if not greater than in the countries of Europe whose obligations we hold. We do not like the idea that we should have a permanent national debt. There is a burning desire for the maintenance of peace. In case of cancellations what assurance is there that the resources which otherwise would be applied upon payments might not be utilized for the expansion of military and naval establishments, and thus create an ever-present threat of future conflict and destruction?

MAINTENANCE OF PEACE

"There is still another point in this connection. A very considerable fraction of the advances was made after the actual close of the war, and was for rehabilitation and the creation of new enterprises rather than for the prosecution of the war in the time of great emergency. It must be said that at the time these loans were made the legislation authorizing them and the popular expectation alike contemplated payment. It was the universal expectation that the loans would be repaid. In the war itself the United States was not subjected to the same surpassing dangers as her allies and in the peace she sought no acquisition of territory. Large indemnities are not expected by her.

"I can not too strongly emphasize the fact that the only effective means for the payment of debts and the healing of the economic life of nations must depend upon progressive disarmament and the maintenance of peace. The burdens of war and of preparation for war have demoralized the finances of nations and spread their withering blight everywhere. In our own country we can point to the startling fact that the expenses of the so-called Civil War from 1861 to 1865 were more than all the expenses of the Federal Government from its beginning in 1789 for 72 years, and, what is still more striking, that the expenses of the late war, with its aftermath and immediate results, were greater than all the expenses of the Federal Government in the 128 years preceding. There can be no more forcible illustration of the desirability of providing means which justice and the common sense of mankind may devise for the amicable settlement of controversies among nations."

ANGLO-AMERICAN COOPERATION

In conclusion Mr. BURTON said that notwithstanding his abhorrence of war he could not refrain from uttering a tribute of praise for the heroism and self-sacrifice so wonderfully displayed in the late war. He referred to the long record of achievements by the British Army and Navy, and expressed the hope that equal might and prowess would be exerted in the cause of peace and an advancing civilization. In the future, with all its uncertainties and dangers, he said, let the influence of the British Empire and the United States coincide, and, although there might be no alliance, prove potent in affecting the destinies of the world by acting in harmony and with a common purpose. Then, after all the welter and confusion, they might look into the future with hope that after the blows of conflict there would come a better day in which peace, justice, and advancing civilization would be the rule. [Cheers.]

[Editorial of same date]

THROUGH AMERICAN EYES

We commend to our readers the thoughtful speech made by Mr. THEODORE E. BURTON yesterday, at the luncheon given in his honor by the American Chamber of Commerce. He spoke upon the foreign relations of the United States and upon the debts owed by the European Allies to America. As Mr. BURTON—who again sits for an Ohio district in the House of Representatives, after having been for six years a member of the Senate—has been nominated by President Harding to the Debt Funding Commission, his words are something more than an expression of individual opinion. Though he disclaimed any wish or any title to interpret the views of his eminent colleagues on the commission—Mr. Hughes, Secretary of State; Mr. Hoover, Secretary of Commerce; Senator SMOOT, of Utah; and Mr. Mellon, Secretary of the Treasury—his long record as lawyer, legislator, and authority on financial questions entitles his statement to special consideration. Moreover, he is one of those thoroughly American Americans from beyond the Alleghanies who know Europe, and this country in particular, almost as well as they know the United States. As he said yesterday: "This is my sixteenth visit to old London, the first of which was made 42 years ago." It is gratifying, therefore, that he should have had an opportunity of speaking to a British audience, and that the Chancellor of the Exchequer, who is shortly to go on a mission to the United States in connection with the funding of the British debt, should have been among his hearers. Men of his standing and experience can certainly render no greater service than by speaking frankly in Europe of relations between the United States and European peoples. The disappointment which he confesses at the absence of recognition, during the League of Nations' meetings at Geneva, of the help given by the American Congress to the starving inhabitants of the Volga Valley, is as natural as its expression may be beneficial. There is a distinct danger that European opinion may be unjust to the people of the United States—not, indeed, of deliberate purpose, but from ignorance and lack of imagination. Be-

fore complaint is made or resentment cherished on the score of American failure to understand the position and problems of Europe, public men and publicists in Europe should at least endeavor to understand the position and the problems of the United States. If they will begin by admitting the probability that they are as ill acquainted with American affairs as Americans can be with the affairs of Europe, their judgments may be formed with a caution and stated with a moderation that may help to maintain the good will which is essential to true comprehension.

Geographical distance, of which the sundering influence can be realized only by those who traverse it, different political and climatic conditions, and the economic circumstance that the United States is exceptionally self-sufficing, combine to keep America and Europe apart. Mr. BURTON's reference to the unhampered freedom of intercourse between the 48 States of the Union, and his suggestion that a similar removal of economic restrictions between the States of Europe might go far to remedy present distress, may sound to European ears like a superficial simplification of European problems.

Does this distinguished American, they may feel tempted to ask, deliberately ignore the history of European countries, the differences in their traditions, ideals, and economic necessities, the density of their populations, and the incompatibilities of temperament, which put union between them beyond the bounds of economic possibility? He does, and he does not. The story goes that when a recent British visitor to the United States was asked to define the main difference between Englishmen and Americans, he said, on reflection, that while for him Julius Caesar was still a historic reality, because he was born by the side of a road made by Caesar's legionaries, he had been unable to discover in typical American citizens of the Middle West and of the West—who are now the most representative Americans—any conscious tendency to look back upon their own or any other history farther than a few decades. "In a word," he is said to have averred, "Europeans are up to their necks in history, whereas most Americans are in it only up to their ankles and look forward to the future with their whole being." If this suggestion contains any element of truth, it may be that Americans, with their sense of futurity, may deserv more clearly than Europeans the ideal direction of European development, while Europeans, with a cautious instinct born of secular experience, may be tempted to qualify the clear-cut judgments of Americans upon European affairs.

The practical question for European and American statesmanship is how to evolve a synthesis, or, at least, a working compromise between standpoints so diverse. The impression on the other side of the Atlantic, to which Mr. BURTON refers, that much remains for Europe to do in settling reparations, and, may be, in the modification of treaties, before the good offices of the United States could be altogether helpful, should remind European governments once again that their concordant action alone can provide any real basis for American cooperation. At the same time it would be well for the European debtors of the United States to take into account the American view of allied debts which Mr. BURTON expounded. That view is strongly held, however moderately it may be stated. The American public is not disposed to be argued out of it, least of all by documents like the Balfour note, of which the effect in the United States has been, as it was bound to be, deplorable. There are, in fact, only two ways of removing the debt question from its present position as an irritant in the relations between Europe and America, and in particular between Great Britain and the United States. One is for the European allies quickly to agree upon a sound and far-sighted plan for the extinction of European inter-allied indebtedness, concurrently with the reduction of the German reparations debt to manageable proportions, if possible, on a business basis. The other is for this country frankly to recognize its indebtedness to America and to arrange to pay it off in such time and by such means as the American Funding Commission may agree to hold just and feasible. Then, with some prospect of greater harmony in European political and economic affairs, and with a consequent prospect of assured peace and reduction of armaments, the average American view of Europe and of American relations to Europe may develop in so salutary a direction as to bring within the range of practical solution problems which to-day seem intractable. That, we take it, is the true lesson of Mr. BURTON's speech.

Mr. HUDDLESTON. Will the gentleman yield?

Mr. BURTON. I will.

Mr. HUDDLESTON. The gentleman used the expression "our allies." The gentleman did that inadvertently, I presume.

Mr. BURTON. I do not think so; I think the criticism that President Roosevelt used of the word "associates" and his substitution of the word "allies" was a very appropriate one. [Applause.]

Mr. HUDDLESTON. How does the gentleman account for the fact that we had no agreement or understanding with the Allies with reference to war aims?

Mr. BURTON. That, perhaps, was a mistake of the administration; perhaps the legislative branch was in some degree responsible for that, but when the fate of governments was hanging in the balance, when the dreadful emergency required immediate action, it is very likely that our State Department and that our President with Congress overlooked those assurances for the future, which it might, as we now look back, have been better to obtain. When the world is full of the din of arms and there is danger that the whole fabric of civilization will be overthrown it is not a time for all the niceties of diplomacy.

Mr. HUDDLESTON. Does not the gentleman think that, because of the fact that we had absolutely no agreement or understanding with the administration, they were not our allies?

Mr. BURTON. I do not think so; when people fight together and assist each other no term I can think of will so properly apply as the word "allies." We were not working at cross purposes, we were working together for a common end, to overthrow invading armies that threatened the whole world.

I agree fully with what the gentleman from Georgia [Mr. CRISP] said, and there is very little to add to his remark upon this subject.

It may perhaps clarify the situation if I review the action of the Debt Commission and legislation pertaining to debt settlements. The standard settlement is that with Great Britain, approved by this House nearly two years ago. What are the general terms of that settlement? Interest on the advances made on the indebtedness from the respective countries was computed at the rate of $4\frac{1}{4}$ per cent, the prevalent rate on our own bonds up to the 15th of December, 1922. That is the basic date. Provision was made for the payment of the principal in 62 installments, beginning with a relatively small amount but sufficient to include by steady increases the whole amount of indebtedness in 62 years. The rate of interest was made 3 per cent for the first 10 years and thereafter $3\frac{1}{2}$ per cent payable semiannually. Four concessions or limitations were made in the settlement with Great Britain—first, that for the first 5 years half of the interest installments might be postponed and funded as principal; second, that during the whole term of the payments there might be accumulations of principal for 3 years, giving leniency in that regard. Then there are two others, comparatively unimportant, but for our own advantage—that payment on 90 days' notice might be made on any installment of principal when interest payments are to be paid. Also that payment might be made in bonds of the United States issued after April 6, 1917. We could not well refuse to make these provisions in a debt settlement.

The settlement with Poland provides for payments of only \$10,000,000 in the first five years. The commission thought, in view of the conditions in that country, that this was a concession which we might very reasonably make. Poland is entitled to the greatest credit for her action. The settlements thus far made have conformed to the standard settlement with Great Britain—\$4,600,000,000 with Great Britain and \$9,000,000 with Finland—and I think I may say that although that is a very much smaller amount, yet when we count the relative resources of the two countries, it was quite as commendable a settlement as that of Great Britain. Then came the settlement with Hungary for a very much smaller amount, \$1,939,000. In this settlement a further concession is made in that the indebtedness was so adjusted as to enable Hungary to obtain loans for rehabilitation and placed those loans on the same footing with the indebtedness to us. In view of the very troubled conditions there, and the necessity in Hungary, just as in Austria, for immediate advances of money, this concession was thought to be reasonable and desirable.

Then comes the settlement which is before you to-day with Lithuania, for \$6,030,000, which is absolutely on all fours with the settlement with Great Britain, except that the initial date for the bonds is different, June 15, 1924.

You now have immediately before you the settlement with Poland, for \$178,500,000, which is quite the same as that with Great Britain, except that payments on the principal and interest for the first five years are to be limited to \$10,000,000. I have already explained that. I think I have clearly stated the situation as to the foreign debts of which settlements have thus far been made.

I agree with my friend from Georgia [Mr. CRISP] that these standard settlements must not be varied from in future settlements made with other countries. All possible leniency should be shown, the granting of moratoriums, if you may call them such, for the earlier payments, but it would not only be unjust to our debtors with whom we have made settlements to make

other adjustments with other countries, it would be unjust to ourselves; so I feel that it is the sentiment of Congress and of the people that these standard settlements should be observed with all other countries.

In view of some things which have recently been said in this country with regard to the attitude of Great Britain in her asking that if we make settlements with our debtors, she may make settlements with hers, I feel that in simple fairness I ought to say a few words here. I speak in the interest of international comity and of justice. We are asking that from reparations to be paid by Germany indebtedness to us shall be met; and how can we, in the name of that which is fair, complain because Great Britain, the creditor of France and other nations, is also asking that payments to her may be considered at the same time.

I should not for a minute approve any interference with a settlement or transaction between our own country and France; but if any criticism rests upon any country for making claims similar to those which we are making, I can not agree with it. We stand for our own country first, but we also must stand for that which is fair and right among nations; and let us never forget that the beginning in this settlement of debts was made by Great Britain; that when she was struggling under an almost intolerable load of debt and taxation she agreed to the payment of \$1,600,000,000; and although she has had the option to fund half of the interest, although she has had the option to postpone payments of principal, her obligations under the debt settlement have been fulfilled to the last nickel, and no postponement has been asked; and so if there is any country toward which we should have feelings of friendliness because of this debt settlement, it is Great Britain. I say this not with any partiality for any country and with primary regard for our own interests, but only because this great country of ours must always be fair and recognize with approval the course of any country in meeting its obligations to us. I now waive the remainder of my time, unless somebody wishes to ask me a question.

Mr. HASTINGS. Mr. Speaker, will the gentleman yield?

Mr. BURTON. Yes.

Mr. HASTINGS. I have not been on the floor, and I have not heard the remarks of the gentleman from Georgia; but if there has not been inserted in the Record during this debate the amount of debts due and owing the Government of the United States from other countries which are not funded, has the gentleman the figures at hand so that he could insert them?

Mr. BURTON. I have them right at hand, but it would take some time to read them. I can perhaps have them inserted in the Record.

Mr. CRISP. I have them, and I can hand them to the gentleman.

Mr. BURTON. They appear on page 255 of the annual report of the Secretary of the Treasury for 1923. In the two right-hand columns in the computation of interest and total indebtedness, the figures are somewhat different from those at which settlements were made, because in this table 5 per cent was the computed rate of interest, while our settlements have been made upon the basis of 4½ per cent. May I ask my friend from Georgia to insert those in his remarks?

Mr. CRISP. If the House will give me leave, I shall insert them in my remarks.

The SPEAKER. The gentleman from Georgia asks unanimous consent to insert these in his remarks. Is there objection?

There was no objection.

Mr. DENISON. Mr. Speaker, will the gentleman yield?

Mr. BURTON. Yes.

Mr. DENISON. Under this bill Poland is to pay \$10,000,000 in five years?

Mr. BURTON. Yes.

Mr. DENISON. That has been referred to as a concession?

Mr. BURTON. Yes.

Mr. DENISON. Will the gentleman state to what extent it is a concession?

Mr. BURTON. The amounts are given in the Senate document transmitted by the President, on page 3. I have not the figures exactly in mind. It is a very considerable concession, however. Payment of principal the first year begins with \$30,000. The interest, however, would be nearly \$5,200,000 per year, so the payments for five years would be about \$26,000,000. The concession in the way of postponement would be approximately \$16,000,000. That amount, of course, is not released.

Mr. HUDSPETH. Mr. Speaker, will the gentleman yield?

Mr. BURTON. Yes.

Mr. HUDSPETH. What was the original rate of interest which the obligation that the debtor countries owed to the United States bore?

Mr. BURTON. It was originally 3 per cent, and then in October of 1918, I think it was, the rate on all these loans was fixed by our Treasury Department at 5 per cent, effective from May 15, 1918.

Mr. HUDSPETH. I understood the gentleman from Georgia to say 4½ per cent.

Mr. BURTON. The rate at which we are settling is 4½ per cent up to the date when a definite adjustment is made.

Mr. HUDSPETH. But the original obligation bore a rate of 4½ per cent?

Mr. BURTON. No. It was on a sort of sliding scale based on rates we were paying, beginning with 3 per cent, and that was raised and finally fixed at 5 per cent some time before the basic date for settlement. As the loans or advances were made to Poland in 1918 or later, I take it the rate was at first computed at 5 per cent.

Mr. RATHBONE. Will the gentleman yield for a question?

Mr. BURTON. Yes.

Mr. RATHBONE. Some portions of the debts of which the gentleman has spoken have been incurred by countries which were not our allies but enemy countries during the World War; for instance, Hungary. Does her relation to us during the World War, in the gentleman's opinion, bear upon this subject or not, or should they all be treated alike?

Mr. BURTON. I think all should be treated alike. Of course, the advances to Hungary were in supplies. This is given on page 255 and consists of obligations for supplies received from the United States Grain Corporation on account of sales under the act of March 30, 1920.

Mr. RATHBONE. Subsequent to the conclusion of the World War?

Mr. BURTON. Yes; and the indebtedness of Poland is of that sort, also subsequent to the World War. The indebtedness of Poland is made up of three classes: Obligations received from the Secretary of War and the Secretary of the Navy on account of sales of surplus war material. That is No. 1. No. 2, commodities received from the American Relief Association. No. 3, sales made by the United States Grain Corporation.

Mr. RATHBONE. What I want to arrive at is this. Is it the opinion of the gentleman and the commission that all countries, no matter whether they are Allies or enemy countries or did not participate in the World War, should be treated the same as far as the matter of these settlements are concerned?

Mr. BURTON. I do not see how we can make any distinction between them. Perhaps if there is any distinction there should be a greater degree of insistence on the indebtedness incurred since the war, because that was not under an emergency; but I do not see how we can make different rules.

Mr. LaGUARDIA. Will the gentleman yield?

Mr. BURTON. Yes.

Mr. LaGUARDIA. Do these settlements made in these matters go into the General Treasury or are they kept separate?

Mr. BURTON. To pay off our indebtedness. That is in the original act authorizing the loans to be made.

Mr. TREADWAY. Will the gentleman yield?

Mr. BURTON. I will.

Mr. TREADWAY. Has the gentleman any information as to the difference between the interest to be paid to us and what we are paying to our borrowers or the people who have loaned money under the Liberty Loan act?

Mr. BURTON. It is the difference between 3 and 4½ per cent, generally speaking. Rates on our different kinds of indebtedness are not altogether uniform. I do not know that any figures have been made upon it. But we felt that the House, having approved the same rates by a vote of 291 to 44, a concession making the interest 3 per cent for the first 10 years and 3½ per cent thereafter was a reasonable settlement in view of all of the facts in the case.

Mr. TREADWAY. I agree with the gentleman fully on that score, but it seems to me to be a matter of interest as to how much that amounted to as showing our Government's liberality in the settlements.

Mr. BURTON. I yield back the remainder of my time.

Mr. GREEN. Mr. Speaker, I desire just to say a word in closing the debate. I fully concur in all that the gentleman from Georgia [Mr. CRISP] and the gentleman from Ohio [Mr. BURTON] said both with reference to the general purpose of the commission in making this settlement and in expressing their personal views. I want to add, I think the commission is entitled to high praise in obtaining these settlements. Further

on, when the bill for the extension of the term of the commission comes up, I desire and expect to speak more fully in commendation of the work of the commission. I wish also to explain the circumstances under which this bill was first called up by the gentleman from Georgia. The fact is that the Polish minister is only authorized to sign this settlement in case it is approved prior to the 1st of January. There was, therefore, and is now, much urgency with reference to the time in which this settlement is ratified. This is one reason why it was brought up at this time, and also why the gentleman from Georgia thought it was better to agree to the Senate bill in order that it might sooner become the law. However, I think there will be no trouble in the Senate in ratifying the action of the House in the matter. I agree with the gentleman from Texas [Mr. GARNER], who made the point of order that bills of this kind ought to be introduced in the House first, and that the Senate has exceeded its right in taking up and passing such bills prior to the time they have been introduced in the House. For that reason I asked the gentleman from Georgia to withdraw his request for the consideration of the Senate bill, thinking possibly it might involve us in still more difficulties in the matter and, after all, save no time.

The remainder of my time may be used by the gentleman from Georgia if he so desires.

Mr. CRISP. Mr. Speaker, I demand the previous question on the bill to final passage.

The previous question was ordered.

The bill was ordered to be engrossed and read the third time; was read the third time.

The SPEAKER. The question is on the passage of the bill.

The question was taken, and the Chair announced the ayes seemed to have it.

Mr. GREEN. Mr. Speaker, for the purpose of getting a record vote, I demand a division.

The House divided; and there were—ayes 114, noes none.

SETTLEMENT OF THE INDEBTEDNESS OF REPUBLIC OF LITHUANIA

Mr. CRISP. Mr. Speaker, I call up H. R. 10650, approving the settlement of the Government with Lithuania, and I ask unanimous consent that the bill may be considered in the House as in Committee of the Whole House on the state of the Union.

The SPEAKER. The Clerk will report the bill by title.

The Clerk read as follows:

A bill (H. R. 10650) to authorize the settlement of the indebtedness of the Republic of Lithuania to the United States of America.

The SPEAKER. The gentleman from Georgia asks unanimous consent that the bill be considered in the House as in Committee of the Whole. Is there objection?

There was no objection.

Mr. CRISP. Mr. Speaker, a similar bill has been read, and I ask unanimous consent that the first reading of this bill be dispensed with.

The SPEAKER. The gentleman from Georgia asks unanimous consent that the first reading of the bill be dispensed with. Is there objection?

Mr. BLANTON. Reserving the right to object, Mr. Speaker, I want to ask the gentleman from Georgia if he does not think that as a matter of record this bill should go into the RECORD and show just exactly what settlement was made?

Mr. CRISP. I do.

Mr. BLANTON. It will not go into the RECORD unless it is read.

The SPEAKER. It will be read the second time.

Mr. BLANTON. In that case it will go into the RECORD, and I will withdraw my objection.

Mr. CRISP. Mr. Speaker, I withdraw my request. Let the Clerk report it.

The SPEAKER. The Clerk will report the bill.

The Clerk read as follows:

Be it enacted, etc., That the settlement of the indebtedness of the Republic of Lithuania to the United States of America made by the World War Foreign Debt Commission and approved by the President upon the terms and conditions as set forth in Senate Document No. 168, Sixty-eighth Congress, second session, is hereby approved in general terms as follows:

The amount of the indebtedness to be funded, after allowing for cash payments made by Lithuania, is \$6,030,000, which has been computed as follows:

Principal amount of obligations to be funded, \$4,981,628.03. Interest accrued thereon from June 30, 1919, to June 15, 1924, at the rate of 4½ per cent per annum, \$1,049,918.94. Total principal and interest accrued and unpaid as of June 15, 1924, \$6,031,546.97. Paid in cash by Lithuania September 22, 1924, \$1,546.97. Total indebtedness to be funded into bonds, \$6,030,000.

The principal of the bonds shall be paid in annual installments on June 15 of each year up to and including June 15, 1986, on a fixed schedule, subject to the right of the Government of the Republic of Lithuania to make such payments in three-year periods. The amount of the first year's installment shall be \$30,000, the annual installments to increase until in the sixty-second year the amount of the final installment will be \$227,000, the aggregate installments being equal to the total principal of the indebtedness to be funded into bonds.

The Government of the Republic of Lithuania shall have the right to pay off additional amounts of the principal of the bonds on any interest date upon 90 days' advance notice.

Interest on the bonds shall be payable semiannually on June 15 and December 15 of each year at the rate of 3 per cent per annum from June 15, 1924, to June 15, 1934, and thereafter at the rate of 3½ per cent per annum until final payment.

The Government of the Republic of Lithuania, at its option, upon not less than 90 days' notice, shall have the right to pay up to one-half of the interest accruing between June 15, 1924, and June 15, 1929, on the \$6,030,000 principal amount of bonds first to be issued, in bonds of Lithuania dated and bearing interest from the respective dates when the interest to be paid thereby becomes due, with maturities arranged serially to fall on each June 15, in the succeeding years up to June 15, 1986, substantially in the manner provided for the original issue of bonds and bearing the same rates of interest and substantially the same in other respects as such original issue of bonds.

Any payment of interest or of principal may be made, at the option of the Government of the Republic of Lithuania, in any United States Government obligations issued after April 6, 1917, such obligations to be taken at par and accrued interest.

Mr. CRISP. Mr. Speaker and gentlemen of the House, I shall not detain you more than a few moments. I am conscious that you want to go on to another bill, the naval appropriation bill, and I can add very little to what I have already said.

This will be the fifth one of the foreign countries that has funded its indebtedness to our Government—Great Britain, Finland, Hungary, Poland, and Lithuania. The amount to be funded in this bill is \$6,030,000. The principal amount of the debt is \$4,981,628.03, and the interest is \$1,049,918.94. There has been a payment by Lithuania of \$1,546.97, which leaves the amount that this bill covers to be funded and bonds issued for it, \$6,030,000.

Now, this indebtedness arose not by reason of money being furnished to our allies to aid in the prosecution of a common war but was for surplus war material and foodstuffs and supplies furnished to Lithuania after the war. It may be interesting for me to give you the principal of these amounts. Four million one hundred fifty-nine thousand four hundred and ninety-one dollars was for surplus war material sold to Lithuania, for which the Secretary of War received the obligations of that Government, and which he has turned into the Treasury Department. Eight hundred and twenty-two thousand one hundred and thirty-six dollars was from the American Relief Society. Those are the two items of principal, the remainder due being interest. So you will see that this indebtedness arose for material, food, and supplies furnished to Lithuania.

Mr. SABATH. Mr. Speaker, will the gentleman yield?

Mr. CRISP. Yes.

Mr. SABATH. The \$822,000 that you state is for relief—is that for relief given by the Red Cross?

Mr. CRISP. No. That was for relief given by this Government. Of course, this Government did not make any charge upon any country for any supplies furnished them when the supplies were purchased from funds raised by the charitable people of the United States.

Mr. SABATH. Has any charge been made for the expenditures made by the Red Cross?

Mr. CRISP. No, sir. The only charge that has been made by this Government is where the Government, through one of the Government bureaus, furnished the supplies, where the money was raised from the taxpayers to purchase the supplies sold. That is my understanding.

Mr. GREEN. Mr. Speaker, will the gentleman yield?

Mr. CRISP. Yes.

Mr. GREEN. The gentleman is quite correct. Perhaps it would be a little more accurate with reference to this particular sum to say that it was loaned to Lithuania to be used for relief purposes.

Mr. CRISP. A rose by any other name smells as sweet.

Mr. SABATH. I will give the reason why I propounded the question. I was informed some time ago that the Lithuanian-Americans had raised a great deal of money, which they for-

warded to the Red Cross for relief work, and later on some charges were made that the amount that was raised by Lithuanian-Americans and forwarded to the Red Cross was charged to the Lithuanian Government. I have denied it, and I have tried to secure positive information. In view of that report, I would ask if there was any foundation for that charge?

Mr. CRISP. None whatever. It is unthinkable that this great, generous Government would make a charge against any other Government on earth for funds that the charitable people of the United States had raised by public subscription to buy supplies for a suffering people and donated to them.

Mr. SABATH. The charge was made against the Red Cross and not against the Government.

Mr. CRISP. I hold no brief for the Red Cross; I know nothing of what the Red Cross does. But I know that these obligations funded in this settlement are for supplies furnished by the Government of the United States through one of its agencies—supplies purchased by taxes collected out of the taxpayers of the United States to meet a Government expenditure.

Mr. DENISON. Mr. Speaker, will the gentleman yield?

Mr. CRISP. Yes.

Mr. DENISON. I assume that all these obligations of these various governments are nonnegotiable. Is that right?

Mr. CRISP. Well, the Government holds, I will say to my friend, promissory notes—

Mr. DENISON. I refer to the bonds.

Mr. CRISP. They are negotiable.

Mr. DENISON. They are negotiable?

Mr. CRISP. Oh, yes. I can not enumerate all of the details of the settlement, but the settlement enumerates how Lithuania is to deliver bonds duly engraved and in different denominations, with the view that this Government may dispose of them as with any other property.

Mr. DENISON. The Government could dispose of them if it had opportunity?

Mr. CRISP. Oh, yes.

Mr. HUDDLESTON. Mr. Speaker, will the gentleman yield?

Mr. CRISP. I will.

Mr. HUDDLESTON. I am informed that after the close of the war our Government sold to Mr. Serge Ughet, who at that time was attaché of the Russian Embassy of the Kerensky government, a quantity of war supplies, which he shipped out of the port of Vladivostok for the use of the Wrangel and Kolchek forces, which were battling with the soviets.

Can the gentleman give us any information about what has been done with that debt?

Mr. CRISP. I regret to say I can not. Since I have been on the commission I have heard nothing about the Russian indebtedness. The amount Russia owes the United States is set out in the report of the Secretary of the Treasury, which I will incorporate in my remarks, but I know nothing about the transaction to which the gentleman refers.

Mr. Speaker, I ask unanimous consent to revise and extend my remarks in the Record.

The SPEAKER. The gentleman from Georgia asks unanimous consent to revise and extend his remarks in the Record. Is there objection?

There was no objection.

Mr. CRISP. Mr. Speaker, if no one desires to speak, I move the previous question on the bill to final passage.

The previous question was ordered.

The SPEAKER. The question is now on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

On motion of Mr. CRISP, a motion to reconsider the vote whereby both bills (H. R. 10650 and H. R. 10651) were passed was laid on the table.

NAVY DEPARTMENT APPROPRIATION BILL

Mr. FRENCH. Mr. Speaker, I move that the House resolve itself into Committee of the Whole House on the state of the Union for the consideration of the bill (H. R. 10724) making appropriations for the Navy Department and the naval service for the fiscal year ending June 30, 1926, and for other purposes; and pending that motion I want to see if the House can agree upon a program as to time. I ask unanimous consent that general debate be limited to four hours. I understand from a previous conversation with the gentleman from South Carolina [Mr. BYRNES], of the minority, that he believes that time will be ample; half of that time to be controlled by the gentleman from South Carolina [Mr. BYRNES] and half by myself.

Mr. BYRNES of South Carolina. I think four hours will be sufficient.

The SPEAKER. The gentleman from Idaho moves that the House resolve itself into Committee of the Whole House on the state of the Union for the consideration of the Navy Department appropriation bill, and pending that asks unanimous consent that the time for general debate be limited to four hours, two hours to be controlled by himself and two hours by the gentleman from South Carolina [Mr. BYRNES].

Mr. SEARS of Florida. Mr. Speaker, reserving the right to object, I wonder whether all of that time has been allotted, and if so, what would be the attitude of the chairman of the subcommittee when we begin the reading of the bill as to debate. It might be that some of us would want to offer amendments and would like to have more than five minutes to discuss them.

Mr. FRENCH. I am satisfied we could be generous with the Members of the House during general debate. That would be my attitude.

Mr. SEARS of Florida. I thought that would be the attitude of the chairman, and I never have objected, Mr. Speaker; but there are some very vital points affecting my district that I might want to speak about, and I might not. With the statement of the chairman I withdraw my reservation.

The SPEAKER. Is there objection?

There was no objection.

The motion of the gentleman from Idaho, Mr. FRENCH, was then agreed to.

Accordingly the House resolved itself into Committee of the Whole House on the state of the Union, with Mr. CHINDBLOM in the chair.

Mr. FRENCH. Mr. Chairman, I ask unanimous consent that the first reading of the bill be dispensed with.

Mr. BLANTON. Mr. Chairman, reserving the right to object—and I think the reading of the bill can be obviated by an agreement—this bill proposes an appropriation of \$290,485,578. The Senate has just recently passed a bill granting the Navy Department another \$110,000,000. The people of the United States ought to know what is in this bill, and they will not know what is in it unless it is put into this Record. If the gentleman's request is granted, this bill will not be printed in the Record. Would the gentleman mind its going into the Record without being read, but as if it were read? If he will couple with his request that the bill be printed in the Record as if it were read, I shall not object.

Mr. FRENCH. I shall be glad to include that in my request.

Mr. BLANTON. Then I shall not object.

The CHAIRMAN. The gentleman from Idaho asks unanimous consent to modify his request. Is there objection? [After a pause.] The Chair hears none. The request of the gentleman from Idaho is that the first reading of the bill be dispensed with but that the bill be printed in the Record as if it had been read. Is there objection?

There was no objection.

The bill follows:

A bill (H. R. 10724) making appropriations for the Navy Department and the naval service for the fiscal year ending June 30, 1926, and for other purposes

Be it enacted, etc., That the following sums are appropriated, out of any money in the Treasury not otherwise appropriated, for the Navy Department and the naval service for the fiscal year ending June 30, 1926, namely:

OFFICE OF THE SECRETARY

SALARIES, SECRETARY'S OFFICE, NAVY DEPARTMENT

Secretary of the Navy, \$12,000; Assistant Secretary, and other personal services in the District of Columbia in accordance with the classification act of 1923, \$146,400; in all, \$158,400: *Provided*, That in expending appropriations or portions of appropriations contained in this act for the payment for personal services in the District of Columbia in accordance with "the classification act of 1923" the average of the salaries of the total number of persons under any grade in any bureau, office, or other appropriation unit shall not at any time exceed the average of the compensation rates specified for the grade by such act, and in grades in which only one position is allocated the salary of such position shall not exceed the average of the compensation rates for the grade: *Provided*, That this restriction shall not apply (1) to grades 1, 2, 3, and 4 of the clerical-mechanical service or (2) to require the reduction in salary of any person whose compensation was fixed as of July 1, 1924, in accordance with the rules of section 6 of such act, (3) to require the reduction in salary of any person who is transferred from one position to another position in the same or different grade in the same or a different bureau, office, or other appropriation unit, or (4) to prevent the payment of a salary under any grade at a rate

higher than the maximum rate of the grade when such higher rate is permitted by "the classification act of 1923" and is specifically authorized by other law.

GENERAL BOARD

Salaries, Navy Department: For personal services in the District of Columbia, in accordance with the classification act of 1923, \$9,920.

NAVAL EXAMINING AND RETIRING BOARDS

Salaries, Navy Department: For personal services in the District of Columbia, in accordance with the classification act of 1923, \$9,880.

COMPENSATION BOARD

Salaries, Navy Department: For personal services in the District of Columbia, in accordance with the classification act of 1923, \$22,000.

CONTINGENT EXPENSES, NAVY DEPARTMENT

For professional and technical books and periodicals, law books, and necessary reference books, including city directories, railway guides, freight, passenger, and express tariff books, for department library, \$3,000.

For stationery, furniture, newspapers, plans, drawings, and drawing materials; purchase and exchange of motor trucks or motor delivery wagons, maintenance, repair, and operation of motor trucks or motor delivery wagons, and one motor-propelled passenger-carrying vehicle, to be used only for official purposes; garage rent; street-car fares not exceeding \$500; freight, expressage, postage, typewriters, and computing machines; and other absolutely necessary expenses of the Navy Department and its various bureaus and offices, \$77,000; It shall not be lawful to expend, unless otherwise specifically provided herein, for any of the offices or bureaus of the Navy Department in the District of Columbia, any sum out of appropriations made for the naval service for any of the purposes mentioned or authorized in this paragraph.

PRINTING AND BINDING

For printing and binding for the Navy Department and the Naval Establishment executed at the Government Printing Office, \$500,000, including not exceeding \$85,000 for the Hydrographic Office.

PAY, MISCELLANEOUS

For commissions and interest; transportation of funds; exchange; for traveling expenses of civilian employees; for the expenses of the attendance of representatives of the Navy Department who may be designated as delegates from the United States to attend the meetings of the International Research Council or of its branches; actual expenses of officers while on shore patrol duty; hire of launches or other small boats in Asiatic waters; for rent of buildings and offices not in navy yards; expenses of courts-martial, including law and reference books, prisoners and prisons, and courts of inquiry, boards of inspection, examining boards, with clerks, and witnesses' fees, and traveling expenses and costs; expenses of naval defense districts; stationery and recording; religious books; newspapers and periodicals for the naval service; all advertising for the Navy Department and its bureaus (except advertising for recruits for the Bureau of Navigation); copying; ferrage; tolls; costs of suits; relief of vessels in distress; recovery of valuables from shipwrecks; quarantine expenses; reports, professional investigation; cost of special instruction at home and abroad, including maintenance of students and attachés; information from abroad and at home, and the collection and classification thereof; all charges pertaining to the Navy Department and its bureaus for ice for the cooling of drinking water on shore (except at naval hospitals), and not to exceed \$200,000 for telephone rentals and tolls, telegrams and cablegrams; postage, foreign and domestic, and post-office box rentals; for necessary expenses for interned persons and prisoners of war under the jurisdiction of the Navy Department, including funeral expenses for such interned persons or prisoners of war as may die while under such jurisdiction, and for payment of claims for damages under naval act approved July 11, 1919; and other necessary and incidental expenses; in all, \$1,725,000; *Provided*, That no part of this appropriation shall be available for the expense of any naval district unless the commandant thereof shall be also the commandant of a navy yard, naval training station, or naval operating base: *Provided further*, That the sum to be paid out of this appropriation, under the direction of the Secretary of the Navy, for clerical, inspection, and messenger service in navy yards and naval stations, for the fiscal year ending June 30, 1926, shall not exceed \$560,000.

CONTINGENT, NAVY

For all emergencies and extraordinary expenses, exclusive of personal services in the Navy Department or any of its subordinate bureaus or offices at Washington, D. C., arising at home or abroad, but impossible to be anticipated or classified, to be expended on the approval and authority of the Secretary of the Navy, and for such purposes as he may deem proper, \$40,000.

TEMPORARY GOVERNMENT FOR WEST INDIAN ISLANDS

For expenses incident to the occupation of the Virgin Islands and to the execution of the provisions of the act providing a temporary

government for the West Indian Islands acquired by the United States from Denmark, and for other purposes, approved March 3, 1917, to be applied under the direction of the President, \$270,150, plus so much of \$29,850 additional as may equal the sum of revenue collected and paid into the treasuries of said islands in excess of \$270,150; toward the construction of permanent water-supply system for the town of St. Thomas, \$45,000; in all, \$315,150.

STATE MARINE SCHOOLS

To reimburse the State of New York, \$25,000; the State of Massachusetts, \$25,000; and the State of Pennsylvania, \$25,000, for expenses incurred in the maintenance and support of marine schools in those States in accordance with section 2 of the act entitled "An act for the establishment of marine schools, and for other purposes," approved March 4, 1911; in all, \$75,000.

CARE OF LEPERS, ETC., ISLAND OF GUAM

Naval station, Island of Guam: For maintenance and care of lepers, special patients, and for other purposes, including cost of transfer of lepers from Guam to the Island of Cullion, in the Philippines, and their maintenance, \$18,000; for educational purposes, \$12,000; in all, \$30,000.

NAVAL RESEARCH LABORATORY

For laboratory and research work and other necessary work of the naval research laboratory for the benefit of the naval service, as authorized in the naval appropriation act approved August 29, 1916, including operation and maintenance of a laboratory, additions to equipment necessary properly to carry on work in hand, maintenance of buildings and grounds, and the temporary employment of such scientific civilian assistants as may become necessary, to be expended under the direction of the Secretary of the Navy, \$150,000; *Provided*, That \$10,000 of this appropriation shall be available for the temporary employment of civilian scientists and technicians required on special problems: *Provided further*, That the sum to be paid out of this appropriation for technical, drafting, clerical, and messenger service shall not exceed \$40,000 in addition to the amount authorized by the preceding proviso.

OFFICE OF NAVAL RECORDS AND LIBRARY

SALARIES, NAVY DEPARTMENT

For personal services in the District of Columbia in accordance with the classification act of 1923, \$25,160.

NAVAL WAR RECORDS

Toward the collection or copying and classification, with a view to publication, of the naval records of the war with the Central Powers of Europe, including personal services in the District of Columbia in accordance with the classification act of 1923, not to exceed \$19,320, and including the purchase of books, periodicals, photographs, maps, and other publications, documents, and pictorial records of the Navy in said war, and other necessary incidental expenses, \$19,720.

OFFICE OF JUDGE ADVOCATE GENERAL

SALARIES, NAVY DEPARTMENT

For personal services in the District of Columbia in accordance with the classification act of 1923, \$102,000.

OFFICE OF CHIEF OF NAVAL OPERATIONS

SALARIES, NAVY DEPARTMENT

For personal services in the District of Columbia, in accordance with the classification act of 1923, \$68,000.

BOARD OF INSPECTION AND SURVEY

Salaries, Navy Department: For personal services in the District of Columbia in accordance with the classification act of 1923, \$22,000.

OFFICE OF DIRECTOR OF NAVAL COMMUNICATIONS

Salaries, Navy Department: For personal services in the District of Columbia in accordance with the classification act of 1923, \$130,000.

OFFICE OF NAVAL INTELLIGENCE

Salaries, Navy Department: For personal services in the District of Columbia in accordance with the classification act of 1923, \$36,520.

BUREAU OF NAVIGATION

TRANSPORTATION AND RECRUITING

For mileage and actual and necessary expenses and per diem in lieu of subsistence as authorized by law to officers of the Navy and Naval Reserve Force while traveling under orders, and officers performing travel by Government-owned vessels shall only be entitled to reimbursement of actual and necessary expenses incurred; for mileage, at 5 cents per mile, to midshipmen entering the Naval Academy while proceeding from their homes to the Naval Academy for examination and appointment as midshipmen; for actual traveling expenses of female nurses; for travel allowance or for transportation and subsistence as authorized by law of enlisted men upon discharge; transportation of enlisted men and apprentice seamen and applicants for enlistment at home and abroad, with subsistence and transfers on route, or cash in lieu thereof; transportation to their homes, if real-

dents of the United States, of enlisted men and apprentice seamen discharged on medical survey, with subsistence and transfers en route, or cash in lieu thereof; transportation of sick or insane enlisted men and apprentice seamen to hospitals, with subsistence and transfers en route, or cash in lieu thereof; apprehension and delivery of deserters and stragglers, and for railway guides and other expenses incident to transportation; expenses of recruiting for the naval service; rent of rendezvous and expenses of maintaining the same; advertising for and obtaining men and apprentice seamen; actual and necessary expenses in lieu of mileage to officers on duty with traveling recruiting parties; transportation of dependents of officers and enlisted men; in all, \$4,000,000.

RECREATION FOR ENLISTED MEN

For the recreation, amusement, comfort, contentment, and health of the Navy, to be expended in the discretion of the Secretary of the Navy, under such regulations as he may prescribe, \$500,000: *Provided*, That the amount paid from this appropriation for personal services of field employees shall not exceed \$64,000.

CONTINGENT

For continuous-service certificates, commissions, warrants, diplomas, discharges, good-conduct badges, and medals for men and boys; purchase of gymnastic apparatus; transportation of effects of deceased officers and enlisted men of the Navy, and of officers and men of the Naval Reserve Force who die while on duty; books for training apprentice seamen and landsmen; packing boxes and materials; books and models; stationery; and other contingent expenses and emergencies arising under cognizance of the Bureau of Navigation, unforeseen and impossible to classify, \$15,000.

GUNNERY AND ENGINEERING EXERCISES

For trophies and badges for excellence in gunnery, target practice, engineering exercises, and for economy in fuel consumption, to be awarded under such rules as the Secretary of the Navy may formulate; for the purpose of recording, classifying, compiling, and publishing the rules and results; for the establishment and maintenance of shooting galleries, target houses, targets, and ranges; for hiring established ranges, and for transporting equipment to and from ranges, \$45,850.

INSTRUMENTS AND SUPPLIES

For supplies for seamen's quarters; and for the purchase of all other articles of equipment at home and abroad; and for the payment of labor in equipping vessels therewith and manufacture of such articles in the several navy yards; all pilotage and towage of ships of war; canal tolls, wharfage, dock and port charges, and other necessary incidental expenses of a similar nature; services and materials in repairing, correcting, adjusting, and testing compasses on shore and on board ship; nautical and astronomical instruments and repairs to same, and pay of chronometer caretakers; libraries for ships of war, professional books, schoolbooks, and papers; maintenance of gunnery and other training classes; compasses, compass fittings, including bin-nacles, tripods, and other appendages of ship's compasses; logs and other appliances for measuring the ship's way and leads and other appliances for sounding; photographs, photographic instruments and materials, printing outfit and materials; and for the necessary civilian electricians for gyrocompass testing and inspection; in all, \$640,000.

OCEAN AND LAKE SURVEYS

For hydrographic surveys, including the pay of the necessary hydrographic surveyors, cartographic draftsmen, and recorders, and the purchase of nautical books, charts, and sailing directions, \$95,000.

NAVAL TRAINING STATIONS

For maintenance, including labor and material, heat, light, water, general care, repairs, and improvement; school books; and all other incidental expenses for the naval training stations that follow:

San Diego, Calif., \$160,000.

Newport, R. I., \$250,000.

Great Lakes, Ill., \$250,000.

Hampton Roads, Va., \$260,000.

Provided, That the amount to be paid out of each of the foregoing sums under the direction of the Secretary of the Navy for clerical, drafting, inspection, and messenger service for the fiscal year ending June 30, 1926, shall not exceed \$12,600, except for Great Lakes, which shall not exceed \$13,500.

NAVAL RESERVE FORCE

For expenses of organizing, administering, and recruiting the Naval Reserve Force and Naval Militia; for the maintenance and rental of armories, including the pay of necessary janitors, and for wharfage, \$170,000; for pay and allowances of officers and enrolled men of the Naval Reserve Force, other than class 1, while on active duty for training; mileage for officers while traveling under orders to and from active duty for training; transportation of enrolled men to and from active duty for training, and subsistence and transfers en route or cash in lieu thereof; subsistence of enrolled men during the actual period of active duty for training; pay and allowances of officers of

the Naval Reserve Force and pay, allowances, and subsistence of enrolled men of the Naval Reserve Force when ordered to active duty in connection with the instruction, training, and drilling of the Naval Reserve Force; and retainer pay of officers and enrolled men of the Naval Reserve Force, other than class 1, \$3,409,820; for aviation material, equipment, fuel, and rental of hangars, \$320,180; in all, \$3,900,000, not more than \$1,232,060 of which amount shall be available, in addition to other appropriations, for fuel and the transportation thereof and for all other expenses in connection with the maintenance, operation, repair, and upkeep of vessels and aircraft assigned for training the Naval Reserve Force: *Provided*, That no part of the money appropriated in this act shall be used for the training of any member of the Naval Reserve Force except with his own consent: *Provided further*, That retainer pay provided by existing law shall not be paid to any member of the Naval Reserve Force who fails to train as provided by law during the year for which he fails to train.

NAVAL WAR COLLEGE, RHODE ISLAND

For maintenance of the Naval War College on Coasters Harbor Island, including the maintenance, repair, and operation of one horse-drawn, passenger-carrying vehicle to be used only for official purposes; and care of ground for same, \$91,800; services of a professor of international law, \$2,000; services of civilian lecturers rendered at the War College, \$1,200; care and preservation of the library, including the purchase, binding, and repair of books of reference and periodicals, \$5,000; in all, \$100,000: *Provided*, That the sum to be paid out of this appropriation under the direction of the Secretary of the Navy for clerical, inspection, drafting, and messenger service for the fiscal year ending June 30, 1926, shall not exceed \$62,500.

NAVAL HOME, PHILADELPHIA, PA.

For pay of employees, at rates of pay to be fixed by the Secretary of the Navy, \$66,971: *Provided*, That the rates of pay prevailing on the date of approval of this act for inmates of the home employed in various capacities shall not be increased.

Maintenance: For water rent, heating, and lighting; cemetery, burial expenses, and headstones; general care and improvements of grounds, buildings, walls, and fences; repairs to power-plant equipment, implements, tools, and furniture, and purchase of the same; music in chapel and entertainments for beneficiaries; stationery, books, and periodicals; transportation of indigent and destitute beneficiaries to the Naval Home, and of sick and insane beneficiaries, their attendants, and necessary subsistence for both, to and from other Government hospitals; employment of such beneficiaries in and about the Naval Home as may be authorized by the Secretary of the Navy on the recommendation of the governor; support of beneficiaries and all other contingent expenses, including the maintenance, repair, and operation of one horse-drawn, passenger-carrying vehicle, two motor-propelled vehicles, and one motor-propelled, passenger-carrying vehicle, to be used only for official purposes, \$123,020.

In all, Naval Home, \$190,000, which sum shall be paid out of the income from the naval pension fund.

SALARIES, NAVY DEPARTMENT

For personal services in the District of Columbia, in accordance with the classification act of 1923, \$423,000.

HYDROGRAPHIC OFFICE

SALARIES, NAVY DEPARTMENT

For personal services in the District of Columbia, in accordance with the classification act of 1923, \$310,000.

Contingent and miscellaneous expenses, Hydrographic Office: For purchase and printing of nautical books, charts, and sailing directions, copperplates, steel plates, chart paper, packing boxes, chart portfolios, electrotyping copperplates, cleaning copperplates; tools, instruments, power, and materials for drawing, engraving, and printing; materials for and mounting charts; reduction of charts by photography; photolithographing charts for immediate use; transfer of photolithographic and other charts to copper; purchase of equipment for the storage of plates used in making charts and for the storage of Hydrographic Office charts and publications; modernization, care, and repairs to printing presses, furniture, instruments, and tools; extra drawing and engraving; translating from foreign languages; telegrams on public business; preparation of pilot charts and their supplements, and printing and mailing same; purchase of data for charts and sailing directions and other nautical publications; books of reference and works and periodicals relating to hydrography, marine meteorology, navigation, surveying, oceanography, and terrestrial magnetism, and to other professional and technical subjects connected with the work of the Hydrographic Office, \$68,800.

CONTINGENT EXPENSES, BRANCH HYDROGRAPHIC OFFICES

For contingent expenses of branch hydrographic offices at Boston, New York, Philadelphia, Baltimore, Norfolk, Savannah, New Orleans, San Francisco, Portland (Oreg.), Portland (Me.), Chicago, Cleveland, Buffalo, Duluth, Sault Ste. Marie, Seattle, Panama, San Juan (P. R.), and Galveston, including furniture, fuel, lights, works, and period-

icals relating to hydrography, marine meteorology, navigation, surveying, oceanography, and terrestrial magnetism, stationery, miscellaneous articles, rent and care of offices, care of time balls, car fare and ferriage in visiting merchant vessels, freight and express charges, telegrams, and other necessary expenses incurred in collecting the latest information for pilot charts, and for other purposes for which the offices were established, \$13,620.

For services of necessary employees at branch offices, \$32,550.

NAVAL OBSERVATORY

SALARIES, NAVY DEPARTMENT

For personal services in the District of Columbia, in accordance with the classification act of 1923, \$82,000.

CONTINGENT AND MISCELLANEOUS EXPENSES, NAVAL OBSERVATORY

Miscellaneous computations: For personal services in the District of Columbia, in accordance with the classification act of 1923, \$9,300.

For professional and scientific books, books of reference, periodicals, engravings, photographs, and fixtures for the library, \$1,000.

For apparatus and instruments, and for repairs of the same, \$2,500.

For repairs to buildings, fixtures, and fences; furniture, gas, chemicals, and stationery, including transmission of public documents through the Smithsonian exchange, foreign postage; plants, fertilizers, and all contingent expenses, \$3,500.

For fuel, oil, grease, pipe, wire, and other materials needed for the maintenance and repair of boilers, engines, heating apparatus, electric lighting and power plant, and water-supply system; purchase and maintenance of teams; maintenance, repair, or operation of motor truck and passenger automobile and of horse-drawn passenger-carrying vehicles; material for boxing nautical instruments for transportation; paints, telegraph and telephone service, and incidental labor, \$12,000, of which amount not to exceed \$3,058 may be expended for personal services in the District of Columbia.

For cleaning, repair, and upkeep of grounds and roads, including personal services in the District of Columbia, in accordance with the classification act of 1923, \$6,030, of which amount not to exceed \$4,920 may be expended for personal services in the District of Columbia.

For expenses in preparing for and conducting observations of total solar eclipse of January 14, 1926, \$3,670.

SALARIES, NAUTICAL ALMANAC OFFICE

For personal services in the District of Columbia, in accordance with the classification act of 1923, \$28,460.

For pay of computers on piecework in preparing for publication the American Ephemeris and Nautical Almanac and in improving the tables of the planets, moon, and stars, \$2,500.

BUREAU OF ENGINEERING

ENGINEERING

For repairs, preservation, and renewal of machinery, auxiliary machinery, and boilers of naval vessels, yard craft, and ships' boats, distilling and refrigerating apparatus; repairs, preservation, and renewals of electric interior and exterior signal communications and all electrical appliances of whatsoever nature on board naval vessels, except range finders, battle order and range transmitters and indicators, and motors and their controlling apparatus used to operate machinery belonging to other bureaus; searchlights and fire-control equipments for antiaircraft defense at shore stations; maintenance and operation of coast signal service; equipment, supplies, and materials under the cognizance of the bureau required for the maintenance and operation of naval vessels, yard craft, and ships' boats; care, custody, and operation of the naval petroleum reserves; purchase, installation, repair, and preservation of machinery, tools, and appliances in navy yards and stations, pay of classified field force under the bureau; incidental expenses for naval vessels, navy yards, and stations, inspectors' offices, the engineering experiment station, such as photographing, technical books and periodicals, stationery, and instruments; services, instruments and apparatus, supplies, and technical books and periodicals necessary to carry on experimental and research work; in all, \$19,500,000, of which \$1,100,000 shall be available immediately: *Provided*, That the sum to be paid out of this appropriation under the direction of the Secretary of the Navy for clerical, drafting, inspection, and messenger service in navy yards, naval stations, and offices of United States inspectors of machinery and engineering material for the fiscal year ending June 30, 1926, shall not exceed \$1,475,000.

ENGINEERING EXPERIMENT STATION, UNITED STATES NAVAL ACADEMY, ANNAPOLIS, MD.

For original investigation and extended experimentation of naval appliances, testing implements, and apparatus; purchase and installation of such machines and auxiliaries considered applicable for test and use in the naval service, and for maintenance and equipment of buildings and grounds, \$175,000.

SALARIES, NAVY DEPARTMENT

For personal services in the District of Columbia in accordance with "the classification act of 1923," \$256,000.

BUREAU OF CONSTRUCTION AND REPAIR

CONSTRUCTION AND REPAIR OF VESSELS

For preservation and completion of vessels on the stocks and in ordinary; purchase of materials and stores of all kinds; steam steers, steam capstans, steam windlasses, and all other auxiliaries; labor in navy yards and on foreign stations; purchase of machinery and tools for use in shops; carrying on work of experimental model tank and wind tunnel; designing naval vessels; construction and repair of yard craft, lighters, and barges; wear, tear, and repair of vessels afloat; general care and protection of the Navy in the line of construction and repair; incidental expenses for vessels and navy yards, inspectors' offices, such as photographing, books, professional magazines, plans, stationery, and instruments for drafting room, and for pay of classified field force under the bureau; for hemp, wire, iron, and other materials for the manufacture of cordage, anchors, cables, galleys, and chains; specifications for purchase thereof shall be so prepared as shall give fair and free competition; canvas for the manufacture of sails, awnings, hammocks, and other work; interior appliances and tools for manufacturing purposes in navy yards and naval stations; and for the purchase of all other articles of equipment at home and abroad; and for the payment of labor in equipping vessels therewith and manufacture of such articles in the several navy yards; naval signals and apparatus, other than electric, namely, signals, lights, lanterns, running lights, and lamps and their appendages for general use on board ship for illuminating purposes; and oil and candles used in connection therewith; bunting and other materials for making and repairing flags of all kinds; for all permanent galley fittings and equipment; rugs, carpets, curtains, and hangings on board naval vessels, \$17,000,000: *Provided*, That the sum to be paid out of this appropriation, under the direction of the Secretary of the Navy, for clerical, drafting, inspection, watchmen (ship keepers), and messenger service in navy yards, naval stations, and offices of superintending naval constructors for the fiscal year ending June 30, 1926, shall not exceed \$1,700,000.

SALARIES, NAVY DEPARTMENT

For personal services in the District of Columbia in accordance with the classification act of 1923, \$315,000.

BUREAU OF ORDNANCE

ORDNANCE AND ORDNANCE STORES

For procuring, producing, preserving, and handling ordnance material: for the armament of ships; for fuel, material, and labor to be used in the general work under the cognizance of the Bureau of Ordnance; for furniture at naval ammunition depots, torpedo stations, naval ordnance plants, and proving grounds; for technical books; plant appliances as now defined by the "Navy Classification of Accounts"; for machinery and machine tools; for maintenance of proving grounds, powder factory, torpedo stations, gun factory, ammunition depots, and naval ordnance plants, and for target practice; not to exceed \$10,000 for minor improvements to buildings, grounds, and appurtenances, and at a cost not to exceed \$750 for any single project; for the maintenance, repair, and operation of horse-drawn and motor-propelled freight and passenger-carrying vehicles, to be used only for official purposes at naval ammunition depots, naval proving grounds, naval ordnance plants, and naval torpedo stations; for the pay of chemists, clerical, drafting, inspection, and messenger service in navy yards, naval stations, naval ordnance plants, and naval ammunition depots, and for care and operation of schools during the fiscal year 1926 at ordnance stations at Indianhead, Md.; Dahlgren, Va.; and South Charleston, W. Va., \$10,125,000: *Provided*, That the sum to be paid out of this appropriation under the direction of the Secretary of the Navy for chemists, clerical, drafting, inspection, watchmen, and messenger service in navy yards, naval stations, naval ordnance plants, and naval ammunition depots for the fiscal year ending June 30, 1926, shall not exceed \$900,000.

For purchase and manufacture of smokeless powder, \$772,000.

For the purchase and manufacture of torpedoes and appliances, to be available until expended, \$500,000.

EXPERIMENTS, BUREAU OF ORDNANCE

For experimental work in the development of armor-piercing and other projectiles, fuses, powders, and high explosives, in connection with problems of the attack of armor with direct and inclined fire at various ranges, including the purchase of armor, powder, projectiles, and fuses for the above purposes and of all necessary material and labor in connection therewith; and for other experimental work under the cognizance of the Bureau of Ordnance, in connection with the development of ordnance material for the Navy, \$190,000.

SALARIES, NAVY DEPARTMENT

For personal services in the District of Columbia in accordance with the classification act of 1923, \$145,000.

BUREAU OF SUPPLIES AND ACCOUNTS

PAY OF THE NAVY

For pay and allowances prescribed by law of officers on sea duty and other duty, and officers on waiting orders—pay \$25,796,006; rental allowance \$5,339,920; subsistence allowance \$3,316,720; in all \$34,452,646; officers on the retired list, \$4,145,769; for hire of quarters for officers serving with troops where there are no public quarters belonging to the Government, and where there are not sufficient quarters possessed by the United States to accommodate them, and hire of quarters for officers and enlisted men on sea duty at such times as they may be deprived of their quarters on board ship due to repairs or other conditions which may render them uninhabitable, \$1,000; pay of enlisted men on the retired list, \$1,433,012; extra pay to men re-enlisting after being honorably discharged, \$1,459,775; interest on deposits by men, \$7,500; pay of petty officers, seamen, landsmen, and apprentice seamen, including men in the engineer's force and men detailed for duty with the Fish Commission, enlisted men, men in trade schools, pay of enlisted men of the Hospital Corps, extra pay to men for diving and cash prizes for men for excellence in gunnery, target practice, and engineering competitions, \$66,588,000; pay of enlisted men undergoing sentence of court-martial, \$498,000; and as many machinists as the President may from time to time deem necessary to appoint; and apprentice seamen under training at training stations and on board training ships, at the pay prescribed by law, \$1,512,000; pay and allowances of the Nurse Corps, including assistant superintendents, directors, and assistant directors—pay \$718,000; rental allowance \$24,000; subsistence allowance \$20,805; in all \$762,805; rent of quarters for members of the Nurse Corps, \$2,900; retainer pay and active-service pay and allowances of members of the Naval Reserve Force, class 1 (Fleet Naval Reserve), \$6,277,496; reimbursement for losses of property under act of October 6, 1917, \$10,000; payment of six months' death gratuity, \$150,000; in all, \$117,000,000; and the money herein specifically appropriated for "Pay of the Navy," shall be disbursed and accounted for in accordance with existing law as "Pay of the Navy," and for that purpose shall constitute one fund: *Provided*, That additional commissioned, warranted, appointed, enlisted, and civilian personnel of the Medical Department of the Navy, required for the care of patients of the United States Veterans' Bureau in naval hospitals, may be employed in addition to the numbers appropriated for in this act: *Provided further*, That no part of this appropriation shall be available for the pay of any midshipmen whose admission subsequent to December 13, 1924, would result in exceeding at any time an allowance of three midshipmen for each Senator, Representative, and Delegate in Congress; of one midshipman for Porto Rico, a native of the island, appointed on nomination of the governor, and of two midshipmen from Porto Rico, appointed on nomination of the Resident Commissioner; and of two midshipmen for the District of Columbia: *Provided further*, That nothing herein shall be construed to repeal or modify in any way existing laws relative to the appointment of midshipmen at large or from the enlisted personnel of the naval service: *And provided further*, That in computing for any purpose the length of service of any officer of the Navy, of the Marine Corps, of the Coast Guard, of the Coast and Geodetic Survey, or of the Public Health Service, who was appointed to the United States Naval Academy or to the United States Military Academy after March 4, 1913, the time spent at either academy shall not be counted.

PROVISIONS, NAVY

For provisions and commuted rations for enlisted men of the Navy, which commuted rations may be paid to caterers of messes in case of death or desertion upon orders of the commanding officers, at 50 cents per diem, and midshipmen at 80 cents per diem, and commuted rations stopped on account of sick in hospital and credited at the rate of 75 cents per ration to the naval hospital fund; subsistence of men unavoidably detained or absent from vessels to which attached under orders (during which subsistence rations to be stopped on board ship and no credit for commutation therefor to be given); quarters and subsistence of men on detached duty; subsistence of members of the Naval Reserve Force during period of active service; expenses of handling provisions and for subsistence in kind at hospitals and on board ship in lieu of subsistence allowance of female nurses and Navy and Marine Corps general courts-martial prisoners undergoing imprisonment with sentences of dishonorable discharge from the service at the expiration of such confinement; in all, \$19,800,000: *Provided*, That the Secretary of the Navy is authorized to commute rations for such general courts-martial prisoners in such amounts as seem to him proper, which may vary in accordance with the location of the naval prison, but which shall in no case exceed 30 cents per diem for each ration so commuted; and for the purchase of the United States Army emergency rations as required.

MAINTENANCE

For fuel; the removal and transportation of ashes and garbage from ships of war; books, blanks, and stationery, including stationery for commanding and navigating officers of ships, chaplains on shore and afloat, and for the use of courts-martial on board ships; pur-

chase, repair, and exchange of typewriters for ships; packing boxes and materials; interior fittings for general storehouses, pay offices, and accounting offices in navy yards; expenses of disbursing officers; coffee mills and repair thereto; expenses of naval clothing factory and machinery for the same; laboratory equipment; purchase of articles of equipage at home and abroad under the cognizance of the Bureau of Supplies and Accounts, and for the payment of labor in equipping vessels therewith, and the manufacture of such articles in the several navy yards; musical instruments and music; mess outfits; soap on board naval vessels; tools, ferrage, yeomen's stores, safes, and other incidental expenses; all freight and express charges pertaining to the Navy Department and its bureaus; labor in general storehouses, paymasters' offices, and accounting offices in navy yards and naval stations, including naval stations maintained in island possessions under the control of the United States, and expenses in handling stores purchased and manufactured under "the naval supply account fund;" in all, \$9,800,000: *Provided*, That the sum to be paid out of this appropriation, under the direction of the Secretary of the Navy, for chemists and for clerical, inspection, and messenger service in the supply and accounting departments of the navy yards and naval stations and disbursing offices for the fiscal year ending June 30, 1926, shall not exceed \$2,850,000.

The clothing and small-stores fund shall be charged with the value of all issues of clothing and small stores made to enlisted men and apprentice seamen required as outfits on first enlistment, not to exceed \$100 each, and for uniform gratuity to enrolled men of the Naval Reserve Force and for civilian clothing not to exceed \$15 per man to men given discharge for bad conduct, for undesirability, or inaptitude, the uniform gratuity paid to officers of the Naval Reserve Force, and the authorized issues of clothing and equipment to the members of the Naval Nurse Corps.

FUEL AND TRANSPORTATION

For coal and other fuel for steamers' and ships' use, including expenses of transportation, storage, and handling the same; maintenance and general operation of machinery of naval fuel depots and fuel plants; water for all purposes on board naval vessels, and ice for the cooling of water, including the expense of transportation and storage of both, \$15,460,000: *Provided*, That fuel acquired other than by purchase shall not be issued without charging the applicable appropriation with the cost of such fuel at the rate current at the time of issue for fuel purchased: *Provided further*, That the President may direct the use, wholly or in part, of fuel on hand, however acquired, to be charged at the last issue rate for fuel acquired by purchase, when, in his judgment, prices quoted for supplying fuel are excessive.

SALARIES, NAVY DEPARTMENT

For personal services in the District of Columbia, in accordance with the classification act of 1923, \$830,000.

BUREAU OF MEDICINE AND SURGERY

MEDICAL DEPARTMENT

For surgeon's necessities for vessels in commission, navy yards, naval stations, and Marine Corps; and for the civil establishment at the several naval hospitals, navy yards, naval medical supply depots, Naval Medical School and Dispensary, Washington, and Naval Academy, \$1,730,000: *Provided*, That the sum to be paid out of this appropriation, under the direction of the Secretary of the Navy, for clerical service in naval hospitals, dispensaries, medical supply depots, and Naval Medical School, for the fiscal year ending June 30, 1926, shall not exceed \$150,000.

CONTINGENT, BUREAU OF MEDICINE AND SURGERY

For tolls and ferrages; purchase of books and stationery; hygienic and sanitary investigation and illustration; sanitary, hygienic, and special instruction, including the issuing of Naval Medical Bulletins and supplements; purchase and repairs of nonpassenger-carrying wagons, automobile ambulances, and harness; purchase of and feed for horses and cows; maintenance, repair, and operation of three passenger-carrying motor vehicles for naval dispensary, Washington, D. C., and of one motor-propelled vehicle for official use only for the medical officer on out-patient medical service at the Naval Academy; trees, plants, care of grounds, garden tools, and seeds; incidental articles for the Naval Medical School and naval dispensary, Washington, naval medical supply depots, sick quarters at Naval Academy and marine barracks; washing for Medical Department and Naval Medical School and naval dispensary, Washington, naval medical supply depots, sick quarters at Naval Academy and marine barracks, dispensaries at navy yards and naval stations, and ships; and for minor repairs on buildings and grounds of the United States Naval Medical School and naval medical supply depots; rent of rooms for naval dispensary, Washington, D. C., not to exceed \$1,200; for the care, maintenance, and treatment of the insane of the Navy and Marine Corps on the Pacific coast, including supernumeraries held for transfer to the Government Hospital for the Insane; for dental outfits and dental material; and all other necessary contingent expenses; in all, \$375,000.

CARE OF THE DEAD

For care of the dead; for purchase of cemetery lots; for funeral expenses and interment or transportation to their homes or to designated cemeteries of the remains of officers (including officers who die within the United States and supernumerary patients who die in naval hospitals) and enlisted men of the Navy and Marine Corps, of members of the Nurse Corps, and of officers and enlisted men of the Naval Reserve Force, when on active service with the Navy, who die or are killed in action ashore or afloat, and also to enable the Secretary of the Navy, in his discretion, to cause to be transported to their homes the remains of civilian employees of the Navy Department and Naval Establishment who die while employed outside of the continental limits of the United States, \$90,000: *Provided*, That the sum herein appropriated shall be available for payment for transportation of the remains of officers and men who have died while on duty at any time since April 21, 1898.

SALARIES, NAVY DEPARTMENT

For personal services in the District of Columbia in accordance with the classification act of 1923, \$73,400.

BUREAU OF YARDS AND DOCKS

MAINTENANCE

For the labor, materials, and supplies necessary, as determined by the Secretary of the Navy, for the general maintenance of the activities and properties now, or hereafter, under the cognizance of the Bureau of Yards and Docks, including the purchase, maintenance, repair, and operation of passenger-carrying vehicles for the Naval Establishment not otherwise provided for, and including not to exceed \$950,000 for clerical, inspection, drafting, messenger, and other classified work in the field, \$6,750,000: *Provided*, That during the fiscal year 1926 the Secretary of the Navy is authorized to purchase not more than 2 passenger-carrying motor-propelled vehicles, to cost not to exceed \$2,500 each, 15 passenger-carrying motor-propelled vehicles, to cost not to exceed \$1,500 each, and 30 passenger-carrying motor-propelled vehicles, to cost not to exceed \$500 each, and the Secretary of the Navy shall sell, or exchange in part payment for such new vehicles, not less than a corresponding number of motor-propelled passenger-carrying vehicles in use and of makes which now cost in excess of \$2,000 per vehicle to replace for each new car purchased costing \$1,500 or more: *Provided further*, That expenditures from appropriations contained in this act for the maintenance, operation, and repair of motor-propelled passenger-carrying vehicles, including the compensation of operators, shall not exceed in the aggregate \$100,000, exclusive of such vehicles owned and operated by the Marine Corps in connection with expeditionary duty without the continental limits of the United States, and on any one vehicle shall not exceed for maintenance, upkeep, and repair, exclusive of garage rent, pay of operator, fuel, and lubricants, one-third of the market price of a new vehicle of the same make or class, and in any case more than \$500.

CONTINGENT

For contingent expenses and minor extensions and improvements of public works at navy yards and stations, \$125,000.

SALARIES, NAVY DEPARTMENT

For personal services in the District of Columbia in accordance with the classification act of 1923, \$238,000.

PUBLIC WORKS, BUREAU OF YARDS AND DOCKS

Navy yard, Portsmouth, N. H.: Repairs to coaling plant, \$25,000.
Navy yard, Boston, Mass.: For improvements to water front, \$150,000; replacement of circulating loop, \$125,000; in all, \$275,000.
Navy yard, New York, N. Y.: for gas-plant improvements, \$25,000; improvements to distributing system, \$15,000; replacement of high-tension electric cable, \$25,000; improvements to sanitary facilities, Dry Dock No. 4, \$20,000; in all, \$85,000.
Navy yard, Philadelphia, Pa.: For paving, to continue, \$30,000; improvements to Pier No. 3, \$70,000; dredging, to continue, \$150,000; in all, \$250,000.
Navy yard, Norfolk, Va.: For improvements to fire protection, \$21,000; replacement of hull of 120-ton derrick, \$90,000; in all, \$111,000.
Navy yard, Charleston, S. C.: Dredging, to continue, \$36,000.
Navy yard, Mare Island, Calif.: For dredging, to continue, \$70,000.
Navy yard, Puget Sound, Wash.: Repair and fitting out pier (limit of cost, \$1,190,000), to continue, \$400,000.
Naval station, Guantanamo, Cuba: For replacement of magazine wharf, \$50,000; improvements to fuel-oil plant, \$28,000; in all, \$78,000.
Naval station, Pearl Harbor, Hawaii: For additional moorings, \$45,000; improvement to water front, industrial section, \$200,000; extension of administration building, \$100,000; in all, \$345,000.
Naval station, Tutuila, Samoa: For improvements to wharf, \$28,000.
Naval station, Cavite, P. I.: For moving officers' quarters from Olongapo, \$30,000; moving power-plant equipment from Olongapo and

replacing worn-out equipment at Cavite, to complete, \$54,000; moving dry dock *Decey* from Olongapo, \$400,000; moving water tank from Olongapo, \$7,500; in all, \$491,500.

Naval ammunition depot, Fort Lafayette, N. Y.: For dredging, to continue, \$20,000.

Naval ammunition depot, Puget Sound, Wash.: For additional storage, \$35,000.

Naval hospital, Washington, D. C.: Extension of nurses' quarters, \$75,000, which sum shall be paid out of the naval hospital fund.

Naval training station, Great Lakes, Ill., buildings: For improvements to power plant, \$30,000.

Submarine base, Pearl Harbor, Hawaii: For extension of motor generator building and equipment, \$55,000.

Submarine base, Coco Solo, Canal Zone: For improvements to refrigeration plant, \$36,000; dredging, to continue, \$90,000; in all, \$126,000.

Naval station, San Diego, Calif.: for extension of shop and storage facilities, \$70,000.

Naval fuel depot, Yorktown, Va.: For foam fire-protection system, \$60,000.

The unobligated balance of the appropriation of \$500,000 contained in the naval appropriation act for the fiscal year 1925 on account of the construction of an extensible building for the supply depot, Marine Corps, San Francisco, Calif., is made available for adding two additional floors to said building, such addition to be of permanent construction and made ready for occupancy in all respects within the amount hereby made available.

BUREAU OF AERONAUTICS

AVIATION, NAVY

For aviation, as follows: For navigational, photographic, aerological, radio, and miscellaneous equipment, including repairs thereto, for use with aircraft built or building on June 30, 1925, \$375,000; for maintenance, repair, and operation of aircraft factory, helium plant, air stations, fleet activities, testing laboratories, and for overhauling of planes, \$6,921,625, including \$300,000 for the equipment of vessels with catapults; for continuing experiments and development work on all types of aircraft, \$1,550,000; for drafting, clerical, inspection, and messenger service, \$700,000; for new construction and procurement of aircraft and equipment, \$5,243,375; in all, \$14,790,000; and the money herein specifically appropriated for "Aviation" shall be disbursed and accounted for in accordance with existing laws as "Aviation" and for that purpose shall constitute one fund: *Provided*, That in addition to the amount herein appropriated and specified for expenditure for new construction and procurement of aircraft and equipment, the Secretary of the Navy may enter into contracts for the production and purchase of new airplanes and their equipment, spare parts, and accessories to an amount not in excess of \$4,100,000: *Provided further*, That no part of this appropriation shall be expended for maintenance of more than six heavier-than-air stations on the coasts of the continental United States: *Provided further*, That no part of this appropriation shall be used for the construction of a factory for the manufacture of airplanes: *Provided further*, That the Secretary of the Navy is hereby authorized to consider, ascertain, adjust, determine, and pay out of this appropriation the amounts due on claims for damages which have occurred or may occur to private property growing out of the operations of naval aircraft, where such claim does not exceed the sum of \$250: *Provided further*, That all claims adjusted under this authority during the fiscal year shall be reported in detail to the Congress by the Secretary of the Navy.

SALARIES, NAVY DEPARTMENT

For personal services in the District of Columbia in accordance with the classification act of 1923, \$191,000.

NAVAL ACADEMY

Pay, Naval Academy: Pay of professors and others, Naval Academy: Pay of professors and instructors, including one professor as librarian, \$236,900: *Provided*, That not more than \$36,500 shall be paid for masters and instructors in swordsmanship and physical training;

For pay of employees at rates to be fixed by the Secretary of the Navy, as follows: Administration, \$154,800; department of ordnance and gunnery, \$16,952; departments of electrical engineering and physics, \$17,727; department of seamanship, \$8,880; department of marine engineering and naval construction, \$47,922; commissary department, \$188,993; department of buildings and grounds, \$131,794; in all \$567,008.

Current and miscellaneous expenses, Naval Academy: For text and reference books for use of instructors; stationery, blank books and forms, models, maps, and periodicals; apparatus and materials for instruction in physical training and athletics; expenses of lectures and entertainments, not exceeding \$1,000, including pay and expenses of lecturer; chemicals, philosophical apparatus and instruments, stores, machinery, tools, fittings, apparatus, and materials for instruction purposes, \$77,800.

For purchase, binding, and repair of books for the library (to be purchased in the open market on the written order of the superintendent), \$5,000.

For expenses of the Board of Visitors to the Naval Academy, \$3,000.

For contingencies for the superintendent of the academy, to be expended in his discretion, \$3,000.

For contingencies for the commandant of midshipmen, to be expended in his discretion, \$1,200.

Maintenance and repairs, Naval Academy: For necessary repairs of public buildings, wharves, and walls inclosing the grounds of the Naval Academy, improvements, repairs, and fixtures; for books, periodicals, maps, models, and drawings; purchase and repair of fire engines; fire apparatus and plants, machinery; purchase and maintenance of all horses and horse-drawn vehicles for use at the academy, including the maintenance, operation, and repair of three horse-drawn passenger-carrying vehicles to be used only for official purposes; seeds and plants; tools and repairs of the same; stationery; furniture for Government buildings and offices at the academy, including furniture for midshipmen's rooms; coal and other fuels; candles, oil, and gas, attendance on light and power plants; cleaning and clearing up station and care of buildings; attendance on fires, lights, fire engines, fire apparatus, and plants, and telephone, telegraph, and clock systems; incidental labor; advertising, water tax, postage, telephones, telegrams, tolls, and ferrage; flags and awnings; packing boxes, fuel for heating and lighting bandmen's quarters; pay of inspectors and draftsmen; music and astronomical instruments; and for pay of employees on leave, \$1,000,000.

For commutation of rent for bandmen, at \$15 per month each, \$13,500.

MARINE CORPS

PAY, MARINE CORPS

Pay of officers, active and class 1, Fleet Marine Corps reserve list: For pay and allowances prescribed by law for all officers on the active and class 1, Fleet Marine Corps reserve list—pay and allowances, \$3,453,174; subsistence allowance, \$486,390; rental allowance, \$703,506; in all, \$4,643,070.

For pay of officers prescribed by law on the retired list, \$493,180.

Pay of enlisted men, active and class 1, Fleet Marine Corps reserve list: For pay and allowances of noncommissioned officers, musicians, and privates, as prescribed by law, and for the expenses of clerks of the United States Marine Corps traveling under orders, and including additional compensation for enlisted men of the Marine Corps qualified as expert riflemen, sharpshooters, marksmen, or regularly detailed as gun captains, gun pointers, cooks, messmen, or holding good-conduct medals, pins, or bars, including interest on deposits by enlisted men, post exchange debts of deserters, under such rules as the Secretary of the Navy may prescribe, and the authorized travel allowance of discharged enlisted men, and for prizes for excellence in gunnery exercises and target practice, and for pay of enlisted men designated as Navy mail clerks and assistant Navy mail clerks, both afloat and ashore—pay and allowances, \$8,609,431; allowance for lodging and subsistence, \$769,711; in all, \$9,429,142.

For pay and allowances prescribed by law of enlisted men on the retired list, \$383,656.

Undrawn clothing: For payment to discharged enlisted men for clothing undrawn, \$250,000.

For pay and allowances of Reserve Force, excepting class 1, Fleet Marine Corps Reserve, \$75,943.

MILEAGE

For mileage and actual and necessary expenses and per diem in lieu of subsistence as authorized by law to officers traveling under orders without troops, \$125,000: *Provided*, That officers performing travel by Government-owned vessels shall only be entitled to reimbursement of actual and necessary expenses incurred.

In all, \$15,400,000, and the money herein specifically appropriated for pay of the Marine Corps shall be disbursed and accounted for in accordance with existing law as pay of the Marine Corps, and for that purpose shall constitute one fund.

PAY OF CIVIL FORCE

For personal services in the District of Columbia in accordance with the classification act of 1923, as follows:

Offices of the Major General Commandant and adjutant and inspector, \$61,840;

Office of the paymaster, \$22,800;

Office of the quartermaster, \$74,300; in all, \$159,000.

For personal services in Marine Corps offices located elsewhere than at Marine Corps headquarters, \$15,650.

GENERAL EXPENSES, MARINE CORPS

For every expenditure requisite for, and incident to, the authorized work of the Marine Corps, other than as appropriated for under the headings of pay and salaries, as follows:

For provisions, subsistence, board and lodging of enlisted men, recruits and recruiting parties, and applicants for enlistment, cash allowance for lodging and subsistence to enlisted men traveling on duty; ice, ice machines and their maintenance, \$3,253,000;

For clothing for enlisted men, \$1,279,000;

For fuel, heat, light, and power, including sales to officers, \$600,000;

For military supplies and equipment, including their purchase, repair, preservation, and handling; recreational, school, educational, library, musical, amusement, field sport and gymnasium supplies, equipment, services, and incidental expenses; purchase and marking of prizes for excellence in gunnery and rifle practice, good-conduct badges, medals, and buttons awarded to officers and enlisted men by the Government for conspicuous, gallant, and special service; rental and maintenance of target ranges and entrance fees for competitions, \$256,000;

For transportation of troops and applicants for enlistment, including cash in lieu of ferrage and transfers en route; toilet kits for issue to recruits upon their first enlistment and other incidental expenses of the recruiting service; and transportation for dependents of officers and enlisted men, \$562,000;

For repairs and improvements to barracks, quarters, and other public buildings at posts and stations; for the renting, leasing, and improvement of buildings in the District of Columbia with the approval of the Public Buildings Commission and at such other places as the public exigencies require, and the erection of temporary buildings upon the approval of the Secretary of the Navy at a total cost of not to exceed \$10,000 during the year, \$400,000;

For forage and stabling of public animals and the authorized number of officers' horses, \$50,000;

For miscellaneous supplies, material, equipment, personal and other services, and for other incidental expenses for the Marine Corps not otherwise provided for; purchase, repair, and exchange of typewriters and calculating machines; purchase and repair of furniture and fixtures; purchase and repair of motor-propelled and horse-drawn passenger-carrying and other vehicles; veterinary services and medicines for public animals and the authorized number of officers' horses; purchase of mounts and horse equipment for all officers below the grade of major required to be mounted; shoeing for public animals and the authorized number of officers' horses; books, newspapers, and periodicals; printing and binding; packing and crating of officers' allowance of baggage; funeral expenses of officers and enlisted men and accepted applicants for enlistment and retired officers on active duty and retired enlisted men of the Marine Corps, including the transportation of their bodies, arms, and wearing apparel from the place of demise to the homes of the deceased in the United States; construction, operation, and maintenance of laundries; and for all emergencies and extraordinary expenses, \$1,875,000: *Provided*, That there may be expended out of this appropriation for the purchase of motor-propelled passenger-carrying vehicles not more than \$12,400, as follows: Two vehicles to cost not more than \$1,200 each, 10 vehicles to cost not more than \$500 each, and 20 motor cycles to cost not more than \$250 each;

In all, \$8,375,000, to be accounted for as one fund.

INCREASE OF THE NAVY

The Secretary of the Navy may use the unexpended balances on the date of the approval of this act under appropriations heretofore made on account of "Increase of the Navy," together with the sum of \$6,944,000, which is hereby appropriated for the prosecution of work on vessels under construction on such date, the construction of which may be proceeded with under the terms of the treaty providing for the limitation of naval armament; for continuing the conversion of two battle cruisers into aircraft carriers, including their complete equipment of aircraft and aircraft accessories, in accordance with the terms of such treaty; toward the construction of two fleet submarines heretofore authorized, to have the highest practicable speed and greatest desirable radius of action and to cost not to exceed \$5,300,000 each for construction and machinery and \$850,000 each for armor, armament, and ammunition; for the settlement of contracts on account of vessels already delivered to the Navy Department; for the procurement of gyro compass equipments, and for the installation of fire-control instruments on destroyers not already supplied; for the installation of fire-control apparatus on the *Colorado* and *West Virginia*; and for the completion of armor, armament, ammunition, and torpedoes for the supply and complement of vessels which may be proceeded with as hereinbefore mentioned.

No part of any appropriation made for the Navy shall be expended for any of the purposes herein provided for on account of the Navy Department in the District of Columbia, including personal services of civilians and of enlisted men of the Navy, except as herein expressly authorized: *Provided*, That there may be detailed to the Bureau of Navigation not to exceed at any one time 24 enlisted men of the Navy: *Provided further*, That enlisted men detailed to the

Naval Dispensary and the Radio Communication Service shall not be regarded as detailed to the Navy Department in the District of Columbia.

No part of the appropriation made in this act shall be available for the salary or pay of any officer, manager, superintendent, foreman, or other person having charge of the work of any employee of the United States Government while making or causing to be made with a stop watch or other time-measuring device a time study of any job of any such employee between the starting and completion thereof, or of the movements of any such employee while engaged upon such work; nor shall any part of the appropriations made in this act be available to pay any premiums or bonus or cash reward to any employee in addition to his regular wages, except for suggestions resulting in improvements or economy in the operation of any Government plant; and that no part of the moneys herein appropriated for the Naval Establishment or herein made available therefor shall be used or expended under contracts hereafter made for the repair, purchase, or acquirement, by or from any private contractor, of any naval vessel, machinery, article or articles that at the time of the proposed repair, purchase, or acquirement, can be repaired, manufactured, or produced in each or any of the Government navy yards or arsenals of the United States, when time and facilities permit, and when, in the judgment of the Secretary of the Navy, such repair, purchase, acquirement, or production, would not involve an appreciable increase in cost to the Government.

The CHAIRMAN. Under the order of the House there will be four hours of general debate, one half to be controlled by the gentleman from Idaho [Mr. FRENCH] and the other half to be controlled by the gentleman from South Carolina [Mr. BYRNES]. The gentleman from Idaho is recognized for two hours.

Mr. FRENCH. Mr. Chairman, every Member of the House of Representatives is interested in the Navy of the United States, because he is interested in our country. At this time the members of the Appropriations Committee, who have had charge of shaping the Budget for the Navy and reporting it to the House, come before you conscious that they have been between two fires aimed at the Congress and the administration from two directions; first, from those who would increase the Naval Establishment of the United States beyond any reason that can find justification under treaty, under policies, and under sound, good administration; and, on the other side, from those who, regardless of international obligations and regardless of other nations' state of preparedness, would scrap our Naval Establishment and set an example thereby, as they say, to the nations of the world.

APPROPRIATIONS AND ESTIMATES

Before asking the Members of the House to consider the pending appropriation bill let me refer to a general statement that I made one year ago in reporting the appropriation bill for the current year. I pointed out at that time that when the World War came to an end the Government found itself in possession of many hundreds of millions of dollars worth of property that had been purchased for the Navy and which was not immediately necessary for the maintenance of the Naval Establishment. The Congress determined to sell several hundred millions of dollars worth of this property and to turn the moneys received into the Treasury. This policy was followed out.

Another policy was adopted which provided for the sale of vast quantities of surplus material by the Navy, with the Navy Department given authority to use large sums in new construction work, these sums being in addition to the regular appropriation for the year within which they were used. Last year, for instance, the Congress authorized the Navy, in addition to the direct appropriation of more than \$278,000,000, to expend \$22,500,000 that would be received from materials sold. For the preceding fiscal year, 1924, we authorized \$35,450,000 in addition to the direct appropriation of \$294,967,200; and for the year before that we authorized the use of something like \$54,000,000, received from surplus-property sales, for increase of the Navy, and this amount did not appear as a direct appropriation against the year 1923. In addition to that, the Navy was authorized to use vast quantities of material that had been purchased during the war without a charge for such materials being made in large part against the direct appropriations for the year in which the materials were used. Thus from these two sources—moneys received from the sale of surplus property and materials purchased during the war—the Navy Department appropriations have been supplemented for each of the last several years without charges being made against the funds appropriated in the annual Budget.

Last year I made the statement to the House that surplus stores had been reduced to such an extent that the bill we then reported would carry, probably, the last blanket authorization for the use of money or materials to supplement the appropriations made by the Congress. In realization of the forecast that I made at that time, the present appropriation bill carries no indirect appropriations, and I make this statement so that as you draw the comparisons between the cost of the upkeep of the Navy to-day and in other years you may follow the correct standard.

For 1924 we made direct and indirect appropriations that aggregated \$330,417,200. For 1925 we made direct appropriations amounting to \$278,175,460.87 and indirect appropriations that amounted to \$22,500,000, a total of \$300,675,460.87. The pending bill carries appropriations in the amount of \$286,385,578 and contract authorization in the amount of \$4,160,000, or a grand total of \$290,485,578.

CRITICISMS

At this point I want to refer to some of the general criticisms that have been directed against the Naval Establishment, not with the object of going into detail either in the presentation of the criticism or into great detail in denials of them. I want to make a general statement which I think will be helpful and that will in a general way answer the criticisms that have been made.

I do not know who is responsible for the propaganda that is going on. At any rate, it appears that there must be some definite organization that is capable of putting out lecturers and writers who with facility obtain a hearing and who on the basis of statements that they make are arousing other comment from editors, publicists, and lecturers, who rely upon the statements put out as though they were facts and upon which statements they proceed to consider the condition of the Navy.

Mr. ABERNETHY. I understood the gentleman wished not to be interrupted, but at this point I want to ask him a question. It worries me, and has other Members of the House, when we saw the actual sinking of the battleship *Washington*, and then the statement of the Secretary of the Navy that it is going to take millions to put the Navy in condition.

Now, I have great respect for the opinion of the gentleman from Idaho, and if the gentleman does not mind I would like to know how he reconciles the demand for large appropriations and at the same time approves of the sinking of so many ships like the *Washington*. Of course, I assume that the answer will be that it was on account of the agreement for the limitation of armament. The gentleman probably remembers the article in last Sunday's paper by Will Rogers, who, it seems, struck a popular chord, and I would be glad if the gentleman would enlighten the House.

Mr. FRENCH. The gentleman from North Carolina gives a very good illustration of what I had in mind when I suggested that I be not interrupted. I had planned to refer to the very thing that the gentleman has asked me about, but since he has put the question let me reply at this time. Reference to it seems to be part of this propaganda. Under the treaty providing for the limitation of armaments it was impossible for the United States to maintain the battleship *Washington* that was in course of construction at the time the treaty was adopted. As a matter of fact when we adopted the limitation treaty the United States had building six battle cruisers and nine battleships, and a number of other craft, not referred to in the treaty. The treaty provided that as to two of the battleships of the nine in the course of construction and nearly completed, we could use them to replace two of the older ones, making up the 18 that we were permitted to retain. We completed these ships, discarded the old, and the two new battleships are a part of the fleet. The treaty also provided that two of the battle cruisers that were being built could be converted into airplane carriers, and we are to-day in the process of converting those two ships. It also provided that the other battle cruisers and battleships that were building should be scrapped. Different ways were provided for their scrapping, but at any rate the end of the scrapping had to be the same. The battleship *Washington*, to which the gentleman refers, was one of these. When it comes to scrapping either the battleship *Washington* or scrapping the treaty, which treaty we adopted and which the country applauded, there ought to be no question as to which one should be scrapped.

We scrapped the *Washington*, and during the process experiments were carried on that will be of greatest help to our Navy. Take another ship, the *Illinois*, well under way at the time of the treaty. This ship was scrapped and turned into

an armory for the State Militia of New York, and there it will serve a useful purpose.

Let me refer to other criticisms. A statement was made in one of the New York papers on Sunday pretending to quote the Secretary of the Navy to the effect that Great Britain has 297 destroyers. As a matter of fact, data that has been furnished to the committee by the Secretary of the Navy and the officers of the department indicate that Great Britain has 182 destroyers instead of 297. It is rather difficult to understand how statements like that can be made.

THE 5-5-3 RATIO

I have here another statement that was made in the press, and which found its way there doubtless through the propaganda that is on at the present time:

The United States . . . has, in fact, only 12 of such ships, (battleships). The other 6 are nearly obsolete and 4 of them are in such a state that the required steam pressure can not be maintained for fear of boiler explosions. They could not keep up with the fleet in last year's maneuvers, and are now laid up.

And hear again—

As matters stand, the battleships *Utah*, *Wyoming*, *Arkansas*, *New York*, *Texas*, and *Florida* are counted as part of the fighting force of the Navy, while actually they are laid up and unable to navigate safely, to say nothing of fighting.

As a matter of fact, all you need to do is to turn to the hearings to find that three of those ships that last year through engine difficulties broke down in attempting to keep up with the fleet are back with the fleet now and the other one is undergoing repairs and could, in fact, proceed with the fleet with her limited speed with little further general reconditioning. In response to a question of my colleague on the committee [Mr. Tamm] as to the condition of the 18 battleships, Secretary Wilbur said:

Secretary WILBUR. Every one of them [the 18 battleships] is fit to fight excepting the *Florida*. The *Florida* can be put in the battle line if a speed of 12 knots will get her there, and of course, that will depend on a lot of other things. It is not such a very long process to put her boilers in a condition so that she could make the necessary speed. We delayed on the *Florida* because under the limitations of the law we could not spend more than \$300,000 without a special authorization. We felt that if we spent up to that amount, there would be an element of waste in it, so we have not done what we could have done with her with the money we have, awaiting this modernization program, which will enable us to do more things at once and save money by doing it. But in case of a war declared, she could be put in condition in a relatively short time. All the ships are in condition to fight to-morrow, and she could with the limitation that I referred to.

There are, as we pointed out in our report, repairs which we class as urgent repairs and repairs which we class as needed. There is the regular overhauling and the regular upkeep of these ships, requiring constant attention. We feel that there has been too little money appropriated to give the necessary repairs and betterments to the ships to keep them in absolutely first-class condition.

So far as being able to fight to-morrow, they can all fight to-morrow.

We have been told, and we are told by the propagandists that there never was a time when we occupied the number 5 in the ratio 5-5-3. That statement does not do justice to those who make it. It does not do justice to those who were charged with the responsibility of shaping the treaty under the conference. Gentlemen should remember that the members of that conference on the part of the United States were men of the greatest ability, of sound Americanism, headed by Secretary Hughes. His coworkers were the former masterful Secretary of State, Mr. Elihu Root; the late Senator Lodge, a man of commanding genius; and the great Senator UNDERWOOD, of Alabama, assisted as they were by the officers of the Navy Department and other specialists representing in superlative degree the best thought of our Government in arranging the 5-5-3 program. When we adopted that treaty we adopted it upon the basis of the conditions that were worked out by those men who were our commissioners at the conference. We have a right to assume that those men knew what they were doing and the contents of the contract to which they had subscribed on behalf of the United States. More than that, it not only had the approval of this commission, but it had the approval of the Senate when the treaty was ratified.

When Secretary Wilbur was before our committee, speaking upon this subject, he said:

I have absolutely no sympathy with the claim that we were over-generated in that limitation of armaments treaty. The fact is that we got exactly what we proposed, and I am perfectly willing to accept

the judgment of those who participated in that treaty that the battleship strength at the conclusion of the treaty and of the scrapping was substantially in the ratio stated in the treaty.

The conclusion of Secretary Wilbur was the conclusion of those who represented the United States in the armament conference. I believe their conclusion was correct. So far as ships were concerned, exclusive of certain limitations touching upon tonnage, the treaty defined the number of battleships and the tonnage for the United States, for Great Britain and Japan, for France and for Italy. The ships of these different nations were not alike but they were substantially alike; they were comparable. Some of them were older than others; some of them were very modern. We were compelled to provide in the treaty that the United States could substitute new battleships for two of the older ships that we counted among the 18 when the treaty was written. We also provided that Great Britain could retain certain battle cruisers and certain tonnage in excess of 18 and in excess of the tonnage that will ultimately be allotted to each nation for the reason that Great Britain's ships were older than ours, and it seemed that the only fair basis that could be attained was one that could provide for adjustment that could be made within a comparatively short period of time. The battleships of the United States, generally speaking, were newer than the battleships of Great Britain. I remember when Colonel Roosevelt nearly one year ago was before our committee, I asked him whether or not our capital ships are not more modern and better ships than the capital ships of Great Britain. Colonel Roosevelt, and remember he was the Assistant Secretary of the Navy at the time, replied, "Yes, on an average."

Continuing, Colonel Roosevelt said:

I remember the expression used by Admiral Chatfield at the time we were talking about that. He said, "The tail of your column is not as good as the tail of our column, but the body of your column and the head of your column are very much better than any of the rest of our column."

Mr. McKEOWN. If the gentleman will yield, are we to understand that the result of the armament conference was simply to fix a ratio up to which we must maintain or could maintain the Navy, and also above which we must not go, but we were permitted to go below as much as we wanted to?

Mr. FRENCH. Well, there are those who contend that the treaty means that it fixes a maximum above which we can not go, and that we should constantly maintain that maximum. The former is the essence of the treaty, namely, that our country shall not exceed the ratio fixed; the latter, namely, what we may do under the maximum, rests with the good judgment of the United States. For the present I believe we should maintain the ratio in the interest of world peace, striving constantly for the consummation of further agreements of the world powers that will mean the reduction of armaments and thereby the lessening of the burden of military and naval establishments.

All of the British capital ships are not in full commission, and I am sure we may assume that with the older of the capital ships of Great Britain there are similar difficulties due to increasing age that pertain to the ships of the American Navy and that pertain to the ships of all navies. So far as I am concerned, I believe it the part of wisdom for the present Congress to provide for the modernization of the six battleships. We have not had opportunity to go into this question upon the basis of Budget estimates. Estimates have not come to us from the Budget, but I believe that the normal looking-forward program for the United States to follow would be to provide for the modernization of these essential ships of our fleet.

We asked the Secretary when he was before the committee whether there were those in this country who had better opportunity for knowing the condition of the Navy than did the officers of the Navy itself. Secretary Wilbur very frankly told us it would be impossible for others to have such opportunity to know the condition of the ships of the Navy. Manifestly that must have been his answer. He gave it. We then followed the question up by asking the responsible heads of the different bureaus what was the condition of the Navy, and I am going to refer to just a few of the answers which were given. In the reference I shall make now I am going to turn to the hearings for a moment. We had before us Admiral Robison, the head of the Bureau of Engineering. Admiral Robison discussed what he called the pending load of accumulated repairs that would need to be kept up in the Navy. He indicated that the pending load amounted to some-

thing like \$49,000,000 plus, a part of which could be regarded as for items for putting in modern equipment, more modern radio, for instance. I remember, as to radio equipment, the amount was for more than \$7,000,000. The part of the Naval Establishment under the Bureau of Engineering would possibly cost to replace \$600,000,000. When Admiral Robison told us the amount of load that he suggested was being accumulated that would need to be cared for I asked him:

Is that a severe indictment of conditions, or how do you regard it?

Admiral Robison answered:

I think not. It is not, of course, satisfactory, but I do not think that it is bad.

Mr. BYRNES asked:

What is their condition to-day?

Referring to the battleships that were taken out during the fleet maneuvers.

Admiral ROBISON. About 10 per cent better so far in 1925 than they were a year ago.

Mr. BYRNES. I do not know what their condition was a year ago, except that the chief of operations says in his report that they could not hold full power trials.

Admiral ROBISON. They are now safe for operation at full power, and I have so reported. I originally made the report that they were not safe, and I also made a subsequent report that they were safe.

Whose authority are you going to take—the statement of the Bureau of Engineering or the self-appointed critics? Those are the battleships to which criticism has been directed.

Again, on page 487, Admiral Robison, in comparing the condition of the establishment now with its condition a year ago says:

It is my personal opinion, which I give as Engineer in Chief of the Navy, that the engineering efficiency of our fleet is to-day between 3 and 4 per cent superior to what it was one year ago.

Criticism has been directed against the destroyers that are out of commission and that are tied up in Philadelphia and in San Diego. I asked Admiral Robison what of the condition of the destroyers, and the record will indicate the situation. What did Admiral Robison say before the committee a few weeks ago upon the condition of the destroyers? I quote from the hearings:

Admiral ROBISON. I could discuss that [condition of destroyers] at length, but I do not think it is necessary. As to the Pacific coast division, the Board of Inspection and Survey has submitted a very favorable report upon the results of our methods in the handling and the care of the machinery on the vessels out of commission at San Diego, particularly. A recent inspection of the destroyers at Philadelphia was made by Commander Church, who is present, and who can give the details of the results of his inspection to you. They are in satisfactory shape also.

Mr. FRENCH. Commander Church, could you at this time give the committee a picture of the situation touching the care and maintenance of the destroyers out of commission at Philadelphia?

Commander CHURCH. Yes, sir. The machinery is kept up in accordance with instructions issued by the Bureau of Engineering, and those instructions have been in vogue for a year. They were made up as a result of an inspection by the Board of Inspection and Survey and after the machinery had been laid up for a period of about two years, during which time methods for the preservation were carefully watched. They were originally laid up in accordance with the bureau's instructions, and all of those inspections were more or less of a check-up on the original methods.

Mr. FRENCH. What would you say as to the general condition of those ships?

Commander CHURCH. The general condition of the ships at present is excellent.

Mr. FRENCH. You would not agree with the statement in the morning papers to the effect that the ships out of commission are rusting and rotting to pieces?

Commander CHURCH. The machinery on the destroyers is not—emphatically not.

Now let me turn to the report that was made to the committee by Admiral Beuret. He is the Chief of the Bureau of Construction and Repair, and is in a position to know the condition of these ships. Let me quote from the hearings:

Mr. FRENCH. What is the general condition of the oil-burning battleships?

Admiral BEURET. There is a certain amount of accumulated work. I do not think they are yet at the point where the vessels could be considered to have seriously deteriorated other than ordinary obsolescence due to age.

Mr. FRENCH. What about the six coal-burning battleships from the standpoint of construction and repair?

Admiral BEURET. The repairs undertaken on them have been limited more strictly because we did not wish to do work that might be thrown away in case modernization were authorized.

Speaking of cruisers of the first line:

Those ships are in very excellent condition, then, from the standpoint of C. and R.?

Admiral BEURET. Oh, yes; they are practically new ships.

Again, turning to aircraft carriers, touching the amount asked for in the pending bill, I asked this question:

Mr. FRENCH. Then, does this \$63,000 care for you pretty well?

Admiral BEURET. Yes; we estimate so.

As to mine layers, the amount referred to was for their upkeep. I asked Admiral Beuret:

Does this care for you?

Admiral BEURET. So far as we know it does. These vessels also are rather old, and they are gradually deteriorating. They have not arrived at the point where we would want to refit. In fact, I do not know whether we would want to refit those particular ships. As you know, they are converted merchant vessels.

Or, again, referring to destroyers of the first line, after referring to the amount asked for, I propounded this question:

Will that care for them in very good shape?

Admiral BEURET. So far as we can determine at the present time, it will. That does not provide for many alterations. It provides what we estimate is a sufficient amount for repairs, however.

As to light mine layers, I asked this question:

Are they in very good condition from the standpoint of their age?

Admiral BEURET. They are in reasonable condition from the standpoint of age, so far as construction and repair is concerned. That is based on our best information.

As to submarines, first line, I asked this question:

From the standpoint of construction and repair, what is the condition of those vessels?

Admiral BEURET. We estimate that that will keep them in reasonably good condition, considering their age.

As to hospital ships, referring first to the *Relief*, my question was—

What would you say as to its condition?

Admiral BEURET. She is in reasonably good condition, so far as I know.

Mr. FRENCH. How about the *Mercy*?

Admiral BEURET. The *Mercy* could have a considerable amount expended on her with benefit; but it is a question of policy as to just how far you want to go with those expenditures.

In other words, I have called to the witness stand the responsible heads of the several bureaus having charge of these ships that are a part of the active fleet of the Navy. The report is, generally speaking, that the ships are in good condition, and I hope the Members of the House may have time to examine the hearings closely.

Now let me refer once more to our critics.

Some of them are demanding inquiries and investigations. Well, I have no objections to any inquiries that may be made, and constantly the Members of the Congress must give closest study to all the varied activities that have to do with public defense and the Nation's welfare. But we must not let ourselves be swept from our feet by exaggerated statements and half truths. More than that, if any inquiry shall be deemed necessary in addition to the inquiry that the regularly appointed committees of the House and the Senate conduct from year to year we should know who it is that is speaking. It will not be enough to know the name of the witness; we must know for whom the witness speaks. If he represents a society or organization that is engaging in the propaganda for the scrapping of the limitation of armaments treaty and the projecting of our country into limitless naval programs, we should know who are supporting the groups or individuals that are carrying on the propaganda. If he is trying to foment suspicion upon the part of friendly nations, we should know his purpose. In short, the welfare of our country and humanity should be the objective, and that alone.

I commend to the Congress the words of President Coolidge in his message to the Congress on December 3:

We have been constantly besought to engage in competitive armaments. Frequent reports will reach us of the magnitude of the military equipment of other nations. We shall do well to be little impressed by such reports or such actions. Any nation undertaking

to maintain a military establishment with aggressive and imperialistic designs will find itself severely handicapped in the economic development of the world. I believe thoroughly in the Army and Navy, in adequate defense and preparation. But I am opposed to any policy of competition in building and maintaining land or sea armaments.

THE BUILDING PROGRAM

The pending bill does not provide extensively for a building program. We carry for increase of the Navy \$6,944,000. We provide for continuing construction on the mine-laying fleet submarine that was authorized by the last Congress. We provide for continuation of work on the two aircraft carriers and we provide for laying down two additional fleet submarines.

Over and over I have been asked what we proposed to do in the way of a cruiser-building program, the construction of gunboats, and the modernization of the six coal-burning battleships. In deference to these questions and because of the interest in this subject at this time, I desire to make a brief statement. The modernization bill that provided the authority for appropriations for eight additional cruisers, for six gunboats, and for the modernization of the six coal-burning battleships passed the House of Representatives and the Senate last spring. As the Members know, the bill was held up in the Senate on a motion to reconsider that was not disposed of until last week. This is the short session of the Congress. We have less than 90 legislative days. When the chairman of the Appropriations Committee laid out the program for the session it could not be foreseen when the modernization measure would pass the Senate, or when, if it should pass, estimates could be made to the Congress under the general legislation. Estimates for cruisers, for gunboats, and for modernization of the battleships have not come as yet to the Congress. Should estimates be made, as I have assumed will be the case, it will then devolve upon the committee and the Congress to consider the larger building program touching cruisers, touching gunboats, and touching the modernization of some of our capital ships.

BUREAU OF ENGINEERING

For the Bureau of Engineering the bill carries a total appropriation of \$19,961,000—an increase of \$1,952,200 over the amount appropriated for the current year.

The Members of the Congress will recall that one year ago the committee during the hearings came to the conclusion that more should be appropriated for engineering than had been recommended by the Budget. Accordingly the committee recommended that \$1,962,000 be added to the Budget estimates for improvement of the fleet in such particulars that would have regard to safety of human life, efficiencies, and economies. In addition to that, we carried a provision for \$600,000 for experimental purposes looking to the development of adequate propulsions on power for a fleet submarine. The Senate struck out the latter item and did not see the former item in the important degree in which it had appeared to the House. However, as the result of the action of the Senate and House, we added a sum total of nearly \$2,000,000 last year to engineering in excess of Budget recommendations.

This year the Budget recommendations follow along the line indicated by the Congress of bringing up the physical condition of the fleet to a more satisfactory shape. With this in view, larger appropriations by nearly \$2,000,000 are being asked by the Budget and by the committee.

Probably I should say here that upon the basis of appropriations made for the current year, we are reducing the engineering load of the Navy, and the ships, generally speaking, are in better condition than they were a year ago, and they will be in better condition next year than they are now.

CONSTRUCTION AND REPAIR

For construction and repair, we have followed the recommendations of the Budget in increasing the amount in the current measure over existing law by about \$1,400,000.

Generally speaking, our ships are in excellent condition, but it will not do for them to retrograde in any particular. The amount that we carry in the bill is a sufficient amount to maintain the ships of the United States, from the standpoint of construction and repair, in such condition as is desirable from an economic basis.

NAVAL RESERVE FORCE

For the Naval Reserve Force we have provided \$3,900,000, the same amount that is carried for the current year.

The House will remember that one week ago a bill was passed dealing with the whole reserve question, and it was felt by the committee that as the reserve establishment is not now up to the number of officers and men that may be attained

under current appropriation, it would be well for us to make an appropriation in the same terms for the coming fiscal year pending further consideration of the question upon the passage of the measure that proposes reorganization of our Naval Reserve.

MARINE CORPS

The members of the committee have only the highest words of praise for officers and men of the Marine Corps. The amount carried in the bill is essentially the amount recommended by the Budget and is based upon an enlisted personnel of 18,000 men instead of 19,500 for the current year.

The reason for the reduction of enlisted personnel is on account of the withdrawal of our forces from Santo Domingo, where until recently we had maintained a force of nearly 1,800 men.

With the administration recommending an establishment of 18,000, and with the activities with which the Marine Corps has to do apparently the same for 1926 as for the current year less their service in Santo Domingo, we have not undertaken to disturb the Budget estimates.

AERONAUTICS

For aviation the bill carries a direct appropriation of \$14,800,000. This is approximately the same amount that has been carried for each of the several preceding years.

In addition to that, however, we are providing authorization for construction of new airplanes and for equipment, spare parts, and accessories to an amount not in excess of \$4,100,000.

As to the total amount of direct appropriation and authorization, it will permit the aviation branch of the service to be provided with some 40 or 50 more planes by the end of the fiscal year 1926 than they will have at the beginning. This does not take account of aircraft that must be provided for the aircraft carriers if they shall be completed by July 1 and October 1, 1926.

Mr. BRIGGS. Will the gentleman yield?

Mr. FRENCH. Yes.

Mr. BRIGGS. I want to ask the gentleman whether those airplanes are thoroughly modern and up to date, or whether they are, according to statements appearing in the newspapers from day to day and emanating from some source—I do not know where—old, antiquated, and not keeping pace with the times and not keeping pace with the developments and improvements of our competitor nations.

Mr. FRENCH. If the gentleman will examine the testimony that was given to our committee he will find it is the judgment of Admiral Moffett, and those who collaborate with him in that great activity, that the United States is not only abreast but is probably in a position of superiority from the standpoint of knowledge of aircraft, the standpoint of designs, and the standpoint of effectiveness of the different craft we have. We are not in the lead from the standpoint of numbers. Great Britain has more than we have; France has more than we have; and so has Italy. A word as to need for quantity production. We do not have the problems to meet that either Great Britain, or France, or Italy, or other nations have to meet. Admiral Moffett told members of the committee that the effective operating radius of an airplane is something like 550 miles. Thus it would be possible for France or Great Britain or Italy to have an enemy, and these countries are surrounded by potential enemies—surrounding them within comparatively short ranges—it would be possible for either one of those countries to have a potential enemy within her bounds in the air within 30 minutes or an hour, while no such condition, thank God, touches the United States, the radius of effective operation of airplanes being 550 miles. I do not believe it is sound business for our Government to engage in quantity construction when it comes to airplanes; we are abreast in design; we are abreast or superior in everything pertaining to aircraft, with the exception of numbers alone.

When it comes to the question of whether the airplanes we now have are the most up to date, let me say that the life of an airplane is approximately 3 years. We have at this time about 512 planes that are serviceable. Of that number about 158 will be subtracted during the fiscal year 1926 on account of obsolescence. We will add during the year 212 new planes, and our total at the end of the fiscal year 1926 should be about 557.

Mr. BRIGGS. Will the gentleman tell me what the present ratio is between our airplane strength and the strength of the leading nations of Europe?

Mr. FRENCH. Does the gentleman mean from the standpoint of numbers of ships?

Mr. BRIGGS. I mean numbers of ships and general efficiency.

Mr. FRENCH. From the standpoint of efficiency, I have already answered the gentleman. I believe we are second to none.

Mr. LAZARO. Before the gentleman leaves the airplane subject, would he tell the House how we compare with England, France, and Japan in respect to personnel?

Mr. WAINWRIGHT. In air service?

Mr. LAZARO. Yes; the Air Service—the number of men trained to handle these planes?

Mr. MILLER of Washington. While discussing the question of aviation in the Navy, how are we keeping pace with the countries of Europe?

Mr. FRENCH. I think I can best answer these questions by making a general statement.

As to number of planes and their effectiveness, it is always difficult to furnish information touching foreign countries. Yet members of the committee have not failed to give some attention to the subject.

In Great Britain, where there is a combined air service, I understand about 3,250 officers are attached to the service and in addition 112 cadets and some 28,880 men.

In France, where there is a combined service, there are about 1,970 officers and slightly less than 35,000 men, including 2,777 pilots.

In Italy again we find a combined service, and there are about 683 officers and 6,000 men.

It must be remembered that in all of these countries there is a combined air service; likewise it must be remembered that many of these men are civilians who are employed as ground men and in various activities that have to do with repair of airplanes and fabrication to some extent.

In the United States we have separate Air Service for the Navy and for the Army.

What part of aviation establishments of different countries should be regarded as corresponding to the aviation service of our Naval Establishment it is not possible to say. We have fairly approximate estimates of officers and men of the air service of the different countries that are detailed apparently to strictly naval work, but our problems are different.

Great Britain has only about one-half the number of planes allocated to her fleet as has the United States, and Japan has less than that.

These countries are developing their air service apparently with the thought that the radius of action from the mainland should be accentuated over a radius of action from the fleet.

In the United States, as of the 15th of October, we had 611 officers listed in Aviation Service, of whom 361 were qualified aviators, 83 students, and the remaining ground officers. Of enlisted men we had 3,623, including 1,763 of aviation rating. In the Marine Corps we had 65 officers, of whom 42 were qualified aviators, and 908 enlisted men, of whom 157 were assigned to duties that involve flying.

Mr. BACON. Are those 5,000 all for heavier-than-air machines?

Mr. FRENCH. Oh, no. The number includes both lighter-than-air and heavier-than-air activities.

Mr. BACON. What proportion of those 5,000 are being used for the *Shenandoah* and the *Los Angeles*?

Mr. FRENCH. It requires a crew of something like 41 for the *Shenandoah* and a few more than that, as I recall, for the *Los Angeles*. About 300 men on the ground can handle either one.

Turning to the question of planes, the general information that I have and which may not be quite accurate is to the effect that Great Britain has about 636 planes in active service, the same number in reserve, and an unknown number in what is called "war stock."

France has about 1,400 planes in active service and about 3,100 in reserve.

Italy has about 900 planes in active service and 500 in reserve.

I have understood that as to Great Britain, the budget contemplates an increase of 192 active planes with a similar number added to the reserve. Here again it must be remembered that we can not know with definiteness how many of the planes of different nations that are regarded in active or reserve service are of latest designs and how many while not of latest design are suitable to some extent for training purposes.

Turning to Japan, I do not have data showing specifically the number of officers and men assigned to this service. I understand that for the fiscal year 1920-21 her budget for aircraft was approximately 43,000,000 yen, or about \$21,500,000; the next year, 1921-22, it was about \$21,000,000, of which a small amount—about \$15,000—was devoted to purposes other than the navy or for a subsidy in the development of aircraft;

during the fiscal year 1922-23 the total budget was slightly less, or about \$21,200,000, and the amount for subsidy was considerably greater, or \$300,000.

Great Britain's budget for aircraft for the fiscal year 1923 was £15,663,500, of which £571,000 was devoted to subsidy and purposes other than military.

The budget of France for the same year was 947,352,550 francs, of which the sum of 179,963,550 francs was devoted to subsidy and purposes other than military.

In Italy the budget for 1923 carried 220,000,000 lire, of which a part was for subsidy and nonmilitary objectives.

Mr. BRIGGS. What do you mean by a united service, if I may ask?

Mr. FRENCH. I mean that in Great Britain there is no air service connected with the navy or with the army. There is an air service, but it is independent, a separate establishment, cooperating with the army and the navy, but independent of them.

Mr. BRIGGS. I would like to ask the gentleman one further question. How do the appropriations in this bill with reference to aircraft conform with the recommendations or the estimates of the Navy Department on that subject?

Mr. FRENCH. As coming to the committee through the Budget?

Mr. BRIGGS. To the Budget first, and then from the Budget to the committee.

Mr. FRENCH. I would say that the Navy Department would prefer to increase the Air Service by building about 300 more airplanes to be regarded as reserve. This would give us a total of 870 planes, whereas we have upward of 500. Airplane development is in such state, however, that the Budget first, and the committee later, felt that it was not a desirable thing to build up a large surplus of airplanes. Should that be done, in a very few days or years, some one like my friend the gentleman from New York [Mr. LA GUARDIA] would rise and point out the hundreds of obsolete airplanes that we had somewhere in the country just as he points out the number of obsolete motors that we now have in the Air Service, although it is a new thing comparatively.

We are making tremendously rapid gains in air development. We have believed in stressing the proposition of development, of working out designs in type, of trying, if we can, to be ahead of any other nation in the world, but when it comes to quantity production I would say that at the present time that has not appealed to the members of the committee. It did not appeal to the Budget. I do not believe it is sound business.

Mr. HILL of Maryland. Will the gentleman yield?

Mr. FRENCH. Yes.

Mr. HILL of Maryland. Is it not the case that our Navy has more actual planes assigned to the Navy for the exclusive use of the Navy than any other Navy?

Mr. FRENCH. Oh, that is true; but I suppose there again we get into the question of a united and a divided air service. Let me say in that connection that there is to-day a drive on in Great Britain looking to the separation of the air service and giving to the naval establishment of Great Britain an independent air unit. More than that, if you will read the program as outlined by the new Premier of Great Britain, Mr. Baldwin, you will find that it is part of his program to establish an aviation service in connection with the Navy.

Mr. HILL of Maryland. I would like to ask the gentleman if France has a separate aviation unit, or is it assigned to the Navy?

Mr. FRENCH. In France it is a separate unit.

Mr. WINGO. Will the gentleman yield?

Mr. FRENCH. I will.

Mr. WINGO. Getting back to the airplanes, I understand that 20 per cent of our planes are obsolete, but we have about 900, and only about 500 are not obsolete.

Mr. FRENCH. The old ones we hardly count at all. Many of them are effective for training.

Mr. WINGO. How many planes of the 500 that they do not count defective will become obsolete during the next fiscal year?

Mr. FRENCH. About 158 will be subtracted on account of obsolescence and usual wear and tear.

Mr. WINGO. Will not there be over 200, have not you got 305 planes that will be more than three years old during the next fiscal year.

Mr. FRENCH. Possibly.

Mr. WINGO. You propose to build 200 the next year.

Mr. FRENCH. Over 200. The replacement will more than equal the separation on account of obsolescence.

Mr. WINGO. It is a mathematical fact that the number of machines you propose to build during the next fiscal year is smaller than the number of machines that will become obsolete during the next fiscal year. That is true mathematically, is it not?

Mr. FRENCH. If you regard a machine obsolete that is not of the latest type, your statement might be accurate or it might not. I have indicated to you the number—we propose to be somewhat ahead in adequate planes another year from the point where we now are if everything runs normally.

Mr. WINGO. That is what I want to get at. The gentleman made a statement a while ago, and as I figure it out you will have fewer adequate planes in the Navy at the end of the next fiscal year than you have now because by the gentleman's own rule of what may constitute an obsolete plane, you do not provide for replacement for machines that will become obsolete next year by 25 or 30?

Mr. FRENCH. The gentleman must remember that a plane does not collapse at the end of a three-year cycle. I was using that as a broad general statement. We have not only done better than the gentleman says but we are providing a program that will give us 50 more planes at the end of the fiscal year than we shall have at the beginning.

The CHAIRMAN. The time of the gentleman from Idaho has again expired.

Mr. FRENCH. Mr. Chairman, I will take 10 minutes more.

Mr. WINGO. Is not this true? Of course, the question when a plane becomes obsolete is more or less arbitrary, but is it not true that you have now some planes among your 300 and some odd, counted as obsolete, that are of a later manufacture than some of the 500 you count effective? Is it not true that some planes will not become obsolete; but, on the other hand, there are going to be about the same number during the fiscal year become obsolete less than 3 years old, as in the past? Does not that fact offset the other?

Mr. FRENCH. No; I do not think it offsets it. I think we have cared for the situation so that the Air Service will be provided for.

Mr. LA GUARDIA. Will the gentleman yield?

Mr. FRENCH. I shall be glad to yield.

Mr. LA GUARDIA. In connection with the relative strength of our air force and the radius of planes, how many plane carriers has England?

Mr. FRENCH. She has three and three are under construction.

Mr. LA GUARDIA. How many have we?

Mr. FRENCH. We have the *Langley*, and we have two under construction.

Mr. LA GUARDIA. Out of the \$14,000,000 that is set aside for aviation in this appropriation bill, how much of it is allotted for experimental purposes?

Mr. FRENCH. About \$1,550,000.

Mr. LA GUARDIA. Has anything been done in the last year to coordinate and cooperate with the Army experimental stations?

Mr. FRENCH. There is that coordination going on constantly. Each service is receiving the benefit of experimentation, and both are working in close harmony in the development program.

Mr. LA GUARDIA. But they both have their overhead forces?

Mr. FRENCH. We try not to duplicate, and that is to be desired. We do not want duplication where it can be avoided.

Mr. LA GUARDIA. Is such duplication avoided at this time?

Mr. FRENCH. For the most part it is. There, of course, must be a boundary line, over which there is some overlapping.

Mr. LA GUARDIA. Following up the statement of the gentleman that as far as development and science of the air go the United States is leading, can the gentleman inform the House how many new types of motor have been adopted by the Navy in the last three years?

Mr. FRENCH. Some five or six, I would say, with several additional modifications of each type.

Mr. LA GUARDIA. As a matter of fact, is it not true that while there has been progress and improvement in air matters we are still using an old-type motor in the majority of our ships?

Mr. FRENCH. To some extent that is true. On the other hand, we have developed five or six very fine motors, and as we build new planes we use the latest and best motors that we have.

The CHAIRMAN. The gentleman from Idaho has consumed one hour.

Mr. FRENCH. Mr. Chairman, I yield myself 10 minutes more.

Mr. LA GUARDIA. Has anything been done now to put in production the new types of motors which have been developed in this country?

Mr. FRENCH. As we need them, yes; and we will have the more modern motors in the airplanes that will be built out of the moneys carried in this bill.

Mr. LA GUARDIA. May I ask the gentleman this further question? Does the gentleman know whether the Navy has taken into consideration the possibility of using aircraft in connection with other departments of the Government for useful purposes?

Mr. FRENCH. In just what way?

Mr. LA GUARDIA. For instance, take the Alaskan mail service. We found there that we can carry mail by aircraft in a few hours that otherwise would take 18 days by dog train. Could not the Navy assign some of its ships to carrying the mail in that region and also in some of our insular possessions?

Mr. FRENCH. It would be a possible thing to do, but it would require legislation to carry out any program of considerable size. The Navy Department under present law may experiment, and if as a by-product of the experiment good shall result, so much the better; but when it comes to any general policy of the Navy going into the mail-carrying business, either on the mainland or in Alaska or elsewhere, the department would be exceeding its authority, in my judgment.

Mr. LA GUARDIA. It is a problem worth studying.

Mr. FRENCH. It is an interesting question, and probably I should say that many by-products are resulting from the aircraft service of the Navy.

Aircraft everywhere must share in improvements to ship designs, motor power, economics to be attained in fuel consumption and in safety devices. This is true of the lighter-than-air activities as well as the heavier than air.

May I say that great strides have been made in economies in helium production within the last few years. Within a year the cost has gone down 40 per cent and we are developing better methods of storing this wonderful product that will be of benefit from military, commercial, and scientific points of view.

Or, again, there has recently been developed what is known as the water-recovery apparatus through which the weight of fuel consumed during the flight of an airship may be recovered by combining the gases from the exhaust of the engines with elements from the air and thus producing such quantity of water as will equal the weight of the fuel supply at the beginning of the trip. This device alone means economy, because it will save the valving of helium in holding an airship to a constant level.

Mr. MILLER of Washington. I am wondering whether the committee took into consideration the recommendations of the Chief of the Bureau of Operations for the establishment of a naval reserve station on Puget Sound; and if they did not, would you tell the committee why? There is now one station on the Great Lakes and two on the Atlantic coast, and the Chief of the Bureau of Operations has recommended the establishment of one on the Pacific coast, and I understand that the committee did not consider it.

Mr. FRENCH. Before referring to the question raised by my distinguished colleague I believe I may say that if the gentleman could have his way he would make Puget Sound the center of our country's Naval Establishment. I am thoroughly familiar with the wonderful harbor and natural conditions in Puget Sound for a large Naval Establishment. I am familiar with our navy yard at Bremerton and with the proposed naval reserve station at Sand Point, and if I were not familiar with them my persistent colleague would see to it that I became acquainted; in fact, he lets me forget nothing.

The recommendation of the Chief of Operations for the establishment of a naval reserve station at Sand Point probably went to the Budget, but it was not before our committee. The members of the committee realize the importance of an air station in Puget Sound. However, the Government has not acquired the site at Sand Point, and we felt that action by our committee would be premature. Again, last week the House passed a bill for the reorganization of the reserve force. That bill is now in the Senate. It seemed to members of the committee that the orderly and logical thing to do was to await the passage of the reorganization bill touching the reserve force and possibly the acquisition of an air station on the Puget Sound.

Mr. MILLER of Washington. I would say that if the Navy could make its principal base at Puget Sound it would use rare, good judgment, and the establishment of a naval reserve

station in the great Northwest should be one of our first considerations.

Mr. FRENCH. Now let me make a further observation and then I must hasten on to another part of the bill. I did not complete mention of the entire program that I have in mind touching the air establishment. At this time we are in process of converting into airplane carriers the *Lexington* and the *Saratoga*. When those ships were authorized as airplane carriers there was a limit of cost fixed at \$23,000,000.

The limit of cost is too low. It must be raised to \$33,000,000 if we are to have carriers. The Appropriations Committee does not have authority to bring in an item for expenditures on those two ships in excess of \$23,000,000. The Congress during the present session should provide legislation for the increase of the limit of cost. If it does, we must then consider another sizeable item. The Budget Bureau did not recommend to Congress any money for the aircraft that will be needed on the two carriers. If the limit of cost shall be increased and the money made available, one carrier should be completed on July 1, 1926, and the other by October 1 following.

We shall need to provide something like \$5,900,000 for airplanes, and this would give 80 planes to each. I do not think we need to make a direct appropriation for the entire amount. Probably we could handle it in the same way we provide for planes in the pending bill—part by appropriation and part by authorization of contract. The number of manufacturing plants capable of producing planes in the United States is not large and they could not turn out the number indicated until well along in 1926.

Mr. FROTHINGHAM. I judge from what the gentleman says about airplane carriers that they are well over half completed.

Mr. FRENCH. Yes; they are running right along, the *Lexington* 56 per cent plus and the *Saratoga* about 55 per cent, and we carry money in the bill for their continuation.

Mr. GARNER of Texas. Mr. Chairman, will the gentleman yield?

Mr. FRENCH. Yes.

Mr. GARNER of Texas. I want to ask the gentleman a statistical question. Has he the figures with reference to the amount of money that England spends each year for the maintenance of her navy?

Mr. FRENCH. Approximately £59,000,000.

Mr. GARNER of Texas. How does that compare with the United States?

Mr. FRENCH. About the same.

Mr. GARNER of Texas. What is it with Japan?

Mr. FRENCH. About \$120,000,000.

Mr. GARNER of Texas. In other words, we are maintaining our Navy as cheaply as England?

Mr. FRENCH. We are maintaining a comparable institution in my judgment.

Mr. CARTER. Is it the gentleman's contention that when we had this reduction in arms agreement, or whatever it is called, our ratio as 5-5-3 was fair? That is, did the United States get a fair 5-5-3?

Mr. FRENCH. Absolutely; I have no doubt we did.

Mr. CARTER. Does the gentleman contend that that has been maintained, or does he agree with the Navy Department that it has been reduced to 5-4-3?

Mr. FRENCH. If a battleship—that is, one of the 18 necessary to be maintained by us to keep up the ratio—should for some reason go out of commission, to that extent you would weaken the ratio of the United States. If it should go out of commission permanently, of course you would have to subtract a little more than 5 per cent, providing the capital ships of other nations were in better shape. When the four temporarily failed to meet the maneuver tests, the department estimated that the ratio had been reduced to 5-4-3. Gentlemen, at no time can ships be kept in absolutely perfect condition. One of the officers was before our committee and I asked him, jovially, whether he could tell the committee how the ships of the Navy could be kept in perfect condition and he said he could. I leaned forward in order to catch his answer, because I saw how enthusiastic the House would be when I related it to this body. He said, "Do not use them." He then followed that up by saying that if you were to put them all away in heavy oil deficiencies would creep in. So then if we are to use the Navy, machinery will break down, delinquencies will occur, and it is up to our Government to replace them constantly.

Mr. CARTER. The gentleman has not quite answered my question, although he has given a very interesting discussion. I want to know the gentleman's opinion as to what at the time the hearings were had was the relative ratio?

Mr. FRENCH. Oh, substantially the same as when it was written.

Mr. CARTER. 5-5-3?

Mr. FRENCH. I think substantially the same. We have reached the point where we all recognize that we ought to modernize several of our older battleships. It is foolish to put money into rehabilitation this year when we think that next year we are going to engage in more extensive improvements. But I think that substantially we are maintaining the 5-5-3 ratio.

Mr. VINSON of Georgia. I understand the gentleman to say that there is no doubt in his mind, and in the minds of the experts that he has examined, that the ratio actually existed at the time of the conference?

Mr. FRENCH. I think so.

Mr. VINSON of Georgia. The chairman of the Naval Affairs Committee last May, in discussing the naval bill there, stated this:

Excepting as to battleships and aircraft carriers, the 5-5-3 ratio with Great Britain and Japan was never in existence.

If the ratio did exist at the time of the conference, why was it necessary for this Congress to appropriate \$30,000,000 for the modernization of our ships? Is it the intention then when we modernize our ships to put them above those of Great Britain?

Mr. FRENCH. Not at all. On the other hand, the United States has the right to assume that Great Britain and Japan will constantly keep their battleships in the best of condition—the same battleships with the replacements permitted under the treaty; and it occurs to the members of the committee, as it does to the heads of the department, that the money recommended could be well expended, or at least that we should withhold money for temporary improvements until we can consider whether or not it would be an economic waste to spend large amounts for more comprehensive improvements.

Mr. VINSON of Georgia. Is not it a fact that the only equality was with reference to the tonnage?

Mr. FRENCH. I think not.

Mr. VINSON of Georgia. That there was never any equality with reference to gun fire or speed of ships?

Mr. FRENCH. Those two elements are not in the written text of the treaty. The treaty speaks in terms touching the number of ships and tonnage.

Mr. VINSON of Georgia. Exactly—

Mr. FRENCH. We recognized that the ships of the two nations were not exactly equal, and therefore Great Britain was allotted 22, including 4 battle cruisers, because she did not have 18 battleships which were comparable to our battleships.

Mr. VINSON of Georgia. I will state to the gentleman he is the only authority I have read or heard who ever has taken the position that when the conference adjourned we were on an equality with reference to the ratio with England except in reference to tonnage. Now, is it not a fact we were called upon to modernize our ships and to put blisters upon them, to deck protect them, and convert the coal burners into oil burners, to bring them up to the ratio of 5-5-3, and is not that the reason this Congress appropriated \$30,000,000 to do it?

Mr. FRENCH. Oh, no; not at all.

Mr. VINSON of Georgia. Then why the bill to modernize the ships?

Mr. FRENCH. Because it is necessary for us to expend money to keep our ships in the best condition that they ought to be in upon the assumption that Great Britain and the other nations are doing the same. We do not know precisely what is occurring in the engine rooms of the battleships there, and we have the right to assume that the machinery is being kept fit.

Mr. VINSON of Georgia. Well, there is a difference between keeping up the machinery and putting on blisters and deck protection. The deck protection is put on to protect the ship, and the blisters are put on to protect it from submarines. Now, when the conference adjourned, not expecting these conditions, we did not have that protection and the speedy cruisers, and we could only get the 5-5-3 when we modernized the fleet. Is it not a fact that our fleet as a fleet has not the range which the British fleet has?

Mr. FRENCH. We have five battleships that have a greater range than any ships of Great Britain. We have five more that are nearly equal in range. The other eight are outranged by the British ships.

Mr. VINSON of Georgia. Is not this the fact, that we have only 10 ships out of our 18 with a range of 24,000 yards, where Great Britain has 13 ships with a range of 24,000 yards?

Mr. FRENCH. That statement is correct.

Mr. VINSON of Georgia. But the total fleet of England can get in action with their 22 before we can get in action with our 18. Is not that the fact?

Mr. FRENCH. The whole question must be considered—not by fragments, but by totals.

Mr. VINSON of Georgia. Does not that go into the making up of the ratio, or does the gentleman contend the ratio is based exclusively on the actual tonnage?

Mr. FRENCH. No; I do not.

Mr. VINSON of Georgia. When the gentleman says that the question of the ratio is based upon the question of tonnage, it necessarily takes into consideration the efficiency and the range of the fire and speed of the ships?

Mr. FRENCH. Let me say to the gentleman that tonnage and numbers were the two most important elements in fixing ratios.

Mr. VINSON of Georgia. Let me state what is in my mind. After the modernization of the fleet has been authorized by Congress, is our fleet now better than it was at the end of the conference?

Mr. FRENCH. The gentleman has a right to his own conclusions, but I prefer to state the conclusions that are mine.

The part of the treaty which had to do with limiting battleships dealt with tonnage and with number of ships. I repeat that, in my judgment, at the conclusion of the conference the nations that were signatory to the treaty were upon the substantial parity indicated for the United States, Great Britain, and Japan by the figures 5-5-3.

Under the treaty we are not at liberty to increase the number of our battleships. Under the treaty we are not at liberty to increase the tonnage of a capital ship above 35,000 tons or the total tonnage of capital ships above 525,000 tons.

Within those bounds there is considerable liberty permitted to the several nations. One nation may prefer less deck and hull protection and devote the saving thus attained in tonnage to development of engine power in the attainment of greater and still greater speed. Another nation may feel that greatest good can be attained from a course that is distinctly opposite but within the boundaries fixed. There will be competition of the best minds connected with the naval establishments of the different nations to produce the best types of ships consistent with the needs of the respective countries.

Thus it does not follow that the ratio at the time of the adoption of the treaty was an unfair ratio because the United States or Great Britain may determine that for a given battleship the oil type of burner is preferable to a coal burner; nor does it follow that the treaty ratio was not a fair ratio at the time of its adoption if within the tonnage limits better protection may be given to the hulls or to the decks. Rather must we assume that all the nations within the bounds of the treaty will maintain the most effective craft.

THE NAVY GENERALLY

In discussing the pending bill I have tried merely to deal with outstanding features of the measure. The details will be considered under the five-minute rule. Probably I should say one word touching the Navy Establishment generally.

Much has been said in the press and in journals as self-appointed critics have discussed the question that would indicate that our Navy Establishment is on the verge of collapse. I am sure if Members of this House will follow, not broad general statements, but will follow the subject into the detail that is obtained in a committee room, they will be impressed with the fact that the ships of the Navy are splendid ships; that our Navy Establishment is adequate; that it is not being reduced to rust and ruin, but that it is an establishment that may arouse the pride and the enthusiasm of the people of our country.

And as for the officers and men of the Navy, they are of the highest type. The esprit de corps is perfect. Officers believe in their men, and men believe in their officers. They are doing teamwork. They are doing efficient work, and I believe that the morale to-day is greater than it has been at any time when officers and men were not under the sublime impelling force that makes heroes in time of crisis.

Mr. BYRNES of South Carolina. Mr. Chairman and gentlemen of the committee, I am not going to occupy very much of the time of the committee. I find myself in agreement with the gentleman from Idaho [Mr. FRENCH] as to many things; first of all, as to the condition of the Navy.

I do not believe that the people of this country need remain awake at night worrying about the condition of the ships that we possess. It is true that in February, 1924, when the man-

euvers were held, four of our ships were unable to keep up with the rest of the fleet, so far as their speed was concerned, and on the recommendation of Admiral Robison, the Chief of the Bureau of Engineering, they were not allowed to increase the pressure of their boilers to enable them to make a speed greater than about 12 knots an hour. But as far back as June that condition was remedied as to three of the four ships, and was not remedied as to the fourth, the *Florida*, because Admiral Robison knew that there was pending in the Congress the so-called modernization bill, which had passed the House and passed the Senate, but was held up in conference, I understand; and he knew that if that bill were enacted into law he would have to place a new deck upon the *Florida*, with resulting expense in wiring, and he very wisely refrained from repairs on the *Florida* until action was finally taken upon that bill.

Notwithstanding that fact, you have been advised by the newspapers that at this time four of our ships can not leave their docks. I must admit that, reading the statements in the Washington press, I was uneasy as to the condition of those ships, and when the Chief of Engineering was before the committee I read to him the statements contained in the leading editorial of the Washington Post that morning, to the effect that four of our ships could not navigate, and I received from the admiral, the Chief of the Bureau of Engineering, an explicit denial of the truth of the statement.

Since that time the Washington newspapers have continued to publish alarming reports as to the condition of the Navy. I simply want to say that I would regard it as extremely unfortunate if either the House or the Senate should respond to the propaganda now being conducted in that newspaper to hold a special investigation as to the condition of the Navy. It would be easy for me, if I wanted to indulge in partisan politics, to declare that notwithstanding the enormous expenditures made, that the money had been so wasted that the condition of the ships we possess is so deplorable that you ought to have a special investigation of conditions. But I know that there is no justification for it, careful investigation having convinced me of it. It would serve only to give some free advertising to a few individuals who are behind this propaganda.

I have in my hand a newspaper containing a statement from the principal propagandist, a man by the name of Shearer, who calls himself a naval expert, but who is a publicity expert. He gives a list of witnesses he will call, and among them is Rear Admiral Twining—he says in parentheses “if physically able.” That list of witnesses was published on December 12 and Rear Admiral Twining died on July 4, 1924. That is about as near accuracy as the other statements he has made from time to time which have been checked up by members of this committee. Just as the statement contained in the report as to the condition of the boilers was six months behind time, so is this list of witnesses just six months behind time. In his list of witnesses he named the chiefs of the various bureaus, all of whom have been before our committee, and their statements appear in the hearings, now available to the public.

But he is not the only one. The gentleman from Idaho [Mr. FRENCH] has referred to statements made by officers of the Navy. That has always been an interesting question for the Congress to determine, to preserve democracy in the service and yet not to encourage ill-advised statements to be made by officers. The American people often fail to distinguish the difference between the statement of the chief of operations and the chiefs of bureaus, who, by official reports, are kept informed daily as to the condition of the entire Naval Establishment, and the statement of a junior officer who has no information except as to the particular duty to which he is assigned, but who wants to make an impression.

When a junior officer is called upon at a banquet, for example, to make a speech, he recognizes the truth of the newspaper adage that if you say a man is bitten by a mad dog it is not news, but if you say that a mad dog is bitten by a man, then it is news. If, instead of saying the Navy is in good condition—a statement which would receive no attention—the officer declares the Navy to be in deplorable condition and the safety of the people endangered, he is assured of a place on the first page, and perhaps in the first column the next morning.

Now, we have not only officers in the service, but we have many retired officers, and the trouble with many retired admirals is that they will not stay retired. [Laughter.] If they did, the difficulties of the Navy would be greatly lessened. But among them there is one who is entitled to particular mention, Admiral Fiske. Of his ability as a naval officer all Americans are proud. He was an inventor and while in the Navy contributed great service to his country. Just as

the failure of Henry Ford as a student of history in no way lessened my admiration for his machine or his ability as an executive, so my admiration for Admiral Fiske as an inventor and naval officer does not prevent me from disagreeing with him when he enters the field of politics, and especially when he discusses the influence of women in that field.

On Sunday morning the press carried a statement from him in which he said that the women of America have an insatiable desire to interfere in matters they do not understand. [Laughter.]

Mr. BLACK of New York. Does the gentleman question that?

Mr. BYRNES of South Carolina. My friend asks whether I question that. I do. Women show no greater desire in this regard than do men, and especially retired admirals. The admiral is quoted as follows:

He spoke of the slump in the preparedness program, evidenced by congressional failure to finance military branches of the Government.

A statement to which I will refer at length in a few minutes.

Congress, however, was only reflecting the pacifist attitude of voters; and women voters not only outnumbered the men, but their influence largely dictated men's votes. This situation, combined with "effeminization that wealth produced" constituted "the enormous danger" of the Nation's position.

So we are informed by this retired admiral that the country is menaced by women and wealth. I am willing to embrace both, and though I may have been disturbed by the first, I have never been disturbed by the latter. He says:

Of all existing matters, the one that women understand the least is war. War is a business of mathematics and machinery, and scientific appliances, and noise, and discomfort, and bloodshed, and many other hard things from which women instinctively recoil.

The article says:

He held that the only possible means of escape when the United States went to war again, was some action by the men that will bring the women to realize realities.

Mr. CONNALLY of Texas. Is he a married man?

Mr. BYRNES of South Carolina. I do not know, but I know this, that when the admiral states that the women of America must be taught to realize realities, he fails to realize that the woman who saw her son go forth to war in 1917 and 1918 never to return, realizes the reality of war and must be pardoned if she asks the statesmanship of the world to devise some method of settling international disputes other than by the shedding of blood. [Applause.] He says:

Perhaps the best way will be to prove to them that it is for the comfort and protection of the women, after all, that wars are fought.

I wish him well in his effort to convince the women that it is for their comfort that wars are fought, especially the women of this day who have so recently endured the anguish inseparable from war. When a man, who is a retired admiral, can go out to indulge in such utter rot as that, it is a matter of sincere regret to those of us who have admiration for his service as a naval officer.

As to the accuracy of his statement that Congress has failed to finance the military branches of the Government, I think that I can show you there is absolutely no justification for his remarks. This bill, you have been told, carries \$290,000,000. That is a part of the story, but only a part.

There was presented to the committee—and you will find it in the hearings—a statement from the Secretary of the Navy and the three admirals charged with the increase of the Navy that the two aircraft carriers now under construction can not be completed unless we appropriate an additional \$20,000,000 for their completion. Very soon after July 1, 1925, this money must be available, because not more than \$750,000 a carrier will then be available. So that at this session of Congress you must provide for the continuation of the work upon those carriers or else abandon them. If you fail to appropriate the money and disorganize the force now working upon them it will prove most expensive. The legislative committee will be called upon to provide legislation increasing the limit of cost by \$20,000,000, and an estimate will be sent in by the Bureau of the Budget, approved by the President, within the next few weeks calling for the expenditure of about \$20,000,000 for carriers and \$5,250,000 to build planes to put on the carriers. And the \$5,250,000 must be provided at this session, else when the carriers are completed about October 1, 1926, there will be no planes to put on them.

As we all know, we passed the so-called modernization bill, and the President signed it a few days ago. I will tell you now that the Navy Department has already submitted to the Bureau of the Budget an estimate for \$40,000,000 to begin the construction of the gunboats and cruisers and \$9,180,000 for the modernization of the battleships provided for in that bill. And while it has not yet been approved either by the Bureau of the Budget or by the President, unless that legislation was but a gesture, then the appropriation must be made at this session. And if you appropriate \$55,000,000 for that purpose and \$25,000,000 for the carriers and planes, it makes a total of \$80,000,000, which \$80,000,000 added to the \$290,000,000 provided in this bill makes a grand total of \$370,000,000. And when Admiral Fiske looks back to the years preceding this he will find that the largest appropriation ever made to maintain the Navy of this country was in 1915, when we appropriated \$157,000,000. As against \$157,000,000 you are going to appropriate approximately \$370,000,000 for the next fiscal year, \$200,000,000 more. As to the Army, for the fiscal year 1916 we appropriated for all purposes—fortifications, Military Academy, and all other Army activities—\$119,530,000, and for the present fiscal year we appropriate \$250,000,000. In the face of those figures, I ask whether Congress is failing to finance the military branches of the Government?

Mr. BLACK of New York. Will the gentleman yield?

Mr. BYRNES of South Carolina. Yes.

Mr. BLACK of New York. Does the gentleman happen to know our relative standing as a general fleet proposition now as compared with that year, not only from a ship basis but as a general proposition?

Mr. BYRNES of South Carolina. I would not attempt to state it because so many factors enter into it. But I repeat that in my opinion when all supplemental appropriations have been made, our total naval appropriations for next year will amount to \$370,000,000. And, so far as I am concerned, I am going to vote for it because to my mind it is as plain as a thing can be that unless the President of the United States will either do what this Congress asked him to do and call a conference for the further limitation of armament, or send to Geneva representatives of this Government, there to meet with European governments and other naval powers for the further limitation of naval armament, there is nothing for us to do but to make these expenditures and construct the ships that are necessary to insure to the American people that they will have a Navy equal to any other navy. They ask no more, but will be content with nothing less.

The gentleman from Idaho read from the message of the President to the House in which he said:

I believe in adequate defense and preparation, but I am opposed to any policy of competition in building and maintaining land or sea armament.

I do not know that I understand what the President means. The very purpose of the conference was to prevent competition. We believed that there should be equality between the United States and Great Britain, not only in tonnage of battleships and aircraft carriers, but the American citizen believed that we were entitled to equality in fighting weapons between the United States and Great Britain. When you tell me to-day that you do not believe in competition, I will ask, then, Why maintain a Navy? Why not reduce this enormous expenditure? What is the justification for it if it is not being spent toward giving us a Navy equal in strength to that of Great Britain or as nearly equal to it as it is possible for us to be?

A navy that is second best in an encounter is worse than none at all. No greater tragedy could befall the human race than a conflict between the two English-speaking nations, but we do not maintain a navy for defense against Peru or Switzerland. We maintain a navy because of the existence of the other navies in the world, to protect our country and its commerce. And we do not seek to have the largest navy in the world but ask for the maintenance in fighting strength of the ratio of 5-5-3.

The question asked by the gentleman from Georgia [Mr. VINSON] as to whether or not at the conclusion of the Armament Conference we had a navy of equal strength with Great Britain, I asked of Secretary Wilbur, and we had an extensive inquiry along that line. If prior to this time we had a navy equal in strength to that of Great Britain, then there is no justification or little justification for asking for the elevation of guns and for conducting diplomatic negotiations with Great Britain seeking the settlement of the question as to whether or not it constitutes a violation of the terms of the treaty.

We know that we had tonnage approximately equal, but other factors enter into the question of equality. Neither the

Secretary of the Navy nor any naval officer will deny that the range of the guns is an essential factor in determining the equality of the two battleship fleets.

In 1922 I made an investigation as to the strength of the two fleets, and the information I secured was from the most reliable sources. In the case of Great Britain she had 16 vessels capable of shooting at a range of 25,000 yards or more, and the United States at that time had three. We now have five vessels which, as my friend from Idaho says, greatly out-range the ships of Great Britain. They have a range of 30,000 yards. But as to all of the others, we can not compete with Great Britain in range.

The number of the United States turret guns over 12 inches was 148. The number of British turret guns over 12 inches was 188. The weight of the United States turret broadside at the conclusion of the armament conference was 262,500 pounds, and the British turret broadside was 315,200 pounds. Great Britain had nine vessels capable of steaming 25 knots, Japan had four, and we had none. Of ships capable of making 23 knots, Great Britain had 14, and with her 2 new ships would have 16. Japan had 10, and United States had none. It is true, as my good friend has stated, our experts have taken the position that speed is not an essential factor in a battleship fleet, and they have sought a uniform fleet of 21 knots.

If a man wants to find out what the situation was at the conclusion of the conference, let him turn to what the other fellow said. My good friend said that in Japan it was said they got the worst of it, and that in Great Britain it was said that the English got the worst of it. Let me read from the debate in the House of Commons, from the Civil Lord of the Admiralty (The Marquis of Linlithgow) in advocating the ratification of the treaty. He said:

If the Washington treaty is not ratified the United States of America would have 20 battleships of the dreadnought type, 6 battleships of the predreadnought type, 9 post-Jutland battleships building, 4 battle cruisers building, and 2 battle cruisers which are now being converted into aircraft carriers, a total of 41 capital ships. Japan, assuming that the treaty is not ratified, would have 7 battleships of the dreadnought type, 4 battleships of the predreadnought type, 4 battle cruisers, 2 battleships building, 2 battle cruisers building, 2 battleships projected, and 2 battle cruisers projected, a total of 23 capital ships. Great Britain, assuming the treaty is not ratified, would have 18 battleships and 5 battle cruisers, a total of 23 battleships.

So, you see, that the Civil Lord of the Admiralty said that if the treaty was not ratified Great Britain would have 23 capital ships as against Japan's 23 and 41 for the United States.

This was the argument made to the Commons in behalf of the ratification of the treaty, and, of course, it was correct, for then we had the 1916 program under construction. But for the peace of the world we were willing to sacrifice, when it meant a great sacrifice in money as well as sacrificing the position of superiority in naval power, in order that we might promote peace on earth.

But when it came to cruisers the situation was reversed. Great Britain had the cruisers and we did not, and the treaty does not apply to cruisers at all. Therefore from that date to this I have insistently urged and pleaded that this Government do its part in securing another conference that will serve to put us on equality in cruiser strength and in the strength of other auxiliary craft as well as battleships.

Mr. KINCHELOE. Will the gentleman yield?

Mr. BYRNES of South Carolina. I yield.

Mr. KINCHELOE. The gentleman says the treaty did not apply to cruisers; is it not a fact that at the time of the ratification of this treaty we had four under construction that were scrapped?

Mr. BYRNES of South Carolina. The gentleman is now talking about battle cruisers?

Mr. KINCHELOE. Yes.

Mr. BYRNES of South Carolina. The treaty covered battle cruisers but did not apply to cruisers of less than 10,000 tons. We had our 1916 program under construction and to scrap it we thought it would cost \$75,000,000. We got out at a lower figure. England's battleship program was only on paper. It involved no great expense to them in scrapping battleships, because they were not engaged in any extensive construction program.

Our difficulty is that when it comes to the fleet, to the fighting weapons, battleships do not constitute the entire strength of a navy, and to-day, when we consider all ships, we are not equal in strength to Great Britain, and this country is called upon to determine whether it will accept a position of in-

feriority in naval strength or whether we will go ahead with the program contained in the bill recently passed. But I do not want to go ahead with that program, knowing as I do now and as you know from the figures I have given you, what it will cost.

I believe in appealing now to the naval powers of the world for a further conference in the hope that we may escape the expense of entering upon this program just as Great Britain did.

Mr. LAZARO and Mr. WINGO rose.

Mr. BYRNES of South Carolina. I yield first to the gentleman from Louisiana, who rose first.

Mr. LAZARO. Is it not the gentleman's honest judgment that the United States got the little end of this Conference on the Limitation of Armament?

Mr. BYRNES of South Carolina. I am forced to the conclusion that the Navy we retained, with its deficiency in cruisers and other craft, is not equal to the navy of Great Britain.

The gentleman from Idaho [Mr. FRENCH] referred to five ships we have with superior range. That is true, but I tell you that Great Britain has 16 vessels capable of shooting 25,000 yards and we have 5. As to speed, I know this, that the speed of a fleet is determined by the slowest vessel of the fleet and not by the fastest. That is common sense. That being true, let me remind you that the speed of our fleet is 21 knots, and the speed of the English fleet is 23 knots. If you will give me a fleet of 23-knot vessels with guns that have a greater broadside power and greater range so that we can not only select the place of battle but from a place of safety, out of range, fire at the other ships, I know that I have the superiority. No officer to-day will contest the question of range, although they do contend that the speed is not vital, that battleships are made to fight and not to run.

Mr. WINGO. Will the gentleman yield?

Mr. BYRNES of South Carolina. Yes.

Mr. WINGO. The gentleman says that instead of going to the expenditure of bringing our fleet up equal to that of Great Britain he prefers another conference. Judging by the result of the last conference, if we come out of the next conference as we did in the last will we not lose what little Navy we have left? [Laughter.]

Mr. BYRNES of South Carolina. I thought that question might be asked. I want equality by agreement, if possible; but, if necessary, by construction. The principal cause of our inferiority is the inferiority in cruisers and other auxiliary craft. I want the limitation to extend to all auxiliary crafts. Without such an agreement I know we are greatly inferior, and we are certain to improve our situation. I admit that I would like to see our Government send a representative to Geneva, because we are the most courteous people on earth, notwithstanding the views entertained of us in some other countries. When representatives of other governments come to our shores we are so anxious to please, so generous to our guests, or so anxious that a conference called by us shall not fail that we are apt to be too generous and make some agreement that we would not be willing to make at Geneva.

Mr. WINGO. I am trying to find in my mind what basis there is for us to get results at the conference with England, inducing her to surrender her superiority of cruiser strength and agree to do what we so foolishly did, scrap that which gave us the superiority. What incentive would it have? How long would the Government of England last that undertook the scrapping program?

Mr. BYRNES of South Carolina. Only this, that in the absence of agreement, we will proceed to build, and with our wealth there will result competition that will impoverish both peoples. Now, consider the alternative. If we enter upon this program, what becomes of the President's surplus? The President says that at the conclusion of the fiscal year we would have a surplus of \$67,000,000 to go toward the reduction of taxation, provided the Congress does not increase the Budget. I am satisfied that the President, before adjournment, is going to send in here an estimate to increase the Budget for the two purposes I have described, the completion of the aircraft carriers and the carrying out of the modernization program amounting to \$80,000,000. That is \$13,000,000 more than the estimated surplus.

The President said this, in his Budget message:

For the national defense the estimates amount to \$549,000,000, which is \$29,000,000 less than the amount available this current year. This reduction is made in accordance with my belief that we can have adequate national defense with a more modest outlay of the taxpayers' money.

I repeat that in a few weeks he is going to send in an estimate for \$25,000,000 for the aircraft carriers and airplanes to go on the carriers, and before adjournment another estimate for \$55,000,000. I believe from this day on the naval budget of the United States Government is going to be between \$375,000,000 and \$400,000,000. That is the alternative to another conference. It is going to be a continuation of competition in auxiliary craft building. And when you have constructed the ships you have got to put men on the ships, and provide fuel to operate them, and that is going to cost \$20,000,000 or \$30,000,000 in addition to construction, so you will find the naval budget is going to be about \$375,000,000.

When any government refuses to agree to a further limitation of armament I think that government will hear from the taxpayer and I think you would hear from the taxpayers of this country when they come to realize that instead of \$157,000,000 provided by the naval act of 1915, that for the fiscal year of 1926 you are going to provide \$370,000,000.

Mr. WINGO. Mr. Chairman, will the gentleman yield?

Mr. BYRNES of South Carolina. Yes.

Mr. WINGO. I do not think the gentleman answered my question as to the incentive to England. As I read the statements and understand what the attitude of the taxpayer of England is now, he is very proud of the fact that they succeeded in getting a superior navy, because they had been told that their cruiser superiority, on account of the developments with reference to the ineffectiveness of battleships, gave them the mastery of the seas and the English taxpayer has never complained about the burdens necessary to maintain British supremacy on the high seas, because the taxpayer there understands that England must do that. That is his viewpoint in order to maintain their trade routes and their world-wide trade. Now, what incentive would there be to England in a conference to surrender that superiority? We went into the last conference with a superiority of battleships on our hands and we yielded that superiority. What incentive would there be for England to yield her present superiority?

Mr. BYRNES of South Carolina. Whatever be the motive the fact is that when this Congress last February adopted the amendment I offered requesting the President to call another conference for the limitation of armament, the debates in the House of Commons show that the government then in control was enthusiastic in its reception of that information, because it held out hopes to them that they would be able to reduce their naval budget. Of course, since then there has been a change of government, but I have no doubt those now in control are entirely willing to make a further agreement because they know that they have got to engage in this competition and they know also that in due time there is but one result to that. That this Nation with its interests is determined to have equality in naval strength and with its wealth is going to have it.

British statesmen of vision know that that means nothing but competition in naval armament, the fruitful source of war. They have had enough of war over there, just as we have had enough of war over here. They are going to be willing to agree, because they know they have nothing to fear from us. But if they did fear us they know that in the absence of agreement, with our wealth, we may build a superior. In any event, we will never know whether we can succeed until we try.

I always have contended that I do not want a Navy superior to that of Great Britain; but give me an equal number of ships and man those ships with American boys and I will take my chance with England, Japan, or any other nation on the face of the earth. [Applause.]

Mr. VINSON of Georgia. Mr. Chairman, will the gentleman yield?

Mr. BYRNES of South Carolina. Yes.

Mr. VINSON of Georgia. In that connection, it is necessary for the United States to authorize about 22 more scout cruisers in order to be equal to England.

Mr. BYRNES of South Carolina. I do not know the exact number.

Mr. VINSON of Georgia. England has 51, and we have 10 already and 8 authorized.

Mr. BYRNES of South Carolina. Of course, the Navy Department contends our new cruisers are superior to anything Great Britain has. They would like to have four cruisers in addition to those authorized by the so-called modernization bill, of 10,000 tons each, if we are going to establish equality in strength. And that adds but another touch to the picture that I am trying to present to you of what we are going into if the President does not see fit to send a representative to Geneva.

Mr. LaGUARDIA. Mr. Chairman, will the gentleman yield? Mr. BYRNES of South Carolina. Yes.

Mr. LaGUARDIA. If the appropriation this year is entirely in keeping with the spirit and letter of the last armament conference, unless there is a further international arrangement, our annual appropriation will be about as much as in past years.

Mr. BYRNES of South Carolina. I just told the committee that just as soon as we engage in the program of construction which is already authorized, and the additional expense resulting from it, we can look for a naval budget of \$375,000,000 a year. The Secretary has said that their program of construction would cost possibly \$100,000,000 a year, but you have to man those ships when they are constructed, and I say that from this day on we can look for a naval budget of about \$375,000,000 a year.

Mr. CONNALLY of Texas. Mr. Chairman, will the gentleman yield?

Mr. BYRNES of South Carolina. Yes.

Mr. CONNALLY of Texas. As I understand the gentleman, when we had the conference on armament with Great Britain, if we had completed our battleships, we would have been superior in battleships to Great Britain?

Mr. BYRNES of South Carolina. That is correct.

Mr. CONNALLY of Texas. But she was superior to us in cruisers and auxiliary craft?

Mr. BYRNES of South Carolina. Yes.

Mr. CONNALLY of Texas. We limited the number of battleships?

Mr. BYRNES of South Carolina. Yes.

Mr. CONNALLY of Texas. But that left her superior because of her superiority in auxiliary craft and cruisers, and the alternative is that unless we get an agreement out of her to limit her cruisers and auxiliary craft, we have to remain inferior or compete with her in building new cruisers and auxiliary craft?

Mr. BYRNES of South Carolina. That is the alternative. I want to add one word in justice to Great Britain. The statement made to the committee last year and on several occasions by gentlemen who participated in that conference, representing this Government, was that the failure to agree to any limitation as to cruisers and auxiliary craft was due not to Great Britain but to France. The reason which France gave at the time was that her proximity to other naval powers demanded that she should have an unlimited number of submarines and smaller craft, because she could not hope to compete with them in battleships; but I believe that France at this time would most probably agree. I am satisfied that she is going to the conference at Geneva, and my hope is that as a result of that conference there will be such a limitation as the gentleman has referred to. Certainly an effort to agree should be made by all of the governments interested.

Mr. KINCHELOE. Mr. Chairman, will the gentleman yield?

Mr. BYRNES of South Carolina. Yes.

Mr. KINCHELOE. I am asking the question for information, because I have great confidence in the gentleman's ability to give it. I am heartily with the gentleman and I am in favor of a naval conference, provided we can have representatives who can hold up our end of the string. Did not this happen at the last disarmament conference, when we agreed on the 5-5-3 ratio? At that time, when it was agreed on, we were constructing seven battleships and four battle cruisers, and had already spent \$153,000,000 on them.

But when this agreement was entered into we were so far above our five in the 5-5-3 ratio that we had to scrap the vessels and did scrap them at an additional cost of \$28,000,000; and now is it not a fact that the same administration comes back and says that we are so far below the 5-5-3 that in the last bill we appropriated \$110,000,000 to build cruisers, and so forth, to build up the Navy and bring us back to the 5-5-3?

Mr. BYRNES of South Carolina. The gentleman is confusing the question of cruisers with the treaty. It refers only to battleships and aircraft carriers, and not to any other craft.

The trouble now is not with our capital ships covered in the agreement but with cruisers, submarines, aircraft, gunboats, and other auxiliaries as to which there is no agreement, and there will be continued competition in cruiser strength up to the 10,000 tons until there is another agreement. Now, let me conclude.

Mr. FROTHINGHAM. If the gentleman will permit, are there any statistics as to how many of these cruisers and lighter craft have been built by these other countries since the conference?

Mr. BYRNES of South Carolina. Great Britain has completed four and at present is building four more. She has a further plan authorized of five cruisers of 10,000 tons each. Japan has added five light cruisers since the treaty and is now building four of 7,000 tons and four of 5,500 tons. And it is understood this year she will lay the keels of four 10,000-ton cruisers.

Mr. FROTHINGHAM. The gentleman possibly knows that a British naval expert, Byswater, recently has written an article in the Atlantic Monthly saying that Great Britain and other countries have built many more cruisers and lighter craft than we have under the terms of the conference.

Mr. BYRNES of South Carolina. It is a fact their program involves the construction of many more cruisers, but the legislation recently enacted by Congress will contribute materially to our cruiser strength, and if we add four more as the department desires it will still further lessen our inferiority.

Mr. LAZARO. Will the gentleman yield?

Mr. BYRNES of South Carolina. I will.

Mr. LAZARO. Is it said that England was willing to scrap more cruisers, and that France prevented it? Am I correct?

Mr. BYRNES of South Carolina. My understanding is France objected not only to limitation of cruisers but particularly of submarines.

Mr. LAZARO. Does the gentleman believe it was wise for us to scrap our new battleships before they agreed to do that?

Mr. BYRNES of South Carolina. Well, that has been done. The question now is whether all craft shall be limited.

Mr. LAZARO. But they were scrapping paper ships and we were scrapping real ships.

Mr. BYRNES of South Carolina. Under construction.

Mr. LAZARO. But when we go into another conference we will be scrapping paper cruisers as against their scrapping real cruisers.

Mr. BYRNES of South Carolina. I have said, and I say again from reading the debates in the House of Commons and from the statements of the British representatives at the peace conference, I have confidence that so far as the British Government is concerned that Government is willing to agree to the limitation of all vessels. They have gone on record in the conference and since that time in welcoming every movement in this country toward the holding of such conferences. I have not any doubt about it. I believe that if given the opportunity they will agree.

I want to conclude—because I do not want to take up any more time—by the reiteration of my position that such an agreement is what I want to see accomplished; but until it is accomplished I am going to vote for this \$290,000,000 and for the additional appropriations that I believe are going to be asked by the President, because I want the Government of the United States to have a Navy equal to any other navy on the face of the earth. I want it by agreement, if possible, but by construction if necessary. [Applause.]

The CHAIRMAN. The gentleman from South Carolina has occupied 45 minutes.

Mr. BYRNES of South Carolina. I reserve the balance of my time. I yield 10 minutes to the gentleman from Texas [Mr. JONES].

The CHAIRMAN. The gentleman from Texas is recognized for 10 minutes.

Mr. JONES. Mr. Chairman, I was very much surprised to learn that the gentleman from Alabama [Mr. HUDDLESTON] had taken the position on the floor of the House that there should not be an authorized conscription of property during war times. I would not have been surprised had some Members assumed this attitude, but of all the Members in the House he is one of the last that I thought would adopt such a philosophy. If I understand the purport of this address aright, he takes the position that such a law would be unconstitutional, and then goes much farther and takes the stand that such a policy would be unwise and unworkable even though its legality should be conceded. I desire to take up some of the propositions which he advanced in that connection and undertake to analyze them.

The gentleman directs his attention to House bill 4841, which is a bill which would authorize drafting of both men and supplies in the event of a national emergency, to be declared by the Congress. Some of his objections to the bill as proposed are well taken, but in my judgment these objections may be easily cured by amendment, and they in no wise are fatal to the general policy as outlined in the measure.

The gentleman says that—

To conscript a man and put him at hard, dirty, and monotonous drudgery is quite different from conscription for some light and in-

teresting employment. To conscript a man to perform the duties of a calling he has heretofore followed makes the rule of social maladjustment and inequality into an edict of law.

Concede for the purpose of argument that there is some merit in these suggestions, if we follow his argument to its ultimate conclusion, should we refuse to allow any drafting either of men or property, simply because all work can not be placed on an exactly equal basis? The question of drafting men for service in the Army and Navy may be a debatable question, but in the late war, after thorough discussion, it was adopted as the policy of the United States, and regardless of what may be its merits or demerits, it will probably continue to be the permanent policy of the United States during war times. The same objection which he offers to drafting of men for work in civilian work also applies to the drafting of men for service in the Army. Not all of the men in the Army had the same character of work. There was some very hard and disagreeable work, and other employment that was very easy and agreeable in the Army. All that could be hoped was that in so far as was possible men would be assigned to those tasks which they were best fitted to perform, and it does not follow that because they could not all be made exactly equal that men of wealth and industry should be turned entirely loose to make whatever profit they might desire and could make during the waging of the war. As for the social inequalities, to which the gentleman refers, they exist in peace times and exist to a much greater degree in war times than in peace times, and the logic of the gentleman's position is because he can not have a perfect arrangement he would not have any control whatever. To my mind that is the philosophy he adopts, and if carried to its ultimate conclusion would permit unbridled graft and unhampered profiteering throughout the conduct of a war.

The second objection which he advances is that the conscription of industries and the physical properties of those engaged in the manufacture of essentials of war would be a violation of the fifth amendment of the Constitution of the United States which forbids the taking of private property without just compensation. As the bill is drafted that may be a legal objection, but that objection could be met by allowing a very small percentage of return. What would be a just profit in peace time might be far more than a just profit in the exigencies of war. Everyone must make sacrifices in war times, and when the flower of the young manhood of the country is drafted from every walk of life and required to serve at \$30 per month, it seems to me that a very small profit, say 2 or 3 per cent, would be sufficient, and would meet all the requirements of this objection. This would be infinitely better than allowing the fabulous profits that have heretofore been permitted in war time. If a man owning a munition factory or any plant engaged in the manufacture of the essentials of war were to have his plant drafted into the service and were allowed a profit of even 1 per cent, and were even himself drafted into the service and put to running the plant at approximately the same basis of pay that soldiers in the field were receiving, he would still be making less sacrifice than those in the Army, who not only give up their services but risk their lives for their country. Under those circumstances would any judge or any court hold that that margin of profit was not just compensation for those times of great emergencies when probably the Nation's very existence may be at stake? During peace times a court might hold, and might justly hold, that property taken for public use should be compensated for on a basis of what might reasonably be calculated to be the normal value of such properties, but circumstances alter cases. Every act of man or government must be gauged in connection with the circumstances surrounding which such act is performed. Therefore, at a time when a great body of the mankind of the country is called into service at a tremendous personal sacrifice to each of them, and when every man is subject to call at any time the Government needs him, undoubtedly a very small return of profit would be just compensation for any properties that might be needed to furnish the supplies essential to the activities of these men who are making such a tremendous sacrifice.

Again, the gentleman says that "if only the useful property is seized, there will yet be waste, disorder, and difficult machinery to manipulate, favoritism and every conceivable governmental abuse." That is rather a strong statement to come from one who has suddenly become so solicitous of the property rights of this country. All those things of which he complains occurred during the last war, and does the gentleman think those abuses would be greater if the Government tried to control them than if the Government gave them free

hand to do as they pleased, notwithstanding the emergency through which the Government might be passing?

But simply because a man can not abolish it altogether, the gentleman seems to adopt the fatal philosophy that you ought to turn it foot-loose and fancy free, no matter what sacrifices the citizens of the country may be going through to win the war; that simply because you can not do a thing perfectly you ought not to undertake to do it at all. That seems to me to be the philosophy of despair.

Mr. CONNALLY of Texas. Mr. Chairman, will the gentleman yield?

Mr. JONES. Yes.

Mr. CONNALLY of Texas. If you did not do that, would not the fact that you took these soldiers out of productive enterprise make their misfortune a source of profit to those who stayed at home, increasing the earning power of those that remained?

Mr. JONES. Absolutely. In time of war the Government can not delay in a dispute over prices, and if you have no limitation a man is enabled to exact a higher price than he could otherwise get.

In other words, to turn them loose puts a premium on disloyalty and puts a premium on the man who is willing to profit on his country's misfortune.

Again he says:

To conscript property either by seizure or fixing prices will not take the profit out of war. It begins with the beginning of war or when it is imminent. Profits which have been made in anticipation are left intact. During the year and a half prior to our entry into the World War greater profits were made than during the period of the war. The year and a half following the signing of the armistice was a continuous orgy of profiteering and profit making.

That, it seems to me, conflicts with the position which he has taken theretofore. He says that profiteering will be worse if we try to control it and then he complains because it does not control both before and after war. He meets himself coming back in that proposition because if, as he says, the abuses will be worse why does he complain of the proposition because it does not cover more territory or a greater extent of time?

Mr. HARDY. Will the gentleman yield?

Mr. JONES. Yes.

Mr. HARDY. Is the gentleman from Alabama a member of the committee?

Mr. JONES. I am not sure whether he is a member of the committee or not. He is a member of the Committee on Interstate and Foreign Commerce.

Mr. BLANTON. Will the gentleman yield?

Mr. JONES. Yes.

Mr. BLANTON. I hope the gentleman will not compromise on his first position of taking profit out of war. That is the correct position, and he must not let speeches of gentlemen like the gentleman from Alabama [Mr. HUBBLESTON] sidestep him on that issue.

Mr. JONES. I am not doing so, and if the gentleman will recall I said conceding, for the purpose of argument, that his position is well taken, that you could not do it in view of the fifth amendment of the Constitution, then at any rate you could reduce the profits in view of the exigencies of war. Of course, if it should become necessary, the Constitution can be amended and thus remove all doubt and discussion. However, I have no doubt that without such amendment we could place the return at so small a figure in war time as to amount to but little.

Mr. BLANTON. You do not even have to allow the 1 per cent, because war is an interruption of all ordinary conditions.

Mr. JONES. However that may be, that phase of the question can be handled in one way or another. The big thing is to give assurance now that the rich harvest of profiteering will not be allowed in the next war.

My colleague from Texas may be correct, but if the court should hold that that position is not well taken, the argument of the gentleman from Alabama falls to the ground, because if you use as a basis of profit that which would be proper and right, in war time it would amount to very little, when the best manhood of the country is fighting for a mere pittance of pay.

The CHAIRMAN. The time of the gentleman has expired.

Mr. BYRNES of South Carolina. I yield the gentleman five minutes more.

The CHAIRMAN. The gentleman from Texas is recognized for five additional minutes.

Mr. JONES. The gentleman from Alabama [Mr. HUBBLESTON] says:

One reason why I have always opposed conscription of soldiers is that it deprives people of their opportunity for decision upon war by forcing them to serve whether they agree with the justice of the cause. I oppose conscription of property upon the same grounds.

Such a position is untenable from any angle. If that philosophy were adopted and everyone were permitted to determine whether or not he agreed to help his country during conditions of war, no successful war could be waged. Men may differ as to the wisdom of declaring war, but after a war is declared every true citizen should support his country; and if he does not do so willingly, he should be compelled to do so or suffer the consequences. All these matters should be decided in determining the question of whether or not war is to be declared. When war is declared the matter passes out of the realm of debate. [Applause.] When the question of the declaration of war is up there should be perfect freedom on the part of the people of the country and their chosen representatives in the matter of determining whether to enter the war. There should be no undue pressure, nothing akin to duress. Unfortunately, this has not always been true. There has been much propaganda and tremendous pressure which sometimes seems almost irresistible, but, as I believe, one of the fine results that would naturally follow through taking the profits out of war would be to reduce the incentive and propaganda and the motives that are frequently behind a country and its representatives looking toward the declaring of war. This, it seems to me, would leave the representative in a position to fairly determine whether or not a war would be just.

Mr. LOZIER. Will the gentleman yield?

Mr. JONES. Yes.

Mr. LOZIER. The virtue of any law depends upon its proper administration. Would not the net result of this law be to conscript labor, and then when you attempted to conscript property—

Mr. JONES. No, no.

Mr. LOZIER. Wait a minute. Will you not let me state my question?

Mr. JONES. I do not care to have the gentleman include two or three questions in the same question. The net result would not be to conscript labor. I would be opposed to it if it would do that, but I believe this: That when you draft the young men of this country the Government should have the right to draft every other man, I do not care where he is in this country. [Applause.] I believe, in addition to that, you should have the right and privilege of drafting property rights. If it should simply include the conscription of the laboring interests of this country, of course I would not approve it. [Applause.]

It is rather difficult to follow the gentleman's logic all the way through, but I think it can be fairly concluded from a careful reading of his whole speech that the gentleman's fear is not based so much upon the violation of the Constitution on the basis of property rights, but rather that he fears the conscription of labor to work in the various factories and industries which are engaged in the manufacture of essential supplies of war. I thoroughly agree with the gentleman that it would be both unfair and unjust to draft labor to work in any of these factories and supply houses if these same factories and supply houses were left free to make the tremendous profits which they could make in such a momentous time if their profiteering were not curtailed. Likewise it seems unfair to draft soldiers and let those who make their supplies gather unlimited profit. But it seems to me that this objection would surely lose its force if these industries were taken over by the Government and run without profit, or at so small a margin of profit as to be practically negligible.

If the draft system is to be used at all, the Government should have authority to call into service any citizen that might be needed and assign him to that position in which he could serve the best. [Applause.] Alongside this it should also have the right to draft into the service such property rights and interests as it might find advisable. Then the interest of the entire country would be engaged—life, activities, and genius—and all the citizens could be drafted in a united effort to achieve a victory in the shortest possible time. True, some injustice would be done. No government is perfect. No government of men will ever be perfect. There will be some abuses, some inequalities, some injustices in whatever plan or policy the Government pursues, but the plan which has been suggested seems to me more fair and just than any that has thus far been advanced. What is far more important, it would, in my judgment, by taking the profits out of war, tend to promote the permanent peace of the world, which far outweighs any inequalities or injustices that men might temporarily suffer.

I have a high admiration for the intellect, the intelligence, and the courage of the gentleman from Alabama. I do not always agree with him, but this is one time I expected to agree. And I am inclined to think he has permitted his fears along certain lines to become exaggerated and lead him astray.

War is a terrible thing, even for the people of the nation that wins. For them it means debts. It means the breaking of family ties. It means shattered hopes. It means cripples. It means anguish of spirit. But for the nation that loses—and in every war some nation must lose—it is infinitely worse. I know from what I have read and seen of war, and from what my southern ancestry has told me, that for the losing nation war is filled with indescribable horrors, and the aftermath is sometimes almost as bad as the war itself.

Universal peace is the finest hope of every nation in the world. I am somewhat of a dreamer myself—too much so at times. But I have always hoped that lasting peace would not forever remain simply the dream of the enthusiast. I have wished that somewhere across some mountain range of experience we might find that happy valley. I trust it may not be beyond the sunset. I believe there is a way to take the superprofits out of war. I have an abiding faith in the ability of the American people to find that way.

The CHAIRMAN. The time of the gentleman from Texas has again expired.

Mr. BYRNES of South Carolina. Mr. Chairman, I yield 10 minutes to the gentleman from South Carolina [Mr. STEVENSON].

The CHAIRMAN. The gentleman from South Carolina is recognized for 10 minutes. [Applause.]

Mr. STEVENSON. Mr. Chairman, I want to discuss a few minutes the bill which was passed through this House unanimously last spring and nearly unanimously through another body, a bill which has been vetoed by the President and which is now being chloroformed by the indirect method of attempting to load it up with the obloquy of putting an additional rate on second-class mail and an additional rate on the parcel-post system of this country. I refer to the bill providing increased compensation for postal employees, which has been hanging in the other body of Congress ever since the day before we adjourned last June.

The reason assigned for vetoing the bill was principally financial, and the statement was made that it is necessary to accompany that measure with a measure increasing the postal revenues in order to pay the additional salaries.

I want to direct the attention of the Congress to the fact that just a year ago the Interstate Commerce Commission increased by 35 per cent the compensation of the railroads for carrying the mails in the New England territory, consisting of eight great carriers in that territory, by something over \$1,000,000 a year, and there was not anything said about its being necessary to accompany that with additional revenue legislation. They also have before them a petition from these same New England railroads to make that retroactive to the time when they filed the petition, adding several more million dollars to the postal expenses. They have that submitted and there has been no objection raised by the department or by the Government that it will be necessary to raise additional revenue if they grant them that largesse reaching back into the times past and giving them an increase all the way up, although it has to be paid by the same people.

Is there any difference between the young fellow who rides on the railroad, who handles your mail in day and in night, and who is in jeopardy of his life every day? Did you know there were 117 railroad accidents last year in which 201 postal clerks were injured and several of them killed?

Why the difference between the New England railroads and the mailman who rides on them? When you give one additional compensation it does not make any difference where the revenue comes from, but if you undertake to give the human element additional compensation, then you must put on the people, who will rebel and cuss out everybody, including Congress, an additional burden in order to derive the revenue.

Let us look at another matter with relation to it. The reclassification act went into effect on the 1st of July and this raised the compensation of all of the departmental employees here in Washington, and the Postmaster General in his report says:

The reclassification of departmental salaries is a step in the direction of proper appreciation of the value of the services of the officers and employees of the departments. However, in order that salaries paid for the different grades of work may be equalized, sufficient funds should be appropriated for salaries to enable the department to at least pay the standard or average salary rate of the grade to which the work is allocated.

In other words, the people here in the departments have received additional compensation and they are not called upon to come down here to Congress and get us to levy an additional tax upon all the people of this country and raise a great hullabaloo about it. In order to get the money you are simply asked to appropriate it out of the funds usually appropriated from.

I see in the Budget message of the President that we are expected to have a surplus this year of \$67,000,000 and they only claim that the additional compensation for these employees will amount to \$60,000,000, which after paying them, leaves us a surplus of \$7,000,000 without levying an additional tax, and the surplus for 1925, he says, will be \$373,000,000. Why levy an additional tax simply because it is going to flesh and blood instead of the intermountain, the New England, and Pacific coast railroads, for whom they are preparing to raise the rates for transporting the mail?

That question is pending, without objection, before the Interstate Commerce Commission and they say they will decide it soon. Likewise the electric railroads mostly in New England and the Northeast.

Let us look just a moment at the figures. Are we going broke on this mail business? The deficit in 1923, according to the report of the Postmaster General, was \$24,000,000; that is, it cost that much more than the income. The deficit for this year will be only \$14,000,000. In other words, the Post Office Department, with all its great ramifications and its business management, is earning all of its own expenses except \$14,000,000 this year, or \$560,000,000 in round numbers. Who runs it? Why, the men who are on the railroads, the men who are carrying the mails into every home and every hamlet in this country through cold and heat, through wet and dry, and the men in the post offices; the men who are every day on the firing line and who are docked if they get off for a minute. They are the folks who are doing it, and yet before they can have increased compensation we are required to put an odious addition to the tax that the people pay on their parcel post and to what they pay on the news which they get through the mails.

Let us look at another thing just for a minute and see how this is running. Is it necessary? In 1918, for every million dollars that the Post Office Department brought in, they spent \$1,003,133. We heard a great deal of abuse of the Postmaster General for being cheeseparing in those days. Since that time it has run up, but it is coming back. In 1921 it got up to \$1,172,000 for every million dollars that came in. In 1922, we got it down to \$1,140,000 for every million that came in. In 1923 we got it down to \$1,070,000, and for this year they say it will be \$1,042,000 for every million dollars brought in. In other words, this department of the Government is earning practically all it spends, and while we say unanimously that these men, the flesh and blood and the bone and sinew of this great system, are entitled to additional compensation, yet we shut the door in their faces and smother the measure over yonder by precipitating a fight by the press of this country on the question of second-class postage and a fight by all the people who use the parcel-post system because we are going to put a larger tax on them and precipitate a fight by them, and tie up the boy who carries the mail with this demand for an increase of the burdens that go directly to the great publicity engines of this country, and thereby indirectly attempt to smother and destroy that which we promised them last year and which all of us promised them during the election.

We are now going to deny them this increase by this indirect method by chloroforming a tardy piece of justice for these people. Will a righteous people stand for it? [Applause.]

Mr. BYRNES of South Carolina. Mr. Chairman, I yield one minute to the gentleman from North Carolina [Mr. LYON].

Mr. LYON. Mr. Chairman, I ask unanimous consent to extend my remarks in the Record for the purpose of inserting an article by Hon. Josephus Daniels, former Secretary of the Navy, entitled "What's the matter with the American Navy?"

Mr. LONGWORTH. Mr. Chairman, reserving the right to object, I did not catch what the article was.

Mr. LYON. The article is entitled "What's the matter with the American Navy?" and is by Hon. Josephus Daniels, former Secretary of the Navy.

Mr. LONGWORTH. I have no objection.

The CHAIRMAN. The gentleman from North Carolina asks unanimous consent to extend his remarks in the Record by including the article which he describes. Is there objection?

There was no objection.

Mr. LYON. Mr. Chairman, under leave granted to me to extend my remarks in the Record I include the following article

by Hon. Josephus Daniels, former Secretary of the Navy, entitled "What's the matter with the American Navy?" as published in the Raleigh (N. C.) News and Observer December 14, 1924:

WHAT'S THE MATTER WITH THE AMERICAN NAVY?—THE MORALE HAS BEEN SHOT TO PIECES, THE PERSONNEL HAS LOST ITS PRIDE, MORE SHIPS HAVE BEEN LOST AND INJURED, AND MORE MEN KILLED SINCE THE WASHINGTON CONFERENCE DEALT THE NAVY A DEADLY BLOW THAN DURING THE WHOLE PERIOD OF THE WORLD WAR

(By Josephus Daniels, Secretary of the Navy in Wilson's Cabinet)

"What's the matter with the Navy?"

That's the question Mr. Average Citizen hurls at you if you walk down Pennsylvania Avenue in the Capital of the Republic, or pass down Main Street in any town, or stop at any country road to get gas for your flivver.

The universal question shows the people know that something is the matter. More destroyers have gone to the bottom of the sea in the past year than in all the World War, and more lives of the Navy personnel lost by accidents at sea since 1921 than were caused by German submarines in the World War. It is a rare month when some explosion, or sinking, or something else doesn't shock the country.

The real answer is that the deterioration of the Navy can be traced to the Washington conference. It deliberately sacrificed the Navy to make a holiday for so-called statesmen playing to the diplomatic gallery in Britain and in Japan. Unwilling to do anything real to prevent war, to remove the causes of war, to secure international arbitration of disputes, the performing statesmen (or politicians?) undertook to win applause by a sensational destruction of American naval strength and a Svengali cabalistic cry of a hypnotic fiction called "The divine ratio of 5-5-3."

HUMILIATING PRIDE AND WEAKENED MORALE

That putting the cart before the horse, that dooming the American Navy to second place or worse, brought its natural result to the Navy. It mortified and humiliated the proud officers and capable men of the Navy. It killed their pride and destroyed their enthusiasm. The last bitter drop to the cup was the compulsion of being a party to the fantastic sinking of the *Washington*. That humiliation began when the Washington conference was called. They knew it was a diplomatic gesture, an empty grandstand play, with the Navy as the sacrificial lamb to be offered up. At that conference the Secretary of the Navy of the United States was not permitted to be a member, though officials of his rank from all other nations represented their country. As a matter of fact, naval statesmen were not consulted at all. Not one can be found who approved the 5-5-3 farce. The hypnotized country now sees what men of knowledge of naval affairs saw then. But the naval leaders were muzzled and the country bamboozled.

ACCIDENTS AND DISASTERS GALORE

The expected has happened. You can not make our Navy equal to that of any country by oratory, by figures of a certain type of ship, or by misleading treaties. If you deliberately, ignorantly, or some other way kill the spirit of the naval personnel, how can you expect it to function efficiently? You can not crush the spirit and destroy the tools and enforce inferiority and then command the highest efficiency. And the seed of inferiority of naval strength planted in the Washington conference has produced seed after its own kind. Wholesale desertions of enlisted men, wholesale resignations of officers, flotillas of destroyers wrecked, battleship accidents, the scene of more loss of life than wars, casualties and horrors not before known—that is the gruesome story of the Navy since the Washington conference gave it a body blow. I passed by Honda, in California, a short while ago. A conductor on the Southern Pacific pointed out a protruding spar, the last vestige remaining of 29 magnificent destroyers which could not be replaced for less than \$50,000,000 to \$75,000,000.

ONLY ONE BRIGHT SPOT

I have been reading the reports of the officers in the Navy Department and the commander of fleets. It is a dreary recital, almost without a ray of brightness. The coming of the ZR-3 from Germany, not an achievement that is due to what the American Navy did, is the one glorious hope. It is a good thing the men writing the naval policy in the Washington conference did not know that big aircraft was building in Germany. If so, judging by their sinking of the *Washington* and other leviathans of the sea they would probably have doomed it to a like fate. Their theory would have been that, inasmuch as Britain and Japan had no such lighter-than-air craft, the United States Navy, out of consideration for their feelings, ought to have killed the *Los Angeles* (the ZR-3) and the *Shenandoah* while they were a bornin'. It is fortunate, too, they had never heard of helium and did not know that it is produced nowhere in the world except by our Navy in Texas. They'd probably have decided to scrap that plant in excess of love for Britain and Japan, or to advertise America's unwillingness to insure its safety.

THE BURIAL OF HOPES

If the real feeling of the officers and men of the American Navy, when the magnificent 16-gun *Washington* was foundered and sunk by the decree of the Washington conference, could be summed up in the words of the old hymns—

"I've been to the funeral of all my hopes
And entombed them one by one."

It was not so much because that magnificent ship, with the many millions spent on it, bad as it was to sink the new *Washington* (able to sink any ship afloat) by letting the inferior *Texas*, no better if as good, as one of the British or Jap ships, but it was the feeling that the best ships of the Navy were going to Davy Jones' locker, while old and outranged capital ships were being retained.

WILL DIPLOMACY PERMIT?

And now there is a hue and cry to elevate the guns of the old ships so they can shoot as far as British ships. This is like shutting the door of the stable after the horse is out. The Navy feels that having, against wise policy, sunk or scrapped the fine ships which would have given the United States primacy on the seas, at least the range of the old guns should be equal to the range of the guns of Britain and Japan. Not so, says diplomacy. They say it is "agin" the 5-5-3 understanding, and while they are debating whether under the treaty the strength of our Navy can be made equal to that of other nations our fleet deteriorates. Will the guns be elevated? I do not know. Do not ask the Navy Department. It has nothing to do with the Navy. You must ask the American and British and Japanese foreign offices. Having secured the sinking of the ten or more capital ships which we were building which would outrange any guns, these two countries and our foreign office may graciously permit the elevation. The ships are old and will not last very many years.

MUST SPEND MUCH MONEY

The reports of the naval heads disclose the fact it will take millions to repair and refit and make ready for use the *Arkansas* and other old ships we saved while scrapping the *Washington* and *North Carolina* and other superdreadnoughts. The commander in chief had to give up the maneuvers last spring because they were in such bad state of repair. Also the Navy desires to build some scout cruisers. They must be built if we are to have a Navy anything like equal to Britain and Japan. And as to the air, we have been playing with it while France's airy navy in the central blue is the greatest ever. If we do these things, where is the big saving that the Washington conference was to save the taxpayers?

As a matter of fact, that conference instead of reducing competitive navy building accelerated it along every line except in dreadnoughts. Somebody in Congress ought to present the figures and show what a big humbug the Washington conference has turned out to have been.

P. S.: The Judge Advocate General reports that the number of desertions and absences without leave have greatly increased in the past year. That is one additional concrete proof of the loss of morale in the Navy since the 5-5-3 miracle was pulled out of the hat by the prestidigitator.

Mr. FRENCH. Mr. Chairman, I yield 10 minutes to the Delegate from the Philippine Islands [Mr. GUEVARA].

FILIPINOS ARE LOYAL

Mr. GUEVARA. Mr. Chairman and gentlemen of the committee, in the last session of Congress your Committee on Insular Affairs reported out the bill H. R. 8856, entitled "A bill to enable the people of the Philippine Islands to adopt a constitution and form a government for the Philippine Islands and to provide for the future political status of the same," introduced by the distinguished chairman of the Committee on Insular Affairs, Mr. FAIRFIELD, on April 23, 1924. In the same session of Congress there were also introduced H. J. Res. 127, H. J. Res. 131, H. R. 2817, and H. R. 3924, fathered, respectively, by the distinguished gentleman from Mississippi, Mr. RANKIN, Mr. COOPER of Wisconsin, and Messrs. KING and SABATH, of Illinois. Each of these bills has for its purpose the immediate withdrawal by the United States of her sovereignty over the Philippine Islands. But the burden of business of great importance to the American people precluded any one of those bills from reaching the floor of this House for consideration and decision.

It was but natural that this Congress should first concern itself with the consideration of measures directly affecting the life and happiness of the people it represents. Permit me, however, to remind you that there are eleven and a half million people in the Philippines eagerly waiting for a definition of their political status. I know that their interests and happiness are also dear to you. It has been evidenced

during the entire 25 years of our providential association. In recognition of the altruistic purpose of the United States in the Philippines the Filipino people have been and are loyal to you not only in times of peace and prosperity but also in times of need and distress. The Filipino people have learned to love America with an ardor and devotion only surpassed by their love for their own country. [Applause.] We proudly regard our country as the bulwark of the American principles and traditions and as the outpost of your culture in the Far East, and I assure you that this sentiment will forever prevail in the Philippines.

INTOLERABLE SITUATION

The humanitarian task, wonderfully undertaken by the United States in that far country, is not yet complete. The achievements are unparalleled, but the situation is intolerable. The structure of our political institutions is founded on a weak base. The gratitude of my people and the spirit of your institutions are the only support that makes possible the endurance of such a situation.

JUSTICE CAN NOT BE DELAYED

It is improper for me to engage in a general discussion of the bills I referred to a while ago. It is unjust to this House as none of those bills are now under consideration. When the proper time comes I hope for an ample opportunity to express my views on them and to convey to the representatives of the American people the true needs and aspirations of the Philippines. For the present I just wish to appeal to your Committee on Rules to report H. R. 8856 to this House to give its Members an opportunity to express their views and decision on the same.

It is but just that the plea of the Filipino people be decided in one way or another by Congress, the supreme authority of the United States. A question of human right should not be permitted to sleep in the darkness. It is un-American. It is undemocratic. It is against the principles upon which the American Government was conceived.

The Congress of the United States has never been reluctant or negligent in the prompt solution of those problems affecting the life, happiness, and prosperity of human beings. Its records conclusively prove this affirmation. Americans as well as Filipinos are united for a definite solution and adjustment of the present Philippine political status.

Where justice is at stake action can not be delayed. Even political expediency can not justify such a delay.

Your Committee on Insular Affairs so understood it, and did its duty by reporting out a legislation for the Philippines. I wish to express to that committee the appreciation of the Filipino people for its devoted interest in the solution of their problems. Both parties in the committee were united in the common purpose of solving the Philippine problem. They were guided by the high spirit of duty, for which the Filipino people are extremely grateful.

There may have been a difference of opinion regarding the way the Philippine problem must be adjusted, but in the final analysis the best interests, and only the best interests, of the Filipino people was the cause of such disagreement. It is now the right and liberty of this House to render the final decision on the question. But before it can be done it is essential that your Committee on Rules set a date for that purpose. I wish to appeal once more to your Committee on Rules. They are men of vast experience in the transaction of public business and men devoted to the cause of justice and liberty. I know that the members of your Committee on Rules will be more than glad to give the Filipino people a fair chance to submit their case to the American Nation through her constitutional representatives in Congress. They would not deny them that right, for which the American people, whom they represent in this House, have fought in the past.

AN ENCOURAGEMENT TO MILITARISTIC NATIONS

The bill reported by your Committee on Insular Affairs is one of the most important pieces of legislation to be considered by the Sixty-eighth Congress. It will be a call for democracy in the Far East and a call to the good faith of those nations who have associated themselves in the common effort to destroy autocracy and follow the victorious flag of democracy. [Applause.] It will be the beacon of hope for the aspiring people in the Far East. It will be a warning to those nations who purposely want to deviate from the line of those principles for which they fought in the last war. The American Nation should be proud to be the first to launch the challenge by setting the example. She is the only one that can call those nations to their duty.

The nonsettlement of the Philippine political status will undoubtedly encourage the selfish aims of militaristic nations. It will encourage them also to look on the weak as the natural

prey of the strong. And the worst, it will induce them to regard the principles for which the world was thrown into a bloody struggle as a mere thought of a difficult moment, without any moral meaning in the life of nations.

The settlement of the Philippine problem will result in the readjustment of international affairs in the Far East. It is a clear case of duty for all liberty-loving nations to initiate such a readjustment. It will be but the fair and honorable execution of the glorious deeds of those who have fallen in the battle fields.

UNITED STATES CAN NOT RECEDE

It is to be acknowledged that the United States of America has made all efforts to reach such a readjustment: First, by the approval of the Jones bill, and second, by the action taken by your Committee on Insular Affairs. As a sequel to the move for the readjustment of international affairs in the Far East, the Conference on the Limitation of Armament was held under the auspices of this great country, with a very successful result. Under America's leadership, Europe, long insolvent, is almost completely rehabilitated. In all present-day world problems the spirit of American principles and the influence of her moral leadership are evidently seen and felt.

This Nation has already laid the foundation on which to build the new world. Let no man or nation obstruct such a magnificent work. The American Nation can not stop. She has already gone too far to recede. The eyes of the world are fixed on the American people in this critical and historic hour. There are a series of events in the Pacific which call for a prompt solution. While other countries in the Far East are favored with well-defined political status, and therefore can wholly devote their energies to the task of reconstruction, the Philippine Islands is handicapped, with its uncertain status, to devote itself to the same task. It would not be tolerated by this Nation, which "demolished at a stroke the lawfulness of all governments founded upon conquest." The demand of the Filipino people for a prompt and definite settlement of their political status is not based upon any grievances. No ill feeling or hate animates their demand. They are proud of their association with this great Nation. Nevertheless, no matter how happy they might be in their association with this Nation, it will amount to nothing if they do not strive to ascertain definitely their fate and destiny in the days to come. The Filipino people look at this Nation as the beacon of hope to which they can turn their eyes for relief and justice. They have rested their case before the tribunal of American public opinion, and the only thing that remains to be done is for its Representatives in Congress to render the verdict on the same. They have faith in your sense of justice. They are confident that the necessary steps will be immediately taken to end the present provisional status of the Philippines, which has been a check to her progress and development during the last 25 years.

Your Committee on Rules is the one now called upon to respond to the plea of the Filipino people. [Applause.]

Mr. FRENCH. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. CHINDBLOM, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 10724, the naval appropriation bill, and had come to no resolution thereon.

LEAVE OF ABSENCE

By unanimous consent, the following leave of absence was granted:

To Mr. REED of New York, on account of illness.

To Mr. WELLER, until December 20, 1924, on account of important business.

To Mr. TAGUE (at the request of Mr. CONNERY), on account of illness.

ADJOURNMENT

Mr. FRENCH. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 4 o'clock and 31 minutes p. m.) the House adjourned until to-morrow, Wednesday, December 17, 1924, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

730. A letter from the Secretary of War, transmitting, with a letter from the Chief of Engineers, reports on preliminary

examination and survey of New York Harbor, N. Y., Bay Ridge, and Red Hook Channels; to the Committee on Rivers and Harbors.

731. A letter from the Secretary of War, transmitting, with a letter from the Chief of Engineers, report on Salem River, N. J.; to the Committee on Rivers and Harbors.

732. A letter from the Secretary of the Navy, transmitting a draft of proposed legislation "To authorize the Secretary of the Navy to proceed with the construction of certain public works at the naval air station, Pensacola, Fla."; to the Committee on Naval Affairs.

733. A communication from the President of the United States, transmitting statement showing the names of persons employed in the inspection of meat and meat-food products, the salary or per diem paid to each, where they have been or are employed, together with contingent expenses for the period beginning July 1, 1923, and ending June 30, 1924; to the Committee on Expenditures in the Department of Agriculture.

734. A letter from the chairman of the national legislative committee of the American Legion, transmitting sixth annual report of the American Legion, 1924; to the Committee on World War Veterans' Legislation.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of Rule XIII,

Mr. REED of West Virginia: Committee on the District of Columbia. S. 2593. An act for the extension of Rittenhouse Street in the District of Columbia; with amendments (Rept. No. 1047). Referred to the Committee of the Whole House on the state of the Union.

Mr. YATES: Committee on the Judiciary. H. R. 82. A bill to amend an act entitled "An act to amend section 101 of the Judicial Code"; without amendment (Rept. No. 1048). Referred to the House Calendar.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of Rule XIII,

Mr. WAINWRIGHT: Committee on Military Affairs. S. 3170. An act for the relief of Edgar William Miller; without amendment (Rept. No. 1049). Referred to the Committee of the Whole House.

CHANGE OF REFERENCE

Under clause 2 of Rule XXII, the Committee on Invalid Pensions was discharged from the consideration of the bill (H. R. 10344) granting an increase of pension to Nancy A. Sumner, and the same was referred to the Committee on Pensions.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. COLTON: A bill (H. R. 10783) conferring jurisdiction upon the Court of Claims to hear, examine, adjudicate, and enter judgment in any claims which the Uintah and White River Tribes of Ute Indians of Utah may have against the United States, and for other purposes; to the Committee on Indian Affairs.

By Mr. McKENZIE: A bill (H. R. 10784) to provide for the promotion of certain officers in the Army by selection; to the Committee on Military Affairs.

By Mr. OLDFIELD: A bill (H. R. 10785) granting the consent of Congress to the county of Independence, Ark., to construct, maintain, and operate a bridge across the White River at or near the city of Batesville, Ark.; to the Committee on Interstate and Foreign Commerce.

By Mr. McLEOD: A bill (H. R. 10786) to provide governmental aid in commercializing aviation in the United States, its Territories, and possessions; to the Committee on Interstate and Foreign Commerce.

By Mr. MORROW: A bill (H. R. 10787) granting to the State of New Mexico 2,000,000 acres of land in said State; to the Committee on the Public Lands.

By Mr. JARRETT: A bill (H. R. 10788) providing for an extension to the Federal building at Honolulu, Hawaii; to the Committee on Public Buildings and Grounds.

By Mr. WAINWRIGHT: A bill (H. R. 10789) to give wartime rank to certain officers on the retired list of the Army; to the Committee on Military Affairs.

By Mr. WATKINS: A bill (H. R. 10790) to authorize the erection of a Veterans' Bureau hospital in Portland, Oreg.,

and authorizing the Director of the Veterans' Bureau to accept by gift a site for said hospital; to the Committee on World War Veterans' Legislation.

By Mr. GRAHAM: Resolution (H. Res. 382) for the consideration of H. R. 7190, to amend the China trade act of 1922; to the Committee on Rules.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ACKERMAN: A bill (H. R. 10791) granting a pension to Frances E. Andrews; to the Committee on Pensions.

Also, a bill (H. R. 10792) granting an increase of pension to Amanda C. Dunham; to the Committee on Invalid Pensions.

By Mr. ANTHONY: A bill (H. R. 10793) granting a pension to Laura V. Adams; to the Committee on Pensions.

By Mr. ARNOLD: A bill (H. R. 10794) for the relief of Frederick Leininger; to the Committee on Military Affairs.

By Mr. AYRES: A bill (H. R. 10795) granting an increase of pension to Gideon C. Lewis; to the Committee on Pensions.

Also, a bill (H. R. 10796) for the relief of Warren M. Myers; to the Committee on Claims.

By Mr. BEGG: A bill (H. R. 10797) granting an increase of pension to Addie M. Jackson; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10798) granting an increase of pension to Flora A. Overmire; to the Committee on Invalid Pensions.

3220. By Mr. FROTHINGHAM: Petition of Army and Navy Union, Boston, Mass., praying for the immediate enactment of proposed legislation to increase the pensions of Civil and Spanish War veterans and their widows and children; to the Committee on Pensions.

3221. By Mr. GALLIVAN: Petition of metal trades department, American Federation of Labor, recommending appropriate action by Congress for the building up and maintaining of a well-balanced Navy based on the treaty ratio; to the Committee on Naval Affairs.

3222. By Mr. WILLIAM E. HULL: Petition of citizens of Peoria County, Ill., opposing Senate bill 3218; to the Committee on the District of Columbia.

3223. By Mr. KIESS: Evidence in support of House bill 19063, granting increased pension to Julia Embich; to the Committee on Invalid Pensions.

3224. By Mr. MORROW: Petition of Las Vegas, San Miguel County, N. Mex., Chamber of Commerce; Peoples Bank & Trust Co.; First National Bank of Las Vegas; Las Vegas Savings Bank; Frank J. Wesner, mayor of Las Vegas, for the proposed Federal building in Las Vegas; to the Committee on Public Buildings and Grounds.

3225. By Mr. O'CONNELL of New York: Petition of the official board of the First Methodist Episcopal Church of Hollis, Long Island, N. Y., favoring the postal salary increase bill (S. 1898); to the Committee on the Post Office and Post Roads.

3226. Also, petition of St. Anne's Council, No. 2429, Knights of Columbus, Queens, Long Island, N. Y., favoring the passage of the postal salary increase bill (S. 1898); to the Committee on the Post Office and Post Roads.

3227. Also, petition of the American Federation of Labor, protesting against the violations of law and outrages to American citizenship that took place on the island of Porto Rico in the elections held on November 4, 1924, favoring a joint subcommittee from both Houses of Congress shall proceed to the island to investigate the aforesaid elections and condition of the people, and take the proper measures to grant those people the right to hold a new general election and to insure to said people of Porto Rico an honest and free exercise of the suffrage; to the Committee on Insular Affairs.

3228. Also, petition of the Dunton Masonic Club (Inc.), of Jamaica, Long Island, N. Y., favoring the postal salary increase bill (S. 1898) enactment at this session; to the Committee on the Post Office and Post Roads.

3229. Also, petition of Attilio Ricciardi, of New York City, favoring the Lineberger bill (H. R. 6484) for retirement of disabled emergency Army officers; to the Committee on Military Affairs.

3230. By Mr. SMITH: Petition of Southern Idaho Conference, Boise, Idaho, containing 925 signatures, against the enactment of Sunday rest legislation; to the Committee on the Judiciary.

3231. By Mr. SWING: Petition of residents of San Diego County, protesting against compulsory Sunday observance; to the Committee on the District of Columbia.

3232. By Mr. WEFALD: Petition of 41 Chippewa Indians of Ogema, Minn., praying for the passage of the \$100 per capita payment bill to help them through the winter; to the Committee on Indian Affairs.

3233. Also, petition of 21 Chippewa Indians of Bejou, Minn., praying for the passage of the \$100 per capita payment bill to help them through the winter; to the Committee on Indian Affairs.

3234. Also, petition of 12 Chippewa Indians of Waubun, Minn., praying for the passage of the \$100 per capita payment bill to help them through the winter; to the Committee on Indian Affairs.

3235. Also, petition of 39 Chippewa Indians of Minneapolis, Minn., praying for the passage of the \$100 per capita payment

bill to help them through the winter; to the Committee on Indian Affairs.

3236. Also, petition of 20 Chippewa Indians of Elbow Lake, Minn., praying for the passage of the \$100 per capita payment bill to help them through the winter; to the Committee on Indian Affairs.

3237. Also, petition of 75 Chippewa Indians of Callaway, Minn., praying for the passage of the \$100 per capita payment bill to help them through the winter; to the Committee on Indian Affairs.

3238. Also, petition of 23 Chippewa Indians of Pinehurst, Minn., praying for the passage of the \$100 per capita payment bill to help them through the winter; to the Committee on Indian Affairs.

3239. Also, petition of 10 Chippewa Indians of Swan River, Minn., praying for the passage of the \$100 per capita payment bill to help them through the winter; to the Committee on Indian Affairs.

3240. Also, petition of eight Chippewa Indians of Waubun, Minn., praying for the passage of the \$100 per capita payment bill to help them through the winter; to the Committee on Indian Affairs.

3241. Also, petition of six Chippewa Indians of Mahnomen, Minn., praying for the passage of the \$100 per capita payment bill to help them through the winter; to the Committee on Indian Affairs.

3242. By Mr. WELLER: Petition of residents of the city of New York opposing compulsory Sunday observance laws, etc.; to the Committee on the District of Columbia.

3243. Also, petition of residents of New York City opposing the compulsory Sunday observance laws, etc.; to the Committee on the District of Columbia.

SENATE

WEDNESDAY, December 17, 1924

(Legislative day of Tuesday, December 16, 1924)

The Senate met at 12 o'clock meridian, on the expiration of the recess.

The PRESIDENT pro tempore. The Senate will receive a message from the House of Representatives.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Farrell, one of its clerks, announced that the House had passed the following bills, in which it requested the concurrence of the Senate:

H. R. 10650. An act to authorize the settlement of the indebtedness of the Republic of Lithuania to the United States of America; and

H. R. 10651. An act to authorize the settlement of the indebtedness of the Republic of Poland to the United States of America, and for other purposes.

DEBT SETTLEMENTS WITH LITHUANIA AND POLAND

Mr. SMOOT. Mr. President, the two bills which have just been received from the House are exactly the same as the bills passed by the Senate on Monday. So I ask that the House bills be put upon their passage at this time.

Mr. ROBINSON. The bills relate to the debt settlement with those two Governments?

Mr. SMOOT. Yes; and they are exactly the same as the Senate bills that we passed the other day.

The bill (H. R. 10650) to authorize the settlement of the indebtedness of the Republic of Lithuania to the United States of America was read twice by its title.

The PRESIDENT pro tempore. The Senator from Utah asks unanimous consent for the present consideration of this bill. Is there objection?

There being no objection, the bill was read and considered as in Committee of the Whole.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

The bill (H. R. 10651) to authorize the settlement of the indebtedness of the Republic of Poland to the United States of America, and for other purposes, was read twice by its title.

The PRESIDENT pro tempore. Is there objection to the present consideration of the bill?

There being no objection, the bill was read and considered as in Committee of the Whole.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

PETITIONS AND MEMORIALS

Mr. ROBINSON presented memorials signed by 228 citizens of Springdale, Huntsville, and Hindsville, all in the State of Arkansas, remonstrating against the passage of legislation providing for compulsory Sunday observance in the District of Columbia, which were referred to the Committee on the District of Columbia.

Mr. FESS presented a resolution of the Marquette Club of Cleveland, Ohio, favoring the enactment of Senate bill 1898, providing increased compensation to postal employees, which was referred to the Committee on Post Offices and Post Roads.

Mr. SHORTRIDGE presented memorials (numerously signed) of sundry citizens of King City, Los Angeles, Los Molinos, Santa Ana, Stockton, Tehama County, and Mountain View, all in the State of California, remonstrating against the passage of legislation providing for compulsory Sunday observance in the District of Columbia, which were referred to the Committee on the District of Columbia.

He also presented petitions of sundry veterans of the Spanish-American War, the Philippine insurrection, and the Boxer rebellion, all of the National Soldiers' Home, in the State of California, praying for the passage of House bill 5934, the so-called Knutson bill, providing increased pensions for Spanish War veterans and their dependents, which were referred to the Committee on Pensions.

He also presented a petition of sundry citizens of Roseville, Calif., praying for the passage of the so-called game refuge bill, which was referred to the Committee on Public Lands and Surveys.

He also presented a petition of sundry members of the First A. M. E. Church, of Oakland, Calif., praying for the passage of antilynching legislation, which was referred to the Committee on the Judiciary.

Mr. NORBECK presented memorials of sundry citizens of Mitchell, Chamberlain, Stratford, Aberdeen, Oacoma, Pukwana, Hartford, and Huron and vicinity, all in the State of South Dakota, remonstrating against the passage of legislation providing for compulsory Sunday observance in the District of Columbia, which were referred to the Committee on the District of Columbia.

Mr. McKINLEY presented the petition of the Council of the City of Chicago, Ill., praying that the flagship *Chicago*, which was used by aviators of the Army Air Service in the historic round-the-world flight, be given into the custody of the city of Chicago to be preserved as a memorial to the courage, ability, and fortitude of the distinguished soldiers who so capably manned it and as a physical evidence of their great achievement and of the commercial and military possibilities of aerial navigation, which was referred to the Committee on Military Affairs.

Mr. JOHNSON of California presented a petition of sundry citizens, all residents of Marin County, in the State of California, praying for the adoption of the so-called equal rights amendment to the Constitution which provides that "men and women shall have equal rights throughout the United States and every place subject to its jurisdiction," which was referred to the Committee on the Judiciary.

He also presented memorials (numerously signed) of sundry citizens of the city and county of Los Angeles, Kings and Shasta Counties, Ocean Park, Santa Monica, Venice, Paradise, Chowchilla, Fresno, Madera, Hanford, Glendale, and Stockton, all in the State of California, remonstrating against the passage of legislation providing for compulsory Sunday observance in the District of Columbia, which were referred to the Committee on the District of Columbia.

Mr. WILLIS presented letters in the nature of memorials from Tennis Wick, of Elyria, and James H. McKay, of Youngstown, both in the State of Ohio, remonstrating against the ratification of the so-called Hay-Quasada treaty, proposing to cede the Isle of Pines to Cuba, which were referred to the Committee on Foreign Relations.

REPORTS OF THE INTERSTATE COMMERCE COMMITTEE

Mr. SMITH, from the Committee on Interstate Commerce, to which was referred the bill (H. R. 4168) to amend an act entitled "An act to punish the unlawful breaking of seals of railroad cars containing interstate or foreign shipments, the unlawful entering of such cars, the stealing of freight and express packages or baggage or articles in process of transportation in interstate shipment, and the felonious asportation of such freight or express packages or baggage or articles therefrom into another district of the United States, and the felonious possession or reception of the same," approved February 13, 1913 (37 Stat. L. p. 670), reported it without amendment and submitted a report (No. 814) thereon.

He also, from the same committee, to which was referred the resolution (S. Res. 283) favoring the allotment of sufficient funds to the Interstate Commerce Commission to enable it to carry on the work of valuation of common carriers, reported it with an amendment.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. MOSES:

A bill (S. 3698) granting an increase of pension to Calvin C. Swormstedt (with accompanying papers); to the Committee on Pensions.

By Mr. HALE:

A bill (S. 3699) for the relief of Amelia A. Swasey (with an accompanying paper); to the Committee on Claims.

By Mr. McNARY:

A bill (S. 3700) for the relief of the city of Astoria, Oreg.; to the Committee on Claims.

By Mr. ERNST:

A bill (S. 3701) granting a pension to Mary E. Grayson;

A bill (S. 3702) granting a pension to Ashley Peak;

A bill (S. 3703) granting an increase of pension to Jacob C. Roberson;

A bill (S. 3704) granting an increase of pension to Jessie D. Rue; and

A bill (S. 3705) granting an increase of pension to Anna Spinner; to the Committee on Pensions.

By Mr. HARRELD:

A bill (S. 3706) to provide for the permanent withdrawal of a certain 40-acre tract of public land in New Mexico for the use and benefit of the Navajo Indians; to the Committee on Indian Affairs.

By Mr. SWANSON:

A bill (S. 3707) granting a pension to Edith Bolling Wilson; to the Committee on Pensions.

By Mr. NORBECK:

A bill (S. 3708) for the relief of the Custer Electric Light, Heat & Power Co., of Custer, S. Dak.; to the Committee on Claims.

A bill (S. 3709) making an appropriation for special research and accounting in matters relating to suits brought by Indian tribes against the United States; to the Committee on Appropriations.

By Mr. COPELAND:

A bill (S. 3710) for the relief of Herbert T. James; to the Committee on Naval Affairs.

A bill (S. 3711) granting the distinguished service medal to Dr. Victor C. Pedersen; to the Committee on Military Affairs.

By Mr. SWANSON:

A bill (S. 3712) to authorize the acquisition of a site and the erection thereon of a Federal building at Boykin, Va.; to the Committee on Public Buildings and Grounds.

By Mr. KENDRICK:

A bill (S. 3713) for the relief of Oscar A. Demple; to the Committee on Public Lands and Surveys.

By Mr. WILLIS:

A bill (S. 3714) to authorize cooperative agreements between the heads of the Executive Departments and the Governor of the Territory of Alaska; to the Committee on Territories and Insular Possessions.

AMENDMENT TO MUSCLE SHOALS BILL

Mr. McKEILLAR submitted an amendment intended to be proposed by him to House bill 518, the so-called Muscle Shoals bill, which was ordered to lie on the table and to be printed.

NAVAL AIR STATION NEAR SAND POINT, WASH.

Mr. JONES of Washington submitted an amendment intended to be proposed by him to the bill (H. R. 2688) providing for sundry matters affecting the naval service, and for other purposes, which was referred to the Committee on Naval Affairs and ordered to be printed.

WARRANT OFFICERS IN THE MARINE CORPS

Mr. FERRIS submitted an amendment intended to be proposed by him to the bill (H. R. 2688) providing for sundry matters affecting the naval service, and for other purposes, which was referred to the Committee on Naval Affairs and ordered to be printed.

AMENDMENT TO INTERIOR DEPARTMENT APPROPRIATION BILL

Mr. McNARY submitted an amendment intended to be proposed by him to House bill 10020, the Interior Department appropriation bill, which was referred to the Committee on Appropriations and ordered to be printed, as follows:

Umatilla Rapids project, Oregon: For investigations of the feasibility of irrigation by gravity or pumping, water sources, water storage, and related problems on the Columbia River and its tributaries, and for cooperative and miscellaneous investigations of the feasibility of reclamation projects, including personal services in the District of Columbia and elsewhere, and incidental expenses, the unexpended balance of this appropriation contained in the act of March 4, 1923 (42 Stat. p. 1540), is hereby reappropriated and made immediately available until used.

To be inserted at the proper place in the bill.

MUSCLE SHOALS

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 518) to authorize and direct the Secretary of War, for national defense in time of war and for the production of fertilizers and other useful products in time of peace, to sell to Henry Ford, or a corporation to be incorporated by him, nitrate plant No. 1, at Sheffield, Ala.; nitrate plant No. 2, at Muscle Shoals, Ala.; Waco Quarry, near Russellville, Ala.; steam-power plant to be located and constructed at or near Lock and Dam No. 17, on the Black Warrior River, Ala., with right of way and transmission line to nitrate plant No. 2, Muscle Shoals, Ala.; and to lease to Henry Ford, or a corporation to be incorporated by him, Dam No. 2 and Dam No. 3 (as designated in H. Doc. 1262, 64th Cong., 1st sess.), including power stations when constructed as provided herein, and for other purposes.

Mr. NORRIS obtained the floor.

Mr. SMOOT. Mr. President, I suggest the absence of a quorum.

The PRESIDENT pro tempore. The Clerk will call the roll.

The principal legislative clerk called the roll, and the following Senators answered to their names:

Ashurst	Ferris	McKellar	Shipstead
Ball	Fess	McKinley	Shortridge
Bayard	Fletcher	McNary	Simmons
Borah	Frazier	Mayfield	Smith
Brookhart	George	Means	Smoot
Broussard	Gerry	Metcalf	Spencer
Bruce	Glass	Moses	Stanfield
Butler	Gooding	Neely	Stanley
Capper	Greene	Norbeck	Sterling
Caraway	Hale	Norris	Swanson
Copeland	Harrell	Oddie	Trammell
Couzens	Harris	Overman	Underwood
Cummins	Harrison	Pepper	Wadsworth
Curtis	Heflin	Phipps	Walsh, Mass.
Dale	Howell	Pittman	Walsh, Mont.
Dial	Johnson, Calif.	Raisdon	Warren
Dill	Jones, Wash.	Ransdell	Weller
Edge	Kendrick	Reed, Mo.	Willis
Edwards	Keyes	Reed, Pa.	
Ernst	Ladd	Robinson	
Fernald	McCormick	Sheppard	

The PRESIDENT pro tempore. Eighty-one Senators have answered to the roll call. A quorum is present. The question is upon agreeing to the amendment proposed by the Senator from Montana [Mr. WALSH] to the substitute submitted by the Senator from Alabama [Mr. UNDERWOOD].

Mr. NORRIS. Mr. President, there seems to be not only in the press, but in opinions prevailing among at least some of the Members of this body, a feeling that the vote yesterday upon the so-called Smith amendment was an indication and some think an actual demonstration that eventually the so-called Underwood substitute would be agreed to by the Senate. An examination of that roll call convinces me that such a conclusion is unjustifiable. There are quite a number of Senators who voted against the Smith amendment who are for the committee bill and are against the so-called Underwood substitute.

I realize, however, as fully as anyone can, I think, and I have all the time realized, the wonderful combination of forces arrayed against the committee bill. I know that the skids have been greased and the machinery oiled of the great steam roller, with the idea of putting the substitute across, or at least smothering the life out of the committee bill. I realize the power and the influence of the Executive over legislation either in this body or in the House. I realize that such influence has not been confined to any one President or to any one administration or to the Presidents of any political party, and while I believe it is contrary to the fundamental principles upon which our Government was organized and upon which it is supposed to rest and stand, I make no complaint against those, either in this body or outside, who disagree with me and who think that it is the duty of the President to use all the influence he may possess to control legislation.

I know, Mr. President, that this wonderful legislative ship has been for some time under way, with a view of bringing about the defeat of the committee bill and the turning over of

that great governmental property at Muscle Shoals to some private interest or private corporation, or, if that be not done, that it be turned over to a governmental corporation organized and controlled by those who are opposed to governmental operation. I submit, if we are going to have governmental operation, it ought to be under a bill at least where the voices of those who are friendly to that kind of legislation have been fairly and honestly considered.

This great legislative ship with the American flag at the mast has upon its bridge as the commander no less a personage than the President of the United States. At his right stands the second in command, the Senator from Alabama [Mr. UNDERWOOD]. Down in the hold of that mighty ship, under the command of the boatswain, the Senator from Kansas [Mr. CURTIS], are the Coolidge Republican Senators tugging away at the oars as common sailors. That ship, Mr. President, is headed straight for Wall Street, and carries a deed of conveyance to the electric water power trust of America for one of the greatest inheritances of unborn generations of American citizens.

Oh, President Coolidge, just after having received such a mighty vote of confidence from the American people, how can you give the power of your commanding position to this program? After having received such a great vote of confidence from the farmers of the United States, how can you be a party to this proceeding that ultimately is going to be recognized, no matter what the intentions and however honest of those who are behind it, as a deception of the American farmer? Giving President Coolidge credit for being honest in every move, giving his representative here on the floor of the Senate, the Senator from Alabama, his officer in command, likewise credit for being conscientious in every step that either one or both propose to take, it seems to me that the inevitable conclusion must be that if this administration measure, fathered here by the Senator from Alabama, shall be enacted into law, it will ultimately be recognized as a rape upon the Treasury of the United States, a gold brick to the American farmer, and the giving of a concession of untold value to some corporation, whose identity has not yet been disclosed; a concession so great that it will make Tea Pot Dome look like a pinhead. Doheny and Sinclair will soon realize that they were only pikers when they spent hundreds of thousands of dollars for the corrupting of public officials and the hiring of ex-public officials when a greater property is going to be conveyed to some private interest through the legislative channel without the expenditure of a dollar and without the necessity of any fraudulent methods.

Mr. President, I do not know, if this bill shall become a law and this property shall be leased, who the lessee is going to be, but it is safe to say that it will be one of two kinds of corporations: It will be a public utility corporation like the Alabama Power Co., or it will be some private corporation that will use all the surplus power for its own private benefit and gain without any obligation to distribute a single kilowatt of it to anybody. If the latter turns out to be the case, it will mean giving to some private corporation a governmental subsidy that none of its competitors has. If Muscle Shoals shall be leased to a public utility corporation, whether it shall be the Alabama Power Co. or some similar institution, it is safe to say that it will be a part of the water-power trust; that the property will become the possession of some institution that is controlled, either directly or indirectly, by the General Electric Co., either through the control by stock ownership or through the control of directors holding places upon the directorates of several corporations of this kind, all of which are in one way or another subsidiary to the General Electric Co.

You will not cure the evil, Senators, if you shall provide that this electric energy, if it is to be distributed, shall be controlled by State commissions. There are two ways of providing that the people of the United States shall get cheap electricity in their homes. One is through the regulation of commissions such as all the States have; the other is that some division of Government, the Nation, the State, or the municipality, shall own some of the instrumentalities, at least, by which electric energy is made and distributed.

Public utility regulatory bodies are composed merely of men, and for the sake of my argument now, I want to assume that they are perfectly conscientious and honest; but they are confronted every time they act officially by a set of experts who have made a life study of this one question, who have at their tongue's end every argument pro and con on every conceivable idea that may become important, and they are therefore very often honestly deceived as to the facts. Furthermore, Mr. President, it has been the history that special in-

terests, trusts, and great combinations never sleep, and a board with regulatory powers, honest and incorruptible to-day and to-morrow, perhaps, will become more or less tainted as time goes on because in a thousand, yea in a million, ways the special interests use their influence and their power to control the appointment and even the election of men whose viewpoint is in their direction.

This thought was well illustrated by my colleague [Mr. HOWELL] the other day when he showed that consumers in Birmingham, Ala., which is supplied with electricity generated by the use of water power by the great Alabama Power Co. are paying higher rates than are paid by the consumers of Lincoln, Nebr., where the electricity is generated by coal and also supplied by private corporations.

What makes the difference? They have a State commission in Alabama which regulates the rates and service; they have another one in Nebraska. The State commission controls the rates in Alabama, but the Nebraska commission was not the instrumentality that brought the rates of the private corporation down to 5 cents a kilowatt hour in that city. That was due to the fact that the city, notwithstanding their commission, had established a small electric-light plant and gone into the business. When that was done, immediately down came the rate supplied by the private company to 5 cents a kilowatt hour.

The city of Cleveland is another illustration. A private corporation there was furnishing electric lights and electric power to the people of that city and charging 10 cents a kilowatt hour. A complaint was made that it was too high. The case went through the commission there; it went through the courts there; but the private corporation everywhere won. I do not say that the commission in that instance was dishonest; I do not say that the courts were dishonest; in fact, so far as I know—and I think it is true—they were honest and trying to do their duty; but they were confronted on the field of investigation by a set of experts who were able to outwit and outdo all of them. So the court of Ohio—I think it was the Supreme Court—held that the rates in Cleveland could not be lowered below 10 cents; that it had been demonstrated mathematically in court that the company could not stand a reduction; that a reduction would mean bankruptcy and a receiver for their plant. So the court held that under those circumstances it was not right to cut the rate any lower. But, notwithstanding that, Cleveland established a municipal lighting plant and went into the business. What happened to the private plant? Notwithstanding that they had demonstrated that they could not lower their rates, notwithstanding the fact that they had a judicial interpretation sustaining their position, they immediately cut their rates in two, and have been doing business at that rate ever since, presumably paying the same salaries, making money, and getting along. No one has suggested a receiver since.

The committee bill, Mr. President, goes on the theory that, even though all of the surplus power at Muscle Shoals may be distributed and transmitted to the States under the jurisdiction of the various State commissions, that is not enough, and experience shows it is not enough to give the people the benefit. So it is provided that this great property in which the taxpayers' money to the extent of \$150,000,000 has been invested shall be kept by the Government, shall be held as a key, as a regulatory instrumentality, and it is provided that when it is sold, either to an existing company or to a new company, if it shall be sold, there may be put in the contract of sale a provision guaranteeing the right of control over the rates to the consumer and the right to put them down where they ought to be.

Mr. President, much has been said by the Senator from Alabama on various occasions to the effect that the committee bill is a power bill and that his bill is a fertilizer bill; and yet every Senator knows, every person who has ever studied this question knows that every bidder who ever makes a proposition or whoever has made a proposition to get Muscle Shoals has been moved by the power possibilities that are in the project; and the Senator's bill, while it will not develop as much power, the Coolidge bill, while it does not develop a power as great as the committee's bill—that is true—while it does not improve the navigation of the river, while it does not assist in controlling the flood waters not only of that river but of the Mississippi River, nevertheless is likewise in the main a power proposition. The bidders under that bill will figure out what the profit will be on the water power that they will have to distribute, the electric energy that they can send over the wire, and the possible loss that they may sustain in carrying out that provision which requires them after six years have elapsed to make 40,000 tons of nitrogen; and then, after off-

setting the loss, whatever it may be, to the gain they will figure out a basis that will leave sufficient profit in the transaction to justify them in undertaking it. In other words, the bill proposes that this water power that ought to be owned and now is owned by the people of the United States, developed with their money, developed in the stress and the trial of war, shall be used as a subsidy, and thus to that extent, I think, prevent the people of the country from getting the benefit of the distribution of the power. When these men bid, as any business man would bid, having taken those elements into consideration, and having found a sufficient profit left to go into the business, they will realize, as every man who has ever studied this subject does realize, that the entire world is trying to cheapen the production of fertilizer, that the Government of the United States is spending thousands of dollars to do it, and that if in the meantime such a cheapening takes place they will be able to get the benefit of it. If they discover it, they will get it patented. If the Government discovers it, they will get it for nothing; and then what?

Suppose they discover it. They are getting a profit now, even counting on the loss; and suppose they discover a method that will enable the production of fertilizer down there to be carried on at a profit instead of a loss. Then their profits on the entire transaction will be increased enormously. They take no risk to begin with. They are safe when they make their bid. If within the 50 years the process is cheapened, they will get the benefit of it. The farmer will not get the benefit of a dollar. If it is patented by them, not only will they get the benefit of it but they will prevent any other concern anywhere in the world from doing the same thing. They will have a monopoly backed up by the great profit that will come from the water-power development—a monopoly by virtue of our action here in the Senate, at least in part.

If we had a surplus of fertilizer and were exporting it, there might be some reason for the contention that the farmer could get the benefit of this particular thing in this bill; but when we know that we have not fertilizer enough, that we will not have fertilizer enough after we use 40,000 tons annually at the end of six years when we develop it, it means that the man who has the fertilizer—in this case the corporation, the lessee that has this improved method patented—can put it on the market, and the market will absorb every ton of it without decreasing the price a penny. On the other hand, if this development and this improvement should take place under the committee bill, if it becomes a law, every improvement that might be made would be utilized by anyone who wanted to go into the business. It would be utilized by the Government, with the agricultural interests of the country immediately getting the benefit of it, and through them the consumers. There would be no holding up. There would be no incentive to profit. The only incentive there is to improve and cheapen the method.

Why not be honest with the American farmer? Why not tell to the American farmer the exact truth, however unpleasant it may be? Why not say to him, as we must say if we tell the truth, it seems to me: "We do not yet know. The secrets are still hidden. We want to disclose them, we want to invent new processes, we want to cheapen the product. We are using the money of the people of the United States in order to do it." If you think private parties can do it better than the public, why not then pass a law giving to any inventor who will materially reduce the cost of production of fertilizer ingredients from the air a million dollars, let us say, on condition that when he discovers his method he will not patent it and get a monopoly, but will lay it open before the whole country?

Mr. President, it has been more than two years since the Committee on Agriculture and Forestry commenced to investigate this subject; and if you will look up the records you will find that I made no effort to get that investigation for that committee. I was not anxious to undertake that job, because I knew then some of the difficulties that were going to confront us. I knew that we were going up against a proposition of very great difficulty. I undertook it with fear, I undertook it with trembling, because I knew that our path was going to be beset, on the one hand, by the clamor that we should do something here, even though we knew it would not turn out to be practical, in order to satisfy the present demands; and, on the other hand, as far as the power proposition was concerned, I knew that we would be confronted with the power interests of America, and I shuddered at the undertaking. But, Mr. President, it was put upon us to do, and in the performance of our duty we went forward.

We have devoted months, weary days, and weary nights to listening to volumes of testimony, reading volumes and volumes of authority on the various elements that enter into the equa-

tion. Much of it, it is true, was of no value. A great deal of it was of inestimable value; but we had to wade through it. After that patient and I think conscientious consideration of the subject we bring our deliberations before this body, and with what are we confronted? We are confronted now not with an analysis of our proposition, not with a fair and open debate in the forum of discussion of the things that we asked, but we are confronted with a control of Senatorial votes by the administration in power, votes that are going arbitrarily according to the demands and the wishes of the administration without regard to argument, without regard to logic; and I confess, Mr. President, that it is not a very pleasant experience. I admit, in the first place, that notwithstanding our study, notwithstanding our investigation, we may be wrong. We are only human, and the results that we have brought in here as an end of our investigations may be erroneous; but if they are, in all fairness, here is the place, in this forum, where it should be demonstrated. It is hardly fair, it is not conducive to future investigations by committees of this body, if after they have done the best they could their entire work shall be condemned at a midnight session of outside people, perhaps on the *Mayflower* or somewhere else. Here is the place where the matter should be considered; yet we are confronted with an administration measure that has never yet received the consideration of a committee of this body, a measure that saw the light first when it was divulged here.

The committee heard everybody who wanted to be heard, and I was often criticized and condemned, because when anyone wanted to be heard I asked him to come. I subpoenaed many men who did not want to come, and when they wanted to come and be heard I insisted that they should be heard without limitation of time; that we should try to go clear through to the bottom to get everybody's idea if he wanted to present it. After that is all done we are confronted for the first time on the floor of the Senate with a new proposition. No advocate of it has ever been subjected to an examination. No one proposing it has ever been cross-examined before a committee. The scrutinizing eye of an investigating committee has never perused a line of it. No opportunity has been presented to analyze it by a committee of investigation; but we know that there is behind it an unseen power, a power that controls votes by the very force of its own power, without reason. We can talk and argue as we do to empty benches, and we know that scattered around in the offices are Senators who have not read either proposition but who are going faithfully and obediently to follow their chief.

Oh, President Coolidge, how can you lead these confiding, these trusting, these obedient Senators into this great arena and control their votes as you would count sheep or cattle in a corral!

What does it mean, Mr. President? As great as this question is, one that is going to be remembered by children yet unborn, one that is going to be investigated by the honest citizens who shall follow us a hundred years hence, what have you done with this great inheritance? I outlined in my first address at the beginning of this debate what no one has disputed, but what everyone referring to the argument has admitted—that the economic force of human nature, the economy of God Himself is going to bring what in ordinary language is called the giant power, when there will be a combination of all water powers of the United States, supplemented by steam power, steam generated, as a rule, at the mouth of the mine, and the power and the light and the energy will be carried across the country on wires instead of the coal being hauled by the railroads. When that time comes—and it is coming rapidly—when that time is here, unless we do something to stay the advance of the water-power trust, they will hold the people of this country in their giant fingers as in a vise. There will be no escape. All the regulatory bodies in your States will not help you out. Experience has shown that they have helped out in the past only to a small extent. I admit they have done good. I would rather have them than not have them. I am not attacking that system, but I am trying to convince the Senate, if I can, that when the time comes when all these powers shall be linked up together the regulatory bodies will not save the people of the United States from what will be in effect human slavery, when the power and the light of every home will be controlled by a private interest, having no other incentive than the making of the almighty dollar, making money, working for all the money that is in it; and I do not criticize them when I say that. When that time comes, and they hold the whole country in their mammoth grip, what will we be but slaves? We can not escape that time. We could legislate against it and say it could not be done, but it would come. It is the law

of Almighty God, and a legislative body can not stay its effect. We are coming to it.

I am told that an examination of the applications for power under the Federal power act before the Federal Power Commission will disclose that in the case of all the valuable interests, where application has been made in one way or another, the applicants can be traced back to the head of this gigantic trust, the General Electric Co. We are now asked to pass a bill that will take the property of the United States, which we have already improved, and put it into that great basket.

Our committee has spent two years of time delving into this matter without any hatred or ill feeling toward the private power companies. They are doing what you would do and what I would do; they are in it for money, a perfectly legitimate object. The economy of nature will compel them to combine, because they can get cheaper energy in that way. We should not throw away the key to that situation. It is not like a new proposition. It is not as though we had not spent any money at Muscle Shoals. It is not as though we had not built that mighty dam there, one of the great dams of the world. If everything were new, then you who tremble with such horrible fear at Government operation might have some basis, some foundation, upon which to place your feet. But that is not true. Rightly or wrongly—I think rightly, but others may not agree with me, and it makes no difference—we have invested our money, we have improved this property, we have built this dam, we have three towns down there, all owned by the Government of the United States, with modern homes ready for occupancy to-day. We have electric light distributing systems in those towns. We have sewerage in those towns. We have macadamized streets in those towns. We have heating plants in the houses. Hundreds of thousands of dollars of the people's money has gone to build them up. We own all that. If the Underwood substitute passes we will turn it all over to a lessee, and what will he pay? Not a cent on any of that property, not a cent on one of the greatest steam plants in the world, in perfect order, only a 4 per cent return on what the water power cost, and, after all, that is not half of it. The water-power expenses have not been a third as great as the other expenses; they were somewhere in that neighborhood. When we turn it over, if this Underwood substitute shall pass as it stands now, it will be possible, notwithstanding all your provisions about limitation and control of current by State authorities, for the lessee to defy every single one of them. The lessee can use every kilowatt of that power for his own business. It may be Mr. Mellon. He may manufacture aluminum there, and if he does, he will be getting a subsidy from the Government of the United States in addition to protective tariff protection. There is no reason why the lessee should ever sell a kilowatt or a single horsepower.

Mr. SIMMONS. Mr. President—

The PRESIDENT pro tempore. Does the Senator from Nebraska yield to the Senator from North Carolina?

Mr. NORRIS. I yield.

Mr. SIMMONS. Will the Senator from Nebraska please tell the Senate, if he is in possession of the facts, what has been the cost to the Government of all these properties which he says they now own, and what construction work has the Government done there?

Mr. NORRIS. I can not give the figures to the Senator in detail offhand. In round numbers, I think it is a little over \$150,000,000.

Mr. SIMMONS. That includes the houses, plants, and so forth?

Mr. NORRIS. Yes. I want to be perfectly frank and say that some of this construction will be of no particular value to the lessee; for instance, nitrate plant No. 2 and nitrate plant No. 1. Nitrate plant No. 1 will have to be remodeled to be made a success; but that is about all. The railroad is there. The engines are there. The cars are there. The quarry is there. The steam plants are there. The streets are there. The water mains are there. The water systems are there. The electric-light systems are there, all in perfect order, up to date, as modern as any other plants anywhere in civilization.

Mr. HARRELD. Whole acres of fireproof buildings.

Mr. NORRIS. Yes.

Mr. SIMMONS. Mr. President, I am very much interested in the very illuminating discussion of the Senator from Nebraska. All of us know that Senators are very busy in looking after matters which pertain to the work of the committees of which they are members, and therefore do not care-

fully read the bills and the reports and the testimony taken in the investigations before other committees upon questions, however important they may be. Since the debate on this matter began during this session we all know that the minds of Senators, as the result of the discussion, have been focused, first on the substitute offered by the Senator from Alabama [Mr. UNDERWOOD], and, secondly, upon the amendment offered by the Senator from South Carolina [Mr. SMITH] to that substitute. There has been no discussion of the committee's bill, except such, I think, as has emanated from the Senator from Nebraska. The minds of Senators, therefore, have been very little directed to that, and I was going to ask the Senator if, before he concludes, he will not give the Senate again, although he may have done so before, the benefit of a clear, brief statement of the essential provisions of the committee bill.

Mr. NORRIS. Mr. President, I did not intend to do that this morning, but the Senator's question is a perfectly proper one.

Mr. SIMMONS. I did not mean to ask the Senator to do it now, but before he concludes.

Mr. NORRIS. I had in mind this morning to go over somewhat the interlocking directorates of the water-power organizations, giving the Senate the benefit of some information I had obtained; but I am not through with the investigation. I have had five or six investigators going into it for the last four or five days; and while I knew about it in a general way, I had not gone into the details. I myself had gathered together some evidence. I was going to call attention, for instance, to what I believed to be the connection of the Alabama Power Co. with the Water Power Trust; but I do not think it makes any difference whether it is the Alabama Power Co. or some other company; they are all the same trust.

I was amazed; and if the investigators who are working on the question, who have given me a little information from time to time, are correct, a complete investigation of the matter will be almost a mathematical demonstration of the fact that to-day there is not a place in the United States where this mighty trust does not have its hold. You can trace the electric light in Omaha and the electric light in the South, and they both wind up in Wall Street.

I have a little chart here, and I wish it were large enough so that I could put it on the wall; but I want to give the Senate a bird's-eye view of this chart as it appears in one of our senatorial documents. Here is the General Electric Co., and there upon those two pages is shown just where its tentacles reach. That was several years ago. That is all contained in "Electric-power development of the United States," a letter from the Secretary of Agriculture transmitting a report in response to a Senate resolution, a resolution of which I think I was the author, February 13, 1915.

Mr. SHIPSTEAD. Mr. President—

Mr. NORRIS. I yield to the Senator from Minnesota.

Mr. SHIPSTEAD. Does the Senator have any objection to having that printed in the Record?

Mr. NORRIS. I do not suppose I could do that. I would be glad if I could. I may have a better one than that before I get through, because that has not been brought down to date. It may be before the debate is over that we can get some of these things in the Record.

Senators will observe when they look at it that it looks like a spider web reaching out into all sections of the country, and in one way or the other controlling everything in the electrical world. From the little electric bulb that we have in our houses to the giant power where hundreds of thousands of electric energy is distributed to the people their influence is felt. It would not be so awful if, as I said a while ago, we were not facing an electric age, if we were not facing a day not far distant when every humble home, every farmer, every business man would be directly interested in the question. When that day comes we will wake up and find that the whole thing is in the control of Wall Street through one company either directly or indirectly.

I have not had time to gather together all the evidence, as I said, but here are three names. I want to repeat that I am not criticizing these men. I am not claiming that they are dishonorable or bad men—nothing of the kind. I have no fault to find with them. I am not complaining.

First is R. A. Mitchell. He is vice president of the Alabama Power Co. Let us see what else he is. He is a director in the Electric Bond & Share Co. The Electric Bond & Share Co. is owned and every dollar of stock in it is owned by the General Electric Co. He is also a director in the American Gas & Electric Co., and that in turn is owned by the Electric Bond & Share Co. He is also a director in the

American Power & Light Co., another company subsidiary to the Electric Bond & Share Co. He is also a director in the Kansas Gas & Electric Co., away out in Kansas, and that is a subsidiary of the American Power & Light Co., which in turn is a subsidiary of the Electric Bond & Share Co., which in turn is a subsidiary of the General Electric Co. He is also a director in the American & Foreign Power Co., a subsidiary of the Electric Bond & Share Co., the same company. He is also a director in the Lehigh Power Securities Corporation, under the supervision of the Electric Bond & Share Co., which in turn is controlled by the General Electric Co. He is also a director in the Alabama Traction, Light & Power Co., and as I said he is a director in the Alabama Power Co.

E. G. Groesbeck is a director of the Alabama Power Co. He is also a director of the Electric Bond & Share Co., which is now owned completely by the General Electric Co. Mr. Groesbeck is also a director in the American Gas & Electric Co., which is a subsidiary of the Electric Bond & Share Co., which is owned by the General Electric Co. He is also a director in the American Power & Light Co., controlled by the General Electric Co. He is also a director in the Lehigh Power Securities Corporation under the supervision of the Electric Bond & Share Co., which in turn is owned by the General Electric Co. He is also a director in the Alabama Traction, Light & Power Co.

G. M. Dahl is another director of the Alabama Power Co. He is also a director of the Lehigh Power Securities Corporation, which company is under the supervision of the Electric Bond & Share Co. The Electric Bond & Share Co. is owned by the General Electric Co. Mr. Dahl is also a director in the Alabama Traction, Light & Power Co. (Ltd.).

Mr. President, it is a mammoth task to take up the thousands of names connected with the various power companies over the United States. Ninety-nine times out of a hundred, when we trace them to the end, we will find that we have reached the General Electric Co. If we do not run directly to them, we run to some other company where they either own all the stock or control a majority of the stock or at least a large percentage of the stock, and we will have a spider web like I have exhibited here that will cover the entire United States. There is no escape if we are going to give away this great institution down in Alabama which the people's money has developed. There is no place to drop it unless we drop it in the lap of somebody or some corporation that in some way or other is connected with or subsidiary to or owned by the General Electric Co. or some of its subsidiary companies. We are there now. We are in the grip of the Water Power Trust to-day. No matter what we do with it, if we give it to anybody, we are going into their web; we are going under their control. Does that mean cheap fertilizer? Does that mean cheap light and power? Does that mean the distribution to as many people as possible over the country of the electric light and energy that is governed by the water in the streams that are owned in turn by the people themselves? Are we going to give away this vast inheritance which will enable this gigantic trust to gather our children into its tentacles and hold them as subservient slaves in future generations?

Why, Mr. President, it seems to me that there is only one escape; but if there is any other, for God's sake let us have it. If the committee is wrong, point it out. If the committee has not solved the problem, then let somebody else solve it; but do not solve it by throwing all of this great power over into the hands of men who are only there for the purpose of making money out of it. We are considering a question here now, Senators, that involves people who are still in the womb of time. We are considering a question, and this is the beginning of it. We are considering a proposition in which millions and millions of our successors in a hundred years from now are going to be deeply interested. Are we going to throw that over into the control and under the influence and power of one of the most gigantic trusts that was ever conceived by human mind? We must pass on that question now.

I realize the different viewpoints of Senators. Of course, I question no man's conscientiousness or his honesty, but it seems to me we ought to look and see whether we can prevent these men from doing this or save to the people of America the power that comes from their own property. I do not know of any other way to do it than to do as has been done in a small way in municipalities, like they have done in Cleveland, like they have done in Tacoma, like they have done in Lincoln, Nebr.—save enough of the energy, keep our hands on enough of the power, so that through its instrumentalities we will be able to control, by competition if you want to put it that way, the price of all power, and when these mighty projects are

hooked up together and the entire United States perhaps at least under one control, we will hold the key to the situation. We have a right to do it. It is our duty to do it. The property with which we do that belongs to the people of the United States. We ought to save it for their benefit and their children's benefit.

Now, briefly, in answer to the Senator from North Carolina [Mr. SIMMONS], the committee bill provides—

Mr. STANLEY. Mr. President—

The PRESIDING OFFICER (Mr. SWANSON in the chair). Does the Senator from Nebraska yield to the Senator from Kentucky?

Mr. NORRIS. I yield.

Mr. STANLEY. Before the Senator leaves that subject and goes to a new subject may I ask him a question? I understand the Senator maintains that a control of the water power at Muscle Shoals will furnish a practical demonstration of the actual cost of producing electricity and in that way will prevent extortion on the part of the General Electric Co. Can the Senator tell me what horsepower the General Electric Co. now controls?

Mr. NORRIS. No; I can not tell the Senator that to-day. I may be able to tell that before the debate is concluded.

Mr. STANLEY. The thought is in my mind that unless the maximum horsepower of the shoals was a considerable part of the total horsepower of the General Electric Co. the retention of it by the Government could not prevent extortion on the part of the General Electric Co.

Mr. NORRIS. The Senator's suggestion has merit in it, I think. Of course, if we had only one horsepower we could not affect the result. If we had two horsepower, we could in theory do twice as much. If we had four, we would double it again, but it would be infinitesimal. I concede that. If there is a weakness in the proposition, the Senator has pointed it out, because it will be a small part of all the power that is generated. But it is one of the great units in America, and if the committee bill is carried out and the Tennessee River is developed like we want it to be developed, the Government will be able to control in the end perhaps more than a million horsepower. As far as the immediate surroundings are concerned in the South it can control the whole situation.

The objection I have to it, and the Senator by his suggestion has called my attention to it, is that it is not enough. I think we ought to go elsewhere to other parts of the country and do the same thing, although there is a reason here that does not exist in other parts of the country. If I had my way, I would go up into the country of the Senator who sits by my side [Mr. JONES of Washington], and I would take possession of the great Columbia River where there is more power than there is at Muscle Shoals, and I would let that be a unit owned by some governmental instrumentality, either the Federal Government or a State government.

But, of course, that is not involved here. If we tried to do that there would be an objection urged to our doing it that can not be urged against such action relative to Muscle Shoals, because we have not done anything up there; we have not spent any public money up there; we have no property up there, while down at Muscle Shoals it is all different. We own that property; we have spent the people's money in order to get it, and there is a reason existing there which does not exist anywhere else for Government action.

Mr. STANLEY. Mr. President—

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Kentucky?

Mr. NORRIS. I again yield to the Senator from Kentucky.

Mr. STANLEY. I appreciate the fact that the Senator from Nebraska has made a profound study of this question. I had some occasion to go into it at length when the proposition was before the Senate for the first time to have the Government complete the project for a powder plant. I have received several requests from sources which I knew were closely identified with the great power companies, public utilities which are operating on a great scale, and which are more than probably connected directly or indirectly with the General Electric Co., urging me to insist that the power generated at Muscle Shoals be made available to the country generally by mandatory provisions for the furnishing of power to those needing it, the industrial concerns, for instance, which are in the radius where it could be distributed, and with rigid requirements for State and Federal control. I have some difficulty in reconciling that demand upon the part of the power companies for the use of the power generated at Muscle Shoals by those making the demand and the contention of the Senator from Nebraska. I have not as yet been able to understand just why power companies would

be demanding that this power be made available for industrial purposes generally rather than for the manufacture of fertilizer.

Mr. NORRIS. Mr. President, I have no doubt that the power companies would be glad if the power at Muscle Shoals were not developed at all. I have no doubt, except as to the particular power company which will get it, that those companies would be glad if we should waste all the power there in making fertilizer at a financial loss, because it would keep it out of competition with them. Every kilowatt hour of that power that is used to make nitrates at a financial loss under the administration substitute will be taken out of competition with the Alabama Power Co. They would be glad if it should all be utilized in making something at a financial loss and thus keep the electric energy from coming into competition with their business.

Mr. SIMMONS. Unless they could control it.

Mr. NORRIS. Unless they could control it, of course. I think that is the explanation of their position, if I understand the Senator's suggestion.

Mr. STANLEY. Mr. President, that would appear to be the natural, logical position for those companies to take; but I know of one company which has developed an enormous water power, and the representatives of that company urged me to see that this bill contained provisions for the mandatory distribution of the power generated at Muscle Shoals, within the radius that it could be transmitted, and for strict Federal and State control. I could not reconcile that position with the idea that any power company at Muscle Shoals would come into dangerous competition or any competition that they apprehended with the existing power companies, such as the General Electric Power Co. I do not mean to say that the argument of the Senator from Nebraska is not well founded, but I have some difficulty in reconciling that suggestion with what the Senator has stated, and I thought probably he would understand it. I could not.

Mr. NORRIS. Of course, I do not know the representatives of whom the Senator speaks; I do not know the companies whom they represent. It may be possible that they themselves expected to get this plant, and they would not dare come to the Senator and say, "We want to get it, and we want no regulation." All of the power companies say, "Oh, regulate it"; they cry aloud, "Regulate it!" They themselves are being regulated; but in very few instances where I have been able to find out are they so regulated that the people get the benefit of what they ought to have in electric lighting rates.

The burden of my argument, or one of its burdens, is—and it is one of the points in the committee bill—that we ought to hold a strong governmental hand upon this property and say, "We are going to see that the energy generated at Muscle Shoals is not only distributed but that if it is used, as it must be used, in connection with other power companies it shall be distributed to the lines on which we wish to distribute it, whenever that can be fairly done; but when it is done that we shall be able to hold the whip hand and say that they must do justice to the people or that they shall not have it."

Mr. STANLEY. Mr. President, I entirely agree with the Senator, but under Federal regulation neither the Interstate Commerce Commission nor the Federal Trade Commission nor any other governmental authority has ever been able to prevent extortion at times in the charging of an unwarranted tariff. The only thing that can do that is the natural law of competition.

Mr. NORRIS. I agree with the Senator from Kentucky as to that.

Mr. HARRELD. Mr. President—

Mr. NORRIS. I yield to the Senator from Oklahoma.

Mr. HARRELD. I wish to ask the Senator from Nebraska a question, but it may be best first to make a short preliminary statement.

I agree with the Senator's argument that, of course, almost any contract we should make for the Government at this time would be a sort of leap in the dark, and that we should be giving away a valuable property under almost any terms that we could make or which are proposed to be made. For that reason I am inclined to be sympathetic with the movement to keep our fingers on this property until such time as we may be able to make an intelligent contract, until such time as we may know what we are doing. Those preliminary observations lead to this question: Some time ago I saw a statement in a newspaper quoting Mr. Thomas A. Edison as saying that the time would come when power could be transmitted without the intervention of wires; in other words, by wireless. If we are giving to anybody to whom we may make a contract under the terms of the Underwood bill or

any of the other bills a valuable property under present conditions, suppose that such a situation as I have indicated should arise; suppose it were to become possible to transmit power without wires and to do away with the enormous expenses of building transmission lines and things of that sort—and that is not more impossible than radio transmission seemed a few years ago—how much would we be giving away under conditions of that kind? I simply mention that to show that we have not before us the facts on which we can intelligently make a contract pertaining to the Muscle Shoals property.

Mr. NORRIS. Mr. President, I wonder if the Senator's question leads to the suggestion that we ought to do nothing with the property, but merely keep it there idle. What does the Senator want to do with it?

Mr. HARRELD. My idea is that a Government agency ought to be created to go there and handle this property, to make experiments, and sell the energy that is going to waste, but to hold it there until we know what we want to do and what we can do intelligently.

Mr. NORRIS. Well, that is what the committee bill does.

Mr. HARRELD. If the Senator will pardon me, the committee bill goes a little further than that. That bill proposes to put the Government into the manufacture of fertilizer, which is just a little further than I care to go.

Mr. NORRIS. I have heard the Senator from Alabama say that the committee bill does not do that. I suggest now that the Senator from Alabama, who opposes the committee bill because it does not provide for the making of fertilizer, and the Senator from Oklahoma, who opposes the bill because it does provide for the making of fertilizer, rent a room somewhere and thrash out their difficulties.

Mr. HARRELD. Mr. President, to make myself clear, I am perfectly in accord with the provision of the committee bill which authorizes experimentations there in the making of fertilizer, but I am opposed to that part of it which creates agencies for the sale of fertilizer all over the country and which puts the Government into the business of manufacturing and selling fertilizer. I am perfectly willing for the Government to spend all the money it wants to spend for experimentation and to give to the public the benefit of such experiments, but I am not willing for the Government to be put into the business of manufacturing fertilizer or to provide that it shall create agencies to distribute fertilizer over the country, because I do not think that is the proper duty or function of the Government.

Mr. NORRIS. Mr. President, to a great extent I agree with the Senator as to that. I do not want to put the Government into business where it is not necessary, and under any ordinary circumstances I would not do it.

Mr. HARRELD. I call attention to the provision of the bill which provides that an agency shall be created for the sale and distribution of fertilizer.

Mr. NORRIS. Yes. I am coming to that; but that takes us into the fertilizer field. Although some people have criticized me and condemned me on the ground, as they say, that I am not a friend of the farmer because I do not want to provide enough fertilizer in the bill I have suggested, I believe from my study of the fertilizer question that it is one of the coming important questions affecting the human race. It goes beyond our Nation, for it is a question of profound interest to the entire civilized world. We must use more and more fertilizer, unless some new discovery of science shall make fertilizer unnecessary, and we must cheapen fertilizer in order to get more of it used. I am willing to spend the public money to do that; I am willing to go to any length when it may be done practically on a business basis. I am not willing, however, to say we will use, let us say, this wonderful property at Muscle Shoals to extract nitrogen from the air and pile it up where it will do nobody any good, where it will be dangerous to handle and expensive to store and keep.

I do not want to do that, and if a farmer is so unreasonable as to ask me to do that I turn my back on him, for he is asking me to do something I can not do and will not do if I can help it. But I will go to any length to try to cheapen the production of fertilizer; and in order that there may be no combination that will make it impossible for the farmer to get the benefit of cheapened fertilizer I am willing that the Government should make it and send it anywhere in the United States, for the same reason that I am willing that the Government of the United States shall use this property to develop electric energy in order to cheapen the product of all the electrical energy in the United States or in the vicinity

where the electricity may be generated by it. There is no difference in principle.

It has been stated over and over again that there is a Fertilizer Trust. I will deal with the Fertilizer Trust just as I will deal with the Water Power Trust. Where the Government has a property at which it can make fertilizer I would have the Government make it, and I would have the Government go under or over the Fertilizer Trust and get the fertilizer to the farmer in any way that may be necessary.

The Senator from North Carolina [Mr. SIMMONS] has waited long for an answer to his question, and I hope I shall not be interrupted until I answer it briefly. I have gone over the matter before, of course and I will just sketch it briefly.

Mr. SIMMONS. Mr. President, if the Senator will pardon me, I was just as much interested in the question he has just been discussing as I was in the information that I had sought. I heartily approve of what the Senator has said about the importance of cheap fertilizer. I agree with the Senator as to the effect of a failure of the essential fertilizers or inability on the part of the farmer to get those fertilizers at a reasonable cost. I think it would produce about the same conditions in this country as the lack of fertilizing applications to the land has produced in China and in some other countries of the Old World. If we should not be able to secure these commercial fertilizers for the purpose of preserving the fertility of our soil, I doubt very much whether, with all our vast domain and rich lands, we would be able to produce in this country in 50 years from now enough crops to support our own population.

Mr. NORRIS. I absolutely agree with the Senator's statement.

Mr. SIMMONS. I think, further, that if we can not reduce the price of fertilizer below the present level another situation almost as disastrous will overtake us in a short time. The cost of fertilizer as a part of the total cost of the production of crops in this country is so large as to absorb a large part of the profits, and that ought not to be the case. Therefore, anything that we can do in this country to increase our supply and reduce the price of fertilizer is one of the most essential things that can be done in order to subserve the general welfare of this country. So I am very much interested in what the Senator is saying, and I do not want him to curtail this part of his discussion for the purpose of giving the information which I asked.

Mr. NORRIS. Mr. President, I am glad to have the Senator's viewpoint, with which I most fully agree. I know, as I said before, that some Senators are interested in trying to convey the idea that as chairman of the committee I do not want to develop this fertilizer business. There is not anything nearer to my heart than that. I should be willing to devote my life to the proposition, and sacrifice everything else, if I could devise a way by which I could cheapen the cost of fertilizer to the American farmer, not because I love the American farmer any more than I do the American consumer, for, as I have said before on the floor of the Senate, this is not a farmer's problem any more than it is a consumer's problem. The consumers of America—yea, the consumers of the world—are directly interested in this question. Some solution may come in a way that none of us think of, but something must be done. It is the most important of all questions; but it does not follow, Mr. President, that we should say that in one locality we will make fertilizer at a loss, even if the farmers of that locality got the benefit of it, which they would not under the Underwood bill, as I have demonstrated. If, however, the time comes, as it may come, when the importance of this fertilizer question will be more fully brought home to the people of the world, it may be, I will say to the Senator from Oklahoma, that the Government will have to go into the fertilizer business, not for the farmer any more than for the consumer, and make fertilizer for every farmer in the United States, even though it makes it at a loss. I am opposed to making it at a loss unless all the farmers shall get the benefit of it, and I am opposed to making it at a loss unless we go into the business and make it for everybody alike, and not merely for a few people in one locality.

The committee bill organizes a governmental corporation for the purpose of handling the Muscle Shoals power proposition. I will say to the Senator from Alabama that if he will read the bill he will find that we have undertaken, in a way that has never been undertaken before in the legislative history of the United States, to keep that corporation out of politics. That is done in section 6 of the bill. We realized to begin with that if this concern became a football of politics it would be ruined; and the power companies, the power trust, would like

nothing better, if the Government does go into the business, than to have a governmental corporation that will at once be a partisan football and a pie counter for hungry politicians and partisans. I think that is what the Underwood bill does in its Government proposition. It will be in politics clear up to its neck the first thing.

We think we have devised a way to keep the matter out of politics. We have made it a crime to use political influence in the promotion or the appointment of any official. We have required them under penalty to make public every recommendation, every letter, every request, whether made in writing or not. Even if made orally, they are required to write it down in a record that becomes public, so that the entire world may see whether anybody is trying to dip the hand of politics into the administration of this affair.

We have provided that they can build transmission lines. They can sell this power. They must give preference to States, cities, counties, and municipalities over private corporations. Recognizing that the economy of the situation is a combination of all power concerns, they can enter into an agreement with any existing company to exchange power. That is where the great economy is going to come. When this corporation will have 500,000 secondary power that can be used only part of the year some other corporation on the other side of the mountains will have four or five hundred thousand secondary power that can be used only part of the year, but that part of the year will be a different part of the year from the other one. By touching a button it can be transferred from one section, from one watershed, from one State, from one locality, to another. As I demonstrated once before, here on the floor of the Senate, while we can only carry electricity directly on the wire from 250 to 300 miles without loss, we can, by the exchange of power, in effect carry it an unlimited distance. We can take it from the Atlantic Ocean to the Pacific, with what the scientific men know now, by the shifting of power from one concern to another.

So when the waters of North Carolina were low, when the streams of the Senator's State in 1922, I think, were going dry and some of his factories were going to have to close down, and some of the cities and villages were going to be left in the dark because the dry weather had dried up the streams and the power was giving out, and they did not know what to do, they went over to Georgia. The company over there had no power to spare. They went to the next one, and they had no power to spare. There was no place where there was a surplus; so they said to the Georgia company: "Transfer some of your energy to us, and the company next west beyond you will transfer some of its energy to you, and the next company will transfer some to that company, and that gets it to the Alabama Power Co., and the Alabama Power Co. from the east side of its system will transfer some of that power to you." Thus the Alabama Power Co. was short in the end; and the Alabama Power Co., having leased this great steam plant owned by the United States Government, put the fires under the boilers there, generated the electricity, and supplied themselves with the electricity that they had given away to the Georgia company east of them, and the result was just the same as though electricity had been transferred from Muscle Shoals to North Carolina; and the Senator's factories, the Senator's street railways, the Senator's towns and municipalities continued to get light and power. The effect of getting it was in reality getting it from Muscle Shoals, 600 miles away.

Mr. SIMMONS. Mr. President, I want to say to the Senator that I think he has very correctly described the very distressful situation which occurred in my State in connection with its great industrial operations in the year 1922 and the manner in which they secured relief from that situation.

Mr. NORRIS. I thank the Senator.

Now, I will say to the Senator that we provide that this corporation shall have turned over to it three million seven hundred and some thousand dollars that is now lying in the Treasury that was obtained from the sale of the Gorgas plant. That is its capital. It is provided that there shall also be turned over to it whatever moneys may be received by the Secretary of War from the sale of useless material. That will amount to a million or a million and a half. That is its capital, and there will not have to be any appropriation out of the Public Treasury for it. It is provided that it shall add to its capital from its income until its capital reaches \$25,000,000, and thereafter all profits shall be turned into the Treasury of the United States. Briefly, that is the water-power end of it.

The committee bill provides that the fertilizer end of it shall be turned over to the Secretary of Agriculture. We found in our investigations that the greatest development made in the

same length of time anywhere in the world, we think, was made by the experts of the Agricultural Department in Washington. They are working on this question now up here at what used to be the American University research laboratory. They have been at it ever since they got into it in the war. We are paying for these investigations out of public funds. We provide that nitrate plant No. 1 down there shall be turned over to the Secretary of Agriculture, and used as an experimental plant, because we realize, as I think everyone realizes who has studied either this subject or any other scientific subject, particularly where chemistry enters into its solution, that a laboratory test that seems to be perfect in the laboratory—a new discovery, let us say—may be worked out to perfection in the laboratory, but they have no way in the laboratory, and our Government now has no way, of trying that out on a commercial basis. The experience of the entire world demonstrates that sometimes the most serious problem is to work out and put on a commercial basis a laboratory test that seems to be perfect in the laboratory.

We found during the war when we took over the German patents that while they had the patents it took us a great deal of time and cost a great deal of money to put on a practical commercial basis those patents that had been worked out in the laboratory. So we turn over nitrate plant No. 1 to the Secretary of Agriculture for an experimental plant, so that whenever anything is discovered that looks toward an improvement he can endeavor to work it out on a commercial basis.

The committee bill as it stands now has a limitation of power. All the experts testified that the invention of improved methods of fertilizer production is tending every day to the use of less and less power. The Haber process, which is newer than the cyanamide process, does not use half as much power. The improvements over that process that have been going on all indicate that we are going to use less and less power.

It is my judgment that power will be something that we will not even consider before we get through with the fertilizer proposition. But we had a provision in the bill—one that was not in the bill as I originally introduced it—providing that the Secretary of Agriculture, if he thought better results could be obtained, could lease that property to private corporations or private individuals and let them experiment. We had provided that, without any limitation, whatever power the Secretary of Agriculture needed should be furnished to him by this governmental corporation.

When we put in the power to lease, then the question at once arose, suppose the Alabama Power Co., for instance, or some other company with which we are going to come in competition if we develop and distribute power, should say, "Well, we want to keep this Muscle Shoals power out of competition. We will make application to the Secretary of Agriculture to lease," not with the idea that they were going to improve fertilizer, but with the idea that they were going to use it solely to take the power away from competition with them, and they would say, if they leased it, "We want 100,000 horsepower," and they would cripple this governmental corporation. In reality they would take the power away, and it would do nobody any good. So we provided a limitation. I said then that, as far as I was concerned—and from conversation with every one of the committee with whom I have talked, and I have talked with most of them, they are all willing—this leasing provision should be stricken from our bill, and if it is stricken then the limitation of power that shall be given to the Secretary of Agriculture should also be taken out, because we assume that the Secretary of Agriculture, being a part of the Government of the United States, would never demand any more power than he needed, and everybody wants him to have all the power that he does need.

If the Senator from North Carolina has any other question about the bill, I will be glad to answer it, if I can.

Mr. SIMMONS. What is the primary horsepower of plant No. 1?

Mr. NORRIS. Does the Senator mean nitrate plant No. 1?

Mr. SIMMONS. Yes.

Mr. NORRIS. Nitrate plant No. 1 has a steam plant in connection with it of 5,000 horsepower. That will operate it.

Mr. SIMMONS. I understood the Senator to say that we had dedicated one plant. What plant was that?

Mr. NORRIS. That is nitrate plant No. 1. But the Secretary of Agriculture would not have to operate steam plant No. 1. The corporation is directed to give him the cheapest power they can furnish. They would give him power from the dam.

Mr. SIMMONS. The information I am trying to elicit is what part of this total power does the Senator's bill dedicate to the production of fertilizer?

Mr. NORRIS. If we make the changes I have suggested, which personally I would be glad to have made, there would be no limit. The bill would then say that all the power not used for fertilizer this corporation shall have the power to handle and to sell and to transmit and to use in the way laid down by the bill.

The Senator has used the word "dedicated." I am glad he did, because a good deal of emphasis has been placed by the Senator from Alabama upon his bill because he says, "We dedicate this to fertilizer." It does that in the first section. "We dedicate it to agriculture."

What does that mean? The only part of his measure where it could mean anything is that in which he tells where it shall be used, and that he does in section 4, as far as the fertilizer end of it is concerned. Forty thousand tons of nitrates must be produced, beginning with the sixth year. Under the committee bill, if the Secretary of Agriculture shall be able to make fertilizer without a financial loss, he can get all the power he wants, no matter what its source, from this corporation. But it does not require him to make 40,000 tons of nitrates a year, because we believe if he made it he would lose money on it, and that would not help the farmer a cent.

Mr. SIMMONS. Do I understand the Senator, then, to say that he simply authorizes the making of fertilizer?

Mr. NORRIS. Yes.

Mr. SIMMONS. He does not prescribe any amount which shall be made, nor does he impose any limitation upon the amount which shall be made?

Mr. NORRIS. No.

Mr. SIMMONS. Does the Senator also provide that it shall be made as long as it can be made without loss?

Mr. NORRIS. In substance that is it.

Mr. SIMMONS. Does the Senator think that that would be a wise provision, in view of the statement which he made a little while ago, that there were being developed methods which possibly might eventuate in the production of nitrates at a very much lower cost than that at which they can be produced now? Does the Senator think it would be wise to say that the Government should not produce unless they can produce without a loss, especially when in the first stages we may not be able to produce except at a loss and when our object is to experiment to the extent of demonstrating either that it can not be produced except at a loss or that it can be produced so as to make a good profit?

Mr. NORRIS. It would be the Secretary's duty to proceed with that kind of a demonstration. The committee bill does not say, "You must make 40,000 tons of nitrogen a year without regard to its cost," but it does turn over the biggest plant for experimental purposes of its kind in the world and directs him to proceed with all his force to study and to develop the production of fertilizer, and when he can make it, he has the machinery to make it, and he can get the power which he may need to make it.

Mr. SIMMONS. I agree with the Senator that we do not want to have the Government engage in this business and for an indefinite period of time produce fertilizer at a loss, but I anticipate that in the beginning it would not be possible, probably, to produce it without a loss, and I think that this bill probably inadequately provides for that contingency. It could be met, however, by a provision that the Government shall continue to produce the nitrate until it is demonstrated that it can not produce it without loss.

Mr. NORRIS. I think we have safeguarded it. But I want to say to the Senator, out of respect to Senators who think as he does, that an amendment such as he has suggested would not be opposed by me. I agree with the Senator so fully on the fertilizer question that I am willing to have the Government suffer what seems to me to be a useless loss of money out of respect for somebody else's ideas with which I do not agree, because they may be right and I may be wrong.

Mr. McKELLAR. Mr. President—

The PRESIDING OFFICER (Mr. COPELAND in the chair). Does the Senator from Nebraska yield to the Senator from Tennessee?

Mr. NORRIS. I yield.

Mr. McKELLAR. As the Senator from Nebraska knows, I have already prepared an amendment along that very line, and I believe the Senator has already stated that he would accept it. It provides that, as far as practicable, the amounts of fertilizer indicated in the Underwood substitute should be made under the plan set forth in the committee bill.

Mr. NORRIS. And, of course, that might happen long before the six years provided in the other bill. I do not know about that. It might never happen. I can not say.

Mr. SIMMONS. I do not know whether I understood the Senator correctly or not; but if I did, he referred only to one plant, and that plant with a horsepower of only 5,000.

Mr. NORRIS. Yes; we would turn the other plant over to the Secretary of Agriculture, too.

Mr. SIMMONS. The big plant, No. 2?

Mr. NORRIS. Yes.

Mr. SIMMONS. The Senator did not say that.

Mr. NORRIS. Probably I did not, but that would be turned over to the Secretary of Agriculture, under the committee bill.

Mr. SIMMONS. Under the committee bill that, as well as plant No. 1, with 5,000 horsepower, is set apart, so to speak—I will not use the word "dedicated" again—for experimentation in the production of fertilizer and nitrogen?

Mr. NORRIS. Yes. Let me say to the Senator that the capacity of nitrate plant No. 2 is 40,000 tons of nitrates a year. That is the big plant. Much can be made there now by the cyanamide process, and everybody knows it.

Mr. SIMMONS. But does the committee bill provide that these two plants shall be used for that purpose until it is demonstrated?

Mr. NORRIS. No; we think it is demonstrated now.

Mr. SIMMONS. In other words, under the committee bill, the Secretary of Agriculture could use one or both?

Mr. NORRIS. Yes, Senator.

Mr. SIMMONS. But there is nothing mandatory about it?

Mr. NORRIS. No.

Mr. SMITH. Mr. President, if the Senator will allow me, I want right at this point to make an observation. Plant No. 1 was constructed for experimental purposes. That is what it is used for now. It is not large enough now to be used for other than the experimental work. Plant No. 2 is already prepared to produce in commercial form 40,000 tons of nitrogen, which is equivalent to about 200,000 tons of cyanamide. Suppose that in the prosecution of the work it is discovered that a process is practicable by which 10,000 horsepower can produce 40,000 tons of nitrogen. It takes 100,000 horsepower now to run nitrate plant No. 2 at full capacity. Suppose the process could be so perfected that 10,000 horsepower would produce 40,000 tons of nitrogen at a reasonable cost; that is, very much below what we are paying for it now. Would the Senator's bill then allow the Agricultural Department to utilize all the power that was necessary to produce all the nitrogen that was needed for agricultural purposes?

Mr. NORRIS. With these amendments which I have suggested, it would.

Mr. SMITH. I will state the reason why I am asking it. I want to call the attention of the Senate to the fact that the amount of nitrogen in the air is absolutely unlimited. It is, only a question of our discovering a process by which we can cheaply fix it or extract it. If we can reduce the unit of power and increase the maximum output from that power, it is thinkable, perhaps it is possible, that we can take the power generated at Muscle Shoals and fix enough nitrogen to supply the whole nitrogen demand of this country. That was what actuated me in offering the amendment to the substitute of the Senator from Alabama to give us unlimited use of that power. If we could develop 500,000 horsepower there and produce 100,000,000 tons of fixed nitrogen it would meet the requirements of all the people of this country. The testimony is to the effect that using 100,000 horsepower to produce 40,000 tons you can operate cheaper than under the present process of obtaining the nitrogen.

Mr. NORRIS. Mr. President, I want to say one thing further to the Senator from North Carolina [Mr. SIMMONS], who has been so patiently listening all the time to what I have had to say. So that there may be no misunderstanding, I ought to say this. The committee bill takes this into consideration, that nitrate plant No. 2, capable, when operated to its fullest capacity, of producing 40,000 tons per annum of nitrogen, is a war proposition, a proposition of national defense. If war should break out it would not necessarily follow that we should utilize nitrate plant No. 2, because we might be able to get our nitrates from Chile, even during the war, at a lower cost than that at which we could make them in nitrate plant No. 2. We would adopt the cheapest plan, it is fair to say.

But we might have a war, by reason of which it would be dangerous to be shut off from access to the Chilean fields or to other fields, and we would want to utilize plant No. 2 to its full capacity. Therefore the bill provides that nothing shall be done with plant No. 2 that will interfere with its capacity to produce 40,000 tons of nitrogen until the Secretary of Agriculture through his experiments shall have produced a process and constructed the necessary buildings to

produce an equal amount by some other process, and that he shall retain it in that form until the Secretary of War shall certify that there are other means or other buildings or other processes, there or elsewhere, by which 40,000 tons of nitrogen can be had per year, and until that time comes he must not do anything that will interfere with its capacity to perform that work. Of course, he can operate or add to or do anything of that kind.

Mr. SIMMONS. That provides very well for our requirements for the purposes of war; but when we make that provision to supply the nitrate requirements of the Government in case of war, why not provide at the same time that the power and plant which can be used to supply the war demands shall in peace times be used to supply an equally essential demand for fertilizer for the farmers?

Mr. NORRIS. We do, excepting that we do not require him to produce it unless he can produce it without a loss. We do not require him to produce nitrogen when the value of it after it is produced will be greater than he could buy it for in the market.

Mr. SIMMONS. Am I to understand the Senator to mean that if the Secretary can produce it at cost, then he is to produce it in peace times for the benefit of the farmer to the full extent of the capacity of the plant which he said was set aside for war emergency?

Mr. NORRIS. I will say to the Senator that while I do not think it leaves it to his discretion, I am perfectly willing, if we can do that, to require him to do it. I have no objection to that.

Mr. SIMMONS. I would like to see him required to do it.

Mr. NORRIS. All right. As I have often said on the floor of the Senate, and particularly in various conferences I have had with the Senator from Tennessee [Mr. McKellar], so far as I am concerned—and I think I can say that it is the unanimous wish of the committee—whenever it can be shown that the Secretary can produce it without a loss, then I am perfectly agreeable that he shall be required to produce it and that they shall be required to give him enough power to do it.

Mr. SIMMONS. The Senator's bill as now drawn provides specifically that he shall produce it only when it can be produced without loss.

Mr. NORRIS. That is the meaning of it.

Mr. SIMMONS. I would not complain of that provision if it were qualified as suggested a little while ago by a further provision that he should not produce it if it could not be made at a loss unless and until it has been demonstrated that it can not be produced otherwise. In other words, I do not wish the temporary situation, which is one of loss, as I believe, to apply to the permanent situation, which may be one of profit. I think the qualification is necessary.

Mr. NORRIS. The Senator wants to require him to do it, no matter what it costs, until it is demonstrated that it is at a loss, and then he can quit.

Mr. SIMMONS. Yes; I want the Government to go ahead until that is demonstrated.

Mr. NORRIS. I want him to go to work to discover a way by which he can do it without a loss. If we add the Senator's provision, and they started on that plan, his proposition would be demonstrated in less than 30 days, and then they would quit. I want them to go on.

Mr. SIMMONS. Thirty days would not be any demonstration at all.

Mr. NORRIS. How long does the Senator want to produce it at a loss?

Mr. SIMMONS. That is a matter of discretion.

Mr. NORRIS. When they know what it is going to cost, why go on at a loss? They can tell before they put a fire under the boilers what it is going to cost.

Mr. SIMMONS. I may know now what it is going to cost. The Secretary of Agriculture may easily understand what it will cost by present methods. He will find that he can not produce it at a profit, but this work of experimentation, this research work that is authorized, is for the purpose of seeing if we can not discover some method of cheapening the cost.

Mr. NORRIS. That is true.

Mr. SIMMONS. One of the methods is that just pointed out by the Senator from South Carolina [Mr. Smith]. Another method is by improving the processes or the application of new processes, by which other processes will be discovered that will reduce the cost. We can not do that in a day. Research directed only through a period of 30 days does not amount to anything at all. The experimentation that is limited to a period of 30 days is not of any value at all.

Mr. NORRIS. The Senator must not try to put me in a wrong position. I am not advocating that the research work shall be continued for 30 days and then stopped.

Mr. SIMMONS. I am not doing that. The Senator has misunderstood me.

Mr. NORRIS. I know that research works costs money. It is always done at a loss. It costs millions of dollars to carry it on. I think we can well afford to keep on spending money for that purpose. If the Senator can demonstrate to me that there is any other way that will cost more money I am willing to vote for more money. I will go without practically any limit in that direction, but when we have machinery set up before us and we know that it will produce a ton of fertilizer for a certain expenditure and cost, and we know the cost will be prohibitive, I am not going to compel somebody to keep on operating and making it at a loss. But we can turn over the whole thing to the Secretary of Agriculture and say, "Take all of your scientific men in your bureaus and go to work on the problem as you have been working. Continue the work. Expand it. Make fertilizer. Experiment." They will make it at a loss to begin with. There is no doubt about that.

But what is the use of making 40,000 tons at a loss when we can settle the same question by making 2 tons at a loss? Why say 40,000 tons every time? Is 40,000 tons like the famous 16 to 1, something sacred and having a halo about it? Why not 41,000 tons or 39,500 tons? If we can demonstrate that we can make it at a profit by manufacturing 50 tons or 100 tons, let us do it that way. They can make more than that in nitrate plant No. 1 when they remodel it and put in new machinery.

I have talked with the head of the bureau in the Department of Agriculture who will probably have charge of this matter and to whom experts before the committee have paid tribute as one of the leading lights on the question. If it were turned over to him to-morrow he would not even rebuild plant No. 1 completely to begin with, because he would be afraid if he spent a couple of million dollars to rebuild nitrate plant No. 1, that in the meantime his investigations and experiments might demonstrate that a whole lot of the machinery would be useless. He would put in a furnace and erect some additional buildings there. He would go along just as fast as the experiments showed he could do it, but not with an idea that during his experiments he was going to make a profit at all. He would expect to lose money on it. He would lose millions of money on it. But why should we say to him, "You must produce it at a loss, so now produce 40,000 tons."

Mr. SIMMONS. Mr. President—

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from North Carolina?

Mr. NORRIS. I yield.

Mr. SIMMONS. I am very much afraid the Senator from Nebraska has wholly misinterpreted the suggestion which I made. I did not suggest, or mean to suggest at least, that the Government, proceeding upon a commission to produce, providing it can produce it at less than cost, should in the very initial stages produce 40,000 tons, and that without regard to whether it could be produced at a loss or not. I think the Senator is entirely right that while they are engaged in the work of demonstration as to whether it can be profitably produced or not, the Secretary ought not to be required to produce to the full extent of the capacity of the plants that are to be dedicated, so to speak, to that purpose. I think he ought to proceed cautiously, working out his experiments, carrying on his research work, trying to discover methods by which he could save water power and by which he could produce at a less cost than by the present accepted methods. But when he has demonstrated that he can produce the product at a low cost, then I would want the first plant and the second plant kept in a condition where they could at once be used for that purpose and for no other purpose.

Mr. NORRIS. I think I have no objection to that, I will say to the Senator. The Senator and I are not in disagreement on that proposition. I may have said something that the Senator thought applied entirely to him. When I was speaking about 40,000 tons I did not have reference to what the Senator himself had said; I had reference to the general talk that has been coming to me for the last six months from all kinds of sources. Forty thousand tons is the figure always used. "Make 40,000 tons, even though we make it at a loss, and we will make the farmer happy and we will get along all right." That is the tenor of the talk. I was think-

ing of that. I had no reference to the Senator from North Carolina. I appreciate the Senator's interruptions.

Mr. SIMMONS. I was thinking myself of those two plants, and I do not want the two plants to be used or so developed or put in condition that they could not, when the experiment eventuated in success, be applied to those purposes. It was to protect against that situation that I made the suggestion which I did to the Senator.

Mr. McKELLAR. Mr. President—

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Tennessee?

Mr. NORRIS. I yield.

Mr. McKELLAR. Speaking about 40,000 tons, in section 3 of the Underwood substitute that amount is provided for, and then it is said that the 40,000 tons are to be manufactured for war purposes. Nothing is said about the price of it. Is that to be furnished the Government free for the granting of these enormous privileges and properties, or is the Government to pay whatever price it costs the lessee, or is it to be adjusted in the Congress, or is it to be by agreement with the Alabama Public Utilities Commission, or just how would the Senator construe section 3 of that proposal in so far as the 40,000 tons of nitrogen for war purposes may be concerned?

Mr. NORRIS. Of course, the Senator from Tennessee is not speaking about the committee bill.

Mr. McKELLAR. No; I am speaking about the Underwood proposal.

Mr. NORRIS. He is speaking about the administration bill, the Coolidge bill. Section 3 of that bill provides that after the sixth year they shall make 40,000 tons of nitrogen a year for war purposes. It does not say a word about fertilizer.

Mr. McKELLAR. Nor about the price.

Mr. NORRIS. No; nor about the price. They just propose to make 40,000 tons of nitrogen. Section 4, however, provides that they shall make 40,000 tons, which will be used as fertilizer.

Mr. McKELLAR. Are those additional tons?

Mr. NORRIS. That would make 80,000 tons, which is just double the capacity of the plant. Therefore, it can not be done.

Mr. McKELLAR. I thought, perhaps, the Senator from Nebraska, who has very carefully gone into this matter, could tell us just exactly how the production was to be divided. The Government uses a great deal of nitrates for military purposes in time of peace, and I wish to know how will the lessee manufacture 80,000 tons or 40,000 tons.

Mr. NORRIS. He can not do it.

Mr. McKELLAR. Will he receive 8 per cent for one 40,000 tons and charge what he pleases for the other 40,000?

Mr. NORRIS. The administration bill in section 3 and section 4, in effect, provides that you may eat your cake and still have it, for by section 3 it is provided that 40,000 tons of nitrogen shall be made for war purposes, and by section 4 it is provided that 40,000 tons of nitrogen shall be made for fertilizer purposes. I have assumed all the time that after the lessee, following section 3, had made the quantity there required, he would take the same nitrogen which he had made for war purposes and use it for fertilizer purposes. If he does that he will not have any left for war purposes.

Mr. McKELLAR. Does the Government have to pay for it in the first instance?

Mr. NORRIS. I do not know. According to my judgment, and according to my interpretation, the two sections are inconsistent and they can not be easily harmonized. I presume a court would say, "You may use the 40,000 tons, the making of which is provided for in section 3, in complying with the obligations imposed by section 4," and, hence, there will be none left for war purposes.

However, Mr. President, I anticipate that the Secretary of War in buying explosives will buy them where he can get them the cheapest, or will make them in the cheapest way, and that he will not use this plant until we have cheapened the process unless it is necessary. The defense for nitrate plant No. 2 is that it is a war proposition, because in the case of war the cost is a secondary consideration. We can make nitrates at Muscle Shoals in quantities of 40,000 tons per year. That has been demonstrated; the plant has been operated sufficiently to know that it can be done. We do not want to take away that power; we want that to remain until the process is cheapened, even though we never use it, as may be the case as to a battleship.

Mr. McKELLAR. Mr. President, will the Senator from Nebraska yield to me?

Mr. NORRIS. I yield.

Mr. McKELLAR. In reference to sections 3 and 4 of the Underwood substitute, suppose a lessee shall receive this plant and undertake to manufacture nitrates for fertilizer, and it shall be found to be impracticable; that it can not possibly be done; that the fertilizer can not even be sold for cost; with the conflict and the inconsistency between section 3 and section 4, would not those sections afford a very excellent ground for the lessee coming into court and having a court determine whether under the circumstances any nitrates should be manufactured either for war or for farm purposes? I want to say to the Senator in all frankness, that sections 3 and 4 of the Underwood substitute seem to me to be so deftly arranged as to afford ample opportunity for any good lawyer to enable the lessee to get entirely out of the undertaking to make fertilizers in the event it should not prove profitable to make them.

Mr. NORRIS. I do not care at this time to discuss the matter; I had not intended to go into the details of the substitute, although I expect to do that before the debate shall be concluded. I respectfully refer the Senator from Tennessee to the Senator from Alabama and to President Coolidge.

Mr. McKELLAR. I can not very well talk with the President about the matter, but when the Senator from Alabama again discusses his substitute I hope to get information from him.

Mr. NORRIS. I think the Senator from Tennessee could easily enough talk with the President.

Mr. McKELLAR. I mean I could not talk with the President on the floor of the Senate. Of course, I understand that I can talk with him somewhere else.

Mr. UNDERWOOD. Mr. President, I will, with the leave of the Senator from Nebraska [Mr. Norris], say that the Senator from Alabama is very much mistaken, although, of course, I know the Senator from Nebraska may deny it, if an organized filibuster is not going on to prevent action on the pending bill. Therefore the Senator from Alabama has not been replying to arguments which have been made in the debate, because he did not wish to consume the time. However, at a time when it will not unduly occupy the attention of Congress and delay action, the Senator from Alabama will be delighted to discuss the question with the Senator from Tennessee and to explain fully the terms of his proposed substitute.

Mr. NORRIS. Mr. President, let me return to a reference I made in the beginning that to my mind involves a question almost as serious as the questions involved in this important legislation. I speak with perfect respect to everybody; I wish to criticize only constructively; I have no personal feeling of ill will; I freely concede the right of all Senators to do just what they have done; but this bill is a demonstration of a situation which has grown up in this country which to my mind implies a very material interference with the liberties of the people of the United States and a very material interference with the very foundations of our Government. The President of the United States simply by announcing that he is for this measure or that measure commands in an instant enough votes perhaps to turn the scales. A Senator on the floor talks to empty seats. Senators, busy, every one of them, in some line of official business or studying some public question, are not required to study, to analyze, and to investigate a particular matter of legislation because the Chief Executive has spoken, perhaps privately, perhaps not publicly at least, and they know what he wants; they have heard the master's voice and they recognize it.

This is no more true in the case of President Coolidge than in the case of other Presidents who have preceded him; but, Mr. President, as a logical result of such procedure, if we are going to follow it, if it is the right kind of government, if that is what we ought to do, then we ought to amend the Constitution of the United States, abolish the Senate, abolish the House of Representatives, and elect a President every four years, giving to him supreme executive and legislative authority, and probably it would follow judicial authority as well. Make him supreme for the term of his office. To a great extent he is supreme already, because with his wonderful power, particularly of the control of appointments to office all over the land, he has only to express his wish to have at least a certain percentage of Members of Congress carry it out.

I wish to add that that may be right, although it is not my idea of a republic or a democracy. I do not criticize the man who believes in that kind of government; he has a right to believe in an absolute monarchy with a limited term if he wants so to believe; but this bill is illustrative of such a situation. Mr. President, I have had Senators tell me confidentially that they have not read either the committee bill or the ad-

ministration substitute but that they are going to vote for the administration substitute.

I wish to say that without criticism, but if that is the way to proceed, then we ought to go out in the open and have that kind of a government. It may be that the Senate is a nuisance; it may be that the legislative branch of our Federal Government ought to be abolished. We ought to abolish it or we ought to draw the line and keep what our forefathers believed they were establishing, a well-defined division between executive and legislative authority. We can do either one and be patriotic; we can do either one and be honest; but we ought not to do one while we are pretending to stand for the other. It is not conducive to Senators to do their best work when they know that when the crucial test comes the decision is going to be made somewhere else and that that decision will control rather than the logic of the situation. That amounts to the control of one branch of the Government over another in its official capacity.

Mr. President, on this question I may be entirely wrong, the committee may be entirely wrong, but I confess to a sense of humiliation, I confess to a feeling of discouragement when after a Senator has done the best he knows how, wearing his life out in studying some legislative problem as to which he has and could have no selfish interest, his work is overthrown in a secret meeting or in a secret conference or even in a public conference which controls the legislative assembly where the work is going on. Perhaps that is no more the case in this instance than in others in years gone by, but we have seen the practice growing from year to year.

Personally no man has a higher regard for the great office of President of the United States than have I; but I do not believe I ought to be considered as being disrespectful to the President because I can not see something as he sees it. I do not understand how a Member of the National Legislature can fully perform the functions of his office if he permits the President, no matter how great, no matter how wise, to control his official action by a wish, by a sign, or even by a request.

The great questions involved in the measure pending before us I think are of vast importance. We are not legislating for to-day, Senators; we are setting up a mile post in the history, not only of our country but of civilization. We are going to say by our action on this bill when we get through with it whether it shall be a marker for human progress, more happiness, and greater democracy, or whether we are going to relegate ourselves and our posterity to the control of combinations and trusts.

It will do no good to talk about the law of supply and demand. It has been repealed a million times by combinations and trusts; and unless we save the national resources of our country that ought to belong to all the people, posterity is going to suffer. Unless we preserve these fundamental rights of human happiness and of humanity, we are going to a certain extent to enslave posterity and make them subject to a combination, to a trust, that in its effect is going to reach every fireside and every home in this land.

It will be no defense to say that we believed in it unless we have carefully considered it and have met the demands of our own consciences as to what action we should take. The effect will be just the same. I appeal to Senators, take these bills home, study them, go over them, look to the bottom of them, because something fundamental is involved here. If I am wrong, if the committee is wrong, change our work; but do not follow somebody else's command and vote down our bill arbitrarily and by brute force.

Mr. UNDERWOOD. Mr. President, I shall not detain the Senate long.

I have listened with much patience to the address of the Senator from Nebraska, and I give him credit for sincerity of heart but not for accuracy of fact. The Senator from Nebraska dreams dreams as to what might be accomplished, and in his argument states them as if they were existing facts.

What has surprised me in the Senator's argument is, first, his attack on the President of the United States, and the candor with which he has made the attack. I want to say, from my long acquaintance with the Senator from Nebraska, that he has always been candid and open; but what surprises me is that he has candidly laid the goods on the table when those who are trying to accomplish the same result, but who, unlike the Senator from Nebraska, are fighting not for a theory but for an ulterior result, have been hiding behind a camouflage that they were not willing to disclose.

I am surprised that the Senator should have made the attack that he has made on the President. So far as I am aware, the President of the United States has not in any way

violated the Constitution of the United States, as the Senator from Nebraska charges, nor has he violated his plain duty to advise the Congress as to the national questions that may come before it.

It is not only his privilege but his duty on the assembling of the Congress to advise them of the conditions that confront the United States that require their attention. Here is a great dam that will be completed in a few months and several great nitrate plants that are ready for operation; and the Congress has been derelict in its duty in not preparing the way for operation and achievement of results. So I say that the President of the United States is not to be criticized but is to be commended for calling to the attention of Congress the fact that now we should act to cover the failure of action at the last session of Congress.

The Senator complains of the viewpoint that the President has taken; but I wish to call to his attention the fact that this question was settled legislatively in 1916. At that time, when the black cloud of war was floating on the horizon, the Congress passed the national defense act, and in that act wrote the provision that has brought about the development of the great dam at Muscle Shoals and the nitrate plants there; and it said in that legislation, in language that no man can misunderstand, that the purpose of erecting those plants and building the dam was for the production of nitrogen for the national defense in time of war and the production of fertilizers in time of peace.

In accordance with the law of the land, the President of the United States, in the message he delivered to Congress a short time ago, stated that this proposition needs legislative action, and that he favors carrying out the purpose of the national defense act, and that this dam should continue to be used for national defense in time of war and the production of fertilizers for the farmers in time of peace.

I do not object to the Senator from Nebraska charging that I am aboard the ship, so far as this legislation is concerned, and working under the commands of the President of the United States. There is no politics in this bill, or should be none. I think the President is right. He is the Chief Executive of this land, and I am glad that his viewpoint and mine agree in reference to the legislation that should be enacted.

There is much difference of opinion here as to what should be done. There are but three things that can be done, so far as the operation of these great plants is concerned. One is to sell and permanently dispose of the property. Another is to lease it. The third is to have permanent Government operation. That is all that can be brought before the legislative mind. You may dive and delve and drift and swim as you want in theory, but there are three practical things that confront us.

The President advises that we lease the property for private operation so long as national defense is accomplished, and a real production—not a theoretical one, but a real production—of fertilizer is also accomplished; but he says in the end that if a lessee can not be obtained, he advises that the Government do it itself.

I think he is correct. I agree with him thoroughly in his viewpoint, and I do not think there is any danger of future generations being deprived of their birthright because we lease one dam and one nitrate plant on the Tennessee River to a private corporation or to an individual and tell them the terms on which they must work to carry out the Government's objective.

Of course, I understand the gentlemen who belong to the school of thought to which the Senator from Nebraska belongs, and he is entitled to his viewpoint. I do not criticize that in any man. They belong to the school of thought that did not have its birth in the Republican Party and is contrary to the fundamental principles of the Democratic Party. Their ideals were originally born on the western plains in a party that then called itself the Populist Party. It believed that the Government, because it was the Government, had more sense and more capacity to do business than private individuals. The Senator from Nebraska belongs to that school of thought, and I do not criticize him for belonging to it. That is his right. I do not agree with him. That is all he has in this bill. He wants to turn over all of this Government improvement to a so-called Government corporation so far as operating and developing water power is concerned, and turn the nitrate plants over to the Secretary of War and a bureau selected under civil-service rules and regulations—which determine how a man can write and spell but not how he can work the mechanics of a great plant—to operate and produce results in time of war for the Government and in time of peace for the farmers.

That is all the difference in these propositions. The President is making recommendations along a practical business line to accomplish a desired result. The Senator from Nebraska is dreaming a dream about how he can develop the headwaters of the Tennessee River and produce a million horsepower. I want to say freely that I think there is a million horsepower in that river, but I fear it will be a long time before the Senator from Nebraska can convince the Congress that they should spend the money to develop it. So far as the production of horsepower at this particular dam is concerned—the only dam that is concerned in the bill that I have introduced as a substitute for the Senator's bill—there is 87,000 horsepower available every day for 12 months in the year on the lowest flow of the river, and 141,000 horsepower for 10 months, and 205,000 horsepower for eight months, according to the testimony of Col. W. J. Barden, an officer of the Army in charge of the work, who testified on the subject after making the measurements.

But practically speaking, I am free to say, and we are all agreed, supplementing the water power in the low flow of the river with the steam power that is there, you can produce 200,000 horsepower.

If the purposes of national defense and of making fertilizer in time of peace are carried out, 100,000 of that horsepower will be gone. The Senator talks about this substitute as if there would be a limitation on the production of nitrogen and fertilizer under it. There would be no limitation as to the amount produced. There is a declaration that any lessee with whom the President shall make a contract must produce not less than 40,000 tons of nitrogen and fertilizer in time of peace sufficient to consume that amount.

Mr. SIMMONS. Mr. President—

The PRESIDING OFFICER. Does the Senator from Alabama yield to the Senator from North Carolina?

Mr. UNDERWOOD. I yield.

Mr. SIMMONS. I just want to get the Senator's opinion about this: If this plant is leased with the minimum production of 40,000 tons of nitrates a year provided, does the Senator believe that the lessees during the whole 50 years of their leasehold would ever make more than 40,000 tons a year?

Mr. UNDERWOOD. Yes; if it is profitable, and if it is not profitable, nobody would make it.

Mr. SIMMONS. Suppose it is leased by a corporation that is primarily interested in power development. Does the Senator suppose such a corporation would ever exceed the minimum in any year during its lease? I am just asking the Senator his opinion about that. It has worried me somewhat.

Mr. UNDERWOOD. I will answer the Senator. In the first place, this bill does not fix the terms of the lease. It merely authorizes the Secretary of War, with the approval of the President, to make the lease, which means the President making it. I assume that when the President, who has announced that it was his purpose to use this power for national defense and the production of fertilizer, comes to make the lease, he will make that the primary object of his lease, and he will not lease the plant to persons desiring primarily to secure water power, but will make it in accordance with the message which he sent to the Congress.

Mr. SIMMONS. I have felt exactly the same way about the matter. If the Senator from Alabama will pardon me a moment, the junior Senator from Nebraska [Mr. HOWELL], in a very illuminating speech, one that evidenced great study and research on his part to get at the bottom of this, contended that the minimum terms provided in the bill were practically negligible, so to speak, compared with the actual value of this property, and while he was making that speech it occurred to me that the President of the United States would not precipitately make a lease, and I assume that what is known to the Senator from Nebraska, if his information is correct, is likewise known to the great business interests of this country, whose operations relate to the subject of power and the manufacture of fertilizer. If they are advised fully as to the value of this property, and should appraise it as highly as does the junior Senator from Nebraska, it occurred to me that unless it were precipitately leased, this plant would not go for less than its value, because there would be competition among the business interests of this country for the property, and they would not be willing to let it be leased for less than something like its reasonable value.

I hope that situation will develop if the Senator's substitute passes. I hope the President will be deliberate, and will give ample opportunity for every interest in this country which may be disposed to bid upon this property to make a bid. If he shall do so, I think we may get at its actual value, may get a price more commensurate with its actual value than the

minimum price fixed in the Senator's bill. But in order to make it certain that the President will pursue that course, and will not lease the plant at the minimum provided, if any American business interest is willing to give more than such minimum price, would the Senator from Alabama be willing to incorporate in his substitute a provision requiring that any lease the President might make should be submitted to Congress for its approval?

Mr. UNDERWOOD. No, I would not; because we have thrashed this question out before Congress for the last 10 years, and if the Congress has demonstrated its inability to handle, as a business proposition, any subject that ever came before it, it has demonstrated its incapacity, so far as this single proposition is concerned. There has been delay and theory and yielding to propaganda year in and year out, and I think the President of the United States is more capable of making a contract in the interest of the American people than the Congress of the United States is, acting collectively. I am not reflecting on the personal business ability or character of my colleagues or myself. All my colleagues are honest, of course. I have often raised the challenge as to whether a number of men could be found with more personal integrity than the men under the dome of this Capitol. Many of them are good business men; some are not. But they are given to more wild theories than men in any other branch of this Government. The Congress can chase off onto theories that are not business-like and accomplish no result, further than any other set of men I have ever known in my life.

I think the President of the United States is a practical man. To charge that he will not make an honest contract when it goes to his hands to make it, is to charge dishonesty to the Chief Executive of the land, and I know that no man on the floor of the Senate would do that intentionally.

Mr. SIMMONS. The Senator knows I was not charging anything of that kind.

Mr. UNDERWOOD. I know the Senator was not.

Mr. SIMMONS. The Senator knows it has been a common practice here, when we have authorized Secretaries of the different departments and heads of branches of the Government, with the approval of the President, to carry out certain business plans of the Congress, to require them to submit their action to the Congress for ratification.

Mr. UNDERWOOD. Not often, but at times.

Mr. SIMMONS. The facts, figures, and statements of the junior Senator from Nebraska did impress me as very powerfully tending to show that the minimum price fixed in the Senator's substitute was a very small price for this power, far below its actual value. Has the Senator any information or data to confute the statements made by the Senator from Nebraska with regard to that matter?

Mr. UNDERWOOD. Certainly.

Mr. SIMMONS. I have not heard any.

Mr. UNDERWOOD. The bill provides a minimum price. The President can charge as much as he wants to. I assume that the President is going to be honest in making the contract and that he is going to get the very best he can for the Government. The reason I put in the minimum price of 4 per cent is because I favored the offer of Mr. Ford, and I wish it were before the Congress to-day. The price Mr. Ford was to pay for this property was about what I fixed as the minimum price. It was expressed in a different way, but 4 per cent on the value of this dam would be about what Ford would have paid for the project. I have incorporated the Ford proposition to make nitrogen as fertilizer in the limitations of this substitute. I think that if the President of the United States can get something better than the Ford offer, he ought to be given a chance, and I am giving him every chance, because I am only fixing a minimum, and not a maximum.

The difficulty with the proposition which the Senator from Nebraska presents, and has presented from the beginning, is that he agrees with every proposition that is suggested on the floor about making fertilizer, but in his bill there is not one constructive line, except that he would turn the plant over to the Secretary of Agriculture without a dollar of appropriation. He may say that we will get it afterwards. We may or we may not. He would turn it over without any directing hand or instruction as to what should be done, and says that he hopes that all the power in the Tennessee River will ultimately be harnessed up in order that it can make a million tons of nitrogen for fertilizer. It is hope and theory and indefinite talk. There is not a constructive line in that section of his bill.

I have said from the beginning that the Senator from Nebraska has written a great power bill. He has. He has written a bill which, if it goes through, would develop the power

of the Tennessee River to its highest waters. I am only trying to deal with a practical question, which is the question before Congress.

I should be very glad to see the headwaters of the Tennessee developed, but I do not know when Congress is going to do it. I know we have a business proposition before us, to operate this plant, and either make fertilizers for the farmers or not. If my bill goes through, whoever operates the plant will have to make as a minimum 40,000 tons of nitrogen every year to be converted into fertilizer.

Mr. BROOKHART. Mr. President—

Mr. UNDERWOOD. I ask the Senator not to interrupt me. I am just about to finish and I do not want to be diverted.

The real issue is before us, and we might as well wipe the scales away. For 10 years those gentlemen who have been interested in the manufacture of fertilizer have opposed any legislation on this subject. They had a right to do so if they did it legitimately, if they used no sinister influence or effort at corruption, and I do not charge them with that. But shall we yield to their demands?

Yesterday I read to the Senate the bulletin they have just issued appealing to Senators to prevent action. What they want is to carry the Congress of the United States off on a sidetrack, to develop water power, with an indefinite, theoretical, glorious statement about how much they love the farmer, and how much in theory they would like to do for him, but they do not want a practical proposition written into the law that whoever takes charge of this plant, Government or lessee, must produce so much nitrogen for national defense and so much for fertilizers.

That is the real problem. The Senator from Nebraska said he might put that in his bill. Yes; he might, but he has not done so. He did not report the bill that way. He reported the bill to the Senate as he believed in it, as he wished it to be. In the contest of legislative action he may be willing to yield if he strengthens his bill, but his purpose is power. It is idle to talk about using surplus power of Dam No. 2 for regulating or fighting the great Power Trust. There is not enough power there to do it unless we are going to abandon the farmers and abandon national defense. We are going to consume it in the manufacture of nitrogen and fertilizer. Of course, if we are going into Government ownership and operation in the development of the great waters of the country, and if we are going to spend millions and millions of dollars in dams and electric lines to convey the power to the cities, even then we would meet the Power Trust at the door of the city with its own lines and communications in the streets of the city unless we intended to take the power from the river and carry it to the home of the consumer. If we start to do that then we are engaging in a business on which this generation would not see us through.

What I am trying to accomplish is a practical business proposition about a thing that is in hand and not to run off on a theory that will never be accomplished in our day or our time. I think, so far as the so-called Fertilizer Trust is concerned, they are in the business, and if they want to openly fight our legislation they have the right to do it. Up to this time they have been fighting it under cover. I am glad I turned up their bulletin and brought them to light. But I want to say this about the Fertilizer Trust: I have no criticism of legitimate business interests; and I think when great business serves the people well it is doing a public duty, but there has not been one advance in the fertilizer business in 50 years. They have fixed prices, as far as they could under the Sherman antitrust law, through their secretaries and dinners and even have a corporation here in Washington through which they can assemble their data. They have exacted the last penny from the American farmer for 50 years. They have adopted no new methods of reducing the amount of dirt that they haul over the railroads and sell to the farmers, no new methods about the concentration of fertilizer so it would be cheapened for the benefit of the farmer. Instead of their bringing down the prices, prices have gone up; and now, when the Government, for national defense and the only defense of the Nation in time of peace, is compelled to dispose of the surplus nitrogen and sell it as fertilizer, they stand as an obstruction in the way of the passage of the bill; not even content to let it come to a vote, because that is what they said in their bulletin which I read to the Senate yesterday. I think it libeled the membership of this body when they issued that bulletin; but they claim they have men who are standing here to block the passage of the bill, a bill for national defense.

I recognize, Mr. President, that under the rules of the Senate there is no power to close debate and there is no power to

secure action. I am glad to say that the bill has the right of way that nobody can take from it, and I am content if we have to stay here until the 4th of March to wait to get a vote on it. But I do think that we are entitled, and the country is entitled, after reasonable consideration—and we have had more than 10 days of debate in consideration—to a disposition of the bill one way or another, so it may go to the House of Representatives and we may have action before the 4th of March. If we do not, we will have a great dam down there capable of producing power that could be sold for \$2,000,000, with the water running over the spillways, and nothing happening whatever. It will be dead to the world if that should happen, because the Congress of the United States was not able to pass creative legislation.

Mr. SIMMONS. Mr. President—

The PRESIDING OFFICER (Mr. DIAL in the chair). Does the Senator from Alabama yield to the Senator from North Carolina?

Mr. UNDERWOOD. Certainly.

Mr. SIMMONS. As I understand the Senator, his bill deals with nothing except plant No. 2 and plant No. 1 and certain contiguous property.

Mr. UNDERWOOD. It turns over all the property and Dam No. 2. It does make an authorization for the building of Dam No. 3, but does not couple it into the project of the lease and does not carry any appropriation for the building of Dam No. 3.

Mr. SIMMONS. It does not, therefore, interfere with the right of the Government to establish and sell power outside of those two dams?

Mr. UNDERWOOD. Outside of the one dam. There is nothing in my amendment that limits the Government at all to anything but Dam No. 2 if it makes a lease.

Mr. SIMMONS. The Government might sell the balance of its interests down there to some other concern?

Mr. UNDERWOOD. It can.

Mr. HOWELL. Mr. President—

The PRESIDING OFFICER. Does the Senator from Alabama yield to the Senator from Nebraska?

Mr. UNDERWOOD. I yield.

Mr. HOWELL. The bill does provide that Dam No. 3, if constructed, shall be operated in conjunction with Dam No. 2?

Mr. UNDERWOOD. Under such terms as the Congress shall establish.

Mr. HOWELL. But any contractor taking over Dam No. 2 would hold, I am sure, that he is to have Dam No. 3.

Mr. UNDERWOOD. On such terms as the Congress may prescribe. If the Congress prescribes that he shall take that power and sell it at such rates and in such way as the Congress wants, the Congress can make him do it. There is nothing in the authorization for Dam No. 3 that does not leave it entirely in the hands of Congress to determine what shall be done.

Mr. HOWELL. Then does the Senator hold that Congress would have the right to operate Dam No. 3 independently of either Dam No. 2 or Dam No. 1?

Mr. UNDERWOOD. Certainly.

Mr. HOWELL. But in the bill it is provided in section 9—

Mr. UNDERWOOD. I understand what the Senator is getting at. The bill provides that it shall cooperate with Dam No. 2 upon such terms as the Congress shall fix.

Mr. HOWELL. Section 9 of the Senator's bill reads as follows:

That upon the completion of Dam No. 2 by the United States the dam, power plants, machinery, and appurtenances thereto shall be leased or operated in conjunction with Dam No. 2.

Mr. UNDERWOOD. Certainly, but the Senator has not read all of it.

Mr. HOWELL. Just a moment.

As provided for in this act on such terms as Congress shall hereafter provide.

But could not the lessee of Dam No. 2 hold that it was his understanding under the terms of the act that he should have the right to operate Dam No. 3 also?

Mr. UNDERWOOD. Without he is blind and deaf and can not think, he will understand that he must take it on the terms that Congress provides.

Mr. SIMMONS. And that the consideration prescribed in the bill is no part of the consideration he will have to pay for Dam No. 2.

Mr. UNDERWOOD. Certainly.

Mr. HOWELL. Will the Senator from Alabama accept an amendment to section 9 as follows:

But no contract herein provided for shall bind the United States to construct said Dam No. 3.

Mr. UNDERWOOD. No; and I will tell the Senator why I would not—because if the Senator does not want Dam No. 3 operated and the Congress do not want it, he can move to strike it out. That is a simpler way to accomplish the same result. What is the use in saying we are going to authorize Dam No. 3 and then adopt an amendment saying we recommend striking it out?

Mr. HOWELL. It does not say that. Let me read my amendment again.

No contract herein provided for shall bind the United States to construct said Dam No. 3.

That does not interfere with the United States constructing that dam if it sees fit to do so, but what I am urging is that nothing in the contract entered into with the lessee shall bind the United States to construct the dam. I ask the Senator if he will not accept the amendment.

Mr. UNDERWOOD. I will say to the Senator that I will not accept it. I do not want to do what legislatively would be—I will not use the word "silly," but it would be to do something that would be unnecessary. Of course, the Senator from Nebraska is not for it.

Mr. ROBINSON. Mr. President, will the Senator yield to me?

Mr. UNDERWOOD. Certainly.

Mr. ROBINSON. Does the Senator from Nebraska hold that anything in the bill binds the United States to construct Dam No. 3?

Mr. HOWELL. The bill states—

Mr. ROBINSON. Does he hold that anything in the bill requires the United States to construct Dam No. 3?

Mr. HOWELL. I am not clear that that is true, but I do hold that if the United States constructs Dam No. 3, under the bill it must be operated in conjunction with Dam No. 2.

Mr. ROBINSON. Is the Senator opposed to striking out the provision relating to Dam No. 3?

Mr. HOWELL. I think probably it is questionable as to whether we want to strike out Dam No. 3 until we find out—

Mr. ROBINSON. Why does not the Senator propose an amendment that will forbid the United States to construct Dam No. 3?

Mr. HOWELL. I do not propose that.

Mr. ROBINSON. Why not?

Mr. HOWELL. My amendment does not propose it.

Mr. ROBINSON. I know; but why does not the Senator, if he thinks it should not be constructed, propose an amendment to that effect?

Mr. HOWELL. I do not want to propose an amendment to that effect. I want the United States to construct Dam No. 3 if it is to the interest of the United States to do so.

Mr. ROBINSON. The Senator admits that nothing in the bill commits the United States to the construction of Dam No. 3, but he is not willing to propose an amendment that forbids the construction of Dam No. 3.

Mr. HOWELL. Section 8 reads as follows:

That the Secretary of War is hereby authorized and directed to complete the construction of Dam No. 3.

Mr. ROBINSON. Does the Senator oppose the completion of Dam No. 3?

Mr. HOWELL. I think Dam No. 3 ought to be constructed, but we ought not to spend another \$25,000,000—

Mr. ROBINSON. Then why does not the Senator propose an amendment to strike out Dam No. 3?

Mr. HOWELL. Will the Senator let me finish my statement?

Mr. UNDERWOOD. I think I can straighten this out for the Senator in a moment if he will allow me.

Mr. HOWELL. May I finish my statement?

Mr. UNDERWOOD. Certainly; but I would like to yield the floor.

The PRESIDING OFFICER. Does the Senator from Alabama yield further to the Senator from Nebraska?

Mr. UNDERWOOD. I yield.

Mr. HOWELL. In my opinion the Government should not go ahead and put \$25,000,000 into Dam No. 3 if the proposed results therefrom are to be what they have got so far from Dam No. 2 and as proposed under the amendment of the Senator from Alabama.

Mr. UNDERWOOD. If the Senator will allow me to make a statement, I think the main difference between the junior

Senator from Nebraska and myself on this proposition is that the Senator is not a lawyer, but he is an engineer. He is not familiar with law phrases, as some of the others of us probably are. More than that, there are certain phrases in legislation enacted in Congress that mean something to men who have been here a while and served on the committees which I am sure the Senator does not grasp at this time. An authorization does not build anything and does not create anything. It merely leaves it within the power of the Congress to put an appropriation in the Budget if it wants to do so. I have not put in any constructive words with reference to Dam No. 3 and have provided for no appropriation for it. I have merely made an authorization that if hereafter Congress wants to build this dam it can appropriate the money, and that has to be done in advance. If the Senator does not want to leave it in that condition where the Congress hereafter can appropriate money for the construction of Dam No. 3, then, of course, he should move to strike out the provision.

But, as I said before when the Senator interrupted me, I understand our difference. Many men do not understand the difference between a congressional authorization and an appropriation. I do not say that in criticism at all. It is a legislative proposition that we only get used to after we have been here some time. What I said before to the Senator from North Carolina is that there is nothing in the bill except Dam No. 2 and the nitrate plant.

Mr. SIMMONS. Except, as I understand the Senator's statement, that if the Government does construct Dam No. 3—and the time within which it must do or not do it is not fixed—then it has to give the lessee of plant No. 2 and plant No. 1 an opportunity to buy, provided they can agree upon terms.

Mr. UNDERWOOD. On such terms as the Congress shall see fit to impose.

Mr. SIMMONS. In other words, the Government would not have absolute control over that property if it should build that dam until it had given a lessee an opportunity to make a bid and then determined whether or not it would accept it.

Mr. UNDERWOOD. I think it would be proper, so far as that goes, to coordinate these dams if we ever build them; we would thereby get more power; but I do not think the Government is bound in any way. That is all I think there is in this proposition. I think that the principal opposition comes from the very gentlemen who do not want the Government possibly to get into any competition with their line of business.

Mr. REED of Missouri. Mr. President—

Mr. WALSH of Montana rose.

Mr. REED of Missouri. I merely wish to propose a unanimous-consent agreement.

Mr. WALSH of Montana. I wish to address an inquiry to the Senator from Alabama [Mr. UNDERWOOD] before this matter shall have passed over.

Mr. REED of Missouri. Very well.

Mr. WALSH of Montana. I should like to have the views of the Senator from Alabama concerning the significance of section 9 of his substitute. By section 8 of the substitute the Secretary of War is authorized and directed to complete the construction of Dam No. 3. Of course, as the Senator has very properly stated, that would require an appropriation by Congress and the lack of the appropriation would prevent the prosecution of the work. Let us assume, however, that the appropriation is made. When the dam shall have been completed, it is provided that it "shall be leased or operated in conjunction with Dam No. 2 as provided for in this act on such terms as Congress shall hereafter provide." That contemplates, of course, the leasing to the same lessee, who is to operate it in conjunction with Dam No. 2; but let us suppose that Congress and the lessee can not agree on terms; that Congress proposes certain terms and the lessee thinks those are too onerous and he will not accept them, or that he proposes certain terms that are entirely unsatisfactory to Congress; then what happens to Dam No. 3?

Mr. UNDERWOOD. Mr. President, I think the Government could go on and operate it. Section 9, however, is not material to me; I inserted it merely to coordinate the bill, and I ask unanimous consent that the section be stricken out of the bill.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

RECLASSIFICATION OF POSTAL SALARIES—VETO MESSAGE

Mr. REED of Missouri. Mr. President, a day or two ago a unanimous-consent agreement was proposed by the Senator from New Jersey [Mr. Egan] providing for a vote on the 8th day of January on what is known as the postal employees'

bill. At that time I objected to the unanimous consent being given, because the agreement contained a clause that permitted in lieu of a vote on the bill, the final disposition of the bill, a motion to refer to the committee. That clause had been added after the Senator from New Jersey had made his proposal, which did not contain it. Since that time we have had a vote in the Senate which convinces me that there is not much danger of that bill being referred to a committee; and, after consideration and consultation with other Senators, I desire to propose a unanimous-consent agreement which is in harmony with the general plan of that proposed by the Senator from New Jersey, and which I think will give us the opportunity finally to dispose of the bill unless, indeed, enough votes can be mustered to refer it to a committee. I sent to the desk the unanimous-consent agreement which I propose, and I ask that it may be read.

The PRESIDING OFFICER (Mr. DIAL in the chair). The Secretary will read the proposed unanimous consent agreement.

The reading clerk read as follows:

It is agreed by unanimous consent that at the conclusion of routine morning business on the calendar day of January 5, 1925, the Senate will proceed to the reconsideration of the bill (S. 1898) reclassifying the salaries of postmasters and employees of the Postal Service, readjusting their salaries and compensation on an equitable basis, and for other purposes, heretofore returned by the President of the United States without his approval; that on that calendar day no Senator shall speak longer than one hour on the bill or any subject, and that if the bill is not finally disposed of on that day, then thereafter no Senator shall speak more than once or longer than 20 minutes upon the bill or any subject, and the bill shall be finally disposed of not later than 4 o'clock on the calendar day of January 6, 1925. *Provided*, That this unanimous consent shall not prevent a motion to be made and disposed of on January 5, 1925, to recommit the bill and the message of the President to the Committee on Post Offices and Post Roads.

The PRESIDING OFFICER. To enter into the unanimous-consent agreement requires the presence of a quorum, and the Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Ashurst	Fess	Ladd	Shipstead
Ball	Fletcher	McKellar	Shortridge
Bayard	Frazier	McKinley	Simmons
Broussard	George	McNary	Smith
Bruce	Gerry	Mayfield	Smoot
Bursum	Glass	Means	Spencer
Butler	Gooding	Metcalf	Stanley
Capper	Hale	Moses	Sterling
Copeland	Harold	Neely	Swanson
Cowzens	Harris	Norbeck	Trammell
Cummins	Harrison	Norris	Underwood
Curtis	Hedlin	Oddie	Wadsworth
Dial	Howell	Overman	Walsh, Mont.
Dill	Johnson, Calif.	Ralston	Warren
Edge	Jones, Wash.	Ransdell	Weller
Edwards	Kendrick	Reed, Mo.	Wheeler
Fernald	Keyes	Robinson	Willis
Ferris	King	Sheppard	

The PRESIDING OFFICER. Seventy-one Senators having answered to their names, there is a quorum present.

Mr. EDGE. Mr. President, of course it is entirely unnecessary for me to state that I am thoroughly in accord with the unanimous-consent proposal suggested by the Senator from Missouri, which in effect is practically the same as the one heretofore offered by me. I have all along held that this is the only businesslike method that can be adopted to assure a vote on the bill and to give Senators what I consider proper notice as to when the bill will be taken up. I sincerely hope the unanimous-consent agreement may be entered into.

Mr. ROBINSON. Mr. President, I hope the agreement will be entered of record; otherwise, great confusion may arise. Senators will have no means of knowing when the matter is to be considered and disposed of and may be unable to vote on the passage of the bill over the President's veto. I repeat, I hope the agreement will be entered into.

Mr. STERLING. Mr. President, I have not as yet heard the proposed unanimous-consent agreement read. I should like to have it read.

The PRESIDING OFFICER. The Secretary will read the request for unanimous consent presented by the Senator from Missouri.

The reading clerk read as follows:

UNANIMOUS-CONSENT AGREEMENT

It is agreed by unanimous consent that at the conclusion of the routine morning business of the calendar day of January 5, 1925, the Senate will proceed to the reconsideration of the bill (S. 1898)

reclassifying salaries of postmasters and employees of the Postal Service and readjusting their salaries and compensation on an equitable basis, and for other purposes, heretofore returned by the President of the United States without his approval; that on that calendar day no Senator shall speak longer than one hour on the bill or any subject and that if the bill is not finally disposed of on that day, then thereafter no Senator shall speak more than once or longer than 20 minutes upon the bill or any subject, and the bill shall be finally disposed of not later than 4 o'clock on the calendar day of January 6, 1925: *Provided*, That this unanimous consent shall not prevent a motion to be made and disposed of on January 5, 1925, to recommit the bill and the message of the President to the Committee on Post Offices and Post Roads.

The PRESIDING OFFICER. Is there objection to the request for unanimous consent presented by the Senator from Missouri? The Chair hears none, and the agreement is entered into.

READJUSTMENT OF POSTAL SALARIES AND RATES

Mr. CURTIS. Mr. President, I understand that the Senator from Arizona [Mr. ASHURST] withdraws his objection to the second reading of the bill introduced by the Senator from South Dakota [Mr. STERLING]. I ask that it may be read the second time and referred to the Committee on Post Offices and Post Roads.

The PRESIDING OFFICER. Is there any objection to the second reading and reference of the bill?

Mr. ASHURST. Mr. President, the Senator from Kansas has correctly stated the situation.

Mr. STERLING. I thank the Senator.

The bill (S. 3674) reclassifying salaries of postmasters and employees of the Postal Service, readjusting their salaries and compensation on an equitable basis, increasing postal rates to provide for such readjustment, and for other purposes, was read the second time by its title and referred to the Committee on Post Offices and Post Roads.

CONSTRUCTION OF PUBLIC BUILDINGS

Mr. ASHURST. Mr. President, I ask unanimous consent to have printed in the RECORD a statement issued for publication by the senior Senator from Florida [Mr. FLETCHER] on December 6 on the subject of a public buildings bill. I am sure that some misapprehension exists, if not in the Senate certainly throughout the country, as to the scope and effect of the bill which the Senator from Florida introduced on December 2. This is a short statement authorized by him, I think—written by him, of course—and sent out by the press. I ask that it be printed in the RECORD as explaining his bill.

The PRESIDING OFFICER. Is there objection to printing this matter in the RECORD? The Chair hears none, and it is so ordered.

The matter referred to is as follows:

WASHINGTON, December 6.—Commenting on the public buildings bill which he introduced on 2d instant, Senator DUNCAN U. FLETCHER, of Florida, to-day said:

"The bill provides:

"That the following sums be, and the same are hereby, appropriated for the objects hereinafter expressed, namely:

"(a) For increase in the limit of cost of construction of those certain public buildings heretofore authorized by Congress to be constructed and for which appropriations were made, referred to in Senate Document No. 28, Sixty-eighth Congress, first session, \$15,130,780, or so much thereof as may be necessary.

"(b) For the construction of public buildings on those certain sites heretofore acquired, for the construction of which buildings no appropriations were made, referred to in Senate Document No. 28, Sixty-eighth Congress, first session, \$23,557,500, or so much thereof as may be necessary."

"I introduced a similar bill during the last session of Congress, and the Secretary of the Treasury advised the chairman of the Committee on Appropriations of the Senate, under date May 17, 1924, in part as follows:

"The passage of this bill would permit the construction of those buildings authorized and limits of cost fixed under act of March 4, 1913, which on account of the increased cost of labor and materials can not now be erected within such limits. The completion of these projects and the erection of Federal buildings in many places where sites only have been authorized would be a substantial help in relieving the congestion in the Postal Service.

"In connection with the foregoing you are advised that the department is informed that the appropriations contemplated by this bill are in conflict with the financial program of the President."

"The Postmaster General, in his annual report for the fiscal year ending June 30, 1922, said:

"The Postal Service is growing steadily, and its requirements are difficult to meet without constant recourse to enlarged quarters, which are secured on a rental basis, at an expense much greater than that which would result from Government construction and ownership. A vast sum is paid annually for these rentals. The reasons in favor of some plan of Government ownership of post-office buildings for postal use where an economy would be realized are set forth in detail in my letter to the Joint Commission on Postal Service."

"In his report for the fiscal year ending June 30, 1923, he said:

"Attention again is invited to the unbusinesslike method of securing quarters for post offices and postal stations under the leasing system. In many cases the Government is paying in annual rent from 10 to 17 per cent of the value of the premises occupied. On August 21, 1922, a letter was addressed by the then Postmaster General to the Joint Commission on Postal Service, setting forth very fully the department's views with reference to Government ownership of post-office buildings. This letter was published in full in the last annual report, and the conclusions contained therein have been considered by me and receive my full approval."

"And in his report for the fiscal year ending June 30, 1924, the Postmaster General says:

"I desire again to invite attention to the unbusinesslike method of securing quarters for post offices and postal stations under the leasing system. In many cases the Government is paying in annual rent a large per cent of the value of the premises occupied. In 1922 the then Postmaster General addressed a letter to the Joint Commission on Postal Service setting forth fully the department's views with reference to Government ownership of post-office buildings. In the last report mention was made of my full approval of those recommendations."

"The bill which I introduced is not a 'pork barrel' bill—as has been inferred by those unacquainted with the facts, for it provides for the construction of public buildings on sites heretofore acquired or appropriated for by the Congress, as follows:

"In Alabama, 6; Alaska, 2; Arizona, 3; Arkansas, 9; California, 7; Colorado, 5; Connecticut, 4; Delaware, 1; Florida, 5; Georgia, 11; Idaho, 4; Illinois, 16; Indiana, 13; Iowa, 7; Kansas, 1; Kentucky, 13; Louisiana, 2; Maine, 3; Maryland, 1; Massachusetts, 9; Michigan, 7; Minnesota, 3; Mississippi, 2; Missouri, 14; Nebraska, 1; Nevada, 2; New Hampshire, 1; New Jersey, 9; New Mexico, 1; New York, 16; North Carolina, 10; North Dakota, 2; Ohio, 16; Oklahoma, 2; Oregon, 1; Pennsylvania, 17; Rhode Island, 1; South Carolina, 2; South Dakota, 3; Tennessee, 7; Texas, 15; Utah, 2; Vermont, 1; Virginia, 5; Washington, 3; West Virginia, 4; Wisconsin, 6; and Wyoming, 4.

"It is a well-known fact that these sites acquired by gift and purchase have not since produced any revenue to the Federal, State, county, or city governments, but are lying idle and are, in most if not all cases, a source of expense to the community and the Government.

"Reference to Senate Document No. 28—the same information appears in the CONGRESSIONAL RECORD of 2d instant—discloses that Congress appropriated \$115,000 for the purchase of a site and the construction of a building thereon at Waltham, Mass.; that the site was acquired October 17, 1911, at a cost of \$46,051, and that the estimated cost of constructing the building is now \$178,900. Therefore, in order to construct a building on that site—purchased and held by the Government since 1911—it will be necessary for the Congress to appropriate \$110,000 additional. This situation illustrates the general object and purpose of my bill—favorable action on which should not be delayed to the continued detriment of the service and further inconvenience and loss to the taxpayers of the country. Furthermore, Congress should provide funds for the purchase of sites and the construction and remodeling of buildings in many other cities and towns where the actual needs of the service justify. *The buildings are going to be erected some day, and the sooner the better for all concerned. The longer such action is delayed the greater will be the cost for sites, material, and labor. And so it would certainly be more economical to proceed without delay.*"

Senator FLETCHER has also offered his bill as an amendment to the bill introduced by Senator REID SMOOT, of Utah, which proposes to appropriate \$50,000,000 for the construction of certain public buildings in the District of Columbia, but does not provide for the construction of buildings elsewhere.

MUSCLE SHOALS

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 518) to authorize and direct the Secretary of War, for national defense in time of war and for the production of fertilizers and other useful products in time of peace, to sell to Henry Ford, or a corporation to be

incorporated by him, nitrate plant No. 1, at Sheffield, Ala.; nitrate plant No. 2, at Muscle Shoals, Ala.; Waco Quarry, near Russellville, Ala.; steam power plant to be located and constructed at or near Lock and Dam No. 17 on the Black Warrior River, Ala., with right of way and transmission line to nitrate plant No. 2, Muscle Shoals, Ala.; and to lease to Henry Ford, or a corporation to be incorporated by him, Dam No. 2 and Dam No. 3 (as designated in H. Doc. 1262, 64th Cong., 1st sess.), including power stations when constructed as provided herein, and for other purposes.

Mr. FLETCHER. Mr. President, I have here a short editorial from the New York World of to-day, December 17, entitled "What is important at Muscle Shoals." I ask to have it read by the Secretary.

The PRESIDING OFFICER. Without objection, the Secretary will read the editorial.

The reading clerk read as follows:

WHAT IS IMPORTANT AT MUSCLE SHOALS

It is not accurate to say that in voting down the Smith amendment the Senate has decided against Government operation of Muscle Shoals. The Senate has simply decided against the theory that Government operation and nothing else will do.

The Underwood bill for Muscle Shoals is so drawn that the Government first attempts to find a bidder ready to meet the terms carried in the bill. If no such bidder is forthcoming, then the Government operates the dams and nitrate plants itself. In either case ownership remains with the public. The point at issue is operation. The amendment offered by Mr. Smith, of South Carolina, proposed to strike out the entire leasing terms and leave only the provisions for Government operation. This the Senate has refused to do.

The Senate prefers private management, provided that this management accords with certain minimum terms drawn to protect the public interest. And provided those terms are high enough, provided the public interest in both water power and factories at the shoals is adequately and specifically protected. The World believes that the Senate is right. What matters at Muscle Shoals is not so much who does the work as on what terms the work is done. The World is less interested in the pros and cons of a theory, less interested in an argument which starts from a point in space, than in urging that, whether the shoals are operated privately or by the Government, the terms which actually set the standard for public service are wisely drawn and clear.

Mr. HOWELL. Mr. President, since last Saturday I have been able to go more into the details of the Muscle Shoals development, and I find, by way of correction, that while 200,000 primary horsepower may be depended upon for most of the time from a combination of the hydroelectric and steam plants at Dam No. 2 and nitrate plant No. 2, yet, strictly speaking, these plants together may be properly rated at but 167,000 horsepower. Upon this basis and the further assumption that the interest charge would be 4 per cent on \$45,800,000—the estimated cost of Dam No. 2—the charge per horsepower on account of interest would be about \$11 per annum instead of \$9. Assuming the cost of operation and maintenance to be \$6 per horsepower, we have a total cost of \$17 instead of \$15. On this basis 167,000 horsepower would cost the lessee approximately \$2,839,000 per annum, while to produce this amount of power by steam, assuming a cost of nine-tenths cent per kilowatt-hour, would cost about \$9,900,000 per annum.

Respecting the combination of power plants at Muscle Shoals and on the Tallapoosa River, the following is an excerpt from a statement by an official of the Alabama Power Co.:

Consider first Muscle Shoals operated independently in a year of low flow; 1904 has been selected as the year of practically the lowest flow. Take Dam No. 2, with an installation of 600,000 horsepower, and Dam No. 3, with an installation of 250,000 horsepower, the Sheffield steam plant—steam-electric installation at nitrate plant No. 2—with an installation of 90,000 horsepower (this is evidently an error, as 80,000 horsepower only is developed at this plant), and the Warrior steam plant, with an installation of 40,000 horsepower—a total of 980,000 horsepower. Now, in the year of low flow, on a 100 per cent load factor, there is available in this combination only 222,000 horsepower—absolute primary power—that is, Muscle Shoals operated independently, but in connection with the steam plants that have been associated with it. * * * In the operation of the Tallapoosa River as a storage proposition, absolutely independent, not connected with any other generation plant, there will be available 85,000 horsepower of absolute primary power. * * * If we combine the two and operate them jointly in connection with the transmission lines, whereas we had approximately 310,000 horsepower—222,000 and 85,000—with independent operation, when we join them together we get 465,000 horsepower * * * and in the energy produced on a 60 per cent load factor we will show a gain of 1,711,000,000 horsepower-hours of energy, or nearly 75 per cent.

Mr. President, as I understand it, this suggests that this contemplated combination of plants would afford not 310,000 primary horsepower but 465,000 primary horsepower on a 100 per cent load factor, or a gain of 50 per cent. Assuming, on a 60 per cent load factor, a gain of 1,711,000,000 horsepower hours of energy, as intimated, the gain added to the 310,000 horsepower would equal about 510,000 horsepower. However, it should be noted that in the statement of the Alabama Power Co.'s official he is only crediting the Muscle Shoals hydroelectric development with 92,000 horsepower, whereas evidence otherwise elicited indicates a practical minimum of 121,000 horsepower. Using this figure and 80,000 horsepower as the energy that can be developed at nitrate plant No. 2, we find, using similar reasoning, that this suggested combination results in 489,000 horsepower on a 100 per cent load factor, or 534,000 horsepower on a 60 per cent load factor. However, let us merely consider 489,000 horsepower as the available power resulting from such combination. Subtract from this 489,000 horsepower, the primary energy due to Tallapoosa River development and the Warrior steam plant, and we have remaining the power that may be credited to the Muscle Shoals development because of the proposed combination, or 364,000 horsepower. This is 163,000 horsepower more than the primary water and steam power attributable to Muscle Shoals. Assuming that Dam No. 3 would be responsible for 39 per cent as much power as Dam No. 2, then that portion of this additional power due to Dam No. 3 would be 46,000 horsepower, leaving 117,000 horsepower attributable to Dam No. 2. Therefore we may assume that the combination proposed, excluding Dam No. 3, would mean that the acquisition of the present Muscle Shoals plants by the Alabama Power Co. would add to its resources, not merely 167,000 initial horsepower attributable to the Muscle Shoals development but 284,000 horsepower. The interest charge on this, however—assuming 4 per cent on \$51,000,000—would be about \$7.18 per horsepower. Adding to this the cost of operation and maintenance—\$6 per annum—we have a total cost of \$13.18 per horsepower per annum, instead of \$7.50, or a total for the 284,000 horsepower of \$3,748,000 per annum. If this could be sold at the cost of the production of electrical energy by steam, say, nine-tenths cent per kilowatt-hour, the income therefrom would amount to approximately \$16,800,000.

Include Dam No. 3 and the horsepower attributable to Muscle Shoals amounts to 364,000 horsepower at a cost, including interest at 4 per cent and an operation and maintenance charge of \$6, of \$14.35 per horsepower per annum, or a total of about \$5,200,000. The annual value of 364,000 horsepower, at nine-tenths cent per kilowatt-hour, or \$59.18 per horsepower per annum, is about \$21,400,000.

Mr. HARRELD. Mr. President, I should like to ask the Senator from Nebraska what is the net result of this calculation? How much does it show that it is possible for this power plant to produce, and how much do we get out of it per annum under any contract that it proposed?

Mr. HOWELL. I have assumed that the lease will be made at 4 per cent per annum. On that basis the Government would receive on account of Dam No. 2 and all other property now at Muscle Shoals, which has cost the people of this country about \$140,000,000, about \$1,832,000 a year.

Mr. HARRELD. How much is it capable of producing if the power were simply sold?

Mr. HOWELL. I have pointed out that, assuming but 167,000 primary horsepower is due to Dam No. 2 and the electric-steam plant at nitrate plant No. 2, the rental or interest, plus the cost of operation, would amount to about \$2,839,000 per annum. Further, that if this power could be sold for what it cost to produce electric energy by steam, say, at nine-tenths of a cent per kilowatt hour, the annual income therefrom would be approximately \$9,900,000. But I wish it understood that I am not stating that this power can all be sold at the present time for that price. What I have been endeavoring to do is to give Senators an idea of the limits of this proposition, the lower and the upper limits. I have further shown that if the present plants at Muscle Shoals were combined with the Tallapoosa River development and the Warrior power there might be attributed to Muscle Shoals 284,000 horsepower.

Mr. NORRIS. I would like to call my colleague's attention to the fact that he must not include the Warrior power, of course. That must be eliminated.

Mr. HOWELL. No; that is subtracted. I think I have stated my deductions in my previous remarks as clearly as they can be set forth.

Mr. HARRELD. If the Senator feels that was as concise as he could make it, I can read that in the Record. I thought he might sum up the net results of it.

Mr. HOWELL. I have set forth the net results attributable to the primary power at Muscle Shoals; also two other similar deductions.

Mr. HARRELD. The purpose I had in asking the question was that I want to emphasize that if this is turned over to a governmental agency to run, and to simply dispose of the power, it will not be a white elephant. It will produce more than you could get out of it by the terms of the contract which is proposed. That is true, is it not?

Mr. HOWELL. Mr. President, in my opinion if the Government operates this great power plant it will enjoy a greater return therefrom than can possibly be obtained from a lessee. Furthermore, it will ultimately cause marked reduction in light rates, at least, all throughout that southern region that naturally will be supplied by this power. Moreover, by example, it will ultimately affect light rates elsewhere in the country.

Mr. FESS. Mr. President, I have been in the Chamber almost every hour since this debate started, and I think the debate has touched the high level, from the standpoint of argumentation, of the best that has gone heretofore on great questions. So far as I know, while this bill has been pending during this session, not over one or two addresses made were not on the subject before the Senate.

I have listened to the discussion of the Muscle Shoals proposition for 12 years. The first speech which attracted my attention in the body at the other end of the Capitol was a speech by the author of this substitute. He was then the majority leader of the House, and the chairman of the Ways and Means Committee. It was then proposed as a water-power project entirely. There was no suggestion of the manufacture of nitrogen.

As I recall, the amount of the appropriation was \$12,000,000. The debate was of a high order, but when the vote came the project was voted down. Every year after that, up to 1916, the same proposal was made, and the appropriation asked for had been as high as \$150,000,000; but just as often as it was proposed it was voted down.

Mr. McKELLAR. Mr. President—

The PRESIDENT pro tempore. Does the Senator from Ohio yield to the Senator from Tennessee?

Mr. FESS. I yield.

Mr. McKELLAR. I just wanted to ask the Senator from what he read. I did not catch it. From what book or document was the Senator reading?

Mr. FESS. I read no book. I was speaking about what I heard. In 1916, when the war was imminent and we knew we were going into it, the proposal was made to develop nitrates, and we had an additional interest added to the Muscle Shoals proposition. As I recall, the initial appropriation was \$20,000,000. As a national defense proposal I voted for it. I also voted for the emergency fund of \$100,000,000 to be expended at the President's suggestion to meet such emergencies as might arise in time of war. Before we knew what we were doing there was an immense amount of money applied to this proposal down at Muscle Shoals, until it had reached \$80,000,000. It now has reached \$140,000,000, and we are told that it will be useless unless we expend \$60,000,000 more, making the enormous figure of half the cost of the construction of the Panama Canal.

If this were a new proposition, if it were de novo, I would vote against it, just as I voted against the original proposal for the development of water power there under the suggestions heretofore made; but that stage is past. In the language of a great statesman, it is not a theory now, it is a condition that faces us. We have represented there now an appropriation of such an enormous amount that it seems to me there is no choice for the Government unless we are willing to junk the plant, and I do not believe any responsible legislator, or really any responsible citizen, is willing to take that step. I know I would not vote for a proposal to junk it as so much loss of war, to be marked off.

I do not believe any measure has come up in either House that has enlisted such general interest. It first appealed to the commercial instinct, on the basis of profit from the development of hydroelectric power. Then it appealed to the patriotic instinct, which went to the national defense in time of war, when the world was on fire, and with the war over, so that that instinct did not play longer, it then appealed to the sympathy of the American people for the farmer, who was sorely distressed in time of depression, due to the war. So we have all the elements playing for action upon this proposal.

As I see it, there are only two alternatives. One is to junk the plant, the other is to go on with it, and I think the universal agreement is that we shall go on with it. If we do that, then we will be limited, as it appears to me, to three

ways. It will be to go on with it through the direct action of the Government, as a Government process in operating a Government property, or to sell it outright and convey a fee simple title and wash our hands from further responsibility, or to keep the title to the property, lease it under conditions specified, and operate it in that way. Those are the three methods open. It is not a new thing with the Senate or with the people. It has been before the country for years.

I am against Government operation of this plant, because I am against political operation of industry. The author of the committee bill says that they have it so fixed that the Government operation would not be political operation. I wish I could believe that Government operation could be prevented from going into political operation, but I do not see how that can be accomplished.

If I wanted any evidence of the inefficiency and the hopelessness of the Government in operating a business, all I would need to look at would be what we have undertaken to do as a Government. We had an experience with the railroads, and that experience was not long ago. It seems to me it would be sufficient to satisfy anybody the balance of his days.

Mr. NORRIS. Mr. President—

The PRESIDENT pro tempore. Does the Senator from Ohio yield to the Senator from Nebraska?

Mr. FESS. I yield.

Mr. NORRIS. Can the Senator discern no difference between the committee bill, which we have before us, and the law that authorized the taking over of the railroads?

Mr. FESS. Yes; there is a difference.

Mr. NORRIS. Is it not apparent on the face of it that the committee bill would prevent the turning of this property over to any political influences, and will the Senator not likewise admit that private ownership of railroads at the time we turned them over to the Government was an acknowledged failure and we turned them over to the Government because private operation had fallen down? There was no other reason for turning them over.

Mr. FESS. I think the Senator is not justified in that last statement. We had passed various legislation touching the railroads. One piece of legislation was that giving a Government agency the power to fix what the railroads could take in, by determining the rates, and another was that giving another agency, Government in character, the power to say what the railroads would have to pay out; so that the Government was determining both the outlay and the income and leaving to the railroads about the only thing left—to pay the bills. The Senator will recognize that with that sort of limitation on the power of the owners of the roads they could not very well become efficient in time of war. If the Senator would permit just a further statement, it should not be overlooked that in time of war we wanted the roads run as a system, and under the Sherman antitrust law the owners could not do that. If they had combined to run the roads as a system, they would have been subject to the penalties of the law, and we literally took the roads over to run them by the Government in order that we might violate the law which we had passed and not hold the roads responsible for violating it. I think everyone will admit that is a fact.

Mr. NORRIS. Mr. President, will the Senator yield at that point?

Mr. FESS. I yield.

Mr. NORRIS. With much that the Senator has said I do not take issue, but I would like to suggest to him that the argument he has made now about the railroads is an argument against Government regulation.

Mr. FESS. No.

Mr. NORRIS. He has shown that Government regulation failed, that we regulated wrongfully. Government regulation, at least under the Senator's argument, had fallen down. If it was economy or a good thing, if we could accomplish something by the Government taking over the railroads in time of war, why could we not accomplish the same thing if we took them over in time of peace and did it by a law that would take them out of politics when we did it?

Mr. FESS. I would like to remind the Senator that it is easier to say we will take them out of politics than it is to do that thing. That is a thing I can not see how we will accomplish. Also I would like to say to the Senator that Government regulation might fail. I can very easily see how it would. The modern tendency of industry is concentration, and while we pass laws forbidding it, we must recognize that the law of progress in modern times is the privilege of bodies or industries to combine in the interest of saving waste on behalf of the people. But when we permit concen-

tration we must hold the power to regulate. The order, of the day, as I see it, would be concentration and control, but control must not become strangulation, and our difficulty is that when we exercise governmental control we might go to the point where it breaks down.

Mr. President, I have the greatest possible respect for the Senators who have been arguing for Government operation. I think the argument here by the two Senators from Nebraska has been on as high a plane and with as great force as any argument I have ever heard on the subject. They have made a pretty strong case out of Government operation. But neither of them has convinced me that the dangers inevitable in Government operation, which is bound to become political operation, have been averted, and they will be imminent if we go on with it, as I think.

Mr. NORRIS. I hope the Senator will not criticize my colleague and myself for not performing an impossibility. We have not expected to convince the Senator.

Mr. FESS. The Senator from Ohio has an open mind on these subjects. I recognize that theory is wonderfully enticing, and even the theory of socialism, where the Government will indicate what the production shall be in order that they may save us from overproducing beyond the necessary consumption, is a beautiful theory, but it does not work and never will work. So the Government-operation plan is a beautiful theory. But the difficulty is we do not work it out. Why should we entangle our feet in the meshes of theory and bump our brains out against the wall of facts as we place them in Government operation?

Mr. NORRIS. Mr. President, may I interrupt the Senator again?

Mr. FESS. Certainly.

Mr. NORRIS. The Senator is very kind in permitting interruptions.

Mr. FESS. I am glad to yield to my friend.

Mr. NORRIS. I do not want to intrude on him too much, but when the Senator says it is all theory I wish he would go up against the fact of Lincoln, Nebr., with 5-cent electric rates with municipal competition. I wish he would perform the same act in the city of Cleveland, where they used to have 10-cent rates and now, by virtue of this socialistic, imperfect system, have reduced it to 5 and 3 cents. I wish he would take up Seattle and do the same thing. I wish he would go to Canada, where on the largest scale anywhere in the world the same thing was performed for several hundred municipalities, taking advantage of Government operation and development of water power in Canada. Those are not all theories. Those are not all dreams of the dreamers, but over there is a combination entirely of business men, men of business principles, for the purpose of getting cheap current, and they have the best and the cheapest.

Mr. FESS. I think we have a point nearer home than Cleveland or Lincoln, Nebr., or Omaha or any of the cities mentioned by the Senator. We only need to look at Government operation and by the Federal Government. That is right at home. The railroads are one thing I have mentioned. Our shipping industry is another. Why, Senators, think of it—1,500 ships built by the Government, 1,100 of them tied up at the wharves, evidently going into a condition in which they will not be of any use in time, and 400 of them on the sea operated by the Government, and when first operated they were operated at a loss of \$200,000,000 a year. It is true we have reduced that loss to something like \$50,000,000 a year. There is Government operation, and it is right at home.

Mr. COUZENS. Mr. President—

Mr. FESS. I yield to the Senator from Michigan.

Mr. COUZENS. Does the Senator think it is fair to compare war-time activities with peace-time activities? I observe that he just referred to Federal operation of activities during war times, when it was a well-known fact that every degree of efficiency and profit making was sacrificed to win the war.

Mr. FESS. My friend was not in either the House or the Senate when we were having that experience. Had he been where I was when the question came up for fulfilling the agreement that the Government made with the railroads to return them to the owners at the expiration of the war, and had he listened to the same sort of argument that we must not turn the roads back, that we had not yet had a sufficient period of experimentation to determine whether it was fruitful or profitable, and, on the other hand, a propaganda which went everywhere that the Government should permanently launch into Government operation of railroads, he would understand the situation to which I refer vastly better.

I admit that it is not quite fair to compare in peace times an operation we had in war time. But I would remind my

friend from Michigan that I am not comparing the operation of the shipping industry in war times. I am speaking of what we are doing now, this very hour. We are running those ships, which are a mere fraction of our merchant marine, at a cost that the Nation itself will have to meet.

Mr. COUZENS. Assuming that private industry had built all those ships in lieu of the Government having done so, and the title had remained with private interests all during the war, could private interests have done any different since the war than the Government has done with the same identical property?

Mr. FESS. Probably the private interests could if they were not tied down by legislative acts, as the Senator very well knows they are at present.

Mr. COUZENS. Does the Senator claim that there is tonnage enough for all the ships that are now in existence to be operated profitably?

Mr. FESS. No; probably not for 1,500 of them, but there ought to be tonnage enough for 400.

Mr. REED of Missouri. Mr. President—

The PRESIDENT pro tempore. Does the Senator from Ohio yield to the Senator from Missouri?

Mr. FESS. I yield.

Mr. REED of Missouri. The Senator has referred to wartime activities, about which we all know something. I have not heard him refer to the ghastly failure of the Federal Government in running the post office and in furnishing the cheapest postal rates on earth, nor to the failure of the Panama Canal. I was wondering what he thinks of those two operations.

Mr. FESS. My observation upon the post office is a pertinent one. We heard only yesterday the statement in flaming tongue that the Government was not running the post office for profit.

Mr. REED of Missouri. Certainly not.

Mr. FESS. That the Government should run the post office, paying living wages, whatever that might mean, without any regard to the equities or inequities existing between different places, and we were indicted for asking the privilege of finding the revenue for the meeting of the deficit. The reply came to us that no matter what the deficit be it should be made up by the Government. That is political operation, and it would not happen in any other business in the world except Government business.

Mr. REED of Missouri. I do not want to interrupt the Senator too much. I do not want, of course, to interfere with his speech.

Mr. FESS. The Senator is not interfering with my speech.

Mr. REED of Missouri. We do run the post office as a public benefaction without profit. We never try to make a profit because we want to furnish at actual cost the machinery for the transmission of information and messages from one part of our people to another. We have made the post office pay its way. Occasionally there is a miscalculation and we have a deficit, and then we remedy that by a slight increase of rates.

We are now asked to increase the pay of the employees. It is said that it will cost \$68,000,000 a year. No one indicts any person for wanting to provide that the deficit which will thus be created shall be made up out of the earnings of the post office, and undoubtedly it will be done.

The only objection I heard—and I was the one who made it—was that we should postpone action upon the bill, which has lain here for months, until we should first make the raise in postal rates, the idea being that if this is an act of justice we should perform it now, and as we had unlimited power to fix the rates, that we should then meet the financial question by raising the rates. I do not know, but I think that the right way to run the post office is not to run it for profit, but for the benefit of the people.

I shall not object, so far as the pending bill is concerned, if the great plant at Muscle Shoals is so managed, either by private companies that may lease it or by the Government, that the Government never makes any profit, but only receives a fair return upon its investment, provided the property is so controlled and managed that the people of the United States get the benefit of cheaper rates. I still ask the Senator if he would abolish the post office, and does he claim it to be a failure? Does he claim the Panama Canal to be a failure? There are at least two examples which, in my humble judgment, have vindicated the proposition, not that the Government shall engage generally in business, but that there are particular cases where the Government can engage in what we may term a business, and that would refer us back again on

this particular question as to whether this case falls in one classification or the other.

Mr. FESS. Mr. President, the Senator from Missouri has gone to the core of my objection to Government operation; he has touched the very spot to which my objection applies. If we launch into this project as a Government undertaking, the plea will be made that the farmers need fertilizer, and although the production of fertilizer at Muscle Shoals may cost far beyond what it can commercially be sold for, and it will be stated that the Government can not afford it, we shall hear on this floor and elsewhere the same sort of statement we have heretofore heard, namely, "It is the Government that is doing it; the Government is doing it for the people; the people need it; the farmers must have it; it does not make any difference how much it costs, the Government is rich enough to do it and it must do it." That will be heard here on this floor and on the floor of the other House. That is political operation, and that is what I object to.

Mr. REED of Missouri. So far as that phase of the matter is concerned, I shall be found as stoutly as will any other person opposing the running of the Muscle Shoals plant at a loss, with the single exception that during an experimental period when it is necessary to develop an industry the Government, like any private institution, frequently is unable to make money until the industry gets properly started. With that exception, I would insist as strenuously as would the Senator from Ohio that this project must be put upon a paying basis. I do not mean a profit basis, but a paying basis.

The objection that is constantly recurring to me is in the thought that is borne of some arguments which have been made here that it is our duty to make fertilizer, no matter what it may cost. I do not propose to give my assent to that kind of a proposition.

Mr. FESS. I am glad to hear the Senator from Missouri say that.

Mr. REED of Missouri. But I do believe that the Government can well afford to spend a reasonable amount of money in order to determine the question whether or not fertilizers can be made successfully, and in accordance with economic laws.

Mr. FESS. I agree with the Senator as to that.

Mr. REED of Missouri. I still do not understand why this small plant—for it is small—that is now owned by the Government falls within the general argument that can be adduced against the Government embarking in ordinary business, and I am disappointed that the Senator does not make the distinction. To begin with, the furnishing of light and power and its distribution constitute a public service coming within the same principles of law as do the highways. Therefore it is not, properly speaking, a private business. Aside, however, from the technical argument we have this situation: We have this property, and I am informed that, so far as employees are concerned, merely to produce the power—I am not discussing now anything beyond that—probably 20 men can run the entire plant. If we shall undertake to make fertilizer, of course, it will be necessary to employ more men; if we undertake to distribute power we shall have to employ more; but, so far as the mere production of power is concerned, it is a very small institution, and is not comparable in its complications and management with the management of the Mississippi and Warrior lines, whose boats are now plying upon the Mississippi and Warrior Rivers. Yet with all the adversities that have confronted that management, with inadequate channels, without wharves, without railroads and a general interchange of railroad freights, and notwithstanding the fact that the boats were a matter of experimentation, they have brought the Mississippi lines to a paying basis, and they saved last year to the shippers direct approximately a million dollars, while the reflex action upon other freights probably resulted in a saving of many millions of dollars.

Mr. NORRIS. Mr. President—

Mr. REED of Missouri. I am asking the Senator to direct his attention to this question, if I may. I am not asking it in a controversial spirit, for I have not made up my mind about this bill. I ask whether this particular plant down there, being owned by the Government, falls within the general sweeping condemnation of socialism or of General Government operation?

Mr. BRUCE. Mr. President, with permission of the Senator—

Mr. NORRIS. Mr. President—

The PRESIDENT pro tempore. Does the Senator from Ohio yield; and if so, to whom?

Mr. FESS. Will Senators desist for just a moment?

Mr. NORRIS. Very well.

Mr. BRUCE. I merely wished to ask the Senator from Missouri one question.

Mr. FESS. I respect the candor of the Senator from Missouri, and believe that he stands precisely upon what he has stated, that he would not favor going ahead and manufacturing fertilizers merely to meet a clamor if it could not be done within reason. If every legislator had the same stamina, I do not think we should have any great fear or that there would be danger of doing what we heretofore have done.

In illustration of my view let me say that transportation is another agency without which we can not get along. It has got to be in operation, no matter what the cost; we could not maintain our present social and industrial life without it; and yet we hear promises constantly repeated on the platform, "We will pay higher wages," thus increasing the outgo, and then, turning to the farmer, it is said, "We shall reduce the freight rates and thus benefit you"; to one class we are making a promise of an increase of operating expenses and to the other class a decrease of freight charges. That is mere politics; but such statements are heard everywhere, and I do not like to hear them.

Mr. REED of Missouri. That is true of railroads under private management to-day just as it was true when the Government controlled them, and why will it not be true of this plant if it shall be leased or if it shall be operated by the Government?

Mr. FESS. The Government will not have the operation of it under a lease except under specified conditions. The clamor influences little except where the Government operates instead of private enterprise.

Mr. REED of Missouri. Certainly, but the Government is going to specify certain conditions; and either we have got to turn that plant over to a corporation, and allow it to make all the money that it can make out of this wonderful stream which we have harnessed, or else we have got to put in the lease some regulatory provisions, and are we not then brought again directly to what the Senator calls politics? How are we going to escape it unless we give this plant away or sell it altogether?

Mr. FESS. The Government would not have any influence if the property were leased under a contract, because the Government would have nothing to do with it, save to compel respect for the conditions of the lease. While clamor for cheap rates to the farmer and higher wages to the railroad employee means little to the country while private enterprise controls, Senators must see what it would mean if the Government operated the roads. We would then hear what was heard yesterday in this Chamber on postal salaries, that deficits mean nothing, the Government must pay.

Mr. GLASS. Mr. President, right on that point—

The PRESIDENT pro tempore. Does the Senator from Ohio yield to the Senator from Virginia?

Mr. FESS. I yield.

Mr. GLASS. I should like to ask the Senator this question: Suppose we should pass the substitute for the committee's bill and we should fail to get a private lessee under the terms of the bill by the 1st of September next, what would be the situation then?

Mr. FESS. I will vote for Government operation as a last resort, and only that, rather than junk the plant.

Mr. GLASS. Is there not some middle ground? Nobody is more opposed than I to Government ownership and operation in either commercial or industrial enterprises; but as the Senator from Missouri [Mr. REED] has indicated, and as the Senator from Alabama four years ago indicated, this is not primarily a question of Government ownership and operation in general. The Government already owns this property; it will have soon expended approximately \$150,000,000 on it. Are we, merely because we are opposed in general to Government ownership and operation of commercial or industrial enterprises, to give the property away, to sacrifice it, to lease it upon terms that are not at all adequate or compensatory to the Government? Is that the Senator's notion as to what we should do, simply because he, as am I, is opposed to Government ownership and operation in general?

Mr. FESS. I will say to the Senator from Virginia that my notion is that it is a better plan for the Government to lease rather than to operate the property as a Government institution.

Mr. GLASS. To lease it at a figure that is not compensatory to the Government for its vast expenditure there?

Mr. FESS. For that reason I was rather inclined to favor the Ford offer, notwithstanding the fact of the small consideration embodied in that offer and the 100-year lease, and not

withstanding the fact that there was not any guaranty of production of fertilizer at a price that would permit the product to be sold commercially. Rather than for the Government to embark on the ownership and operation of that plant I was inclined to vote for the Ford proposal, although it never reached a position where I had a chance to express myself by a vote. I am speaking now, however, of my impression as to which would be the better alternative. I have a reason for my opinion. Ford stands for efficiency if he stands for anything in the world; he does not permit disintegrating elements in his organization; he looks for results; he has the confidence of legislators; and if Muscle Shoals could be made a profitable enterprise, he would make it so. I assure my friend from Virginia that the small consideration was rather startling to me; it seemed to me it was almost giving the property away. I regard this proposal now before us as very much better than the Ford proposal, as it gives a leeway to secure the best terms.

Mr. GLASS. Let me say to the Senator that I recall the appearance before the Appropriations Committee of the Senate four years ago of Colonel Cooper, presented to the committee by the Senator from Alabama [Mr. UNDERWOOD] as the greatest hydraulic engineer in the world; and upon this point I should like the Senator from Alabama to give me some information, because I do not know how I am going to vote, and I want to vote right. I recall very distinctly that Colonel Cooper said that the Government could complete this plant at the estimated cost and, after paying the interest on the bonds, after paying operating expenses and all expenses of repair, and after amortizing the property and getting its money back at the end of a series of years, could operate it at 5 per cent net profit to the Government; and could do that and sell the power at \$15 per horsepower at the dam, which was \$4 per horsepower less than the Keokuk Dam was selling its power for. If that be the fact, I want to inquire why the pending measure should authorize the leasing of this plant at 4 per cent on only one of the dams to be operated?

Mr. FESS. Mr. President, I can make my position on the bill clear in a few words. If there is a profit that is potential, such a man as Ford, with the character of research men and engineers that he has about him upon whom to depend, would quite certainly know what it is.

Mr. GLASS. Colonel Cooper made it perfectly plain that no research engineers are required; that no experts are required; that the masonry is there, the water is flowing over the dam, and he stated in text and in terms that it would be impossible for the Government to lose money on it.

Mr. FESS. I read what Colonel Cooper has said on other occasions, and recognize that he claimed that there was the potentiality of profit in the water-power feature. My contention is this: While there are two arguments offered on Government operation that are very strong, those arguments, I think, can be answered and cared for by the leasing plan. The one is to avoid monopoly. If there is to be a monopoly in which great profit is to accrue, it is argued that the Government ought to have the advantage of it. That, I agree, is sound. In other words, I hesitate to vote, and would not vote, to give a monopoly that would deny the people rights to which they are entitled; but that can be avoided, and will be avoided, under the provision here with regard to leasing which limits the maximum profit, especially in the manufacture of nitrogen or of fertilizer.

Mr. REED of Missouri. Mr. President, if the Senator will permit me an interruption, it limits the profit in the fertilizer branch.

Mr. FESS. Yes. The other is simply paying interest on the amount of money invested.

Mr. REED of Missouri. No; there is no limit upon the profit which can be made except in the fertilizer branch. Outside of that the lessee may make any amount of profit he sees fit. I think I am correct on that.

Mr. UNDERWOOD. Mr. President, as the bill stands the Senator is correct. If the Senate wants to limit the profit on the power I have no objection. I have always said that if we confine ourselves to Dam No. 2 there will not be very much additional power.

Mr. FESS. Let me ask the Senator from Alabama, if a limit of that sort is put on the power, is there any possibility of getting a lessee?

Mr. UNDERWOOD. I think we will limit the power of getting a lessee; that is the difference.

I listened to what the Senator from Virginia [Mr. GLASS] said a minute ago about Colonel Cooper's testimony. Colonel Cooper was testifying solely in regard to the dam, and not the nitrate plant, when he came before the Senator's committee. He did say that in his opinion this power could be sold for

5 per cent on the investment, and I understand now that it can be done. If we are willing to abandon the production of nitrogen for national defense and fertilizer, to wipe it out and just make it a power plant, there are bidders who will come before the Secretary of War and agree to lease it for an indefinite time and pay 5 per cent on the cost of the dam. Colonel Cooper was right. I heard one gentleman say that myself, and the Secretary of War informed me that there were others; so that Colonel Cooper was right.

Mr. GLASS. But Colonel Cooper said the 5 per cent profit would inure on the sale of power at \$15 per horsepower at the dam.

Mr. UNDERWOOD. I think that is right.

Mr. GLASS. As I understand, there is not any limitation in the Senator's bill upon what may be charged for the power, and the \$15 per horsepower at the dam mentioned by Colonel Cooper was \$4 per horsepower less than was at that time being derived by the Keokuk Dam people for the sale of their power.

Mr. UNDERWOOD. The Senator from Virginia probably was not in the Chamber when I made my original speech when my bill was presented. I stated then that I fixed a minimum of 4 per cent on the sale of power, but left the contract to the President and the Secretary of War to make, so that they can adjust it to meet the situation. I think the President will get as much for the power as he can.

Mr. GLASS. Does the Senator think he can get more than 4 per cent for it?

Mr. UNDERWOOD. He may, but of course we put on the lessee the burden of making fertilizer and making nitrogen; and, as I said in the debate, I would not be willing to make a plant run at a loss solely for an industrial purpose, but for the purpose of national defense I would run it at a loss, just as I would a battleship, rather than not run it at all.

Mr. GLASS. I do not understand that the Senator proposes to accumulate this war material in time of peace.

Mr. UNDERWOOD. No; I do not.

Mr. GLASS. And in time of war it is the province of the Government to take possession of the works upon an instant's notice.

Mr. UNDERWOOD. Undoubtedly; but, with the permission of the Senator from Ohio—

Mr. FESS. I yield.

Mr. UNDERWOOD. Let us visualize a battleship, which will give the Senator from Virginia my point.

Mr. GLASS. I heard the Senator's argument on that line, and it was very plausible and very persuasive.

Mr. UNDERWOOD. That is the whole thing about this nitrate plant. It has been lying idle for six years; and if we let it lie idle for another six years without working it, when we need it probably it will be obsolescent. At any rate, we would not know that it was in efficient working condition.

It is a great industrial plant. It covers acres of ground. It takes skilled men to operate it. It is necessary to have the key men in the various positions for it to run; and if we simply let it lie there without manning it and operating it in time of peace, we do not know, if the war gong ever sounds, whether we would have anything to rely on or not. My purpose and the purpose of this bill is to operate it in time of peace, and, of course, to dispose of the nitrogen in the only way it can be disposed of in time of peace, and that is to sell it for fertilizer, but to keep the source of supply and build it up in accordance with the modern and newer methods, so that if war does come we will have it prepared to go into action as a battleship is prepared to go into action.

Mr. GLASS. Yes; that was the only justification I had in voting for the \$20,000,000 asked for four years ago to complete this enterprise.

I should like the Senator from Alabama, and also my colleague from Ohio, to believe that I am not approaching the question in any critical mood. If I ever wanted to understand a problem, I want to understand this, and I want to vote right, but I do not know just now what is right. If, according to the testimony of Colonel Cooper, a great engineer, the Government of the United States could operate property which it now owns at 5 per cent net profit and sell power at a vastly less cost than similar power is now being sold by private enterprises, it seems to me that we should not lease this great property to a private enterprise at a profit to the Government of merely 4 per cent.

Mr. UNDERWOOD. If the Senator will allow me to interrupt him just a minute—

Mr. NORRIS. Mr. President, the Senator from Missouri [Mr. REED] was just about to leave the Chamber; and I

wanted to get permission to have him answer a question, if the Senator from Ohio would permit it, before he goes.

Mr. FESS. I yield to the Senator.

Mr. UNDERWOOD. Just a moment.

Mr. NORRIS. All right.

Mr. UNDERWOOD. I want to suggest this to the Senator from Virginia: The testimony of Colonel Cooper related to the sale of power at the plant. Of course, a private concern has to build transmission lines. It has to distribute the electricity. There is a good deal of additional cost before it gets to the consumer.

Mr. GLASS. That was true of the collateral plants distributing the power of the Keokuk Dam. The Keokuk Dam, as testified by Colonel Cooper, was getting \$19 a horsepower at the dam, and he insisted that the Government could not fail to be able to sell its power at \$15 at the dam and derive a profit of 5 per cent.

Mr. UNDERWOOD. Undoubtedly; but Colonel Cooper also called attention in that testimony to the fact that the Keokuk Dam was very much closer to large industrial developments and it was easier to sell the horsepower, and that is true. I do not mean to say that the minimum price fixed in this bill is to be the basis of making the lease. I fixed a low price to give the President a wide latitude in making a lease. It does not bind him.

Mr. GLASS. But if the President should fail to make the lease at a higher rate than 4 per cent, then the Senator concedes that he has leased the property at a pretty low rate?

Mr. UNDERWOOD. I do not know what it will cost to make the nitrogen into fertilizer. That all depends on that side of the equation. Of course, I want the nitrogen made for defense and for fertilizer.

Mr. GLASS. Yes; but what I apprehend is that after that shall have been done these private interests will have a great monopoly of power and will extort unfair rates from the users of power.

Mr. UNDERWOOD. They can not do that under this bill, because the bill provides for the regulation of the sale of power by the States.

Mr. GLASS. By the State commissions. Well, we have had an illustration here—to be accurate, a startling illustration here—of just how much the decisions of State commissions are worth in matters of this kind. In at least two or three instances that have been cited these State commissions insisted, and not only the State commissions but the courts up to the Supreme Court insisted, that a reduction in rate would be confiscatory; and it afterwards developed that these rates were cut in half, and the properties have not yet gone into the hands of receivers.

Mr. UNDERWOOD. That does not go to the question of regulation. It goes to the judgment of men.

Mr. GLASS. But we must rely upon the judgment of men for regulation.

Mr. UNDERWOOD. We will have to; but their judgment is worth just as much as ours. We are looking into the future; and the President will probably know more about the fair rate than we would, I suspect.

I beg the pardon of the Senator from Ohio.

Mr. FESS. Mr. President, I said in the outset that if this were a matter de novo I would not think of supporting it, because it would involve the question of Government operation. Everyone knew that that was inevitable; but it is here, and now our choice between the alternatives must be made. I am quite clear in my own view what I ought to do. I would not vote to have the Government operate this as a Government institution, except as the very last resort, where the other alternative would be to junk it.

I should prefer the former to the latter. On the other hand, I would not be in favor of selling it outright and conveying the fee simple title, because then there might be all of the danger of monopoly which would grow out of a tremendous development that may produce what none of us think is possible; but because in these times, when miracles in invention and discovery are being realized, a great field like hydroelectric power is one as to which no one knows whether we have more than touched the fringes. I would not want to convey a fee simple title, but I would much prefer to hold the title in the Government and make a lease of the property under the regulation of the Government, as we do in the case of other water powers. If leasing is wrong, then our former legislation has its errors. I would endeavor to still retain the title, so that it could be recaptured and the Government go on with the development, with the assurance that while it is proceeding we will be possessed of the elements of national de-

fense, because that is the purpose of the measure; and if fertilizer can be produced it will be. In the meantime this hydro-electric power will be used by the people under the regulation of the States in which it is used.

I do not see any danger in that, and it seems to me it is perfectly clear. The first time I read the Underwood substitute I stated to a friend, "There is the thing I will vote for, unless it has something in it I do not see." I have not seen anything in it that is dangerous, and I do not care a whit that it is being offered on the other side of the aisle. I would just as leave follow the Senator from Alabama on this thing as to follow anyone else in the Senate. I shall vote against the committee proposal and for the Underwood substitute.

MEMORIAL ADDRESSES ON THE DECEASED SENATORS

Mr. WALSH of Massachusetts. Mr. President, I ask unanimous consent for the adoption of the order which I send to the desk.

The order was read, considered, and unanimously agreed to, as follows:

Ordered, That Monday, January 19, 1925, at 3 p. m., all pending business be set aside and the Senate proceed with memorial addresses on the lives, characters, and public services of the Hon. HENRY CABOT LODGE, late a Senator from the State of Massachusetts; the Hon. FRANK B. BRUNDAGE, late a Senator from the State of Connecticut; and the Hon. LEBARON B. COLT, late a Senator from the State of Rhode Island.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Haltigan, one of its clerks, announced that the Speaker of the House had affixed his signature to the enrolled joint resolution (H. J. Res. 310) authorizing payment of salaries of the officers and employees of Congress for December, 1924, on the 20th day of that month, and it was thereupon signed by the President pro tempore.

EXECUTIVE SESSION

Mr. CURTIS. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business.

After five minutes spent in executive session, the doors were reopened.

MARGARETHE MURPHY

Mr. ROBINSON. From the Committee on Foreign Relations I report back favorably without amendment the bill (S. 3576) for the relief of Margarethe Murphy, and I ask unanimous consent for its present consideration.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill, and it was read, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay Margarethe Murphy, widow of the late George Herbert Murphy, late American consul general at Zurich, Switzerland, the sum of \$9,000, being one year's salary of her deceased husband, who died of illness incurred while in the Consular Service; and there is hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, a sufficient sum to carry out the purpose of this act.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

RECESS

Mr. CURTIS. I move that the Senate take a recess until to-morrow at 12 o'clock.

The motion was agreed to; and (at 4 o'clock and 55 minutes p. m.) the Senate took a recess until to-morrow, Thursday, December 18, 1924, at 12 o'clock meridian.

CONFIRMATIONS

Executive nominations confirmed by the Senate December 17 (legislative day of December 16), 1924

MEMBERS OF BOARD OF TAX APPEALS

Adolphus E. Graupner.	Benjamin H. Littleton.
Charles D. Hamel.	John J. Marquette.
J. S. Y. Ivin.	Charles P. Smith.
A. E. James.	John M. Sternhagen.
Jules Gilmer Korner, jr.	Charles M. Trammell.
W. C. Lansdon.	Sumner L. Trussell.

COLLECTOR OF CUSTOMS

Walter W. Wilde to be collector of customs for customs collection district No. 27.

UNITED STATES DISTRICT JUDGE

Charles A. Boynton to be United States district judge, western district of Texas.

POSTMASTERS

CALIFORNIA

Leigh M. Rothenburg, Burbank.
Joseph C. Beard, Burlingame.
Irene Pierce, Burnett.
Charles M. Grist, Covelo.
Clement J. McDonald, Firebaugh.
William W. Ware, Fort Bragg.
Charles F. Evers, Fortuna.
Wallace B. Sawyer, Galt.
Charles W. Conrad, Huntington Beach.
Josephine C. McCabe, Imola.
John E. Nolan, Jamestown.
Jay K. Battin, La Jota.
Edna M. Sheridan, Monte Rio.
Frank B. Clark, Mount Lowe.
Carolyn M. Kell, Niles.
Harvey P. Rogers, Quincy.
Charles J. Funk, Redondo Beach.
William J. Martin, Salinas.
John W. S'Renco, Santa Fe Springs.
Ruth A. Hamilton, San Ysidro.
Charles R. Fuller, Sunnyvale.

COLORADO

Isadore D. Bronfin, Sanatorium.

CONNECTICUT

William Krause, Westport.
Hal B. Kellogg, Woodmont.

GEORGIA

Edith A. Herrington, Millen.

IDAHO

Catherine J. Craig, Avery.
Golda O. Esveltdt, Bovill.
Robert R. Coon, Emmett.
Joseph B. Newbury, Mullan.
Effie Taylor, White Bird.

IOWA

Myrtle M. McNelly, Haniontown.
Ida Kelly, Harpers Ferry.

MASSACHUSETTS

Albin K. Parker, Norwood.

MISSOURI

Ida A. Sack, Bosworth.
Kenneth C. Dixon, Creighton.
Hobart Lewis, Downing.
Bertha D. Marling, Elsberry.
Irene Shibley, Gorin.
Delph C. Simons, Grant City.
Delphia Johnson, Jerico Springs.
John A. Mills, Jonesburg.
Mattie A. Campbell, King City.
Stephen C. Accola, La Grange.
Amos E. Jennings, Miami.
Thomas M. Fowler, Nelson.
J. Frank Wilson, Palmyra.
Clyde S. Jones, Polo.
Luther C. Brower, Queen City.
Charles E. Traylor, Richmond.
George R. Hendricks, Rutledge.
Joseph A. Davis, Waynesville.

NEBRASKA

Leroy L. Ambler, Holbrook.

OHIO

George H. Scheetz, Bridgeport.
John M. McConnell, Mingo Junction.
Harriett E. Craig, Neffs.
Elizabeth F. Kelley, North Olmsted.
Will B. Maynard, Olmsted Falls.
Charles F. Shoemaker, Pickerington.

PENNSYLVANIA

Sarah V. Patton, Aliquippa.
Charles L. McNett, Clarendon.
Margaret E. Warnock, Darlington.
Carey W. Huff, Durant City.
Laura E. Rich, Enola.

Edwin H. Cliff, Glen Olden.
Harry B. Henderson, Kittanning.
Judson C. Norris, New Castle.
H. Oscar Young, Plymouth Meeting.
Eli H. Shockey, Stoyestown.
Charles M. Wilkins, Wayne.

SOUTH CAROLINA

Lawrence D. Hagan, Due West.
Elijah Lee, Paolet.
Paul G. Barnett, Westminster.

HOUSE OF REPRESENTATIVES

WEDNESDAY, December 17, 1924

The House met at 12 o'clock noon.

The Chaplain, Rev. James Shera Montgomery, D. D., offered the following prayer:

To the God of our fathers we lift our hearts in prayer. We would yield to Thee the right of sovereignty and accept Thy law. Let it touch all our purposes and motives, and thus shall we know what things to value. Enlarge our charity and keep us free from all prejudice. Teach us that the best that we can do for Thee is to be kindly and helpful to the unfortunate, to live upright in the presence of great truths, and allow nothing to come between us and the wisdom of Jesus of Nazareth. In His name we pray. Amen.

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Craven, one of its clerks, announced that the Senate had passed bills and resolutions of the following titles:

S. 3493. An act to amend an act entitled "An act to create a commission authorized under certain conditions to refund or convert obligations of foreign governments held by the United States of America, and for other purposes," approved February 9, 1922, as amended February 28, 1923;

S. 3509. An act to change the time for the holding of terms of court in the eastern district of South Carolina;

S. J. Res. 154. Joint resolution providing for the filling of a proximate vacancy in the Board of Regents of the Smithsonian Institution of the class other than Members of Congress; and

S. J. Res. 155. Joint resolution providing for the filling of a proximate vacancy in the Board of Regents of the Smithsonian Institution of the class other than Members of Congress.

The message also announced that the Senate had passed without amendment joint resolutions of the following titles:

H. J. Res. 310. Joint resolution authorizing payment of salaries of the officers and employees of Congress for December, 1924, on the 20th day of that month; and

H. Con. Res. 35. Joint resolution that there shall be compiled, printed with illustrations, and bound, as may be directed by the Joint Committee on Printing, 25,000 copies of the oration delivered by Dr. Edwin Anderson Alderman in the House of Representatives during the exercises held in memory of the late President Woodrow Wilson on December 15, 1924, including all the proceedings and the progress of exercises, of which 8,000 copies shall be for the use of the Senate and 17,000 copies for the use of the House of Representatives.

ENROLLED JOINT RESOLUTION SIGNED

Mr. ROSENBLUM, from the Committee on Enrolled Bills, reported that they had examined and found truly enrolled joint resolution of the following title, when the Speaker signed the same:

H. J. Res. 310. Joint resolution authorizing payment of salaries of the officers and employees of Congress for December, 1924, on the 20th day of that month.

CALENDAR WEDNESDAY

The SPEAKER. This is Calendar Wednesday. The Clerk will call the roll of committees.

PROHIBITING THE SENDING OF PISTOLS, ETC., THROUGH THE MAIL.

Mr. RAMSEYER (when the Clerk called the Committee on the Post Office and Post Roads). Mr. Speaker, by direction of the Committee on the Post Office and Post Roads, I call up the bill H. R. 9093, declaring pistols, revolvers, and other firearms capable of being concealed on the person nonmailable and providing penalty.

The SPEAKER. The gentleman from Iowa calls up the bill H. R. 9093, which the Clerk will report.

The Clerk read the bill, as follows:

Be it enacted, etc., That pistols, revolvers, and other firearms capable of being concealed on the person, are hereby declared to be nonmailable and shall not be deposited in or carried by the mails or delivered by any postmaster, letter carrier, or other person in the Postal Service: *Provided, however,* That such articles may be conveyed in the mails, under such regulations as the Postmaster General shall prescribe for use in connection with their official duty, to officers of the Army, Navy, or Marine Corps; to officers of the National Guard or Militia of the several States, Territories, and Districts; to officers of the United States or of the several States, Territories, and Districts, or to peace officers thereof; to officers of the United States or of the several States, Territories, and Districts whose official duty is to serve process of warrants of arrest or mittimus of commitment to employees of the Postal Service; to watchmen engaged in guarding the property of the United States, the several States, Territories, and Districts; and also to manufacturers of firearms or dealers therein in customary trade shipments from one to the other. Whoever shall knowingly deposit or cause to be deposited for mailing or delivery, or shall knowingly cause to be delivered by mail according to the direction thereon, or at any place to which it is directed to be delivered by the person to whom it is addressed, any pistol, revolver, or firearm, declared by this act to be nonmailable, shall be fined not exceeding \$1,000 or imprisoned not more than two years, or both.

With the following committee amendments:

Page 1, line 9, after the word "prescribe" insert a comma.

Page 2, line 7, after the word "commitment" insert a semicolon.

Page 2, line 11, after the word "other" strike out the period and insert: "other, under such rules and regulations as the Postmaster General may prescribe."

Mr. RAMSEYER. Mr. Speaker and gentlemen of the House, I shall take only a few minutes in informing you of the attitude of the committee upon this bill and also of the Post Office Department. Then I intend to yield time to the author of the bill, the gentleman from Washington [Mr. MILLER], to go into the purposes of the bill more fully.

This bill simply makes firearms such as pistols and revolvers, capable of being concealed on the person, nonmailable. I presume every State in the Union has laws making the carrying of concealed weapons a criminal offense. We have other things declared by law nonmailable, for instance, poisons, intoxicating liquors, explosives, and then matters pertaining to lotteries; schemes intended to defraud are prohibited from the mails, and we are seeking now to exclude this class of firearms from the mail. The bill was reported out unanimously by the Committee on the Post Office and Post Roads, and the Post Office Department is unreservedly back of the bill. The Postmaster General on two different occasions indorsed the purpose of the bill and then in a letter on May 9, of this year, indorsed the specific proposition that is before you. In a letter to the chairman of the committee he said:

MAY 9, 1924.

Hon. W. W. GRIEST,

Chairman Committee on the Post Office and Post Roads,
House of Representatives.

MY DEAR MR. GRIEST: I beg to acknowledge the receipt of your letter of the 8th instant, referring for my consideration and recommendation bill H. R. 9093, declaring pistols, revolvers, and other firearms capable of being concealed on the person nonmailable and providing penalty.

In line 9, page 1 of the bill, a comma should be inserted after the word "prescribe."

In line 7, page 2, a semicolon should appear after the word "commitment."

I have carefully considered this matter and from my observations it is my opinion that the public welfare demands this legislation. I therefore recommend the favorable consideration of this bill.

Very truly yours,

HARRY S. NEW,
Postmaster General.

This bill is specially designed to help corral or control the lawless elements in the large cities. Nearly all of the cities have ordinances and some of the States have laws preventing the sale of these firearms unless the person wishing to buy a pistol or a revolver has a permit from either the mayor of the city or the chief of police or the county sheriff or some other official. Because of the ease with which this kind of firearms can be acquired from the mail-order houses through the mails it is impossible to prevent them from getting into the hands of the lawless element and thugs and those who make a living by violating the law. Of course every lawyer here knows how much more unsafe is human life in this country than in any

other country in the world, and that is partly due to the ease with which persons can acquire these very instruments of death and destruction. The Post Office Committee and the Post Office Department think it is advisable in so far as a Government department can prevent delivery of these instruments of death, to do so by positive law.

There are a few exceptions made to this bill. That is, firearms can still be obtained through the mail under such regulations as the Postmaster General shall prescribe, by officers who by virtue of their duty as such officers are required to carry firearms of this kind. Then, of course, the bill provides for a penalty for violating its provisions.

Mr. STENGLE. Mr. Speaker, will the gentleman yield?

Mr. RAMSEYER. Yes.

Mr. STENGLE. I notice on the last line, first page of the bill, that the exceptions are begun by reference to officers of the Army, Navy, and Marine Corps. Would not the committee be willing to add there the officers of the reserve training corps, because at certain periods each year they are called upon to go from place to place or to transfer arms, and it seems to me that they come clearly within the provisions of the intention of the committee. They are really during that period of training in the summer time actually engaged in the service of the military arm of the Government.

Mr. RAMSEYER. Are not they officers of the Army? They are simply a branch of the Army. The bill names the officers of the Army, the Navy, and the Marine Corps.

Mr. STENGLE. Yes; but that refers to the permanent part of our Army and Navy and not to those who temporarily are engaged in this work.

Mr. RAMSEYER. If the gentleman is sure that this language does not cover what he is after, personally I would have no objection to the amendment.

Mr. STENGLE. Oh, I am not after anything personally, but I have reference to the strong arm of the Government that works in the summer time, and I do not want to cripple a very good work in behalf of our country.

Mr. RAMSEYER. If the gentleman is personally certain that this does not apply to the class of officers to whom he refers, then, so far as I am concerned personally, I would have no objection to such an amendment. I did express the view that I thought the language here covered the officers to whom the gentleman refers.

Mr. STENGLE. It may, but I only want to remove any doubt.

Mr. OLDFIELD. Would it not be better to cut out these officers of the Army and the Navy and the Marine Corps. I judge that they can get firearms without sending to Sears-Robuck and other places.

Mr. RAMSEYER. It was thought that officers might sometimes be away from the base of supply and might have to acquire firearms in this way. I doubt whether very many firearms will be shipped to officers of the Army, Navy, or the Marine Corps under the provisions of this bill.

Mr. OLDFIELD. Personally, I think that ought to be cut out of the bill.

Mr. RAMSEYER. I now yield to the gentleman from Alabama.

Mr. BANKHEAD. I would state I am in general sympathy with the purposes of this bill, but it seems to me that it might militate or operate in favor of the express companies of the country.

Mr. RAMSEYER. Let me right here say that a similar bill is pending before the Committee on Interstate and Foreign Commerce to regulate the shipment of pistols, revolvers, and other firearms capable of being concealed on the person through the express companies. This Committee on the Post Office and Post Roads has jurisdiction only of mail matter, and we felt that we could not couple the provision the gentleman has in mind to this bill without invading the jurisdiction of the Committee on Interstate and Foreign Commerce, but such a bill is now pending before that committee, introduced by the gentleman from Washington [Mr. MILLER], who introduced this bill, and I am going to call upon Mr. MILLER in just a minute or two now to explain the general purposes and needs of this kind of legislation.

Mr. BANKHEAD. I am very glad to know such an effort is being made by the gentleman from Washington.

Mr. RAMSEYER. The purpose of the bill is to make it more difficult for the lawless to get firearms and committing crimes of violence against the law-abiding. Mr. Speaker, I reserve the remainder of my time, and I yield 15 minutes to the gentleman from Washington [Mr. MILLER].

Mr. MILLER of Washington. Mr. Speaker and gentlemen of the House, I presume that every Member on the floor is cogni-

zant of the enormous amount of law violations taking place just now. This bill, and the companion bill forbidding the shipment of firearms that are capable of being concealed on the person through interstate carriers, it is hoped will minimize the prevalence of firearms in the hands of the undesirable criminal element of the country. I think we are all acquainted, generally speaking, with our State laws on the question and also with many of our municipal regulations governing the sale of firearms in cities. Most all States, I think every one, makes the carrying of a concealed weapon a crime, in some States a felony and in some a misdemeanor. Most all cities have municipal regulations prohibiting the sale of firearms within the city limits of the cities except where application is made and a permit granted by public officials authorizing a citizen to purchase firearms and retain them in his home. Every criminal, of course, carries concealed weapons. Every robber, every highwayman, every highjacker, every bootlegger in the country is armed with a pistol, and when a policeman or officer of the law gets after and pursues them the first thing they do is to get rid of their firearms, and then they just simply get one through the mail-order house or through the express to take the place of the one which they have thrown away. This is to stop their replenishing themselves from the mail angle, through the mails, and in conjunction with the companion bill, which forbids their transportation over common carriers, those two put together, we hope, will stop the prevalent use of these weapons.

There is nothing more dangerous to the community than this criminal element having the liberty on any and all occasions to buy concealed weapons. If a man criminally inclined or with a bad police record can not get a permit in the town or city in which he lives, he simply orders a weapon from the mail-order house, and the weapon is delivered to his door, and thus he evades all the municipal regulations intended to stop the sale of firearms. I think every Member appreciates the need of a law such as this.

Mr. BLANTON. Mr. Speaker, will the gentleman yield?

Mr. MILLER of Washington. I yield.

Mr. BLANTON. Does the gentleman believe that this law, if passed, will prevent any of the criminals he has mentioned from carrying firearms, from obtaining them and carrying them unlawfully?

Mr. MILLER of Washington. Why, I certainly do, and that is the opinion of the Post Office Department; else the bill would be absolutely useless.

Mr. ABERNETHY. Mr. Speaker, will the gentleman yield?

Mr. MILLER of Washington. Yes; glad to yield to my North Carolina friend.

Mr. ABERNETHY. In our State a man has to have a license before he can buy a pistol. As I understand now, a man can not order one without the permission of the State authorities.

Mr. MILLER of Washington. He can under the State law.

Mr. ABERNETHY. He can not do that under your bill?

Mr. MILLER of Washington. The bill makes it absolutely unobtainable.

Mr. ABERNETHY. Suppose he has permission. Can he get it?

Mr. MILLER of Washington. With permission, he can buy it locally. He can not get it through the mails.

Mr. ABERNETHY. This protects the State law?

Mr. MILLER of Washington. Yes.

Mr. BANKHEAD. Mr. Speaker, will the gentleman yield?

Mr. MILLER of Washington. Yes; glad to.

Mr. BANKHEAD. I assume that the pending bill will pass, and also the one now pending before the Interstate and Foreign Commerce Committee, prohibiting common carriers from transporting weapons. In the course of time, in States where firearms are not manufactured, the supply will be exhausted; and in that event what means would be available for the peaceable, law-abiding citizen to buy a weapon for protection in his home?

Mr. MILLER of Washington. The bill provides that manufacturers and dealers in firearms are privileged to continue their customary trade shipments from one to the other.

Mr. ABERNETHY. I understand the provisions of the bill; but I would like to see if it conforms to the ideas that our people have. Your bill as it stands now makes it unlawful to order a pistol through the mail, and it can only be obtained from a local dealer. It does not interfere with the local dealer having his shipments made to him?

Mr. MILLER of Washington. Absolutely not. Dealers and manufacturers in firearms can continue shipping firearms to each other.

Mr. ABERNETHY. This is to aid the local authorities?

Mr. MILLER of Washington. Yes; that is the effect of the bill.

Mr. Speaker, the pistol is the favorite weapon of the assassin; it is the pet of the highwayman, of the robber, the burglar, and the thief. It is an especially designed weapon with which to take human life. It is not like the shotgun, the rifle, or any firearm used in hunting or by the sportsman. Its very purpose is to kill people. It is the handy weapon for the suicide as well, and likewise it is the source of more fatal accidents than any firearm use in our country.

The bill is aimed primarily at the thug, the criminal class, to make it more difficult for this class of people to obtain them.

The Post Office Department strongly approves of this bill, as it recognizes the enormous traffic in firearms of this character sent into communities where the addressees are undoubtedly barred from making local purchases.

This measure is likewise indorsed by the Police Commissioner of New York City and by the police authorities of substantially every large city in America.

It will do much toward suppressing the general sale and distribution of firearms of this class and will be of infinite assistance to local authorities throughout the country in suppressing crime and violence.

My judgment is that it is one of the most commendable measures of its character ever before the Congress. [Applause.]

Mr. BLANTON. Mr. Speaker, I desire recognition in opposition to the bill unless some member of the committee claims the time.

The SPEAKER pro tempore. Does any member of the committee desire time in opposition to the bill?

Mr. BLANTON. Mr. Speaker and gentlemen, I am with the gentleman in his desire to prevent the unlawful carrying of arms. If I could I would help the gentleman to prevent every thug and violator of the law from carrying arms. But I do not believe this bill will do it. I do not believe that this bill would stop a single thug or a single bootlegger or a single murderer from carrying firearms unlawfully.

I want to read to you what the Constitution, the fundamental law of the land, says about firearms. It says:

The right of the people to keep and bear arms—

To keep arms and bear them: that means lawfully to keep and lawfully to bear arms, of course—shall not be infringed.

Mr. RAMSEYER. Mr. Speaker, will the gentleman yield right there?

Mr. BLANTON. I yield.

Mr. RAMSEYER. The gentleman knows, too, that every State constitution—I will not say every one, but it is true of the constitution of my State and the constitution of the State of Texas—contains that identical provision, and yet every law that has been passed prohibiting the carrying of concealed weapons has been declared to be constitutional.

Mr. BLANTON. Those prohibitory laws have reference to carrying concealed weapons in public and on public highways. There has been no law passed by any State that prevents any citizen of the United States from having firearms in his home and keeping them there.

Mr. RAMSEYER. Laws have been passed prohibiting the sale absolutely, unless the person who makes the purchase has a permit from the authorized officials.

Mr. BLANTON. Yes. But I want to discuss this bill from the standpoint of the Constitution and what the Constitution means when it says that "the right of the people to keep and bear arms shall not be infringed." I am arguing from that one standpoint. To keep arms in their homes; that right "shall not be infringed."

Mr. STENGLE. Mr. Speaker, will the gentleman yield?

Mr. BLANTON. Yes.

Mr. STENGLE. While you are discussing the constitutionality, you should bear in mind the Sullivan law in New York State, which does exactly what you say can not be done.

Mr. BLANTON. I will ask the gentleman, does the Sullivan law say that the gentleman from New York can not keep firearms in his home?

Mr. STENGLE. Most assuredly, and they would put me in jail if they caught me with them.

Mr. BLANTON. Well, if the gentleman is arrested and should appeal to the United States court, they would hold that the Sullivan law is not worth the paper it is written on, because it is violative of the Federal Constitution if it prevents the gentleman from keeping firearms in his home.

Mr. STENGLE. We must get a license or permit from the court in order to have it in the home. Otherwise we can not have it.

Mr. BLANTON. Oh, the gentleman is an easy mark if he and other law-abiding New Yorkers submit to a law like that. That must be a strong-arm law, passed back in the days of John L. Sullivan. [Laughter.]

Mr. WINGO. Mr. Speaker, will the gentleman yield?

Mr. BLANTON. Yes.

Mr. WINGO. I want to suggest this to the gentleman: I have not looked into it particularly, but I think in all these laws you will find an exception in favor of officers or in favor of such arms as are used in the Army and Navy of the United States. Take it in my own State, for instance, and I think it is typical of other States. We have a law against pistol toting.

There is one exception as to carrying it openly, and the other is that it must be such a weapon as is used in the Army or Navy, and I think another allows arms to be carried when you are going upon a journey. But the gentleman is right in his proposition, that there is a limit to the regulatory power. This bill not only makes a constitutional distinction, but it makes an exception as to the officer and the type of gun, that is, an armed-defense gun.

But the gentleman overlooks that this is one only of a series of measures to meet the continuous demand that everything shall be regulated here from Washington. That carries with it the implication that the people of the States, or their State agencies, or their State courts or legislatures are either incompetent or else they are corrupt.

Mr. BLANTON. I am not contending, I want to say to my colleagues, for the right of any individual to carry a revolver on his person publicly. I am against it. It is not necessary. Men have no business sticking revolvers in their hip pockets. I am not contending for that at all, but I am contending for the constitutional right of a citizen to have a revolver or any other firearm in his home, if he wants it, and I am contending for that under the Constitution of the United States.

Mr. STEAGALL. Will the gentleman let me interrupt him?

Mr. BLANTON. Certainly.

Mr. STEAGALL. The gentleman would not favor a law which would deny the right of the citizen to have firearms of any kind he might select for the purpose of self-defense, would he?

Mr. BLANTON. No. That is what I am contending for.

Mr. STEAGALL. So far as I have ever observed, all the laws in the States which attempt to prohibit the carrying of weapons make an exception in favor of the man who bears arms for purposes of defense.

Mr. BLANTON. Why, certainly, and I am going to touch on that in a minute.

Mr. STEAGALL. This bill would deny a man that right in so far as the right to transport such arms through the mails is concerned.

Mr. BLANTON. That is true.

Mr. STEAGALL. Is not this true, too? The gentleman's first statement is absolutely correct to the effect that this bill will not prohibit any criminal from obtaining pistols or any firearms that may be concealed about his person, for the reason that this bill denies him the use of the mails and turns him over to the tender mercies of the express companies.

Mr. BLANTON. I will tell the gentleman from Washington [Mr. MILLER] what the criminal will do when he wants a revolver and can not get it through the mails—if he can not get it in any other way he will break into a dealer's store and steal it. The criminal is going to have a revolver. You can have Congress and the legislatures of the States pass all the laws they want to but you will never keep a criminal from having and carrying firearms. I am not going to sit here and let a law be passed that will take away the right or infringe upon the right of a citizen to keep arms lawfully in his home—which is his castle and where his family resides—or a revolver, if he wants one, or a double-barreled shotgun, if he wants it. That is his right and it is for the protection of his family, under certain circumstances. Let him keep a rifle, if he wants one. The Constitution gives him that right. He should be permitted to keep arms in his home, but he has no right to carry them abroad.

Now, what is this bill going to lead to?

Mr. BLACK of New York. Will the gentleman yield?

Mr. BLANTON. Not just now. I will gladly yield directly.

Mr. BEGG. Will the gentleman yield?

Mr. BLANTON. Not just now. I will be glad to yield later. I do not want to take up too much time, but I want to get

these ideas before my colleagues. In every State there is a law which provides for a posse comitatus. When an officer of the law needs the citizenship to help him arrest dangerous criminals he can call on you and every other person to help him make such arrests. What good would be the right of an officer to call on you if you did not have arms available to assist him? Why, the very idea of the posse comitatus is that the citizen has arms available to which he may turn when he goes to the assistance of an officer. If you are going to make it impossible for the citizen to get them, what is the aid from that source? Why, here is what this law would result in: You allow the dealers under this law to transport firearms and revolvers through the mails; you let officers transport revolvers through the mails, and you let everybody else except the law-abiding individual himself do it, and here is what you are going to have: In certain parts of the State of New York, in West Virginia, in Alabama, in Tennessee, in Texas, and in the State of Washington there will be certain cities where there will be only one dealer accessible, and when a citizen wants to buy a revolver, even though he conforms to the regulations of the State laws, he is at the mercy of that one dealer, and he will have to pay not \$20 for a good revolver, or \$25, but he will have to pay \$50 or \$75 or \$100 for it, and it will be beyond his reach financially, and we will be depriving a citizen of a right given him by the Constitution to keep a revolver in his home.

Mr. BLANTON of New York. Will the gentleman yield now?

Mr. BLANTON. Yes.

Mr. BLACK of New York. I just want to remind the gentleman that there is something else that a great number of the citizens would like to have in their homes and on their hips that you will not let go through the mails. [Laughter.]

Mr. HUDDLESTON. Will the gentleman yield?

Mr. BLANTON. In just a moment. I want to answer first the gentleman from New York [Mr. BLACK]. Here is the Constitution, upon which I am standing to-day. I am upholding the Constitution, which affirmatively says that you shall never take away from the gentleman from New York the right to keep firearms in his home; it says that Congress shall not infringe upon that right; it says the Legislature of New York shall not infringe upon it, and that is the reason why I told the gentleman's colleague [Mr. STENGLE] that if the Sullivan law attempted to do that it was not worth the paper it was written on. But there is another section in the Constitution which goes on to say that the gentleman from New York has not the right to stick a private flask in his hip pocket.

Mr. BLACK of New York. What about his home?

Mr. BLANTON. It says he has not the right to keep a private flask in his home under certain circumstances.

Mr. BLACK of New York. That is different.

Mr. BLANTON. The Constitution says also that the gentleman from New York has not the right to give liquor out to others from his home. The Constitution says that, and when the gentleman complains about the apparent inconsistency of the position taken by the gentleman from Texas he is complaining about the Constitution, because I am upholding the Constitution.

I want to say this: I hope that every American boy, whether he is from Texas, New York, or Washington, will know how to use a six-shooter. I hope he will learn from his hip to hit a dime 20 paces off. It would be their only means of defense in combating that deadly art of jiu jitsu in close quarters should war ever face them with such danger. It is not brave men who know how to shoot straight that violate laws or carry concealed weapons.

I hope every woman in America will learn how to use a revolver. I hope she will not use it but I hope she will know how. It will be for her safety; it will safeguard her rights and it will prevent her rights from being jeopardized. That is what the framers of this Constitution had in mind when they said the Congress should never infringe upon the right to keep firearms in the home.

Mr. MORTON D. HULL. Will the gentleman yield?

Mr. BLANTON. Yes.

Mr. MORTON D. HULL. Does the gentleman object to a more careful regulation of the distribution of firearms?

Mr. BLANTON. No. I am in favor of it.

Mr. MORTON D. HULL. Will it not tend to a more careful regulation of the distribution of firearms if the distribution can be localized to dealers and if mail and express company distribution can be blocked?

Mr. BLANTON. It would immediately double and treble their selling price. Let me ask the gentleman this question:

Does the gentleman believe a law like this is going to prevent bootleggers from having firearms?

Mr. MORTON D. HULL. Probably not.

Mr. BLANTON. Does the gentleman believe it is going to prevent murderers from having firearms?

Mr. MORTON D. HULL. The gentleman believes it will tend to a more careful regulation of the distribution of firearms and that may help to answer some of the gentleman's questions.

Mr. BLANTON. Is the gentleman in favor of taking away from a citizen a constitutional right to keep a revolver in his home whenever he wants to?

Mr. MORTON D. HULL. There is not a single line or word in the proposed act that prevents a man having a firearm in his home under any constitutional guaranty that he has.

Mr. BLANTON. But it infringes upon the right. I do not believe in mail-order houses. I want to say that here, when I am at my home town in Texas I do not buy from Montgomery Ward & Co. and Sears-Roebuck. I buy from the merchants of my home town. They are entitled to my trade. [Applause.]

Mr. MORTON D. HULL. Are you not afraid you are going to pay more than you ought to?

Mr. BLANTON. But let me say that the mail-order houses safeguard the people from profiteering, which otherwise might be indulged in by some of the local merchants.

Mr. HUDSPETH. Will my colleague yield for a question?

Mr. BLANTON. Certainly.

Mr. HUDSPETH. The gentleman made the statement that he believed the women of the country should be familiar with the use of firearms. Does the gentleman make that statement in view of the fact that they have been using them on their husbands in our State very recently?

Mr. BLANTON. I want to make this statement, and I will give it to you as my solemn, good judgment, that whenever a woman has used one on her husband down in the State of Texas or anywhere else, he deserved it. [Laughter and applause.]

I am going to now conclude my remarks with this criticism of the committee report. You would imagine that before infringing upon a right guaranteed by the Constitution, this great Committee on the Post Office and Post Roads would give us some good reason for taking away this constitutional right and for making it harder for the people to exercise a right which the Constitution gives them. I have read the report carefully. Here is all it contains. The report says that the Post Office Department has sent the committee a list of mail-order houses which are advertising the sale of pistols. Then in addition to that they print a letter from some man down in Tennessee who says that his son, under 16 years of age, one morning received from a mail-order house a pistol, and that day he shot himself with it. Based on that alone, and nothing else, this great committee has asked us to infringe upon the constitutional rights of the people.

One boy shot himself with a pistol! Why, do you not know that probably if he had not gotten it from the mail-order house for \$6.70—which I think it cost him—that boy would have had a pistol bought from some other place at a higher price? He would have gone to the nearest store that sold pistols and probably would have paid twice \$6 or three times that amount and would have been a dead boy anyhow, and there would have been a greater loss to the old gentleman's exchequer of about twice that sum.

Gentlemen, I do not believe in this kind of a bill. I know there is a disposition on the part of the House to back up a great committee like the Committee on the Post Office and Post Roads, and usually I follow them, and usually I vote for their bills.

Mr. RAGON. Will the gentleman yield?

Mr. BLANTON. I was about to conclude, because I do not want to take up any more time of the House, but I yield to the gentleman.

Mr. RAGON. I want to call the gentleman's attention to this case in Tennessee. The writer of this letter says:

As I understand the law of Tennessee, it is a violation of the law to ship, buy, or sell a pistol in the State of Tennessee.

In the State of Arkansas it is a violation of the law for a man to sell a pistol within that State. Do you think, for instance, that Sears-Roebuck ought to be given a privilege to sell a pistol in Arkansas and use an instrumentality of the United States Government in delivering that pistol when that is a privilege—if it is a privilege; I say it is not or should

not be one at least—when the privilege is denied the merchant or the hardware man in the State of Texas? This law has been, by the Supreme Court of the State of Arkansas, held constitutional, and you can not lawfully sell a pistol in the State of Arkansas. This letter refers to the State of Tennessee.

Mr. BLANTON. Has that law ever been tested in the Supreme Court on the constitutional question involved?

Mr. RAGON. The Supreme Court of the United States?

Mr. BLANTON. Yes.

Mr. RAGON. I could not say as to that, but I know it has been before the supreme court of my State.

Mr. BLANTON. I mean before the United States Supreme Court on the question of constitutional right and privilege.

Mr. RAGON. I could not say about that.

Mr. MILLER of Washington. Many others have.

Mr. STEVENSON. If the gentleman will yield, I want to ask, apropos of that question, if it is a criminal offense to sell a pistol in Arkansas, the fact that the motion is started in Chicago and the pistol is delivered in Arkansas—does not that still make it a crime in Arkansas, and why do they not indict those who do that?

Mr. BLANTON. Of course, that makes it a crime in Arkansas; and it would have been a crime in Tennessee.

Mr. STEVENSON. They extradited a man from this city and took him down to my State and tried him and convicted him and put him in the penitentiary for selling certain powders to a young lady down there, holding it was an offense against the law of that State, although the United States mail transmitted the package and he simply mailed it in Washington.

Mr. RAGON. Let me answer that by saying that if you will take away from Sears-Roebuck the United States mail as an instrumentality of delivery which sends the pistol down there to this young fellow who is 15 years of age, then they can make delivery through the express company.

Mr. BLANTON. The supreme court of my State held several times that where liquor was purchased outside of the State of Texas and it was shipped into the State of Texas, where sales were prohibited, through the United States mail, it was a sale in the State of Texas at the place of delivery, and that would also apply to the Tennessee case.

Mr. WINGO. If my friend will yield, I would suggest to him that he ask my colleague from Arkansas if he believes that all the pistols in Arkansas come by mail, and that they have stopped the sale of pistols in the stores in Arkansas.

Mr. RAGON. Does the gentleman want me to answer that question?

Mr. WINGO. Yes; when did they stop the sale of pistols in our State?

Mr. RAGON. If the gentleman has kept up with the State papers, he knows there has been a crusade made against them. I do not know how it is in his district, but in my district they do not sell them.

Mr. BLANTON. But does the gentleman believe in taking away from the people of Arkansas the right under the Constitution to keep pistols in their homes?

Mr. RAGON. I would like to say to the gentleman in answer to that question, I can not think of any purpose in the world that a pistol serves except to kill somebody.

Mr. BLANTON. I mean as a matter of defense.

Mr. RAGON. I want to say that I am unequivocally opposed to pistols in any connection whatever. If you want, something in the home for defense, there is the shotgun and the rifle, but a pistol is primarily for the purpose of killing somebody.

Mr. BLANTON. This is a clause in our Bill of Rights. This is a right that was reserved to the people in the Constitution. You may submit the repeal of that to the legislatures of the States some day and they may repeal it, but until they do repeal it we ought to uphold the Constitution.

Mr. LAGUARDIA. Will the gentleman yield?

Mr. BLANTON. Yes.

Mr. LAGUARDIA. Does the gentleman construe the provision of the Constitution in the light of changed conditions, and was it not put in at the time when most of the population lived in the rural communities where they had no police department and firearms were necessary for every individual?

Mr. BLANTON. I want to ask the gentleman from New York if in New York he knows of any lawbreakers who do not carry firearms and pistols?

Mr. LAGUARDIA. The gentleman from New York is not on speaking acquaintance with lawbreakers.

Mr. BLANTON. Does the gentleman from New York believe that this regulatory measure sought to be passed is going to stop lawbreakers from getting possession of revolvers?

Mr. LAGUARDIA. It will tend to do it, and that is all we can do about it.

Mr. BLANTON. Tend to do it! I do not believe it will even tend to do it. And those of you who have been around the courthouses and seen criminal cases tried I do not think believe it. Thugs are going to get a pistol whenever they engage in nefarious business, so that they can shoot their way out when they have to do it. I will say, in conclusion, that I will go as far as you want to go to stop the lawbreaker from carrying firearms. I will even help you pass a law, if you are with me on the subject, making it a death penalty where the lawbreaker carries firearms. I will help you pass a law providing that where a man engages in breaking the law and puts a firearm in his hip pocket he shall suffer the death penalty, but I am not willing to visit the punishment upon the law-abiding citizens and prevent them from keeping arms in their homes and defending their own homes when necessary.

Mr. McKEOWN. Is there anything in this bill that will prevent the citizens of Oklahoma from buying sawed-off shotguns to defend themselves against these bank-robbing bandits?

Mr. BLANTON. That may come next. Sometimes a revolver is more necessary than a sawed-off shotgun.

Now, gentlemen, there is going to be another bill brought up here from the Post Office Committee. You are going to pass it, I suppose, because it comes from a great committee. There is a bill coming up here after this bill—and you will pass this in a few minutes, I suppose—that is going to give carte blanche authority to the Postmaster General to establish an air mail service all over the United States wherever he wants to that may cost \$100,000,000.

Mr. LAGUARDIA. Oh, the gentleman is in error.

Mr. BLANTON. Well, it is a bill with only two short paragraphs, and I submit to my colleagues that that is the effect of it. I hope you gentlemen will read it before it is called up; I hope you will pass your judgment on it; I hope you will see the unlimited and unrestricted power that it puts in the hands of the Postmaster General. It could cost the Government \$100,000,000 a year if the Postmaster General sees fit to make it cost that amount.

Mr. LAGUARDIA. Where is he going to get the money?

Mr. BLANTON. It is a legislative bill. It is a bill that gives him authority to act, and when he once engages in the enterprise of increasing obligations on behalf of the Government Congress always gives him the money, for we pay our Government debts. I want to call your attention to what is coming up so that you will be prepared to meet it in a few moments. Now, I am not going to vote for that bill, and I am not going to vote for this bill.

REPORT ON THE WORLD WAR VETERANS' LEGISLATION

Mr. SNELL. Mr. Speaker, from the Committee on Rules I submit a privileged report, House Resolution 370, on a resolution extending the time for rendering the report of the Committee on the World War Veterans' Legislation under House Resolution 351, to February 15, 1925.

The House resolution was referred to the House Calendar.

PROHIBITING THE SENDING OF PISTOLS THROUGH THE MAILS

Mr. BLANTON. Mr. Speaker, I yield 10 minutes to the gentleman from Arkansas [Mr. Wingo].

Mr. WINGO. Mr. Speaker, we all of us want to stop the evil of pistol toting, to use a common expression. The question is, Are you going to do it this way; will it be effective; and if so, is it the proper way? I think I live in as law-abiding a State as any State in the Union, and with all due respect to my colleague [Mr. Ragon], I venture the assertion that in his district I can buy a revolver at half a dozen places. The criminal characters can and do get hold of all the guns they want in Arkansas and the other States under the present state of public opinion.

Gentlemen, you are not going to wipe out the evil in this country by saying to the local community under the local courts that the way we will check all evil will be by turning the matter over to the Federal Government.

Oh, but you say, this simply protects my State and other States by saying that they can not bring the pistols in by mail! Ah, gentlemen, you may say what you please, but if you want to stop pistol toting and the evil results flowing from it you must have an awakened public conscience which will enforce the local laws of the States, not alone against the unlawful sale of firearms, but against the carrying of them. We have a law down in my State that you have to register your six-shooter, and while every law-abiding citizen registers his six-shooter, no criminal ever does. That is my observation.

I never bought a six-shooter in my life. One of my clients gave me one once, but I never did discover how to make the thing shoot.

I have no desire to buy one. I want to stop pistol toting, but I want to go to the root of the matter. The way to stamp out crime in this Nation, the way to enforce your local laws against the sale of firearms and against the carrying of firearms, is for the law-abiding citizens of the different communities first to have respect for the laws themselves and then to enforce their own laws. You are not going to do it by piling statute on statute. This country has a multiplicity of laws, and it has a paucity of sane, sensible, consistent, persistent law enforcement.

Mr. RAMSEYER. Mr. Speaker, will the gentleman yield?

Mr. WINGO. Yes.

Mr. RAMSEYER. The gentleman understands that this bill does not undertake to regulate the States. The only thing it undertakes to do is to tell the person who wants a pistol that he can not use an agency of the Federal Government to transport the pistol.

Mr. WINGO. Oh, I understand that. This does not interfere with a single law. It just creates another law for the same evil, when you are not enforcing the laws that you already have.

Mr. RAMSEYER. Oh, well; it is on the same principle that we years ago made intoxicating liquors nonmailable, that we made explosives nonmailable, and poisons nonmailable. We are just adding to the list of nonmailable matter.

Mr. WINGO. Oh, I can not agree with the gentleman that they are on all fours. They are entirely different.

Mr. RAMSEYER. I do not say they are exactly alike.

Mr. WINGO. Then because we have piled one law on the Federal Government that is no reason why we should pile on others. You will have to have more inspectors. You have already got it so that you can not send a pair of Christmas socks by mail without having some inspector probably open the package and look at it to see whether or not it is something that ought not to go through the mails or properly classed. It is a matter of common knowledge and daily occurrence that the privacy of the people is invaded by these Federal agents under the guise of enforcing the law. They even open your private mail, and if some whipper-snapper representing the Federal Government or some department of it conceives the idea that somebody has committed a crime he says, "Yes; I can do that, even though it be a violation of law, and nobody will punish me." Why, if they have an idea that you are making a little more money than you ought to, as shown by your bank account, and they have a desire to see whether or not you are getting it unlawfully, they will go down and make one of the national banks show them your bank account. I have seen that done within six months, without authority of law, in violation of law.

Mr. MORTON D. HULL. Was the gentleman in favor of the publicity provisions of the income tax law?

Mr. WINGO. I was in favor of the bill as it passed the House.

Mr. MORTON D. HULL. The gentleman is opposed to the publicity provisions as incorporated in the bill?

Mr. WINGO. Oh, well, I think a "tempest in a teapot" has been raised about it. I can not see that it is going to disturb the whole business world if somebody knows how much the gentleman or I pay as income tax. I think there is a clear distinction between knowing how much we pay and knowing where we get the money and seeing our returns.

Mr. MORTON D. HULL. I was trying to see how consistent the gentleman is in his statement.

Mr. WINGO. If the gentleman will stay here a little bit longer, he will find that the only mark of genius here is for a man to try to be consistent. Then nobody pays any attention to him, and he is referred to finally as an eccentric genius, who tries to be consistent. The gentleman entirely misses the force of my argument. I am against pistol toting, and as a member of the State senate and as a citizen I tried to stop the evil. If I thought this bill would do it, I would hail it with delight, but you will still have the criminal with the six-shooter in his pocket after you pass this law, just as you have now, and at the same time you will have more post-office inspectors on the pay roll; you will have new officers running up and down the land; and I tell you that right now in the State of Arkansas there are more Federal agents camped on its soil nosing into the private affairs of individuals than we have State, county, township, and municipal officers. You can not turn around without rubbing your elbow against some inspector of some department of the Government. What are they doing? The principal thing they are doing is drawing

their salary and riding the backs of the already overburdened taxpayers. All right! We are going to stop all evils by passing a Federal statute. We are going to make people good by a Federal statute. We are going to regulate their mail. As it is now, when you want to send your wife a Christmas present of a pair of stockings, some clerk will want to look at the package to see whether or not you are sending something through the mail that ought not to be sent through the mail. Oh, pass the bill. Of course, you are going to pass it, and why? Because it has a moral sentiment back of it. The man whose heart has been wrung, the woman whose life has been wrecked by some scoundrel with a six-shooter in his pocket, or some boy using it and getting himself into trouble, thinks that this will wipe out the evil and that the moment we stop the mail from carrying pistols, then every pistol pocket will be empty; that criminals will be left without their guns, and that the millennium will be rushed in. But, gentlemen, that will not do it. This will pile on a little bit more law. I tell my constituents they need more enforcement of the laws which they now have, and not to ask the Federal Government to usurp, not alone the right but the duties of the local organizations.

What is the result? You know what the result is. You enforce the law in my State and everywhere else against the sale of firearms, enforce the law against the carrying of those firearms, and you will stop these tragedies. Sears, Roebuck Co. and Montgomery Ward are not the source of all the pistol toting in this country.

Mr. MILLER of Washington. Will the gentleman yield?

Mr. WINGO. I will.

Mr. MILLER of Washington. What does the gentleman think of this state of affairs where in the State of Ohio, which requires a permit to be obtained to carry a pistol, within the last 18 months 3,000 pistols were shipped into that town through the United States mail? That is what this bill is trying to prohibit.

Mr. WINGO. How does the gentleman know that?

Mr. MILLER of Washington. The Post Office authorities made the statement.

Mr. WINGO. What authority did they have to dig into the mail to ascertain?

Mr. MILLER of Washington. I do not know. The gentleman can ascertain the facts as well as myself.

Mr. WINGO. They say they are digging into it. You stop it by mail and you stop it by express, then you stop it by freight, and then they are going to carry it in their pockets on the train. That is what they are going to do. Gentlemen, of course you ought to see that there is a sensible regulation of the sale of firearms to necessary police officers and the different peace officers, but I submit the States can do it better. It is not going to make the grand jury any more efficient in my State, it is not going—

The SPEAKER pro tempore. The time of the gentleman has expired.

Mr. BLANTON. I yield the gentleman five additional minutes.

Mr. WINGO. It is not going to make the man who keeps his six-shooter hidden in the drawers of his store from doing so by prohibiting the sale of firearms. It is not going to prohibit the sale of firearms to the criminal. If they want to come and get them they will come and get them. It is not going to stop the bootlegging of pistols in the States where they are sold unlawfully. There is just one thing that is going to stop it, and that is an awakened and aroused public sentiment in those States and communities to enforce and maintain the laws which they have, and if a man carries a gun or brings it in by mail and goes and carries it he is violating the law. This will not make it any easier for you to detect the man who is carrying. But if you shut off one convenience for getting it he will get it through another avenue.

Mr. BEGG. Will the gentleman yield for a question?

Mr. WINGO. Yes.

Mr. BEGG. I am very much in sympathy with what the gentleman is saying. If this bill were enacted into law and another cutting off the express companies and another cutting off the transportation by freight, if we continue to permit the manufacture what is to prevent a man driving 100 miles and bringing back 5 gross of firearms?

Mr. WINGO. If you start on this road, start the Federal Government undertaking to suppress pistol toting, you have got to go the whole length. You prohibit its coming through the mails, by express, by interstate commerce, and then whenever you have made it a matter of interstate commerce that

Includes transportation by automobile, airship, or by train, or in the pocket, you will just add to the Federal enforcement officers of the Nation, require more officers, more employees on the pay rolls, and you will not stop the evil, gentlemen. But, as I repeat, you will pass your bill. Those of us who vote against it will be criticized by some good people. I wish your hopes could be realized by this bill. I have seen tragedies in reference to pistol toting. I repeat, I never bought one. I would like to see the law in my State more rigidly enforced, but I do not believe a Federal statute is going to make them any more vigilant. I regret to say my observation has been when the Federal Government invades this field, I have seen the tendency on the part of the local authorities to be more lax and say, "Let George do it; let Uncle Sam do it." Gentlemen, this Federal machine is big enough now—

Mr. BLANTON. Will the gentleman yield?

Mr. WINGO. I will.

Mr. BLANTON. Is not after all the revolver under the teller's counter a protection against the bandit every day that they do business?

Mr. WINGO. Oh, yes.

Mr. BLANTON. They are afraid of that revolver under the teller's counter. It is that which keeps most of them out.

Mr. WINGO. I will say to the gentleman, they will get it; they will get the six-shooter. They will buy it in some way; and the criminal, most of all, will get it, because the man who started out to run the risk of carrying a six-shooter in his pocket will not hesitate to violate the procurement statute. The pistol in his pocket is more apt to be carried according to the subterranean methods by which he gets the pistol. Take the pistols out of the pockets; enforce the local laws against the sale of them. That is the way to stop this evil. You can not do it by employing a horde of Federal officials to open the packages in the mail.

Mr. WAINWRIGHT. Mr. Speaker, will the gentleman yield?

Mr. WINGO. Yes.

Mr. WAINWRIGHT. What is the use of enforcing the local laws and regulations with regard to carrying pistols if it is perfectly easy to get them through the mails?

Mr. WINGO. The gentleman is well versed in the law. They tell me I am wrong about my view of it. But if you want to protect local law I will vote with you to settle the dispute, if there is any dispute about it, and say that the transportation of firearms through the mail shall be governed by the law of the State where they are delivered. I will go with you on that if there is any dispute about it, and then say to the local communities, "Do not cry out to Washington to save us from our own indifference." That is not the way to save the great institutions which our fathers founded. [Applause.]

Mr. RAMSEYER. Mr. Speaker, I yield 10 minutes to the gentleman from Georgia [Mr. UPSHAW].

The SPEAKER pro tempore. The gentleman from Georgia is recognized for 10 minutes.

Mr. UPSHAW. Mr. Speaker, I ask unanimous consent to address the House out of order.

The SPEAKER pro tempore. The gentleman from Georgia asks unanimous consent to address the House out of order. Is there objection?

There was no objection.

Mr. UPSHAW. Mr. Speaker, with Woodrow Wilson gone and Henry W. Grady dead, I had not supposed that there lived on the American Continent a man who could make such a speech—such a masterful compass of thought and language, eloquence, and statesmanship—as we heard in that wonderful memorial address of President Edwin Anderson Alderman, of the University of Virginia. [Applause.] Gray-haired men on both sides of Congress declare with unmingled and unrestrained enthusiasm that the speech was the very greatest message, viewed from every angle of estimate, that has been heard in this historic Chamber in this generation. If the greatest in this generation, then why not the greatest in all generations since this Republic began its mighty processes of growing patriots and building statesmen of heroic stature and gigantic mold?

Known for a quarter of a century in the educational life of America, and especially the South, as an educator-statesman of towering proportions, Edwin A. Alderman has reflected a signal honor upon his native North Carolina—a State that has a way of giving a marvelous plenitude of outstanding men to the world; but whether at the helm of the University of North Carolina or Tulane in Louisiana, or in the crowning work of his brilliant and fruitful life on that inspiring spot where the Sage of Monticello thought and wrought—where

the Father of the Declaration of Independence laid the foundation of that shining pyramid of freedom that will pierce the ages as they pile themselves upon its deathless glory, it remained for this great national and international hour to unchain the latent forces of his greatness and challenge the "pinioned powers" of Virginia's scholar-statesman to their most marvelous achievement.

And it was an honor of first magnitude, gentlemen, a premier victory of superb isolation, for a private citizen to be summoned to the mighty task—the priceless privilege of speaking the "in memoriam" of America's great war President before the President and his Cabinet, the diplomats of all nations, and the assembled Congress of the United States. But, rich as were the materials with which the speaker had to deal, deep as were the crystal springs of his sacred inspiration, he had a task that was as delicate as it was difficult. Truly, as he said, he would have been lacking in the courage of the leader whom he memorialized if he had failed to treat with personal candor those controversial points of sharp contention that were the positive pivots of Woodrow Wilson's regnant ideals and the glowing arena of his most stirring activities.

And yet, at the very altar of Wilson's supremest dedication, and in the very presence of the opposing but honest leaders whose variant views and efforts had thwarted his passionate dreams, Edwin A. Alderman moved with a cautious and yet a dauntless frankness that disarmed criticism and commanded a fascinated and fascinating reverence that awed and subdued and exalted all who hung upon his magic words.

His courage was superb; and yet it was matched only by a courtesy as winsome and as gentle "as down from some high angel's wing."

His language! I stand almost dumb at the threshold of its contemplation.

It is said that "no man can be argumentative who is not historical." The orator of that memorial hour seemed at once the maker of history, the wizard of literature, and the master of logic all in one. There was radiance with reason, vision with virility, vigor and victory in the resourceful treatment of every theme. When and where did we ever hear before such balanced sentences of beauty and power? When and where did we ever drink in before such minstrelsy and music and majesty of words? And yet there was never a lost motion, a lost sentence, or a lost word in all that mighty torrent of human thought, human history, human ideals, and human and divine achievement. It took a statesman as well as a scholar and an orator to meet that wonderful hour; but the man and the hour met. And because of that high and holy trusting place that seemed the antechamber of the eternities, we are a better company of lawmakers, the Nation is a better Nation, and this world is a better world. I thanked God while the speaker moved, as John Temple Graves said of Grady, "from easy effort to success," that the supreme consideration was not subordinated to histrionic power and literary charm. God was honored as the Supreme Builder of character, and the "stately steppings" of the Almighty were heard in the deep recesses of every listening soul. It was the radiance of God's own vocal skies and the threnody of heavenly harmonies that fell into our hearts "like the benediction that follows after prayer."

As this marvelous masterpiece shall go into our permanent literature and be proclaimed in shining segments by ambitious young Americans in many a mimic contest, I rejoice that its glorious evangel of uplifting reverence will flow like a veritable gulf stream of spiritual enrichment, fructifying the character, the ideals, and the aspirations of every plastic youth that it shall touch, "through God's restless tide of years." Verily, it was a throne of sceptered truth, and that scepter was waved by such a master hand that I found myself involuntarily coveting such a master man for the White House of my country! I kept saying in my soul: Why not make that man President of the United States?

Are we so bound by the unwritten dictum of sectional bias that he would have to move to New Jersey or Massachusetts or Ohio in order to place him on the "eligible list"? Surely. If those super-Virginians, Washington and Jefferson, Madison and Monroe, Tyler and Wilson, "rule us from their urns," we should rejoice to place this premier scholar-statesman where his princely powers and Alpine personality would stir the pride of all American patriots regardless of party lines.

Fellow Americans in Congress, I propose that master American, the present president of the University of Virginia, for President of the United States! [Applause.]

Mr. RAMSEYER. Mr. Speaker, I yield five minutes to the gentleman from New York [Mr. BLACK].

The SPEAKER pro tempore (Mr. LUCE). The gentleman from New York is recognized for five minutes.

Mr. BLACK of New York. Mr. Speaker, I think this bill is a fairly good measure, designed to do the very thing that a great number of men associated with the prosecution of the criminal law want to see done. But I do not think it goes half far enough; I do not think it goes half far enough under the provisions of the Constitution, even. I do not think there is anything that the ordinary householder has to be afraid of in this bill. I do not think there is anything that the man who likes the Constitution has to be afraid of in this bill. As a practical proposition, how often has a householder been called upon in the large cities to defend himself by the use of a firearm against a bandit? I venture to say that the bandits who use guns are more afraid of little Skye terriers in the homes than they are of all the guns in the world.

Only once can I recall a case where a gun was used in the city of New York to stop a bandit, and on that occasion a fight or scuffle ensued by the use of the gun by the householder, in which a woman in the house was accidentally shot. Very seldom do you have a bandit entering the home with a gun. They still respect the household. It is on the open streets that they use the guns in the big cities. How often have you heard of any man on the open streets using a gun to protect himself against a bandit?

What the householder wants, and what the man on the street wants, and what the citizen wants is police service against the bandit, and he can have the police service against the bandit when the policemen of all the cities are released from other things that have been brought down upon them by this House requiring them to devote their time to other regulations that the people do not want, keeping them away from real police duty.

As to the business man and the gun, every big business house has a watchman; and every big business house has a watchman because his burglary-insurance provisions practically require him to have a watchman. There is nothing in this bill preventing a watchman from getting a gun. There is nothing in this bill preventing a man who has a right to have a gun from having it. As a good citizen, a man is free to have a gun if he procures a license for it. This bill simply supplements those things that we try to do in the States against the bandit.

Make it hard for him to get a gun; make it as hard as possible for him to get a gun. And I say that if we want to really help the people against the violators of the law and our affairs we should strike out the language of the eighteenth amendment as that now stands and after the word "prohibit" insert "the manufacture, sale, and transportation of concealed weapons." And that has back of it the thought of a number of our best jurists. I have heard judges in New York City say that the way to stop the use of guns, and the only way to stop their use effectively, is by prohibiting the manufacture and sale of guns.

Mr. BLANTON. Will the gentleman yield?

Mr. BLACK of New York. Surely.

Mr. BLANTON. Does not the gentleman know that in every one of the many banks in New York to-day there are at least a half dozen revolvers right at hand under the tellers' desks?

Mr. BLACK of New York. I want to say to the gentleman from Texas that if this bill passes those guns will be there as they are to-day. They can get guns and they can buy guns under this bill from legitimate dealers, and they are the only ones who can get them. I will say to the gentleman that there would be no use for those guns were it not for the fact that bandits can now get guns through the mail, although the State laws prohibit the sale and use of guns. The householder does not need a gun unless the bandit has one. Take guns away from the bandits and you will take away the necessity of householders needing guns, and if he can not use a gun he can do no harm and will harm nobody about him. I will say to the gentleman that you should not prohibit temperance but prohibit murder, and that is in very large measure accomplished by this bill.

Mr. BLANTON. Will the gentleman yield further?

Mr. BLACK of New York. Yes.

Mr. BLANTON. Does the gentleman—who is quite an able lawyer from the great metropolis—believe that this bill will stop thugs from having guns?

Mr. BLACK of New York. No; but it will tend to stop them from having guns. This measure is a step in the right direction, but I say you ought to go all the way and enact a constitutional amendment prohibiting the manufacture and sale of concealed weapons. [Applause.]

The SPEAKER pro tempore. The time of the gentleman from New York has expired.

Mr. BLANTON. Mr. Speaker, I yield 10 minutes to the gentleman from Alabama [Mr. STEAGALL].

The SPEAKER pro tempore. The gentleman from Alabama is recognized for 10 minutes. [Applause.]

Mr. STEAGALL. Mr. Speaker and Members of the House, the provision in our Constitution which attempts to guarantee to the citizen the right to keep and bear arms lies deep at the root of our liberties. The men who framed our Constitution were fresh from the struggle for American freedom and independence, and they had read with understanding the lessons of human history. They recognized that the right to bear arms was not only essential to the protection of the individual citizen and the defense of the home of the individual citizen but that that right is essential to the preservation of self-government and the liberties for which they had fought and which they desired to hand down to those who were to come after them.

This bill would give to the military and to the constabulary the unqualified right guaranteed by the Constitution, but would infringe upon that right as to the individual citizen of the country.

Mr. BLACK of New York. Will the gentleman yield?

Mr. STEAGALL. Yes.

Mr. BLACK of New York. The gentleman realizes that the second section only guarantees to the people the right to bear arms through a well-regulated militia, which, I take it, is a militia created under the laws of the several States.

Mr. STEAGALL. But my friend does not catch the first great fundamental thought underlying this provision in our Constitution, which was to safeguard the citizen in the right of self-government and enable the people to protect themselves against the encroachment, usurpation, and oppression of the military, which had overawed and held down the masses in all the ages of human history. [Applause.] That is the great fundamental thought underlying this principle in our Constitution, and it was founded upon the unmistakable lessons of human history in all ages throughout the world.

Mr. BLACK of New York. Will the gentleman yield further?

Mr. STEAGALL. Yes.

Mr. BLACK of New York. Does the gentleman understand it is left to the people, with guns in their homes, to decide when oppression was coming and when tyranny was coming, and that it is not left to the officers of the land to say that?

Mr. STEAGALL. Well, the gentleman makes a speech that is all interesting, but it does not bear directly on the thought that I am attempting to pursue in this argument. What is going to become of the citizenship of America if you disarm them and then turn over to your Military Establishment the unlimited right to bear arms? There is no possibility of such danger right now, but what would be the situation if we should ever unwisely see fit to elevate and enlarge the Military Establishment to the point that it would become an instrument of oppression to the masses of the American people? The thought of this danger is the principle which guided the framers of our Constitution, who attempted to write this safeguard into the organic law of the land.

Gentlemen, this bill attempts to infringe upon that right in a way which, I dare say, has never been attempted in any other legislative body anywhere in this Union. If it has been attempted, it has escaped my attention.

Mr. WAINWRIGHT. Will the gentleman give way?

Mr. STEAGALL. In just a little bit. I do not know of any State and I have never heard of any legislature that ever attempted to go as far as this bill seeks to go. The only thing any State has ever done, so far as I am informed, that in the least infringes upon the rights vouchsafed by the Constitution is to require the citizen who bears arms to carry them openly, so that those with whom he comes in contact may be put on notice that he is armed. That is as far as the law has ever gone.

The right to possess arms of any sort has never been denied to responsible citizens anywhere in this country, so far as I am informed. I have never heard of an attempt before to infringe upon the guaranty of the citizen in the right to keep arms. That is just as essential as the right to bear arms.

This bill not only attempts to infringe upon the right to bear arms but, as has been pointed out, would, in so far as its effect will prevail, deny every citizen of the country the right to have firearms in his home or about his person for the protection of his family or for purposes of self-defense.

The framers of this bill were not content with attempting to restrict the keeping of arms or the bearing of arms but

would deny the citizen the right to purchase firearms of this character or to deal in them at all, because if they may not be transported they can not be had. So far as I am informed, no other legislative body, in dealing with the question, has ever gone further than to say that the citizen in bearing arms should carry them openly so as to put those with whom he came in contact upon notice that he was armed. That is not unreasonable nor unjust nor does it take away any substantial right.

Mr. HOCH. Will the gentleman yield there?

Mr. STEAGALL. I yield.

Mr. HOCH. Under this bill, as it is written, a reputable citizen living, we will say, 15 or 20 miles from town calls up his dealer, whom he knows and who is known to the dealer, and asks him to send out by parcel post a certain revolver; that dealer could not do that under this proposed law without violating the law?

Mr. STEAGALL. No; he could not, and it is not true that this bill will not accomplish anything. It will deny the use of the mails for the purpose of transporting firearms; and the logical and consistent thing to do would be to follow it up with other laws which would prohibit the transportation of firearms by other methods, and another logical step would be to deny to the citizen the right to keep or to own or to possess firearms of this character at all; and the logic back of this would really deny the citizen the right to arm himself at all or to put firearms in the home for protection of himself or the family. It would disarm the citizen while conferring especial favor upon the constabulary. It is fundamentally vicious in principle.

Mr. WAINWRIGHT. Will the gentleman give way?

Mr. STEAGALL. I yield to the gentleman.

Mr. WAINWRIGHT. May I ask the gentleman what is his conception of the constitutional provision? The gentleman has referred to it as a provision guaranteeing to the individual citizen the right to bear arms. May I ask the gentleman if he himself would have any objection to reading the constitutional provision.

Mr. STEAGALL. I think I know what the Constitution contains. It was read here a few moments ago. I do not think I need to be refreshed, but I will be glad to yield to the gentleman for that purpose.

Mr. WAINWRIGHT. May I read the constitutional provision:

A well-regulated militia—

I am now reading article 2 of the first amendment to the Constitution—

A well-regulated militia being necessary to the security of a free state, the right of the people to keep and bear arms shall not be infringed.

I doubt if that has ever been construed to mean that the individual citizen has any constitutional right to bear arms.

Mr. STEAGALL. The gentleman is totally in error, because all the decisions of the courts are to the contrary and the purpose of the framers of our Constitution was to accomplish the very opposite of what the gentleman has in mind. It was not their thought to arm the Military Establishment with a power that could be used to destroy and override the citizen, but to give the people the right to bear arms, in order that they might defend themselves and their liberties and enforce the inalienable right of self-government. That was the principle involved. The right given the military was not to supplant the right of the citizen, but was intended to further and protect the right guaranteed the citizen.

The SPEAKER pro tempore. The time of the gentleman from Alabama has expired.

Mr. BLANTON. I yield the gentleman three minutes more.

Mr. KETCHAM. Right there, would the gentleman be kind enough to yield for a question?

Mr. STEAGALL. Yes; I yield.

Mr. KETCHAM. I want to direct the gentleman's attention to the statement of a very distinguished jurist upon the very point that has been read. I am reading from Thomas M. Cooley, one of the most outstanding judges Michigan has ever known, and it bears directly upon this point. He used these words:

The arms intended by the Constitution of the United States are such as are suitable for the general defense of the community, and the secret carrying of those suited merely to deadly individual encounters may be prohibited.

Mr. STEAGALL. Yes; there is no question about that. Everybody understands that and there is nothing new in it whatsoever. Carrying weapons concealed has often been pena-

lized and properly so. Such statutes rest upon entirely different grounds as I have already attempted to explain.

Mr. MOORE of Virginia. May I suggest to the gentleman that this particular provision of the Constitution is restrictive of congressional action.

Mr. STEAGALL. Certainly.

Mr. MOORE of Virginia. And it leaves to the States to do what the States think proper in this regard.

Mr. STEAGALL. Absolutely. I was coming to that point, and, as has been well said before in this argument, this is merely another step by which the Federal Government is to trespass upon the rights of the States, the thing first set down to be preserved inviolate by the framers of our Constitution, and I believe our gradual departure from this great fundamental principle is the most dangerous tendency in our national life.

The suggestion has been made here in this discussion that this bill is itself the child of bureaucratic government at Washington. If I am correctly informed, the bill is sent here by one of the bureaus dealing with the petty details of a department, yet it is an enactment which departs from one of the most fundamental, far-reaching, and sacred principles in our Constitution.

Let me say to you, Members of the House, that if there is any one thing upon which the people of the United States are surfeited and which all thoughtful people deplore, it is the regulation and control of affairs by Federal boards and agencies and the tendency to center all authority in the Government at Washington. [Applause.] What the citizen of this country wants, above all things, is to have the Federal Government take its hands off of him and out of his pocket.

Mr. MILLER of Washington. Will the gentleman yield for a short question?

Mr. STEAGALL. I yield to the gentleman.

Mr. MILLER of Washington. Can you imagine the law of any State in the American Union forbidding the delivery of firearms through the mails in their States? As a lawyer, can you imagine that?

Mr. STEAGALL. That is a proposition—

Mr. WINGO. May I make a suggestion to the gentleman? Since I spoke a while ago I have been refreshed by one of the ablest lawyers in this House and have had recalled to me a case which arose right in the District of Columbia, where a man was extradited and sent to the State of South Carolina that had never been in that State, because he sent through the mails the thing which caused the commission of a crime in the State of South Carolina, and the defense was that he had not committed any crime in South Carolina, but he was held guilty in that State. You can now prosecute them in the State for sending pistols through the mail.

Mr. STEAGALL. Yes. I discussed that very case with the same gentleman from South Carolina, and the decision reached in that case was unquestionably sound. [Applause.]

Mr. RAMSEYER. Mr. Speaker, how much time have I remaining?

The SPEAKER pro tempore (Mr. LUCE). The gentleman has 15 minutes remaining.

Mr. RAMSEYER. I yield five minutes to the gentleman from Pennsylvania [Mr. KELLY].

Mr. KELLY. Mr. Speaker, I am sure after this debate we will be convinced that the enactment of this law will not bring the millennium, but after all its only purpose is to make it more difficult for the thug and murderer to get his weapons with which to commit crimes. It will make it easier for the law-abiding citizen to live in the peaceful possession of his life and his property. I do not believe that the representatives of the law in this great Republic need to be concerned more than those who are financially interested in this proposition.

I was rather forcibly impressed less than 60 days ago to read in the public print a statement by Julius Rosenwald, head of Sears-Roebuck Co., the greatest mail-order house in the country, on this proposition. I have myself never been charged with being a supporter of mail-order houses. But this manager stated that the revenue of that house from firearms through the mail amounted to many millions of dollars, and he believed that patriotism required a determined action on their part, and they had fixed the policy that never again would they send through the mail a revolver or pistol because of their menace to law and order in the local communities.

Now, when a great organization, which is interested in getting all the revenue it can, without any compulsion of law sees fit to adopt a policy cutting down their own revenues through such a motive, it seems to me that we need not have too much compunction, as the representatives of law and order, to say that it shall not be done by any individual or interest in the United States. [Applause.]

Mr. BLANTON. Mr. Speaker, I yield the balance of my time to the gentleman from Alabama [Mr. HUDDLESTON].

The SPEAKER pro tempore. The gentleman from Alabama is recognized for two minutes.

Mr. HUDDLESTON. Mr. Speaker, that is not time in which I can speak. I will say, however, that the worst thing in this bill is its discriminatory features. The fact that it permits certain classes to receive weapons through the mails, weapons not required in the performance of their duties, while the same privilege is denied to all others, embodies a discrimination which is bad. Discriminatory legislation is vicious in principle and ought never to be tolerated except under extraordinary conditions. Here we have a bill that exempts certain classes from the operation of the law to do whatever they please with reference to sending or receiving firearms, whereas other classes are forbidden. These preferred classes are not restricted to obtaining arms necessary in the performance of their duty as officers. They may buy pistols from the mail-order houses and sell them to their neighbors or anybody else, and there is nothing in the bill to prevent it. You will put these officers practically in the business of dealing in these firearms, while other people of good repute are not permitted to do it. It is a discrimination that ought not for a moment to be tolerated. If we are to pass a bill forbidding the purchase of pistols through mail-order houses, we should make it apply to everybody alike. [Applause.]

Mr. RAMSEYER. Mr. Speaker, I yield five minutes to the gentleman from Arkansas [Mr. RAGON].

Mr. RAGON. Mr. Speaker, I can not see that violence to the Constitution which my friend from Texas sees in this bill. I think if you will take the statistics of the murders or homicides that occur in the United States and compare them with the number of homicides in Great Britain or Canada, it will be enough to bring the blush of shame to the cheek of any American. Something is vitally wrong either with our system, jurisprudence, and administration of criminal laws in this country or else there is something fundamentally wrong in not ridding ourselves of the opportunity of committing homicide.

Much has been said here about the use of these pistols as a defense of the home, and so forth. I can not subscribe to any such maudlin sentiment when these firearms are primarily used in taking human life. In my State it is a violation of the State law to sell a pistol within the borders of the State. The same law prevails in the State of Tennessee. I undertake to say that within the borders of the United States there are a score of States which have laws to the same effect. In other words, the merchant in my community can not sell a pistol lawfully. Oh, there may be bootleggers. It is a violation to sell liquor in Arkansas, but we occasionally have sales. It is a poor argument to make against any proposed law that there are violations of other laws in the community. It will not hold water. I say to you that under the present conditions we have that prohibits the sale of weapons in my State you are permitting the United States Government, you might say, to commit a criminal offense when it delivers within the borders of the State an article of commerce prohibited by an act of the State. In other words, if you permit a mail-order house to sell to a citizen of that State and use the United States mail as an instrumentality for delivering the article and the consummation of that sale, then you are permitting your own Government to do an act that is held unlawful if done by a citizen of my own State.

Mr. BLANTON. Will the gentleman yield?

Mr. RAGON. I will, although I have only five minutes.

Mr. BLANTON. If I should mail a revolver into the gentleman's State to-day, would I be guilty of a criminal offense?

Mr. RAGON. Absolutely; there is no question about that, but that is dodging the question. The argument that they are using—that he would be violating the law in the State of Arkansas if you in the District of Columbia ship a pistol there—reminds me of the old antiprohibition cry when they said, "Don't go to state-wide prohibition, because you can't enforce it." Of course you can do that. Suppose we take Sears, Roebuck & Co. The gentleman says that they have quit the sale of firearms. However, they used to sell them. Suppose they should sell some 15-year-old boy in my State a pistol. He could do with it as the Tennessee boy did—blow his brains out. The sale of a pistol is only a misdemeanor, and you indict them. I think it carries a fine of \$20 or \$50. Are you going to the State of Illinois, where Sears, Roebuck & Co. are situated, and there go through the proceeding of extraditing some member of that firm and bringing him to Arkansas and prosecuting him for a misdemeanor? That shows you the utter folly of the position the gentleman takes. I say that you have an oppor-

tunity in the passage of this bill of taking the first step, as I see it, in the total extermination of the most deadly weapon that human beings know anything about. The farmer does not go out and kill his hogs with a pistol. The man who walks out on a hunting trip through the woods does not go hunting game with a pistol. He does not go out to do any of the other things which ordinarily we call sport with a pistol. The primary purpose that the pistol serves and has served in America is that of killing human beings, and I would say for the unktion of some gentlemen who have been discussing this that statistics will show that more than 50 per cent of the murders that happen in the United States happen as a result of the misuse of a pistol.

The SPEAKER pro tempore. The time of the gentleman from Arkansas has expired.

Mr. RAMSEYER. Mr. Speaker, I yield two minutes to the gentleman from Missouri [Mr. LOZIER].

Mr. LOZIER. Mr. Speaker, if this bill becomes a law it will materially strengthen the several States and increase their power to enforce their police regulations, without being crippled by the action of citizens of other States in shipping revolvers into such States, thereby rendering the enforcement of those laws exceedingly difficult. Nearly all of the States have laws that forbid the sale of firearms to minors. These are salutary legislative enactments, but under the present system, which permits revolvers to be transported by mail, any boy of 10 or 12 years of age can order a revolver from a mail-order house in another State, and having in that manner acquired possession of a revolver he in many instances uses it to violate the law and sometimes take human life. This law will remedy those conditions and enable the States to efficiently function, exercise their wholesome police power, and enforce local police regulations. This bill, if enacted, will prevent young boys all over the United States from buying these revolvers and using them very frequently for unlawful purposes. It is a wholesome and salutary bill, and it ought to be adopted by this House without serious opposition.

Mr. RAMSEYER. Mr. Speaker, I suggest that the amendments be disposed of.

The SPEAKER. The Clerk will report the amendments. The Clerk read as follows:

Page 1, line 9, after the word "prescribe," insert a comma.

The SPEAKER. The question is on agreeing to the amendment.

The amendment was agreed to.

The Clerk read as follows:

Page 2, line 7, after the word "commitment," insert a semicolon.

The SPEAKER. The question is on agreeing to the amendment.

The amendment was agreed to.

The Clerk read as follows:

Page 2, line 11, at the end of the line after the word "other," strike out the period, insert a comma, and add the following words: "under such regulations as the Postmaster General may prescribe."

The SPEAKER. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. STENGLE. Mr. Speaker, I offer the following amendment, which I send to the desk.

The Clerk read as follows:

Amendment by Mr. STENGLE: Page 2, line 1, strike out the words "or Marine Corps" and insert in lieu thereof the words "Marine Corps or Reserve Officers' Training Corps."

The SPEAKER. The question is on agreeing to the amendment.

Mr. WINGO. Mr. Speaker, does the gentleman want to be heard in favor of this amendment?

Mr. STENGLE. I do, if the gentleman desires to oppose it. Otherwise, I am willing to go to a vote.

Mr. WINGO. I merely rise to ask the gentleman whether he proposes to throw this open to everybody who belongs to the Reserve Corps?

Mr. STENGLE. If the gentleman will read on page 1, line 10, he will find that none of these exceptions is provided for except in connection with official duty, and the Reserve Officers' Corps has no official duty except at specified periods in each year.

Mr. RAMSEYER. Mr. Speaker, will the gentleman yield?

Mr. STENGLE. Yes.

Mr. RAMSEYER. As I stated in opening the debate, I think this bill covers everything. I think it covers the officers that the gentleman seeks to designate in his amendment. I am not

sure that the gentleman has properly designated them. May I ask to have the amendment again reported?

The SPEAKER. Without objection, the Clerk will again report the amendment.

There was no objection, and the Clerk again read the Stengle amendment.

Mr. LAGUARDIA. Mr. Speaker, I think the term the gentleman should use is "Reserve Officers' Corps."

Mr. STENGLE. Very well; I shall accept that.

Mr. LAGUARDIA. The other is a students' organization.

Mr. NEWTON of Minnesota. Mr. Speaker, if the gentleman's point is correct, he should also include the members of the Naval Officers' Reserve Corps.

Mr. STENGLE. I have no objection to the gentleman offering such an amendment. I had no intention, Mr. Speaker, when I offered the amendment to take up the valuable time of this House to discuss the reasons why I believe this addition should be made to the bill. It seems to me self-evident that there might at some time be a question raised, technically, which would prevent in our training camps the permission to transport certain firearms for the use under official duty of the reserve officers in the camps. I am not surprised that there seems to be some question as to what the corps is and what it does. General Pershing requested many Members of this House two years ago to visit the camps in training near their homes. I was officially informed at the conclusion of that summer that I was one of only two Members who did what General Pershing had requested.

Mr. RAMSEYER. Will the gentleman yield?

Mr. STENGLE. I will.

Mr. RAMSEYER. After conferring with some members of the committee, if the term is a proper one I do not think there will be any objection.

Mr. STENGLE. I will accept any term the gentleman suggests, if it covers what is desired. All I desire is to clear up any question that might arise.

Mr. RAMSEYER. It should be "Officers' Reserve Corps."

Mr. STENGLE. I accept the suggestion; it should be the Officers' Reserve Corps.

The SPEAKER. Without objection, the Clerk will report the amendment as modified.

The Clerk read as follows:

Amendment offered by Mr. STENGLE: On page 2, line 1, strike out the words "or Marine Corps" and insert in lieu thereof the following: "Marine Corps or Officers' Reserve Corps."

Mr. WINGO. Mr. Speaker, I ask unanimous consent to proceed for five minutes additional.

The SPEAKER. Is there objection? [After a pause.] The Chair hears none.

Mr. WINGO. Mr. Speaker, as I gathered from the remarks of my friend from New York, his amendment will take care of the constitutional rights of himself and one other man. [Laughter.] Because—

Mr. STENGLE. Will the gentleman yield?

Mr. WINGO. I can not, because the gentleman had five minutes of my time.

Mr. STENGLE. My time. I had the floor and the gentleman took up my time.

Mr. WINGO. Now, my friend stated that he and one other officer complied with something, I do not know what. Now, this will permit him and that other officer in the Marine Corps to buy their pistols from Sears, Roebuck & Co. by mail. [Laughter.] Gentlemen, at first I was opposed to the amendment, but now that I see the force of it I appeal to all the Members of the House to support it. Think of it! Here are two prominent officers of the Reserve Corps who will have the right to patronize Sears, Roebuck & Co.

Mr. HILL of Maryland. Will the gentleman yield?

Mr. WINGO. I do.

Mr. HILL of Maryland. Could the gentleman tell the House how many additional post-office inspectors will be necessary to enforce this act?

Mr. WINGO. What difference does it make? We are approaching that beautiful stage in the evolution of our Government where we will get as many people as we can on the payroll and try to see how many of us can shift the burden of taxation to support it.

Mr. HILL of Maryland. It will make necessary several additional inspectors?

Mr. WINGO. Yes. If they have the right to search the mail for one purpose, they have it for all, because if they want to nose into your mail and find out what is in a package they will and say, "We do it because we have grounds to believe that there was a six-shooter in there." Of course, my col-

league from Arkansas [Mr. RAGON] says it will be the first step. The gentleman is right. My young friend made a wonderful appeal to the House to stop murder, and he summoned the Federal Government to aid to suppress murder. I am an old-fashioned Democrat, and I well recall, with a failing memory, the days when murder, larceny, and other crimes were the peculiar province of the State and the local force to suppress, but we are reaching that beautiful state where Washington will have a bureau to regulate all the citizens of the States and let a bureaucrat, under regulations prescribed by the chief bureaucrat—the Postmaster General in Washington in this case—determine when some one has committed a crime and when he has not; and the people of the States will have nothing under the sun to do except dodge the Federal officials, because the local force will have nothing to do because this Federal Government shall apply its own methods and suppress murder and other crimes. Murder is bad, grand larceny is bad, and petit larceny is bad and ought to be stopped; and here is a body that will step in and by Federal aid stop these crimes. There is the robbing of a chicken roost. That is bad—we will stop that. The robbing of a chicken roost is a crime, and we call upon the Federal grand jury to help prosecute the chicken thief. Gentlemen, this is the first—no; this is not the first step. For years continually upon the statute books we have placed Federal statutes taking over duties that should be discharged by local courts.

I believe the people of Arkansas can protect themselves against murder and every other crime by their own courts, judges, and machinery if the law-abiding people will stand together to do it; if the grand jury, if the petit jury, will do their duty. God keep this Nation when you have a department down here, with a bureaucrat in charge with authority, under such regulations as he shall prescribe, to say that he will protect the community and peace and order and property rights and personal rights of all the citizens of the Republic. And God pity the Democratic Party when it comes to the day when gentlemen, to meet a passing breeze of popularity, desert the time-honored principles of the Democratic Party and say, "On to Washington! To Washington! To the Federal Government!"

We yield all the power, we yield all the rights for which once our historic party contended. Go and tear down the statue of Jefferson or remove the picture of Washington. [Applause.] Abandon your party if you propose to turn for the suppression of murder and every other crime to Federal agents and have a bureaucrat in Washington undertake to prescribe the regulations to prevent it! [Applause.]

The SPEAKER. The question is on agreeing to the amendment offered by the gentleman from New York.

The amendment was agreed to.

Mr. RUBEY. Mr. Speaker, I offer an amendment.

The SPEAKER. The gentleman from Missouri offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. RUBEY: Page 1, line 4, after the word "person," insert "and newspapers, circulars, pamphlets, or publications of any kind containing any advertisement for the sale of any pistol, revolver, or other firearm." Also, on page 2, line 18, after the word "firearm," insert "or any newspaper, circular, pamphlet, or any publication of any kind containing any advertisement for the sale of any pistol, revolver, or other firearm."

Mr. BLANTON. Mr. Speaker, I make a point of order against that.

Mr. RAMSEYER. Mr. Speaker, I make a point of order on that because it is not germane to the provisions of the bill. This bill simply makes firearms nonmailable. That is all it does. Now, then, the gentleman from Missouri undertakes to prevent advertisements of firearms from going through the mails. There is certainly no kinship or germaneness or relevancy one to the other at all.

The SPEAKER. The Chair will hear the gentleman from Missouri.

Mr. RUBEY. Mr. Speaker, this bill declares firearms capable of being concealed unmailable. My amendment refers to nothing except advertisements telling fellows where to get the firearms. I want to go to the root of the trouble and stop the source from which the firearms are obtained. The gentleman's bill is to prevent them from going through the mail.

The SPEAKER. The Chair sustains the point of order. The bill refers to mailing revolvers. I do not think the provision as to advertisements is germane.

Mr. HILL of Maryland. Mr. Speaker, I offer an amendment.

The SPEAKER. The gentleman from Maryland offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. HILL of Maryland: Page 2, line 21, insert: "Provided, That no firearm shall be mailed to any person unless such person is required to wear a prescribed and distinctive uniform when armed with such firearm."

Mr. HILL of Maryland. Mr. Speaker, I hope the committee will accept that amendment.

Mr. RAMSEYER. Mr. Speaker, I make a point of order against that. It is not germane.

Mr. HILL of Maryland. It is a limitation.

Mr. RAMSEYER. No; it is not a limitation. This is not an appropriation bill.

The SPEAKER. The Chair will hear the gentleman from Iowa on the point of order.

Mr. RAMSEYER. Mr. Speaker, this bill is a very important one. The purpose of it is to make firearms capable of being concealed nonavailable. It does not undertake to say what the fellow at the other end shall wear in order to get firearms. I do not recall the exact wording of the gentleman's amendment, which was evidently offered in a facetious manner.

Mr. HILL of Maryland. No; there is nothing in the amendment except to protect the public rights.

Mr. RAMSEYER. The gentleman's amendment is somewhat indefinite. But this bill has to do with nothing except that the forbidden articles shall not be carried in the mail, with certain exceptions to classes of officers who may receive them through the mails under regulations prescribed by the Postmaster General.

Mr. WINGO. Mr. Speaker, will the gentleman yield right there?

Mr. RAMSEYER. Yes.

Mr. WINGO. The gentleman has overlooked something else in the bill. He says, "in connection with their official duties." In other words, you undertake to make an exception of a certain class who may have a certain thing. If you do that, you may put on another provision with reference to that class.

Mr. RAMSEYER. Furthermore, Mr. Speaker, it is not only not germane to the bill, but it is not germane to the particular portion of the bill to which it is offered, attaching it onto the penalty provision in the bill.

The SPEAKER. The bill is all in one section. The part pertaining to the mailing of firearms is an exception. The Chair can not see why there can not be another exception. The Chair overrules the point of order.

Mr. HILL of Maryland. Mr. Speaker, may we have the amendment again reported?

The SPEAKER. Without objection, the Clerk will again report the amendment offered by the gentleman from Maryland.

The amendment was again read.

The SPEAKER. The question is on agreeing to the amendment.

The question was taken, and the amendment was rejected.

Mr. BLANTON. Mr. Speaker, I offer an amendment.

The SPEAKER. The gentleman from Texas offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. BLANTON: On page 1, line 9, strike out the words "Postmaster General" and insert in lieu thereof the word "Congress."

Mr. BLANTON. Mr. Speaker, if this bill is passed it will confer upon the Postmaster General the right to control the procurement of firearms, and therefore hamper the people in their right to keep them in their homes, when the right of keeping them in the home is assured and guaranteed to the people by the Constitution of the United States. I am not willing to confer that power upon the Postmaster General.

It has been less than 10 days since the Postmaster General in Washington has appealed to the Senate committee and also to the House committee to let his employees, hundreds of them, here in Washington keep their automobiles on the streets of Washington with their engines running and nobody in attendance upon them; to let them disregard and violate an important, serious regulatory provision of the District of Columbia law. He wants to let all of his employees drive their automobiles just as he wants them to drive them, without any control whatever by the District law.

He wants his employees to be given the right to violate every provision of the traffic laws of the District of Columbia, without any control whatever by the police of Washington.

The Postmaster General, I am reminded, has placed upon the hip of every employee who drives a mail wagon in the

United States a big 44-caliber automatic; he has placed on the hip of the postmasters all over the United States, the men in charge of post offices, 44-caliber automatics. He must have had some reason for doing it; he must have had some reason for arming all of the post-office employees. He knew it would protect Government property. And I approve of his action, which was begun by Postmaster General Hays. If he can arm his own men, hundreds of them and thousands of them, why should he want to take away the inherent constitutional right of the individual citizens to keep firearms in their own homes? Whenever you prevent law-abiding people from procuring them you are infringing upon their constitutional right to keep them.

I am reminded of the fact that every bank in the city of Washington, D. C., and every bank in every State in this Union to-day depends primarily for its protection and the protection of the money of its depositors not upon the police force of the town, and not upon the insurance companies altogether, but it depends upon those automatic pistols under the teller's counter, and there have been many hold-ups which have been prevented by the fact that there were revolvers right under those counters. That is what deters criminals from holding up banks every day in the United States more than anything else; it is a fear of being shot, not by the immediate cashier just in front of them, but by some other teller or clerk in that bank from some other window or from some other angle. They have learned that the bankers have armed themselves. But under the provisions of this bill not a bank and not a teller or cashier could procure a pistol except from some dealer in the immediate vicinity, and when you pass this bill it will double and treble the price of every pistol locally.

It may force law-abiding men to get in an automobile and drive 100 or 200 miles to get one.

Not so long ago I was coming down a long hill in the Cumberland Mountains in Pennsylvania, and about halfway down that hill, a steep incline—it took both brakes to hold my car—I was stopped by two fellows who were standing out in the road and wearing uniforms. At first I thought they were chauffeurs, because they looked like chauffeurs' uniforms, but they said "Stop," and I stopped as well as my brakes would hold me. My brakes began to slip a little and my car was moving a little bit when one of them said, "Stop immediately or I will blow your tires out with my pistol." I stopped, and they said they were Pennsylvania prohibition officers, and they wanted to see what I had in my car. [Laughter.] I said, "All right, gentlemen; I am with you on that subject; I am a prohibitionist and I believe in the enforcement of the law; help yourselves; here is my car; look into it." They said, "We are not prohibitionists, but we are enforcing the law nevertheless." [Laughter.] And they went through my car, examining the contents. What is going to happen if we pass this law?

You are going to have inspectors everywhere on the roads stopping you whenever they please to see whether or not you have a pistol in your car, when, maybe, you are a bank cashier and it is necessary for you to procure one. Those officers from Pennsylvania had no right to stop my car under the law; they had no right whatever to go through my car, as they had no warrant. But I did not protest, because I was a law-abiding citizen. They said they had stopped and examined several hundred cars there that day. I want to say this: They have no right to stop all automobilists along the road and go through their cars, and yet these Pennsylvania officers were stopping every automobile on that road when there was no law for it and no right to do it. The people are getting tired of it. I am as strong a prohibitionist as ever lived; I am as strongly in favor of the enforcement of the law as any man who ever lived; I do not believe in pistol toting; I believe, like the gentleman from Illinois [Mr. RATHBONE] believes, that we ought to stop it if we can, but we ought not to curtail the rights of law-abiding citizens; it is the rights of the thugs we ought to curtail.

I am not willing to place this great constitutional power in the hands of the Postmaster General, who has placed upon the hip of every employee in his department an automatic six-shooter, and yet, at the same time, he is trying to take away from the law-abiding people the constitutional right to keep firearms in their homes.

Mr. ROACH. Mr. Speaker, I would like to speak in opposition to the amendment.

The SPEAKER. The gentleman from Missouri is recognized.

Mr. ROACH. Mr. Speaker and gentlemen of the House, I did not have the benefit of hearing the general debate on this bill, but it seems to me, gentlemen, that if we expect the several States of our Union to enforce the laws which they

now have prohibiting the indiscriminate carrying of concealed weapons we should enact this law. It has often occurred to me that the States are impotent to enforce their pistol laws under present conditions. I can not conceive or imagine a more stringent law upon antiaugun toting, as we call it, than we have in Missouri, yet our laws are being nullified every day by reason of conditions which now exist, but which this bill, if enacted into law, will greatly remedy if not entirely cure.

Illustrating, if a person in our State wishes to purchase a pistol or a revolver he goes to a dealer, as the law requires, makes his application and states the purposes for which the revolver is to be purchased; that application is then submitted to the sheriff, is indorsed and approved by him or rejected, as the case may be; a record is kept of it, and if the applicant is deemed to be a citizen worthy of and entitled to the privilege the firearm is sold to him. If the person is unworthy the privilege, his application is denied. In that way the police officers of the several cities in our State can keep a check on those having these firearms in their possession, and renders it impossible for the "holdup man" to obtain these firearms unbeknown to our officers, and gives our officers a complete check on those having pistols in their possession, the value of which information is inestimable in enforcing the law. But that law is absolutely nullified by the fact that any person who wishes to purchase a pistol or revolver for purposes of offense or holding up some one, can write to a catalogue house in Chicago or some neighboring city and procure the firearm without the knowledge of the officers of our State and without having complied with the very good law which our State has upon the statute books. The enactment of this bill will correct that evil and will make it possible for the law-enforcing officers of our State to keep track of and to keep tab upon those who have these deadly firearms in their possession, both as to the citizen who buys for lawful purposes and the thug or stick-up man who buys for unlawful purposes. It will greatly check and reduce crime.

It is all nonsense to talk about denying to any person the right of personal privileges to own these firearms in the enactment of this bill, because it does not do anything of the sort. It does not in any way hamper the many splendid laws of the various States upon this very important subject. It is simply an aid to them so they can enforce those laws and make them mean what the citizenship of the particular States who have good laws want them to mean, and make such State laws enforceable.

I sincerely hope this bill will be enacted into law. [Applause.]

The SPEAKER. The question is on the amendment offered by the gentleman from Texas.

The amendment was rejected.

Mr. RAMSEYER. Mr. Speaker, I move the previous question on the bill and all amendments thereto to final passage.

The previous question was ordered.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The question was taken; and on a division (demanded by Mr. BLANTON) there were—ayes 112, noes 19.

Mr. BLANTON. Mr. Speaker, I make the point of order that there is no quorum present, and I object to the vote on that ground.

The SPEAKER. The gentleman from Texas makes the point of order that there is no quorum present. It is clear there is no quorum present. The Doorkeeper will close the doors, the Sergeant at Arms will bring in absent Members, and the Clerk will call the roll. The question is on the passage of the bill.

The question was taken; and there were—yeas 281, nays 40, not voting 111, as follows:

[Roll No. 10]

Foster	Madden	Sanders, Ind.	

So the bill was passed.

The Clerk announced the following pairs:

Until further notice:

Mr. Beedy with Mr. Tydings.
Mr. Curry with Mr. Kunz.
Mr. Murphy with Mr. Corning.
Mr. Dyer with Mr. Eagan.
Mr. Fredericks with Mr. Clark of Florida.
Mr. Sinnott with Mr. O'Connell of New York.
Mr. Winter with Mr. Geran.
Mr. Larson of Minnesota with Mr. Taylor of Colorado.
Mr. Zihlman with Mr. Kerr.
Mr. Tinkham with Mr. Wolff.

Mr. Kahn with Mr. Thomas of Oklahoma.
 Mr. Freeman with Mr. O'Connor of New York.
 Mr. Hall with Mr. Lee of Georgia.
 Mr. French with Mr. Oliver of New York.
 Mr. Scott with Mr. Shallenberger.
 Mr. Fairchild with Mr. Ward of North Carolina.
 Mr. Britten with Mr. Sherwood.
 Mr. Fitzgerald with Mr. Logan.
 Mr. Ward of New York with Mr. Vinson of Georgia.
 Mr. Paize with Mr. Mooney.
 Mr. Snyder with Mr. Stevenson.
 Mr. McKenzie with Mr. Mead.
 Mr. Cole of Ohio with Mr. Smithwick.
 Mr. Longworth with Mr. Garrett of Tennessee.
 Mr. Johnson of South Dakota with Mr. Cummings.
 Mr. Fenn with Mr. O'Sullivan.
 Mr. Lineberger with Mr. McNulty.
 Mr. Vane with Mr. Evans of Montana.
 Mr. Davis of Minnesota with Mr. Salmon.
 Mr. Anthony with Mr. Wright.
 Mr. Mills with Mr. Fisher.
 Mr. Dallinger with Mr. Jones.
 Mr. Sanders of Indiana with Mr. Kindred.
 Mr. Swaine with Mr. Weller.
 Mr. Tilson with Mr. Buckley.
 Mr. Madden with Mr. Dominick.
 Mr. Porter with Mr. Sullivan.
 Mr. Foster with Mr. Larsen of Georgia.
 Mr. Graham with Mr. Tague.
 Mr. Kless with Mr. Lazaro.
 Mr. Temple with Mr. Montague.
 Mr. Rogers of Massachusetts with Mr. Posa.
 Mr. Morin with Mr. Howard of Nebraska.
 Mr. Reed of New York with Mr. Spearling.
 Mr. Bixler with Mr. Gambrell.
 Mr. Michaelson with Mr. Tillman.
 Mr. Parker with Mr. Morris.
 Mr. Merritt with Mr. O'Brien.
 Mr. Cooper of Ohio with Mr. Carew.

The result of the vote was announced as above recorded.

The SPEAKER. A quorum is present. The Doorkeeper will open the doors.

On motion of Mr. RAMSEYER, a motion to reconsider the vote by which the bill was passed was laid on the table.

THE AIR MAIL SERVICE

Mr. LAGUARDIA. Mr. Speaker, by direction of the Committee on the Post Office and Post Roads, I call up for consideration the bill H. R. 6942, establishing transmission and carrying of mail by airplanes and flying machines.

The SPEAKER. This bill is on the Union Calendar.

Mr. BLANTON. Mr. Speaker, I rise to a question of consideration.

The SPEAKER. The gentleman from Texas raises the question of consideration.

The question was taken; and, on a division (demanded by Mr. BLANTON) there were 106 ayes and 23 noes.

Mr. BLANTON. Mr. Speaker, I make the point of no quorum.

The SPEAKER. The Chair overrules the point of no quorum. The House automatically resolves itself into Committee of the Whole House on the state of the Union.

Accordingly the House resolved itself into Committee of the Whole House on the state of the Union, with Mr. LEHLBACH in the chair.

Mr. LAGUARDIA. Mr. Chairman, I ask unanimous consent that the first reading of the bill be dispensed with.

The CHAIRMAN. The gentleman from New York asks unanimous consent that the first reading of the bill be dispensed with. Is there objection?

There was no objection.

Mr. LAGUARDIA. Mr. Chairman and gentlemen of the committee, this bill simply authorizes the transportation of mail by means of airplanes or flying machines. In other words, it establishes authority permanently to do that which the department is now doing temporarily by means of annual appropriation. Gentlemen will recall that when the last Post Office appropriation bill was being considered, when it came to the item of carrying the mail by air, a point of order was raised, I believe, by the gentleman from Michigan [Mr. CRAMTON], and each year previously a point of order has been raised against that particular item in the appropriation bill. Such a situation simply leaves a vast undertaking at the mercy of the whim of anyone of 435 Members.

In order to permit the Postmaster General to carry the mail by air, now that it has passed the experimental stage, this bill was introduced and has received the unanimous support of the committee and the Post Office Department. I want to make it clear to the gentleman from Texas [Mr. BLANTON], who has given advance notice of his opposition to this bill, that this does not carry any appropriation. It is simply a legislative bill. Neither does it in any way increase the authority of the Postmaster General. This bill does not disturb the limited authority of the Postmaster General or any Cabinet officer in spending money not appropriated. Every Member of the House

knows that the Postmaster General is required by law to obtain appropriations each year from Congress. He can not and would not dare to go outside the limits of duly appropriated funds in expanding the Air Service or any other service.

Mr. BLANTON. Will the gentleman yield?

Mr. LAGUARDIA. Yes.

Mr. BLANTON. Section 2 of this bill, which the gentleman did not have read by the Clerk, reads as follows:

SEC. 2. The Postmaster General is authorized to operate and maintain Air Mail Service in any part of the United States and Territories that he may from time to time designate.

Under that authority suppose the Postmaster General tomorrow were to designate as Air Mail Service routes over every single contract that is now held by the railroads. He has the authority to do it. Does not the gentleman know that if he entered into a contract of that kind this Congress would have to pay the debt and appropriate the money to pay every dollar, although it might amount to five hundred millions?

Mr. LAGUARDIA. Oh, the gentleman in his customary solicitude for the railroads—

Mr. BLANTON. That is not fair, I have no solicitude for the railroads. I have no interest in a railroad in the United States. I never represented any of them, and I don't own a dollar of stock in any.

Mr. LAGUARDIA. Well, the gentleman has no solicitude for railroads, let us get that clear. Let me say to the gentleman that he should have no misapprehension of the Postmaster General taking all the business away from the railroads; that he can not possibly extend this service to that extent on the appropriations which Congress gives him. He is now under the law limited in the operations for this fiscal year to the appropriation we gave him. He will be limited in the next fiscal year to the appropriation that Congress gives him. It makes no difference whether you are carrying the mail by air, by rail, or by boat, the Postmaster General is limited by the appropriations which Congress gives him. I hope I make that clear to my friend from Texas. There is nothing in the bill that can possibly give the Postmaster General the authority which the gentleman fears.

Mr. JACOBSTEIN. Will the gentleman yield?

Mr. LAGUARDIA. Yes.

Mr. JACOBSTEIN. Under what authority are the experiments now being made?

Mr. LAGUARDIA. By the item in the appropriation bill.

Mr. JACOBSTEIN. Then the Postmaster General is expending money which he was not authorized to spend?

Mr. LAGUARDIA. Oh, no. We appropriate each year a certain amount to carry the mail by air. But it is simply an appropriation item subject to a point of order each year and that point of order has been raised each year.

Mr. JACOBSTEIN. Can the Postmaster General continue this Air Service without a special appropriation?

Mr. LAGUARDIA. No; he can not. Now, on the subject of aviation, if you will bear with me a few moments, I will endeavor to demonstrate to you that it can not possibly be carried on or developed if we make it a temporary proposition and the appropriation subject to a point of order each year.

As far as carrying the mail by air is concerned it is past the experimental stage. We have demonstrated the practicability of this new means of transportation and I will give you some figures in regard to it. The Air Mail Service of the Post Office Department is the one department of the Government dealing with aviation that has made a complete success. Yesterday you heard the discussion in general debate on the naval appropriation bill that carries \$14,000,000 for that department with \$24,000,000 more to come for airplane carriers, and \$550,000 for planes to put on those carriers. During that discussion the need of developing an air industry and keeping a permanent trained personnel were stressed and emphasized. In the report from the Committee on Appropriations the President's message transmitting the Budget is quoted and it is quite opportune that I read from that message now: "Aside from the important factor of training personnel," said the President, speaking of aviation, "our national defense is largely an industrial problem. To-day the outstanding weakness in the industrial situation as it affects national defense is the inadequacy of facilities to supply Air Service needs. The airplane industry in this country at the present time is dependent almost entirely upon Government business. To strengthen this industry is to strengthen our national defense." Here gentlemen is an opportunity to do just that and in a productive, useful manner. In a few days you will have the military appropriation bill, carrying with it fifteen or sixteen million dollars for aviation, yet in all of the time that

the Post Office Department has been carrying the mail by airplane, since 1918, you have given them but \$10,000,000, of which we have at the present time in property \$3,000,000.

Mr. LANHAM. Mr. Chairman, will the gentleman yield?

Mr. LA GUARDIA. Yes.

Mr. LANHAM. Will the gentleman distinguish between this bill, H. R. 6942, and the provisions of H. R. 7004? I understand that the gentleman made the report of the committee on that bill, which provides for the limit of cost.

Mr. LA GUARDIA. I am coming to that in a moment.

Here are some of the outstanding facts relative to the Air Mail Service, which may be of interest to you.

It was started in 1918. In 1920 it began transcontinental operation, relaying on and off railway trains and flying only during the daylight hours. In 1923, after having lighted an airway from Chicago to Cheyenne, we operated for four days as a continuous movement service in both directions across the country. This test was successful and, beginning with July 1 this year, we have operated on a similar schedule each day.

As I said before, counting this year's appropriation, the Air Mail Service has spent less than \$10,000,000 since it was inaugurated in 1918, and we now have on hand over \$3,000,000 worth of tangible property in the shape of buildings, motor equipment, flying equipment, tools, and so forth. This inventory is made up on the basis of going value prices.

There are 580 people in the employ of the Air Mail Service, of whom 49 are pilots. Since July 1, although our performance has not been 100 per cent, we have been unusually fortunate in being on time a substantial percentage of the whole time, we have had no fatal service accidents, and we have only been off schedule badly when the weather has been clear against us. Fogs, heavy snowstorms, and like disturbances, of course, result in our being unable to get through on schedule time.

Let me pause but a few moments to read from a speech made by Col. Paul Henderson, the Second Assistant Postmaster General, before the College of Engineering of the New York University on October 22, 1924. He gives in a few words the history and development of our Air Mail Service that it is well worth while reading here:

There have been several distinct steps in the Post Office Department's use of the airplane. A start was made in 1918 by the establishment of a route from Washington to New York. This is approximately 200 miles by air line. Later, other independent and disconnected routes were established between such points as Cleveland and Chicago, New York and Cleveland, Chicago and Omaha, Chicago and St. Louis; Chicago and St. Paul and Minneapolis. None of these comparatively short, disconnected routes was sufficiently long to permit the airplane carrying for itself sufficient gain over rail operation to develop any marked advantage. For example, it took about two hours to fly to New York from Washington. The trains run in five hours. It took the better part of an hour to carry the mail out to the field just outside of Washington, ready for its departure, and it consumed almost, if not quite, an hour to get it in from the flying field at New York to the post office ready for distribution. This cut down the advantage to just about an hour, which is not sufficient to make it worth while.

Much advantage was gained in the way of experience in the matter of operating these disconnected routes.

A nucleus of organization was developed. Pilots were trained. The operation of several types of airplanes was studied and methods of maintenance, inspection, and repair were arrived at.

The public began to think of the airplane as a possible postal transport agency. People within the postal organization saw enough of the new vehicle to begin to have some little degree of faith in its possibilities. These lines were certainly valuable as entering wedges, and from their operation the Air Mail Service has been able to grow. But for these comparatively small starts and but for the foresight and the courage of those responsible for them, there would be no Air Mail Service to-day.

It soon became quite apparent to those who studied the subject that the airplane could not really begin to mean much in the matter of postal transportation until the distances covered were at least 1,000 miles.

Basing its action upon the experience which it had derived from these operations, in 1920 plans were made for a transcontinental service with New York as one terminus and San Francisco the other. These plans were reasonably well matured in 1921, during which year this transcontinental service was actually placed in operation.

This was a relay service operated in connection with the railway trains. By that I mean that mail was flown during the daylight hours from station to station across this route and that during the night this mail continued its forward movement in the railway-mail cars. With this service the airplane came to really mean something to the

Post Office Department. It operated with an increasing degree of regularity and dependability until, in the spring of 1922—when as it happened I came into the service of the department—I found this service operating with a remarkable degree of regularity, well established in the minds of the people as a serious postal function, well organized as to its personnel, and really moving forward beautifully.

It became apparent to me that the next forward step should be that of conducting these flights during the night time as well as during the daylight hours. Much of the advantage which the airplane was able to take to itself in competition with the train was lost because of our inability to operate at night. Feeling confident that night operation could be made practical, in June, 1922, the department inaugurated what might be termed a laboratory experiment in night flying. Land lighthouses of varying types were examined, purchased, and tested; pilots were asked to pass judgment upon advance plans for a practical night airway. These experiments and this laboratory work of ours culminated in August, 1923, in a four-day test of continuous flight operation in each direction across the continent.

To make this test possible, an airway had been lighted from Chicago to Cheyenne, approximately 1,000 miles. This test was 100 per cent successful. Mail was carried eastbound on one day of the test in 26 hours and 14 minutes. The average for both directions those four days was well under 30 hours. Everything about the test seemed to indicate that our laboratory work and experimenting had been thoroughly done. However, it was not until July 1 of this year that we were able to undertake, as an every-day job, to repeat what we did in those four days of August a year ago. Part of the reason for this interval of delay was our lack of available funds. Now, and since July 1 last, we are operating seven-days-a-week continuous service from New York to San Francisco. This operation is running along very smoothly. Our schedules are approximately four hours longer than our experiment of a year ago would indicate as practical. There is no hysteria in the service. Pilots no longer fear flying at night. It is just taken for granted that night flying is here and here to stay. People in New York are no longer astounded when they get letters which left San Francisco early the day before. Every day the service becomes more popular with the people, and consequently better patronized. Every day we learn new, important things in connection with the details of this operation. I am confident, from what I have seen, that this transcontinental service—which is now about 4 months old—is here to stay.

Here is a public official who not only has ability, courage, and vision, but the required enthusiasm to make possible a great transcontinental air line.

We have, therefore, moved San Francisco up to within 34 hours of New York. Congress does not want the Post Office Department to stand still. Let us give the department the power, the authority to add to their transcontinental route by the scheduling of other operations over it during the 24-hour period. It is necessary to operate out of New York each night for delivery in Chicago the next morning. We will retain control of appropriations. Nothing in this bill takes that power away from Congress. But let us not hamper aviation development by uncertainty, by hand-to-mouth existence. Let us not hold back Colonel Henderson, this splendid, energetic official. Permit him to develop his department in keeping with progress and development in aviation. It is certain that as the designers of airplanes develop better type planes and as better motors are invented and produced, we will be able to reduce the time between New York and San Francisco. As we grow and learn we will be able to expand this wonderful service. Give the department a chance is all we ask in this bill.

The line between New York and San Francisco functions daily. The plane leaves New York at 10 o'clock in the morning, eastern time, and arrives at San Francisco at 5:45 Pacific time, the next day. The country divided into three zones—New York to Chicago, Chicago to Cheyenne, Cheyenne to San Francisco. We are charging 8 cents extra on each letter for each zone, making a total charge of 26 cents from New York to San Francisco, or of 10 cents within the zone.

We have landing fields, which are the relay points, and take mail at New York City; Bellefonte, Pa.; Cleveland, Ohio; Bryan, Ohio; Chicago, Ill.; Iowa City, Iowa; Omaha, Nebr.; North Platte, Nebr.; Cheyenne, Wyo.; Rawlins, Wyo.; Rock Springs, Wyo.; Salt Lake City, Utah; Elko and Reno, Nev.; and finally San Francisco. The total length of the route is 2,680 miles.

Since July 1, in excess of the 2-cent rate, we have had an income of approximately \$50,000 a month. In other words, during the first five months of operation this fiscal year we collected approximately \$250,000.

I want now to call your attention to what has been actually accomplished by the Post Office Department. We have extended a lighted airway from Chicago east to Cleveland, and

from Cheyenne west to Rock Springs, and we are now endeavoring to extend it from Cleveland to New York. Our lighted airway, I believe, is the most ingenious and safest that has ever been operated since aviation has been developed. We have permanent lighted airways, the territory covered by night flying. The system provides towers with 36-inch arc lights throwing a beam 150 miles. The towers are placed approximately 250 miles apart. Then in between we have 18-inch arc lights, throwing a beam 40 miles, 25 miles apart. So that at all times the machine is within the ray of these beam lights. Then at intervals of 3 miles we have a ground light, such as you see in the picture on this board. There is a picture here also of the beacon lights, which are 250 miles apart, and the other lights, which are 25 miles apart. Every 25 miles we have an emergency landing field, and that is surrounded by lights. So that the plane at all times is within gliding distance of an emergency field by reason of a very carefully thought-out landing and lighting system.

A great deal of the credit for this lighting system should be given to the Second Assistant Postmaster General, Colonel Henderson, and the superintendent of air mails, Mr. Egge. Because of that carefully thought out system we have had no accidents at night. We have been able to fly up to 97 per cent of efficiency all through the time since July 1 to date, and, as I have just stated, we have brought San Francisco within 32 hours of New York by mail. That is an actual accomplishment.

Mr. GRIFFIN. Mr. Chairman, will the gentleman yield?

Mr. LAGUARDIA. Yes.

Mr. GRIFFIN. All of these beacon lights and landing places have been established by the United States Government?

Mr. LAGUARDIA. Absolutely; and that is out of the limited appropriations that we have had. We have something to show for the money which the Congress gave us.

Mr. BLANTON. Mr. Chairman, will the gentleman yield?

Mr. LAGUARDIA. Yes.

Mr. BLANTON. The statistics show that 90 per cent of all of the commercial mail of New York is actually mailed between the hours of 1 and 7 p. m.

Mr. LAGUARDIA. That is correct.

Mr. BLANTON. And that there are fast mail trains leaving New York from 7 o'clock p. m. until 1 o'clock a. m., going in the direction of Chicago, bound westward.

Mr. LAGUARDIA. Yes.

Mr. BLANTON. And the air mail does not leave New York until 10 o'clock the next morning?

Mr. LAGUARDIA. No.

Mr. BLANTON. When these trains could have carried the mail fully the distance that the airplane could travel in order to pick it up the next morning.

Mr. LAGUARDIA. The gentleman is correct.

Mr. BLANTON. And the trains carry the mail for about one-twentieth of the cost that the airplanes do?

Mr. LAGUARDIA. One-tenth.

Mr. BLANTON. It was one-thirty-sixth when the gentleman from Illinois, Mr. MADDEN, first made his splendid speech against all the money we are wasting upon it.

Mr. LAGUARDIA. Oh, we are not wasting any money in the Post Office Department. In reply to the gentleman, let me say that we concede that for short hauls the transportation of mail by air is not successful, but when you take a line from New York to San Francisco, or from New York to Chicago, and when we will have our lighted airway from New York to Chicago, as we will very soon, we can beat the train time by 70 per cent, and that is exactly what we are trying to do. Air mail leaving New York at 10 a. m. is landed in Chicago at 6 p. m. the same day. No train can beat that. If we authorize as a permanent establishment the carrying of mail by this up-to-date modern means of transportation I assure the gentleman that we will establish in this country a system of air mail transportation which will be of great benefit to the commerce, to the industry, and to the happiness of the people of this country.

Notwithstanding the train schedules, let me read from Aviation, December 1, 1924, which will give an idea of the valuable and important mail carried by this service:

Millions of dollars each week are being sent from Kansas City to New York and other eastern cities by air mail.

The use of air mails for the transfer of money, according to the officials of the Commerce Trust Co., results in the saving of thousands of dollars in interest that would be lost if the transfers were made

by train. The bank forwards daily a letter containing all New York checks of \$1,000 or more. The amount varies from \$500,000 to \$2,500,000 in each letter.

While the Federal reserve bank has not yet adopted the use of air mail, many other Kansas City banks make all transfers to cities along the air routes by the more modern method.

The safety of sending money shipments by air also appeals to bankers and insurance companies. This factor they say makes it a desirable medium, even to such points as St. Louis, Chicago, Cleveland, and Cincinnati, only an overnight run from Kansas City by train.

Mr. SNELL. Mr. Chairman, will the gentleman yield?

Mr. LAGUARDIA. Yes.

Mr. SNELL. I am interested in the general proposition; but it seems to me that we are giving a pretty wide scope of authority to the Postmaster General. Would it not be possible to authorize something in the line of the work that he is doing at the present time, with perhaps some reasonable extension, and stop there, rather than to give him permission to establish air mail service in any part of the United States or its Territories?

Mr. LAGUARDIA. In reply to that I looked up the history of air mail legislation and we have it here. I will say to the distinguished gentleman from New York, when the first railroad mail service was established, at the time the statute passed, I think in 1838, it designated certain lines. It seems that the Postmaster General in those days had a great deal of trouble in being limited to certain routes, so in 1872 a general statute was passed authorizing the Postmaster General to designate any railway as a post road, and we have simply followed the history, the experience, and almost the wording of railway mail legislation in drafting this bill.

Mr. SNELL. Of course, that is taking advantage of a system that exists at the present time, and it is a little different in establishing a new means of transportation over a new territory.

Mr. LAGUARDIA. It does not. The air is here; we are not limited by tracks or roadbeds. There is unlimited possibility, as the result of the tests made and the experience since 1918 has demonstrated that the Post Office Department has sufficient experience that they are not going to embark in short hauls or lines where there is a distinct loss. I am sure there can be no abuse under the law.

Mr. SNELL. Right there, the gentleman does not expect it to be carried at a profit, does he?

Mr. LAGUARDIA. I do not believe there will be anything like the losses we have in other classes of mail. Let me read the Postmaster General's report, the last report for the fiscal year ended June 30, 1924, in which he says:

The appropriation for the year for the service was \$1,500,000. The expenditures were \$1,495,996, and we carried 60,001,360 pieces of first-class mail.

I think that is a pretty good showing. Out of that money we purchased considerable equipment.

Mr. SNELL. It does not state how much was received for carrying the mail?

Mr. LAGUARDIA. No.

Mr. SNELL. It does not show anything except the number of pounds.

Mr. LAGUARDIA. It shows out of that limited amount of money—

Mr. SNELL. The receipts might not have come within 40 apple trees of paying the expenses.

Mr. LAGUARDIA. We have got everything to show for it. If the gentleman has seen the report of the cost-ascertaining committee, he will see that several classes of mail were carried at a great loss, and this is nothing like that.

Mr. SNELL. If the gentleman will yield further, I do not expect them to pay the cost, but I thought the inference of the gentleman's remark was that it pretty nearly paid its own expenses.

Mr. LAGUARDIA. I believe in 1925 and 1926, when we have better equipment and more lines, it will carry its own expenses. I am sure the gentleman has confidence in the Postmaster General, and I do not believe he will question that it is now very near the point of being self-sustaining.

Mr. SNELL. I think we ought to have some limitation on the general proposition; otherwise I am in favor of the proposition.

Mr. LAGUARDIA. I really do not believe it is necessary. I am sure the general law covers that, and that no expenditures not specifically authorized in an appropriation bill could be incurred by any Postmaster General.

Mr. CRAMTON. Will the gentleman yield?

Mr. LAGUARDIA. I will.

Mr. CRAMTON. If I understand the gentleman's remark just now, I believe he stated this service was about self-supporting.

Mr. LAGUARDIA. In 1925-26.

Mr. CRAMTON. And that the bill urges that this authority be given for an extension on the theory it is practically self-supporting; am I correct?

Mr. LAGUARDIA. Exactly.

Mr. BLANTON. Will the gentleman yield for one other question?

Mr. LAGUARDIA. I will.

Mr. BLANTON. I was wondering by what chain of circumstances the gentleman from New York was selected as the administration floor leader to put this bill through the Congress?

Mr. LAGUARDIA. I will say for the gentleman's information and enlightenment that prior to last November the gentleman was chairman of the subcommittee on air mail and had given a great deal of thought and study to this subject, and in accordance with the custom of the committee he was intrusted with reporting this bill.

Mr. BLANTON. I am glad the gentleman has still the confidence of the steering committee.

Mr. LAGUARDIA. Oh, well; do not worry about that, I will say to the gentleman.

Mr. KELLY. In connection with the question asked by the gentleman from New York [Mr. SNELL], which is an important question, as to the revenues now being received from this Air Mail Service, I think it would be well to read here an official statement made by General Henderson to me under a letter which I received this morning at my request. He said:

Also starting on July 1, special postage rates have been charged. Since July 1 the income of the Post Office Department, as a result of this operation in excess of the ordinary 2-cent postage charge, has been approximately \$50,000 each month. In other words, during the first five months of this continuous transcontinental operation the department has collected approximately \$250,000 as excess postage.

In other words, they have collected \$250,000 as excess postage.

Mr. LAGUARDIA. I had already given that figure.

Mr. SNELL. How much did it cost?

Mr. KELLY. It has a clear excess of over \$600,000 a year.

Mr. SNELL. I would like to know for the information of the House how much it costs to maintain the service?

Mr. KELLY. In excess of the appropriation given?

Mr. SNELL. I thought perhaps you people knew. It is an important question, and I would like to know what it costs.

Mr. KELLY. I think it might be pertinent to say that the clear profit over the 2 cents is \$600,000 a year.

Mr. SNELL. Would the gentleman call it a clear profit if it costs \$2 to get one?

Mr. LAGUARDIA. Of course, our initial expenditures would not be a fair test, permit me to say to the gentleman, because we had to go out and survey this ground first, buy equipment, buildings, and get the service started.

Mr. SNELL. A reasonable allowance ought to be made for your equipment.

Mr. CRAMTON. Mr. Chairman, will the gentleman yield?

Mr. LAGUARDIA. Yes.

Mr. CRAMTON. In regard to receipts, if they could be shown by months, showing the decrease in the latter months as compared with July, that would be informing.

Mr. LAGUARDIA. That averages from July, I will say to the gentleman, \$50,000 a month.

Mr. LANHAM. Mr. Chairman, will the gentleman yield?

Mr. LAGUARDIA. Yes.

Mr. LANHAM. The gentleman from New York made a report on the bill H. R. 7064, a bill introduced by the gentleman from Pennsylvania [Mr. KELLY], to encourage commercial aviation and authorize the Postmaster General to contract for Air Mail Service.

Now, the conditions of that bill are such that in establishing air service between various points the Postmaster General is authorized to pay only four-fifths of the revenue derived from the service performed. Now, if this mail is being carried at a loss, does the gentleman think it will encourage commercial aviation to pay it only four-fifths of the revenue? And does he think that there is any likelihood that commercial companies will take the risk?

Mr. LAGUARDIA. Yes. If the gentleman will read the hearings he will find that all the commercial companies favor

that bill. We have a great many distant points in the United States where private contractors would be glad to come in and give daily Air Mail Service on these terms.

Mr. LANHAM. Can the Government carry the mail at a profit between those points itself?

Mr. LAGUARDIA. Well, we have the equipment now. We do not want to stifle this business entirely. The Air Mail Service between San Francisco and New York can absorb my branch lines as feeders.

Mr. LANHAM. I am trying to make the distinction between governmental operation and commercial operation.

Mr. LAGUARDIA. We have not had enough operation to make that comparison at this time.

Mr. RAKER. Mr. Chairman, will the gentleman yield?

Mr. LAGUARDIA. Yes.

Mr. RAKER. Could not the gentleman tell the committee what it costs the Government approximately, now to equip a man so that he will be capable to use an airplane?

Mr. LAGUARDIA. During the war we thought it would take about \$20,000.

Mr. RAKER. Outside of what the gentleman has said, to the effect that the expenses may be a little more than the revenue, but in a year or so he hopes the revenue will equal the expenses, is it not one of the best investments that this Government could make to have on hand a large number of well-equipped and qualified aviators? [Applause.]

Mr. LAGUARDIA. I tried to make that clear when I opened my remarks. Not only that, but this department, with its meager appropriations, has not only developed a successful transcontinental line but is training real navigators of the air. It is one thing to make spectacular circles over an air field, and another thing to make a night flight across the country.

Mr. RAKER. That is the thing I wanted to emphasize. It is one thing to practice over the fields, and another thing to navigate 3,000 miles.

Mr. LAGUARDIA. Yes.

Mr. BLACK of New York. Mr. Chairman, will the gentleman yield?

Mr. LAGUARDIA. Yes.

Mr. BLACK of New York. I wonder if any of the business interests oppose this bill at this time?

Mr. LAGUARDIA. I am trying to pass this bill.

Mr. RAKER. Mr. Chairman, will the gentleman yield for just one more question?

Mr. LAGUARDIA. Yes.

Mr. RAKER. Then every aviator who becomes competent and qualified to deal with the Government in this way or privately is an asset worth millions of dollars to this country. Is not that correct?

Mr. LAGUARDIA. Yes. I am going to read, with the permission of the House, a list of air lines throughout the world and the subsidies given to them by their respective governments.

We are not asking for a governmental subsidy. We do not want to subsidize anybody. But I will say that our Government is not doing a fraction of what other countries are doing for the development of aviation. At the present stage of aviation individuals are not buying airplanes. The lack of flying fields, the timidity of shippers and passengers, and the limited trade make it impossible for private enterprise to embark to any great extent in commercial aviation. That is only temporary. Eventually the carrying of passengers and freight will be as common as railway transportation. The gentlemen will recall the early days of the railroads. Was it not necessary then for the Government to subsidize new railroad lines? Did we not give grants of land to the various railroad companies? Did not the State give tax exemption for years and ground terminal centers? Yet we hesitate to do anything practical and definite for the promotion and development of the greatest means of transportation, the greatest invention that human mind has evolved in the history of the world. Why, gentlemen, I said a moment ago that we are not doing anything in comparison to what other countries are doing, and yet, since 1917, this Government has spent more for aviation than any other Government and has less to show for it. Most that we have to show for the hundreds of millions of dollars spent for aviation is scandals, inefficiency, graft, favoritism, investigations, special investigations, congressional investigations, reports, and statistics of what we failed to do. Let us now do something real, something definite, something concrete. Let us establish the policy of transportation of mail by airplanes or other flying machines, thereby making it a permanent institution.

To give an idea of the advancement made by other countries in the manufacture of airplanes, air motors, as well as practical use of aviation and the direct subsidies or assistance given by various nations, let me read from page 2 of the Aircraft Yearbook, 1924, published by the Aeronautical Chamber of Commerce of America (Inc.):

(From Aircraft Yearbook, 1924, p. 2)

THE LEADING MILITARY FLYING NATIONS

The four leading military flying nations of the world to-day are: France, Great Britain, Italy, and Germany; with Russia and Japan as significant potential powers looming more clearly in the near background. The commercial fields into which this policy has led are to be found in all the markets of the world, not even excluding the United States, as is seen by the following:

COUNTRIES INTO WHICH FRENCH, BRITISH, ITALIAN, AND GERMAN AVIATION HAS PENETRATED

From France: Argentina, Austria, Belgium, Bolivia, Brazil, China, Czechoslovakia, Denmark, Ecuador, Greece, Guatemala, Japan, Yugoslavia, Mexico, Peru, Poland, Rumania, Russia, Siam, Spain, and United States.

From Great Britain: Argentina, Australia, Brazil, Canada, Chile, China, Czechoslovakia, Ecuador, Egypt, India, Japan, Lithuania, New Zealand, Peru, Rumania, Russia, Spain, Switzerland, and United States.

From Italy: Argentina, Brazil, Guatemala, Yugoslavia, Peru, Russia, Spain, and United States.

From Germany: Argentina, Austria, Colombia, Denmark, Finland, Guatemala, Hungary, Italy, Japan, Latvia, Mexico, Norway, Russia, Sweden, Switzerland, and United States.

Although American commercial aviation has made numbers of attempts at exporting in not a single country of the world has it had even the passive assistance of its own Government, while in at least one region—Asia—it has been specifically barred, although the industries of France, Great Britain, Italy, and Germany have been permitted to enter.

Furthermore, our own Government, through military purchases, has, possibly unwittingly, assisted foreign aircraft manufacturers to penetrate the coveted American field and actually to establish themselves in this country.

Sixteen of the fifty-five nations, the aviation activities of which are recorded in this volume, are pursuing a deliberate policy of establishing air transport. Just as Great Britain, by means of preferential laws, mail contracts, and grants built up a preponderance in merchant shipping, which in turn became the bulwark of sea power; and just as Germany, by means of tariffs and dumping, constructed an enormous world-wide trade machine, which in the late war was the severest obstacle to allied victory, so France, Great Britain, Italy, and Germany, among others, are extending air lines, like an invisible web, across Europe and into Africa, Asia, and South America.

Air lines of the world, 1923, exclusive of the United States

Contracting or operating nation	Route	Civil air funds or subsidies by each nation
Argentina.....	Buenos Aires-Montevideo (twice daily).....	\$4,500 monthly.
Australia (British).....	Geraldton-Derby (weekly).....	Substantial
Austria (Germans and French).....	Charleville-Cloncurry (weekly).....

	Zurich-Basle-Paris-London (occasional).....	

Now, let me call your attention, gentlemen, to the report of the National Advisory Committee on Aeronautics:

A few days ago the President of the United States, in compliance with the provisions of the act of Congress approved March 3, 1915 (Public, No. 273, 63d Cong.), submitted the Tenth Annual Report of the National Advisory Committee for Aeronautics. This report in a few pages records the advancement in the art of flying, in the science of real dynamics, and the progress in practical aviation. The scientific branch of aviation in our Government is way ahead of the practical development. I recommend the report of the Aeronautics Advisory Committee to my colleagues. It is now printed as Senate Document No. 158, Sixty-eighth Congress, second session.

Let me here read what it says about the Air Mail Service:

The Air Mail Service was inaugurated May 15, 1918, the first route being between Washington and New York. It has been supported by annual congressional appropriations without having been definitely established by law.

It is a transportation service directly operated by the Post Office Department under the immediate control of the Second Assistant Postmaster General.

The personnel of the Air Mail Service totals 580, including 42 regular airplane pilots and 5 reserve pilots. The airplane pilots, as well as the other personnel, are secured direct from civil life without examination.

The flying equipment of the Air Mail Service comprises a total of 94 airplanes, of which there are 82 DH-4's, used for carrying the mails, 4 inspection airplanes in good condition, and 8 others that are not serviceable.

The air-mail stations in operation number 15, extending across the country on the route from New York to San Francisco. There is also an air mail general repair depot located at Chicago employing 115 men. At this station airplanes are overhauled and rebuilt, and spare parts are stocked for all flying equipment and ground equipment, especially that needed for night flying.

In a special report of the National Advisory Committee for Aeronautics submitted to President Harding on December 20, 1922, at his request, it was stated that—

The fundamental purpose of the Air Mail Service is to demonstrate the safety, reliability, and practicability of air transportation of the mails, and incidentally of air transportation in general. In particular it should—

(a) Develop a reliable 36-hour service between New York and San Francisco, and make that service self-supporting by creating the necessary demand for it and charging a rate between ordinary postage rates and night-letter telegraph rates.

That we have already accomplished.

(b) Keep strict records of the cost of the service and strive in every way to reduce such costs to a minimum, thereby demonstrating the value of air transportation from an economic point of view, and in particular making it possible for private enterprise eventually to contract for the carrying of mails by airplane at a rate which not only would not exceed the income from such a service, but would permit the Post Office Department to provide other postal airways to meet the demands of the people for the more rapid transportation of mail.

We provide for that in a separate bill, which we will consider to-day.

In the present undeveloped state of the art it would be wholly impracticable to operate an air mail service by contract.

The Air Mail Service at the present time is conducting an experimental demonstration of the practicability of night flying in the transportation of mail between New York and San Francisco by air. The ground equipment for night flying extends from Bryan, Ill., near Chicago, to Rock Springs, Wyo., near Cheyenne, and mail is being transported regularly on an approximate average of 41 hours for westbound mail and 36 hours for eastbound. The use of the service is gradually increasing, and the developments to date indicate that in a reasonable time the service will be fully self-supporting.

We believe it will be in a very short time.

The development of the Air Mail Service has been a credit to American aviation. It is a practical means for aiding the development of commercial aviation, as well as a means for expediting the transportation of mail. Mail is bound to be carried eventually by the fastest means available, and it is safe to say that in this age of progress the American people will demand and will support a more or less general use of aircraft in the future for carrying the mails.

That there should be opposition to establishing the policy of carrying mail through the air and establishing regular permanent air-mail lines, of course, is not surprising. Progress is always opposed, whether by science, art, mechanics, or even in politics. The same sort of opposition now presented against this bill was raised and urged in 1835 or thereabouts when we were first considering the transportation of mail by rail. The gentlemen will recall the time the Post Office appropriation bill was under consideration the first session of this Congress a point of order was raised against the item providing appropriations for maintaining the transcontinental air line. I have referred to that before, but I want to recall the attention of my colleagues to an authentic record read by my colleague from Iowa [Mr. RAMSEYER] at that time. The gentlemen will recall that he read from "A History of the Railway Mail Service," and to refresh the memory of the House and to emphasize the point which I am trying to make, that the present opposition is due to lack of vision or misinformation or neglect to be informed or perhaps inspired by those who see this new means of transportation as a real competitor that will put them out of business, as the locomotive put the stage coach out of business in the early thirties, let me read from the CONGRESSIONAL RECORD of February 12, 1924, page 2320, where you will find a few paragraphs taken from the history I have just mentioned, prepared in 1885, which was read on that day by the gentleman from Iowa [Mr. RAMSEYER]:

At this time grave doubts were entertained as to whether the railway service could ever be made acceptable to the public or the department, and frequent threats are on record that the contractors will be remanded to the stage coaches.

February 18, 1835, on account of many complaints of gross irregularity in the transportation of the newspaper mail between Philadelphia and Harrisburg and Carlisle, the contractors were informed by the department that if the irregularities were repeated "this mode of transportation by the railroad must be at once abandoned, and you will be required to resume your double daily line of four-horse post coaches between Philadelphia and Chambersburg."

March 27, 1835, a letter from the department reveals the fact that the contractors, after having used the railroad from Baltimore to Frederick for some time, ask permission to resume their trips by stage coach. On this request the Postmaster General made the following indorsement: "The contractors will go by railroad or otherwise, so that the mail is carried in due time."

A letter addressed by the department, March 28, 1835, to James Reeside, contractor, complains that "The mail from New York to Philadelphia, by railroad, is usually late, taking more than 13 hours from Jersey City. . . . This was hardly the case in the worst of bad staging."

The intimation is given to the contractor that a repetition of these evils will be followed by directions from the department to abandon this mode of conveyance and to resume his former route; that is, go back from the railway to the stages.

Dated April 30, 1835, there is a paper in the department which reads like this:

"There have been two failures of the mail from beyond Philadelphia at this city in the course of the present week, occasioned, it is said, by accidents to the locomotives on the Amboy & Camden Railroad. These occurrences are peculiarly annoying at this time and have become the subject of public notice and complaint. From the experiences we have had, the adoption of the railroad to the purpose of mail transportation is becoming every day more and more questionable. It is very apparent that it can not be relied on with that degree of certainty which is all important in the transmission of the mail, and without which disappointments occur to the public and complaints are rung in the ears of the department from every quarter of the country."

Then, too, with regard to contracts, I find in this history:

"The early notices of acceptance of proposals on lines where railroads were in course of construction were, many of them, qualified by the phrase, 'On condition that in case any arrangement shall hereafter be made under the authority of Congress to carry the mail for the whole or any part of the route on railroad, then your contract to be annulled, or there shall be a pro rata deduction, as the case may be.'"

"February 26, 1836, the contractor on route between Augusta and Charleston is authorized to make a subcontract with the railroad company if he desires to do so. The letter notifying the contractor says: 'The Postmaster General will not object to your making a subcontract with the railroad company, provided all the offices be supplied, and provided the expedition furnished by the railroad involve no extra expense.'"

We can truly say history repeats itself, and our predecessors were as afraid of the railways as some of my colleagues seem to be afraid of the airplanes. Still, we have the benefit of nearly a hundred years of advancement; and while there might have been some justification for the timidity and lack of vision on the part of our predecessors of the thirties, there surely can be no justification for any well-informed, well-read gentleman who wants to keep abreast of the times.

We have a demonstration, a living, existing demonstration, of what can be accomplished, so that there is no reason to hesitate any longer.

Mr. FROTHINGHAM. Will the gentleman yield?

Mr. LAGUARDIA. Yes.

Mr. FROTHINGHAM. Are the subsidies which the gentleman speaks of as being granted in various countries given for carrying the mail?

Mr. LAGUARDIA. Absolutely.

Mr. FROTHINGHAM. Are they given also to concerns which carry passengers?

Mr. LAGUARDIA. They are given to private concerns which carry both passengers and mail.

Mr. FROTHINGHAM. Do they have to carry the mail in order to get the subsidy?

Mr. LAGUARDIA. No. For instance, Buenos Aires-Montevideo, \$4,500 monthly; in Belgium, Brussels-Paris, Brussels-London, Brussels-Amsterdam, and Congo River, Belgian Congo, 8,100,000 francs, and Magdalena River, between Barranquilla and Cartagena, \$100 a trip, and so on. I have the whole list here.

Mr. BLANTON. Will the gentleman yield?

Mr. LAGUARDIA. Yes.

Mr. BLANTON. Is the gentleman and his party in favor of granting subsidies to corporations?

Mr. LAGUARDIA. Which party?

Mr. BLANTON. And if they are, since when?

Mr. LAGUARDIA. They are not. I will say to the gentleman from Texas that personally the gentleman from New York is not urging a subsidy; he is doing exactly the opposite and is trying to impress upon the gentleman from Texas the fact that you appropriate \$20,000,000 and \$50,000,000 to the Army and the Navy for experimental purposes, for the training of personnel and for being prepared, while here you appropriate \$2,000,000 a year, or \$3,000,000 a year, to be used for useful purposes. In this way you train personnel and do something real. It is not a subsidy; it is an economy, a governmental economy in the highest sense of the word.

Mr. SEARS of Florida. Will the gentleman yield?

Mr. LAGUARDIA. Yes.

Mr. SEARS of Florida. In reading section 2, it would appear to me that the Postmaster General could authorize other routes, but I notice from your report that this bill simply authorizes the Postmaster General to carry on the present Government owned and operated Air Mail Service.

Mr. LAGUARDIA. He has not the money to do anything else.

Mr. SEARS of Florida. But the bill would lead us to believe that he could establish other routes.

Mr. LAGUARDIA. But he has not the money to do it, I will say to the gentleman.

Mr. SEARS of Florida. I am glad the gentleman is frank, because I thought that must be the case. In the letter written by the Postmaster General to the chairman of the Post Office Committee, it is stated that a bill was introduced by Mr. KELLY on the 18th of February and that this bill was not reported until May 13. I was wondering why the great Post Office Committee struck out section 3 and did not incorporate Mr. KELLY's bill in this bill.

Mr. LAGUARDIA. The Post Office Department asked to have those bills separately reported. The next bill to be called up will be the bill to which the gentleman refers, and we will have another day because this is our first day.

Mr. KETCHAM. Will the gentleman yield?

Mr. LAGUARDIA. Yes.

Mr. KETCHAM. Before the gentleman concludes, I would like to have him make a statement with reference to the reliability of the schedules that have been maintained in operating the Air Mail Service.

Mr. LAGUARDIA. Ninety-seven per cent.

Mr. KETCHAM. Also the freedom from accidents.

Mr. LAGUARDIA. We have had no serious accidents. Probably we should touch wood.

Mr. SNELL. Will the gentleman yield?

Mr. LAGUARDIA. Yes.

Mr. SNELL. Are the aviators doing this work Army or naval aviators?

Mr. LAGUARDIA. No; they are paid by the Post Office Department.

Mr. SNELL. They have nothing to do with the Army or the Navy?

Mr. LAGUARDIA. No. I will say to the gentleman from Texas—

Mr. SNELL. I am not from Texas.

Mr. BLANTON. It would be an honor to the gentleman if he were.

Mr. LAGUARDIA. Pardon me. Then I will say to the gentleman from New York that I have been trying to urge since the Sixty-sixth Congress, when I left the Army and came back to the House, the use of the aviators we may have in the Army and the Navy, assigning them for duty with the Post Office Department, but that has not been agreeable to the Army or the Navy.

Mr. SNELL. Would that result in cutting down the expense of the service?

Mr. LAGUARDIA. Of course it would, but they will not do it. Now, gentleman, I hope you will give this bill your very serious consideration. It is absolutely necessary and it is in keeping with the progress of the times. Now, gentlemen, everything that is progressive has opposition, whether it is in science, medicine, or even in politics. I may be wrong on some of my political views; I may be wrong on some of my economic ideas, but on this subject I am right, and I hope the House will agree with me, at least on this bill. [Applause.]

Mr. BLOOM. Will the gentleman yield?

Mr. LAGUARDIA. Yes.

Mr. BLOOM. I would like to know whether there is any limit to the expenditures which the Postmaster General may make?

Mr. LAGUARDIA. Yes; that is under the control of Congress. Now, gentlemen, in closing I just want to say that I believe that the congratulations of this House should be extended to Col. Paul Henderson, Second Assistant Postmaster General, and his able general superintendent of air mail, Mr. C. F. Egge. These men have succeeded in developing a transcontinental service. The praise of this House is also deserved by the cooperation given them by the zone superintendents, pilots, mechanics, radio men, and the personnel of the Air Mail Service. The esprit de corps of this service is excellent; their efficiency of the highest. Together they have demonstrated to the world the great possibilities of aviation for useful, peaceful purposes. We are proud of them all. They have done well. [Applause.]

Mr. BLANTON. Mr. Chairman, I rise in opposition to the bill.

The CHAIRMAN. Does any member of the committee desire time in opposition to the bill? If not, the gentleman from Texas is recognized for one hour.

Mr. BLANTON. Mr. Chairman and gentlemen, I have but one interest in this bill, and that is in behalf of the people of the United States. The inference that was made by the gentleman from New York that some railroads might have objection to this bill had no application to me whatever. I have no connection—and never have had in my life, of any kind, nature, or description—with any corporation or with any railroad. I own not a dollar's worth of stock in any corporation and never have owned a dollar's worth of stock in a corporation. I oppose this bill only because I feel sure that it is against the best interests of the people.

Is this bill as restricted as the gentleman from New York seems to think it is simply because the Postmaster General has not yet been given the money? Why, a man does not have to be a scientific expert to know what this language means. It plainly authorizes the Postmaster General to operate and maintain new air mail routes anywhere in the United States. I know that the committee can and will push this bill through. They had that purpose in mind, I presume, when they favorably reported this bill introduced by the gentleman from New York [Mr. LAGUARDIA]. They knew they would have the help, at least, of two parties to put it through—the Republican Party and his new party—because he and the gentleman from Wisconsin [Mr. BERGER] constitute the new party here. Therefore, with added strength thus given to the bill they bring it here.

I want to read this bill:

That the Postmaster General shall arrange the air routes on which the mail is carried by airplane or other flying machine.

SEC. 2. The Postmaster General is authorized to operate and maintain air mail service in any part of the United States and Territories that he may from time to time designate.

You see that this bill authorizes him to operate and maintain new routes everywhere at his own discretion, without coming to Congress. Does not that language mean it? Why, the language is as plain as English can make it.

Mr. LAGUARDIA. Will the gentleman yield?

Mr. BLANTON. In just a moment, and then I will yield all time the gentleman wants me to yield. Now, I want to submit this to the Committee on Rules, whose distinguished chairman [Mr. SNELL] honors the committee here to-day with his presence. [Laughter and applause.]

The gentleman knows, because he is well versed in such matters, that if the Postmaster General were to see fit tomorrow to establish a mail route from Washington down through Atlanta, Ga., to New Orleans and Dallas, Tex., and then on to El Paso, he would have a right to do it under this bill, and Congress would have to pay its debts. He could enter into a contract after this bill is passed even though it might cost twenty times as much as the contracts with railroads now call for, and we would have to furnish the money to pay the bill because we authorize him here in this bill "to operate and maintain" new air-mail routes without limit, and he has a right to do everything that we authorize.

Mr. BOYLAN. Will the gentleman yield for a question?

Mr. BLANTON. I promised first to yield to the gentleman from New York.

Mr. LAGUARDIA. I am sure the distinguished legislator, the gentleman from Texas, would not want to go on record as saying that this bill would authorize the Postmaster General to do anything he wanted to, when the gentleman knows he is limited to the appropriations which we give him.

Mr. BLANTON. When the Congress passed the war act authorizing the President to conduct war and to use the resources of this Government, we did not first have to appropriate the billions of dollars before he made contracts. We did that afterwards. The President entered into the contracts, however, under that authority.

Mr. LAGUARDIA. The gentleman would not press that as a proper comparison.

Mr. BLANTON. Whenever we authorize the Postmaster General "to operate and maintain new air-service routes without limit," the presumption to all contractors all over the United States is that we are going to pay the bill. I may not be as distinguished a lawyer in the country as the gentleman from New York, because I do not hail from New York—

Mr. LAGUARDIA. It is a good place to be trained.

Mr. BLANTON. It is a good place to be trained in subtlety sometimes.

Mr. LAGUARDIA. Let us analyze that. Will the gentleman yield for a moment?

Mr. BLANTON. I am used to reading language for what it means, and that is what this language means.

Mr. LaGUARDIA. Will the gentleman yield?

Mr. BLANTON. I yield to the gentleman. I did not mean to be offensive, because I think a great deal of the gentleman from New York.

Mr. LaGUARDIA. The gentleman knows that the Secretary of War and the Secretary of the Navy are authorized by law to buy aviation equipment or contract for battleships and yet they are limited to the appropriations which Congress gives them.

Mr. BLANTON. The gentleman from New York knows that this is legislation—

Mr. LaGUARDIA. Exactly.

Mr. BLANTON. Legislation that authorizes the Postmaster General to do anything he wants to do in Air Mail Service.

Mr. LaGUARDIA. Within the limits of the appropriation that Congress may make.

Mr. BLANTON. But the gentleman did not put that language in this bill, which is language that appears in lots of legislative bills. If the gentleman had wanted to restrict the Postmaster General, he should have added the language, "within the limitations of appropriations made by Congress"; but the committee did not do that, and the gentleman has not offered any amendment to that effect.

Mr. CARTER. Will the gentleman yield for a question?

Mr. BLANTON. I yield to the gentleman.

Mr. CARTER. Would not this be the case: This bill authorizes the Postmaster General to contract for mail routes?

Mr. BLANTON. Yes.

Mr. CARTER. And having contracted for them, could Congress in good faith refuse to make good those contracts?

Mr. BLANTON. That is the very point I am making. The clear, incisive, legal mind of the gentleman from Oklahoma has seen the point I am trying to make here, and that is exactly the situation, gentlemen.

Whether you gentlemen want to put this great power into the hands of the Postmaster General or not, I do not know. I know one thing. I know that if the party of the gentleman from New York [Mr. LaGUARDIA]—that is, the political party now constituted here in the persons of the gentleman from New York and the gentleman from Wisconsin [Mr. BERGER]—was in power, the Republican steering committee would never for one minute pass this bill and thus place this power in the hands of one of their Cabinet officers; and I do not say that offensively. That is quite a growing party. It now has two representatives here. But I can go further than that, because I sat here in this House and watched Republicans when my side was in power. If the Democrats of this country, who have ably shown their ability to run a government rightly, were now in power, the Republican steering committee on the other side of the aisle would never let a bill like this pass, giving such unlimited power to any Cabinet officer of that party. Oh, because you are now in power, you pass this bill and think it is all right. I think a great deal of your Postmaster General personally. He has never yet turned me down on any reasonable proposition I have requested of him.

Mr. LaGUARDIA. That is more than the gentleman from New York can say.

Mr. BLANTON. He has never turned me down on a reasonable proposition, because I do not ask for anything except what is reasonable and proper. I do not ask him for patronage jobs like the gentleman does.

Mr. LaGUARDIA. We do not get any, either, and the gentleman knows it.

Mr. BERGER. Will the gentleman yield?

Mr. BLANTON. Yes.

Mr. BERGER. This simply shows that the Republican Party has good reason to trust the Socialist Party and it could not trust the Democratic Party. [Laughter.]

Mr. BLANTON. Oh, but the gentleman from Wisconsin could never make the American people believe that.

Mr. BLACK of New York. Will the gentleman yield?

Mr. BLANTON. Yes.

Mr. BLACK of New York. Of course the Republican Party will trust the Socialist Party with the air.

Mr. BLANTON. Yes; with the air, but with nothing else.

Mr. BERGER. But not with the hot air of the gentleman.

Mr. LOWREY. Will the gentleman yield?

Mr. BLANTON. I yield.

Mr. LOWREY. The gentleman from New York spoke a while ago of carrying air by mail, and now the gentleman from Texas speaks of running a line of this kind to Dallas, Tex.—

Mr. BLANTON. Oh, the gentleman from Mississippi now is getting facetious, and I have not time to yield for facetiousness.

Mr. LOWREY. Does not the gentleman think that even a Republican Postmaster General would be too wise to establish a line to carry air to Texas? [Laughter.]

Mr. BLANTON. He certainly would not go through the swamps of Mississippi or over them. [Laughter.]

I want to say this to my colleagues without taking up further time: This bill ought not to pass without some kind of restriction. If you are going to pass it at all, you ought to put a limitation in here providing that the money spent shall be within the limitations of the appropriations made by Congress. You ought to do that to protect yourselves, to protect the Appropriations Committee and the people.

Mr. RAMSEYER. Will the gentleman yield for a question on that point?

Mr. BLANTON. On that point; yes.

Mr. RAMSEYER. There is to be another bill brought up under which the Postmaster General is authorized to make contracts with private carriers without any cost to the Government, and that will have nothing to do with the appropriations made by Congress.

Mr. BLANTON. But every bill should stand on its own footing. The gentleman may not get a chance to pass another bill.

Mr. RAMSEYER. Oh, yes; we will.

Mr. BLANTON. What is the use of passing legislation by piecemeal? Why do you not cover the situation in one bill? I am surprised that the Republican steering committee would permit a bill of this kind to be taken up in the absence of the gentleman from Illinois [Mr. MADDEN], whose time now is taken up in the Appropriations Committee in properly framing the appropriation bills. I do not believe that you could pass this bill if the gentleman from Illinois [Mr. MADDEN] was on the floor. I heard the finest argument from him I ever heard in my life when you first started in this air mail service from New York to San Francisco; he came on the floor and defeated it. He showed that it cost then—regardless of what it costs now—about 36 times as much as under the present mail contract with the fast trains coming out of New York every night.

Here is the foolish situation we find ourselves in. Most of the commercial mail from New York—at least 90 per cent of it gets into the post office by 7 o'clock p. m., and the mail for California stays in the post office all night when a dozen fast trains that night are coming out of New York going toward Chicago and could be in Chicago the next morning at 9.30 o'clock. The mail stays there all night, then it is picked up by airplane and leaves at 10 o'clock the next morning and is carried west. I believe you should save that air run from New York to Chicago. The mail that leaves New York at 4 o'clock in the afternoon gets into Chicago the next morning at 9.30. It gets to Chicago the next morning before the airplane leaves New York.

Mr. LaGUARDIA. Will the gentleman yield?

Mr. BLANTON. Yes.

Mr. LaGUARDIA. The fast train for Chicago leaves New York at 3.40 and gets to Chicago about 9 o'clock the next morning. We leave New York at 10 o'clock and the air mail gets to Chicago at 6 o'clock that day.

Mr. BLANTON. Why can not you New Yorkers deposit this mail that you want transported to San Francisco in the post office by 3 o'clock p. m. and let it go from New York to Chicago on this Broadway Limited fast mail train that leaves New York at 3.45 p. m. and arrives in Chicago at 9.30 the next morning?

Mr. LaGUARDIA. The mail that leaves at 10 o'clock gets into Chicago that night at 6.

Mr. BLANTON. Let me ask the gentleman how much commercial mail is mailed in New York in the morning prior to 10 o'clock? Very little, and the gentleman knows it. Some of the business houses in New York are not open much before 10 o'clock in the morning.

Now, I am not against experimental airplane service conducted in a proper manner. I will not raise my voice against the experimental service between New York and San Francisco. That is all right. It has been of service and worth the money to the Government as an experimental matter. But I know what will come from the passage of this bill. I know that the friends of the Postmaster General, political and otherwise, would get his ear, bring their tremendous influence to bear upon him, and make him see their way, and under this authorization he could establish and operate and maintain new contracts for as many new air mail routes as he saw fit. Now, you colleagues ought to hesitate before you pass this bill.

Mr. LAGUARDIA. If the restriction was put on this bill would the gentleman vote for it?

Mr. BLANTON. I will if you put the restriction on, as long as the gentleman from Illinois [Mr. MADDEN] is chairman of the Committee on Appropriations. [Applause.]

Mr. LAGUARDIA. Mr. Chairman, I yield to the gentleman from Michigan [Mr. McLEOD].

Mr. McLEOD. Mr. Chairman and gentlemen, for many months I have hoped that some bill tending to encourage commercial aviation would be reported favorably by a House committee, that the House of Representatives might be given an opportunity to discuss the necessity of going to the limit in every way possible in behalf of commercial flying in the United States.

The two bills reported back to the House by the Committee on the Post Office and Post Roads, and which you now have under consideration, are steps in the right direction. One of them legalizes the granting of contracts by the Postmaster General, and its passage will result in the establishment of air mail lines with private individuals and planes under contract to carry the mail.

One of the most important questions of the day is the extension of aviation, both military and commercial. Other countries have recognized this fact and have spent huge sums on aerial development. I am at a loss to understand why the United States, the largest and most prosperous of all nations, should be reluctant to enter into competition with lesser nations in perfecting and extending aviation. This country at the present time has set the pace for commercial enterprise in everything except aviation. It has made it extremely difficult for its neighbors to keep this pace; yet at the same time it is ignoring the most important commercial enterprise—it is allowing countries unable to compete in every other commercial field to far surpass it in the most important one.

While other countries, notably England, are doing everything in their power to bring about ventures into the commercial aviation field by private individuals and corporations, the United States has been standing idly by, making no progress, making no effort to keep pace, contented with a dilapidated and inadequate Army and Navy air force, and thoughts of commercial aviation yet unborn.

The desire to compete with other nations in the commercial aviation field is grasping a firm hold on public sentiment. A start is all we need, and in a short time we will set the pace in aviation just as we have kept it in other commercial fields.

The passage of the two bills pending before you to-day will be only a start—but the right kind of a start—and the complete awakening will see established passenger and freight air lines second to none in the world; large corporations engaged in commercial aviation, and a fleet of planes that in times of stress may be converted into battle types in an hour.

There are a number of persons in the United States who are interested in commercial aviation and who would spend large sums in the establishment of air lines and in the development of commercial aviation. All they need is a little encouragement—recognition by the Government of this country of the value and necessity of commercial aviation to a great and prosperous Nation.

This bill may properly be termed the first official recognition of commercial aviation by the United States, and therefore this is an historical occasion. Its significance is very broad in that it marks the entry of our country into better and larger fields of endeavor.

I would like to see this bill passed unanimously, and I would like to see more bills of this nature, wider in scope, perhaps, reported from committees and passed by the House. I am eagerly looking forward to the day when this body of wise legislators will enact into law a bill providing for governmental aid to those responsible individuals and corporations who are willing to establish air lines for the transportation of passengers and freight. Such action by the House of Representatives and the Senate is inevitable. It is bound to come eventually, because it is extremely necessary to the successful operation of commercial planes. It would only be in keeping with the general policy of the Government practiced in the past to encourage entry by private capital into new fields. It would be only what other countries have done and are doing for commercial aviation; countries which are much less prosperous than the United States. England has done it. France has done it. And why, if you please, should this Nation be backward?

General Mitchell, of the Army Air Service, for whom I have the highest admiration, has advanced a plan whereby, if I properly understand it, the Government would operate air lines for the carrying of passengers and freight, and upon the lapse of a certain period would sell these lines to private individuals and corporations.

While General Mitchell's idea is along the right line, I feel that such action on the part of the United States would involve a large expenditure. It would compel our country to spend vast sums during the period prior to the time when the lines might be placed on a paying basis. I am afraid that this plan would not be in keeping with the commendable economy policy of the present administration, nor would it meet with the approval of the citizens, already overburdened with taxes, who are crying tax reduction.

Would it not be a better plan to set aside a sum—say, for example, \$100,000,000—and provide that the Secretary of Commerce, after careful investigation, loan amounts not exceeding two-thirds of the total amount required to establish lines, the individual or corporation desiring such governmental fiscal aid providing the rest and agreeing to repay the Government the amount borrowed within a period of seven years? I am of the opinion that in that time every line established upon the provisions of such a bill would be on a paying basis and that those who took advantage of the governmental-aid clause would be in a position to refund the amount borrowed. In this manner the Government would lose nothing. The money it loaned to responsible corporations and individuals would be secured by the holdings of these individuals and corporations. Overtaxed citizens would not be called upon to pay for this new venture and it would serve to put this Nation on a basis with other nations in the commercial aviation field. It would, indeed, have the desired results, and there are many who would avail themselves of the Government's offered aid.

Perhaps this is not the best plan that could be advanced after careful study of the aviation field, but it is the most economical, and it is a plan that would meet with the approval of the general public and would permit this country to immediately enter into aerial competition with its neighbors.

Let us not call this plan a subsidy plan. It is not that. I want to make this point clear, because I realize that those who are opposed to the encouragement of commercial aviation would sing the subsidy song and would try in every way possible to make the public believe that such a plan, if adopted, would cost them large sums of money. It is merely a plan advanced for the purpose of providing Government aid or loans for commercial aerial development, these loans to be repaid in seven years. I am fully aware that were such a plan put in bill form it would meet with a great deal of opposition, but I am also fully confident that there are enough men in this lower House who know the necessity of encouraging passenger and freight air lines to put such a measure through.

Let us study carefully the aviation subject—it is very broad—and let us do something immediately to enter the air-plane into the commercial aviation field. It is essential that this be done at once, for every day we delay it is putting us that much further behind other countries in the aviation field.

My reason for supporting the two bills before us to-day is that they are stepping-stones to greater ventures in commercial aviation. Their consideration here, I feel confident, will cause wise legislators to awaken to the crying need of encouraging further commercial aviation, which they have considered lightly in the past. For that reason and the reason that they are good bills they warrant the support of every Member of this House.

I congratulate the chairman and the members of the Post Office Committee on their handling of these bills, and sincerely trust that many more bills encouraging commercial aviation will be reported favorably by House committees in the future, and that the House itself may see fit to enact many of them into law.

Mr. BLANTON. Mr. Chairman, I yield to the gentleman from Massachusetts [Mr. CONNERY].

Mr. CONNERY. Mr. Chairman, during the previous session of Congress some of you may remember that one day I stood on the floor and advocated the raising of this appropriation, and the distinguished chairman of the Appropriations Committee [Mr. MADDEN] made a point of order against this very thing. At that time the gentleman from New York [Mr. LAGUARDIA] and several others of us service men were trying very hard to put this provision through in favor of air mail. I look upon this as not only a proposition for carrying the mails from New York to San Francisco and Chicago and St. Louis or any other place, but I look upon it as a provision connected with the national defense. I am glad to see in the naval appropriation bill and the Army appropriation bill appropriations for real aviation in the United States and real aviators. We who were in France during the war know what it means to be up in the Argonne and see these German planes come over and point out our position to the Germans, and we with no adequate planes to fight them. We had

plenty of American aviators ready to go up in the air but we had no airplanes for them to go up in, while the French and the Belgians had plenty of them.

I do not want to see any other war. I do not want to see any war at any time, and I hope that we will never have any war at any time, but if it does come I do not want to see it come when we are in the same position. I do not want to be placed in the position where the enemy will have the airplanes, the eyes to show our position, and we not be in a position to have any adequate planes for American aviators.

That is what we went through in the last war and we do not want to go through it again. It seems to me that the economic side of the question should be very plain to us as Members of Congress. Whether or not we pass this legislation at this time, the airplane service is bound to come. I was reading an article last night in the Liberty Magazine which said that while Congress is passing legislation, tinkering with railroads, or is not, inventions take care of these things, and whether Congress likes it or not, the different inventions take care of these propositions, and that progress comes along and that before Congress passes legislation the thing is all settled. Whether we pass this legislation or not at this time, it is coming. Let us have vision. The day is coming when the mails are going to be carried all over the United States by airplanes. The day is coming when we are going to have express packages carried by airplane. We are going to have Zeppelins or different kinds of planes like Z-3 carrying these things.

Mr. LAGUARDIA. We take packages now up to 50 pounds.

Mr. CONNERY. Yes. We ought to have vision and be glad to pass legislation like this, that gives opportunity not only from an economic standpoint, but from the position of national defense, to have our aviators and airplanes ready, provided not only by the United States, but if necessary by private corporations—and those of you who have heard me in the past know that I have never been very strong and have never fought very much for large corporations. But I am for anything, whether private or Government-owned, that will take care of our national defense and see that we have trained aviators ready to carry the mail in time of peace and in time of war to keep enemies off these shores. [Applause.]

Mr. LAGUARDIA. Mr. Chairman, I yield five minutes to the gentleman from Michigan [Mr. CLANCY].

Mr. CLANCY. Mr. Chairman, it seems to me that there is an almost anxious effort upon the part of the gentleman from Texas [Mr. BLANTON] to play upon the prejudices that some Members of the House must feel against the gentleman from New York [Mr. LAGUARDIA] because of his political affiliations. He says that just two parties, Progressive and Republican, are for this measure. In rebuttal I wish to call attention to the fact that the Second Assistant Postmaster General, in charge of this item, Mr. Henderson—who, by the way, is a son-in-law of the gentleman from Illinois [Mr. MADDEN], whom Mr. BLANTON quoted against the air mail—said that the credit for putting through the measure last year belonged to Detroit and in a large measure to the Detroit Board of Commerce. Through the efforts of at least one Member of the Michigan delegation, and he a Democrat, who made a fight for it, the item was kept alive after being struck out on a point of order in this House.

The matter went to the Senate, and it was put through there at double the amount it was killed at in the House, and when it came back here for a vote at \$2,750,000 there were enough Members on this side of the House at least, with Members on the other side, to insure the continuation of the United States Air Mail Service with all its equipment across the continent, and to insure the vocations of its aviators, many of whom risked their lives in the World War, and are accounted World War heroes. Thus the Democrats materially helped to save the United States air mail last year.

I hold in my hand a picture taken from the Detroit Free Press of an airplane just made in an airport, donated by Henry Ford and Edsel Ford, and sold to the United States Air Mail Service for operation between Cleveland and Chicago.

In a report made to the President by the United States National Advisory Council it is declared that the United States air mail is the most important development of aviation to-day, and aviation is one of the most tremendous facts before the public of America or of the world to-day.

The Air Mail Service of the United States is the most important development we have in aviation as stated, and this legislation merely seeks to protect it against any capricious Member who wishes to make a point of order and kill this

essential enterprise. The fact is that if you get aviation to the point where our private capital will invest, then America will lead the world, because, as General Mitchell, of the Army Air Service, says, America has the personnel, the industry, based on the automotive industry and the raw material, as no other country has. So far as the personnel is concerned, in the United States Air Mail Service are to be found the finest aviators in the world.

Henry Ford and Edsel Ford, Detroit, and the Detroit Board of Commerce are very much interested in this development. You do your part in carrying along the United States Air Mail Service, which, as the reports to the President said—and President Coolidge concurred with this—is the nub of the whole aviation situation, and many of you will live to see the day when the bulk of the freight and passenger business in the United States is carried by airplane and other air machines.

Europe has seen the necessity of building up and encouraging aviation, and through subsidies, which are quite taboo in our system of government, is building up various lines which operate on the Continent. Some other lines reach out from Cairo to Bagdad, under the English system, and in Europe we have the international line from Berlin to Moscow under the German-Russian system. The United States is the birthplace of aviation and we should not fail to take advantage of the opportunity that is presented to us. Aviation will develop particularly the great States of the West and of the South, who have not the population nor the industry to support railroads. [Applause.]

The CHAIRMAN. The time of the gentleman from Michigan has expired.

Mr. LAGUARDIA. Will the gentleman from Texas use up some of his time now?

Mr. BLANTON. I do not care to use any further time.

Mr. LAGUARDIA. Then, Mr. Chairman, I call for the reading of the bill.

The CHAIRMAN. If no one else desires to discuss the bill, the Clerk will read.

The Clerk read as follows:

Be it enacted, etc., That the Postmaster General shall arrange the air routes on which the mail is carried by airplane or other flying machine.

Mr. MOORE of Georgia. Mr. Chairman, I move to strike out the last word. Representing the first district of Georgia, I desire to say that the folks whom I represent are in favor of this kind of legislation. [Applause.] The board of trade down there recently passed resolutions insisting that I should get busy up here, and the people that I represent down there want this kind of legislation. It seems to me that this thing is coming. Those of you who stand in the way of it to-day will see in the course of time the mistake that you are making here to-day. When the rural-carrier routes were first started they met with much opposition in this country. The delivery of the mail to the people on the farms was a slow process, and all of these new processes are slow. People hang back. They get in ruts, and they do not want to try a new thing.

Just a few years ago in Georgia I was mayor of a little town when the automobile first came out. There were three of them in the town, and along came a great petition, signed by lots of folks in that town, asking that those things be denied the use of the streets. If the mayor and the council had agreed with those petitioners where would we be in the march of progress to-day? We saw the thing was coming, and we decided to let the automobiles stay in Statesboro, Ga., where I happened to be mayor at that time. [Applause.] The man who stands here to-day and opposes the carrying of the mail by airplane is just simply getting in his own shadow, and that is all there is about it. You might as well come along and vote for this kind of legislation. It is just a question of a short time.

Now, I believe in economy as much as anybody and I believe in protecting the taxpayers of this country, but here is a thing needed, a thing we need in this country, and that is men who can go in the air and manage a plane. You talk in this country about not fighting, about not having any more wars! You might just as well get down and crawl in a hole and stay there. Wars will go and come. We have had them for 6,000 years and will have them in the future. I am in favor of training the boys of this country to handle the airplane, because the future fighting is going to be done very largely in the air. Let us have mail by air. [Applause.]

The CHAIRMAN. Without objection, the pro forma amendment will be withdrawn. There was no objection.

The Clerk read as follows:

Be it enacted, etc., That the Postmaster General shall arrange the air routes on which the mail is carried by airplane or other flying machine.

Sec. 2. The Postmaster General is authorized to operate and maintain air mail service in any part of the United States that he may from time to time designate.

The committee amendments were read, as follows:

Section 2, page 1, line 6, insert the word "Sec." Page 1, line 8, after the word "States," insert the words "and Territories."

The question was taken, and the amendments were agreed to.

Mr. CRAMTON. I offer an amendment at the close of the paragraph to insert the language I send to the Clerk's desk.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Amendment by Mr. CRAMTON: At the end of line 9, page 1, insert: "Provided, That additional air routes shall not be arranged, operated, or maintained until transportation by air mail has passed the experimental stage and is substantially self-supporting."

Mr. CRAMTON. Mr. Chairman, at the present time we have under operation an experimental route from New York to San Francisco. We have an appropriation for that purpose this year of \$2,750,000. I do not know of anyone who is opposed to this experimentation or any necessary experimentation. The bill before us proposes to give the department authority to extend this service anywhere in the United States. That means an expenditure would be authorized that would run into many, many millions of dollars. The gentleman from Georgia [Mr. MOORE], who has just spoken, expressed the pride of his community in having this service. Every community will feel the same way and will call upon their Representatives to have this service extended. When Mr. MADDEN spoke on this subject in the House on the 7th of June, in connection with the proposed Boston extension, he said:

The plan has been to run an air mail service between New York and San Francisco simply for experimental purposes. Anything more than that is pork barrel, ought not to be done, ought not to be tolerated.

He said at that time:

Mr. Speaker, to extend the Air Mail Service to Boston is nonsense [applause], nothing more or less. In the first place, air mail service is impracticable on any distance less than 1,000 miles. If you can not run the Air Mail Service for 1,000 miles or more, you had better not run it at all, because the trains will get the mail to points covering a distance of 500, 600, or 700 miles quicker than the airplanes will, because the trains run at night, while the airplanes run only in the daytime, except on the specified route that is lighted between New York and San Francisco.

The plan has been to run the Air Mail Service between New York and San Francisco simply for experimental purposes, and anything more than that is pork barrel, ought not to be done, and ought not to be tolerated. You can not carry mail at \$5.35 a ton-mile as a commercial proposition, and that is what it has been costing. It is true they have reduced the cost to \$2.40 a ton-mile, and it may be true that some time in the distant future they will reduce that cost to 60 cents a ton-mile; but to say that we will send mail by air instead of by train over a route where the train can arrive sooner than the airplane can is not only expensive but unwise and nonsense. It ought not to be done, and this bill ought not to pass. [Applause.]

The present time to carry mail by air costs \$2.60 per ton-mile. It is claimed if the planes carry the full capacity of 1 ton that will reduce the cost per ton-mile to a little over 60 cents, six times the rail rate. The increased rate for this special service, it is alleged, will make the service self-sustaining, but that will depend upon there being enough of the special-rate mail to fill the planes to capacity.

The proposed New York to San Francisco program gives ample opportunity for this sort of experiment.

The fact is at the present time they only carry about one-fourth of that anticipated capacity, so they have not yet reached the point where it cost them, in my judgment, anything less than \$2, as against 11 cents by rail. Now, there are some gentlemen very ready to raise some question of a Member's motives; but, as we all seek to do our duty here, we have to face any aspersion of that kind that may arise.

I have no objection now to extending this mail service just as the importance of the service justifies it and the revenue produced by the demand for it makes it reasonably more self-supporting. But I do not believe just to satisfy local pride that we ought to pay \$2 per ton-mile if it can be done for 11

cents and when existing mail routes will give equally good service.

Mr. HULL of Iowa. Will the gentleman yield?

Mr. CRAMTON. I do not want to take up much time.

Mr. HULL of Iowa. Does the gentleman mean to estop an extension of the service if it is not self-sustaining by his limitation?

Mr. CRAMTON. I want to place the limitation here until it is substantially self-supporting.

Mr. RAMSEYER. If the gentleman will permit, the interpretation of the amendment would be when it passes the experimental stage.

Mr. CRAMTON. The balance of the amendment clears that, when it is substantially self-supporting.

Mr. RAMSEYER. Who is to judge of when it passes the experimental stage; Congress?

Mr. CRAMTON. The Postmaster General ought to be able to judge whether it is self-supporting or not.

Mr. RAMSEYER. Does the amendment so state?

Mr. CRAMTON. Yes—

Mr. RAMSEYER. Does it state the Postmaster General is to judge?

Mr. CRAMTON. No. This bill gives authority to the Postmaster General.

Mr. LaGUARDIA. Will the gentleman yield?

Mr. CRAMTON. Later, if you please. The present service extends from New York to San Francisco and benefits the entire country. If the business men mail a letter in Detroit at night, it can connect with the Air Mail Service at Cleveland or Chicago in the morning and get the benefit of the Air Mail Service beyond that point. An air-route extension to Detroit might flatter Detroit but would not improve their mail facilities.

What will happen if this bill goes through unamended is that every gentleman here who represents a city district will feel impelled to force an extension of the service to his city. The gentleman from Savannah is not the only one. I have newspaper clippings showing that there is a movement fostered by the boards of trade and chambers of commerce in every large city in the United States along that line.

The CHAIRMAN (Mr. LEHLBACH). The time of the gentleman from Michigan has expired.

Mr. CRAMTON. Mr. Chairman, may I have five minutes more?

The CHAIRMAN. The gentleman from Michigan asks unanimous consent to proceed for five minutes more. Is there objection?

There was no objection.

Mr. CRAMTON. Gentlemen join together, as is always the history of those matters, and force appropriations; \$5,000,000, \$10,000,000, any amount. The bill of the gentleman from Pennsylvania [Mr. KELLY], which I suppose will follow this one, is a much better bill, and if this bill were framed along similar lines, no one could object to it. Every purpose for military use in war, every purpose for the development of aviation, would be served by the development of commercial aviation as proposed by the Kelly bill for use of private lines in the feeders for the Air Mail Service. When it comes to commercial aviation and its development, the Kelly bill reported by this committee provides that private carriers shall receive not more than four-fifths of the revenue and net one-fifth to the Treasury. But in this bill on lines to be Government operated the lid is off entirely. They will cost under present conditions five times the revenues or more, and a network of such lines may spread over the country.

If my amendment does not accomplish the purpose that the language in the Kelly bill accomplishes, it might be modified. The proposition of the gentleman from Texas [Mr. BLANTON] would not cure the situation at all. It would simply invite combines here in behalf of appropriations.

Money is needed in the Postal Service. A bill is now pending in this Capitol to increase the pay of postal employees some \$60,000,000. That bill is being held up because the postal revenues are not sufficient to care for it. When a bill is proposed to increase the postal rates to produce the needed additional \$60,000,000 to take care of that, there is opposition to the increased rates. There is opposition to the increase of pay without increase of rates. What right have we, when this question of adjustment of pay for postal employees is under way, to put an added burden of \$3,000,000 or \$5,000,000 or \$10,000,000 upon the Postal Service?

Mr. BOYLAN. Mr. Chairman, will the gentleman yield?

Mr. CRAMTON. Yes.

Mr. BOYLAN. Would the gentleman be willing to transfer some of the funds voted for the enforcement of prohibition to this service?

Mr. CRAMTON. If I were willing, it would probably be the first time the gentleman from New York and I had agreed upon any proposition relating to prohibition. I think there should be some more substantial reason for it than that. [Laughter.]

I hope the amendment which I have offered may be adopted in order to safeguard the Treasury. I was not last session opposed to an appropriation for the existing experiment. I am not now opposed to the experimental route, but I was opposed to combines for extensions everywhere. I have had my mail flooded by appeals from motor manufacturers in Detroit asking me to support that measure. We make the best planes and the best motors in Detroit that are made anywhere. But we ought to act here from the national viewpoint and not be influenced wholly by locality. [Applause.]

I will ask unanimous consent, Mr. Chairman, to extend my remarks in the Record and include the remarks of the gentleman from Illinois [Mr. MADDEN].

The CHAIRMAN. Is there objection to the gentleman's request?

There was no objection.

Mr. GALLIVAN rose.

The CHAIRMAN. The gentleman from Massachusetts is recognized.

Mr. GALLIVAN. Mr. Chairman, this amendment does not mean anything, after all, and it is hardly worth while to take up the time of the committee in opposing it.

It says:

Provided, That additional air routes shall not be arranged and operated or maintained until transportation of air mail has passed the experimental stage and is successfully self-supporting.

Well, the gentleman from Iowa [Mr. RAMSEYER] asked the gentleman from Michigan [Mr. CRAMTON], who is the sponsor of this amendment, who was to be the official to say whether or not the transportation of mail through the air had reached the successful stage, and he was quite unable to answer.

As a member of the subcommittee of the Committee on Appropriations, which only to-day finished the drafting of the appropriation bill to take care of all of our postal facilities, may I say to the gentleman from Michigan and to those who are giving me attention that the one man in the Post Office Department who ought to know, the Second Assistant Postmaster General, Col. Paul Henderson—and, parenthetically, I might add that there is no finer official in the entire Government of this Republic—has convinced our committee that the transportation of mail by air has passed the experimental stage, and Col. Paul Henderson is substantiated by the Postmaster General. If they can not convince a committee of Congress, and if that committee subsequently can not convince this Congress, then it would be for Congress to cancel any further appropriations for air-mail transportation.

But, as I said in the beginning, this amendment itself means absolutely nothing, and I am rather surprised that my distinguished friend from Michigan, who usually, except when he talks on prohibition [laughter], says things worth while, should take up the time of the committee at this hour in presenting such an amendment to the House. [Applause.]

Just here I want to read an editorial from the Indianapolis News of a few days ago which is rather appropriate to this whole subject:

AVIATION'S FUTURE

When Col. Paul Henderson, Second Assistant Postmaster General, was placed in charge of the department's Air Mail Service he became convinced that unless night flying were possible the movement might as well stop. No other country had tried night flying, except in war and under the pressure of military necessity. Night service was established and has been maintained with few interruptions since the initial flight in August, 1923.

Colonel Henderson says that the first consignments obviously were "publicity junk." People wished to patronize a novelty. Then the freak mail stopped and the weight of mail carried diminished. After a full business men began to appreciate the economic value of saving time by air mail, and there has been a constant increase in bulk, with the result that the planes now are loaded to about 75 or 80 per cent of their capacity.

The Air Mail Service will succeed, says Colonel Henderson, only as the business world realizes its importance. He believes that the country should think more about commercial aviation than aviation as an arm of national defense. "National defense in the air," he says in the New York Times, "must be the outgrowth of commercial aviation; never can commercial aviation, in an economic sense, grow out of military flying. Therefore, instead of persistently harping on the need for more appropriations so that it can be profitable to manufacture aircraft, we must work out some national policy whereby the public will find it profitable to use aircraft. And having done this, we shall have solved

the whole problem." Colonel Henderson throws out the hint that although aviation is flourishing abroad, largely because of heavy government subsidies, it is, from a commercial standpoint, practically on the verge of collapse in this country. As will be noted, he does not wish Federal appropriations. He wishes the public to use airplanes for business profit, and in that event there would be plenty of reserve in time of war—a very sensible view.

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Michigan [Mr. CRAMTON].

The question was taken, and the amendment was rejected.

The CHAIRMAN. The Clerk will read.

Mr. BLANTON. I offer an amendment, Mr. Chairman.

The CHAIRMAN. The gentleman from Texas offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. BLANTON: Page 1, line 6, after the words "Postmaster General", add a comma and insert the following: "within the limit of appropriations now or hereafter to be made therefor by Congress."

Mr. RAMSEYER. Mr. Chairman, I make a point of order that we have passed that section.

Mr. BLANTON. No; we have not passed section 2.

The CHAIRMAN. Nothing has been read beyond section 2 of the bill.

Mr. RAMSEYER. I withdraw my point of order.

The CHAIRMAN. The point of order is withdrawn.

Mr. BLANTON. Mr. Chairman, the author of this bill says there is no intention on his part or on the part of the committee to permit the Postmaster General to go beyond the authorizations of appropriations made by Congress. If there is no such intention, why not pass this amendment?

Mr. SNELL. Mr. Chairman, will the gentleman yield?

Mr. BLANTON. Yes.

Mr. SNELL. Is it not a fact that the law now prohibits any executive officer of the Government from making a contract where there is no appropriation or a contract beyond the appropriation?

Mr. BLANTON. Not where by legislation we specially authorize him to do something, such as is done in this bill.

Mr. SNELL. In these general appropriation bills there is a general authorization carried in the bills, but it is the distinct law of Congress that an executive officer must not exceed the appropriations made in carrying out any proposition.

Mr. BLANTON. But that applies to appropriation bills.

Mr. SNELL. I know; then this would not add anything if we passed it again.

Mr. BLANTON. But this is a legislative bill, and it specifically authorizes the Postmaster General to do a specific thing; that is to operate and maintain any and all air mail routes he may determine upon.

Mr. SNELL. But all of these things are original and definite authorizations, and then they are appropriated for afterwards, and there is a definite law against a Cabinet officer going beyond the amount appropriated.

Mr. BLANTON. If I thought like the gentleman from New York, I would not offer this amendment. But my experience since I have been here is this: That whenever Congress specifically authorizes a bureau chief to do a specific thing he can and does go ahead and do that very thing and make it a charge upon the Government.

Mr. WAINWRIGHT. Will the gentleman yield?

Mr. BLANTON. Yes.

Mr. WAINWRIGHT. I want to ask the gentleman whether he thinks it is perfectly plain that this bill, if enacted into law, will authorize the Postmaster General to contract unlimitedly within his discretion?

Mr. BLANTON. That is my idea.

Mr. WAINWRIGHT. The bill provides that he shall operate and maintain. Does that mean—

Mr. BLANTON. To save time I want to ask the gentleman from New York [Mr. SNELL] one question.

Mr. SNELL. I want to ask the gentleman from Texas whether he meant what he just said, namely, that it authorizes him to contract without regard to the appropriations made.

Mr. BLANTON. I do think that. Now, I want to ask the gentleman from New York this question: If there were any attempt on the part of the Postmaster General to go beyond the limit of the appropriation allowed him by the Appropriations Committee, would the gentleman stop him?

Mr. SNELL. I would try to; I certainly would.

Mr. BLANTON. The gentleman would try to stop him?

Mr. SNELL. I certainly would.

Mr. BLANTON. Then I withdraw the amendment, Mr. Chairman.

The CHAIRMAN. Without objection, the amendment is withdrawn.

There was no objection.

The Clerk read as follows:

3. The Postmaster General is authorized to contract with any individual, firm, or corporation for the transportation of mail by aircraft between such points and in accordance with such regulations as he may prescribe.

With the following committee amendment:

Strike out all of section 3.

Mr. BOYLAN. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. Does the gentleman from New York move to strike out the last word of the committee amendment?

Mr. BOYLAN. Yes.

The CHAIRMAN. Then the gentleman from New York is recognized for five minutes.

Mr. BOYLAN. Mr. Chairman, I want to say that I am for this bill, and I hope it will pass, but another thing I would like to say is that last June, before we adjourned, we raised the hopes of the employees of the Postal Service; we painted a picture for them which led them to hope for a happy Christmas. In a few days we will disperse from the august and historic precincts of this Hall of the House of Representatives to our firesides and in the bosoms of our families enjoy the festive times and days of Christmas and the succeeding holidays. How will these postal employees enjoy their holidays, overworked, as they will be, by the excessive demands made upon them, made by you and by me and by every other citizen in this great country. The little hope they had in looking forward to a bright and cheerful Christmas has been dissipated by Congress doing nothing to bring about what this House voted to do before Congress adjourned. Are we going to break those promises? Are we going to forget what we said to these men during the campaign? Is the honor of basking at the feet of the illustrious and genial President at the breakfast table to result in dissipating the promises we have made to these faithful employees? Are we not going to give them at least the hope that the \$300 increased pay we promised and voted for them will materialize in the near future?

Mr. STENGLE. Will the gentleman yield?

Mr. BOYLAN. I will.

Mr. STENGLE. It is not the intention of my colleague to create the impression that this delay in giving justice to the postal employees is due to any inactivity, voluntarily performed, on the part of this House, is it?

Mr. BOYLAN. Well, by indirection; yes.

Mr. STENGLE. Is it not a fact that the body at the other end of the building has gone to sleep and that we are wide awake? [Applause.]

Mr. BOYLAN. Very true, but when I look around and see the influential men sitting in this body—the distinguished gentleman from Ohio [Mr. LONGWORTH] and the distinguished gentleman from New York [Mr. SNELL]—

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. BOYLAN. Mr. Chairman, I ask unanimous consent to proceed for two minutes more.

The CHAIRMAN. The gentleman from New York asks unanimous consent to proceed for two additional minutes. Is there objection?

There was no objection.

Mr. BOYLAN. I know that if the powerful influences that are wielded by Members of this House would go over to the other side of the Capitol and put an entering wedge under some of the illustrious gentlemen holding down seats there, then action might be had.

Mr. LA GUARDIA. Will the gentleman yield?

Mr. BOYLAN. Yes.

Mr. LA GUARDIA. I understand the other body has agreed to vote on the bill the gentleman is discussing on January 5.

Mr. BOYLAN. I think the vote should be to-morrow in order that a Christmas joy and a Christmas spirit might be brought home to the employees of our great Postal Service, and having the knowledge that it was coming would make the day better and happier and would inculcate in the minds of the faithful employees a greater desire to perform service satisfactory to the country.

Mr. GALLIVAN. Mr. Chairman, I ask unanimous consent to revise and extend the remarks just made by myself.

The CHAIRMAN. The gentleman from Massachusetts asks unanimous consent to revise and extend the remarks he has just made. Is there objection?

There was no objection.

Mr. LA GUARDIA. Mr. Chairman, I make the same request.

The CHAIRMAN. The gentleman from New York makes the same request. Is there objection?

There was no objection.

Mr. RAKER. Mr. Chairman, I rise in opposition to the committee amendment.

I rise primarily to ask the gentleman in charge of the bill the theory they have in striking out section 3.

Mr. LA GUARDIA. Because the purpose of section 3 is covered by language contained in the bill introduced by the gentleman from Pennsylvania, which has been favorably reported.

Mr. RAKER. And the Postmaster General reports favorably upon it?

Mr. LA GUARDIA. He does.

Mr. RAKER. In substance, that is the same language as section 3, is it not?

Mr. LA GUARDIA. It is substantially the same as section 3, except it provides that the Postmaster General shall pay not more than four-fifths of the income on any particular line.

Mr. RAKER. That is just a technical perfection. Do you expect to call up that bill this afternoon?

Mr. LA GUARDIA. We do.

Mr. RAKER. You are going to call it up and pass it before we adjourn to-day?

Mr. LA GUARDIA. We hope so.

The CHAIRMAN. The question is on the committee amendment.

The committee amendment was agreed to.

Mr. LA GUARDIA. Mr. Chairman, I move that the committee do now rise and report the bill to the House with sundry amendments, with the recommendation that the amendments be agreed to and the bill as amended do pass.

The motion was agreed to.

Accordingly, the committee rose; and the Speaker having resumed the chair, Mr. LEHLBACH, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill (H. R. 6942) establishing transmission and carrying of mail by airplane and flying machines, and had directed him to report the same back to the House with sundry amendments, with the recommendation that the amendments be agreed to and the bill as amended do pass.

Mr. LA GUARDIA. Mr. Speaker, I move the previous question on the bill and all amendments thereto to final passage.

The previous question was ordered.

The SPEAKER. Is a separate vote demanded on any amendment? If not, the Chair will put the amendments in gross.

The amendments were agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

On motion of Mr. LA GUARDIA, a motion to reconsider the vote by which the bill was passed was laid on the table.

Mr. LA GUARDIA. Mr. Speaker, by direction of the Committee on the Post Office and Post Roads I call up the bill (H. R. 7064) to encourage commercial aviation and to authorize the Postmaster General to contract for air mail service.

Mr. BLANTON. Mr. Speaker, I make the point of order we have not a quorum.

The SPEAKER. The gentleman from Texas makes the point of order that there is no quorum present. It is clear there is no quorum present.

Mr. SNELL. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, when the following Members failed to answer to their names:

[Roll No. 11]

Abernethy	Browne, Wis.	Crowther	Favrot
Ackerman	Buckley	Cummings	Fenn
Aldrich	Bulwinkle	Curry	Fisher
Anthony	Burdick	Dallinger	Fitzgerald
Ayres	Butler	Davey	Foster
Barkley	Byrnes, S. C.	Dickstein	Frear
Beedy	Carew	Domlnick	Fredericks
Black, Tex.	Clark, Fla.	Doyle	Freeman
Bowling	Clarke, N. Y.	Dyer	French
Brand, Ga.	Cole, Ohio	Eagan	Funk
Brand, Ohio	Cooper, Ohio	Edmonds	Gambrell
Britten	Corning	Evans, Mont.	Garrett, Tenn.
Browne, N. J.	Croll	Fairchild	Gasque

Geran	Lilly	O'Sullivan	Sherwood
Glatfelter	Lineberger	Oliver, N. Y.	Simmons
Graham	Logan	Paige	Smithwick
Green	McDuffie	Parker	Snyder
Greenwood	McKenzie	Peavey	Sparring
Hawley	McNulty	Peery	Stevenson
Hoch	Madden	Phillips	Sullivan
Holiday	Magee, Pa.	Porter	Swoope
Howard, Nebr.	Mead	Pou	Tague
Hudson	Merritt	Purnell	Taylor, Colo.
Hull, Tenn.	Michaelson	Quayle	Thomas, Ky.
Johnson, S. Dak.	Miller, Ill.	Rainey	Tincher
Johnson, W. Va.	Mills	Reed, N. Y.	Tinkham
Kahn	Montague	Reed, W. Va.	Tydings
Kindred	Mooney	Roch	Voigt
King	Moore, Ill.	Robison, Ky.	Ward, N. Y.
Kunz	Morgan	Rogers, Mass.	Ward, N. C.
Kurtz	Morin	Rogers, N. H.	Weller
Langley	Morris	Sabath	White, Kans.
Larsen, Ga.	Nelson, Wis.	Sanders, Ind.	Williams, Mich.
Larson, Minn.	Nolan	Sanders, N. Y.	Wolff
Lazaro	O'Brien	Schall	Wright
Lee, Ga.	O'Connor, N. Y.	Shallenberger	Zihman

The SPEAKER. Two hundred and eighty-seven Members have answered to their names—a quorum.

Mr. SNELL. Mr. Speaker, I move to dispense with further proceedings under the call.

The motion was agreed to.

The doors were opened.

RIVERS AND HARBORS APPROPRIATION BILL

Mr. DEMPSEY, chairman of the Committee on Rivers and Harbors, by direction of that committee, reported the bill (H. R. 10894, Rept. No. 1053) authorizing construction, repair, and preservation of certain public work in rivers and harbors, and for other purposes, which was read a first and second time and, with accompanying papers, referred to the Committee of the Whole House on the state of the Union.

CONTRACT AIR MAIL SERVICE

Mr. LAGUARDIA. Mr. Speaker, I call up the bill H. R. 7064, to encourage commercial aviation and to authorize the Postmaster General to contract for air mail service.

The SPEAKER. The gentleman from New York calls up the bill H. R. 7064 on the Union Calendar. The House will automatically resolve itself into Committee of the Whole House on the state of the Union.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union, with Mr. LEHLBACH in the chair.

Mr. LAGUARDIA. Mr. Chairman, I ask unanimous consent that the first reading of the bill be dispensed with.

The CHAIRMAN. The gentleman from New York asks unanimous consent that the first reading of the bill be dispensed with. Is there objection?

Mr. BLANTON. Reserving the right to object, I want to ask the gentleman from New York if he does not think the bill ought to be read for the information of the House, in view of the fact that it is a great departure from the present policy of the Government carrying its own mail?

Mr. LAGUARDIA. The bill is short and can be read while the gentleman is talking.

The CHAIRMAN. The Clerk will read the bill.

The Clerk read the bill as follows:

Be it enacted, etc., That this act may be cited as the air mail act.

SEC. 2. That when used in this act the term "air mail" means first-class mail prepaid at the rates of postage herein prescribed.

SEC. 3. That the rates of postage on air mail shall be not less than 10 cents for each ounce or fraction thereof.

SEC. 4. That the Postmaster General is authorized to contract with any individual, firm, or corporation for the transportation of air mail by aircraft between such points as he may designate at a rate not to exceed four-fifths of the revenues derived from such air mail, and to further contract for the transportation by aircraft of first-class mail other than air mail at a rate not to exceed four-fifths of the revenues derived from such first-class mail.

SEC. 5. That the Postmaster General may make such rules, regulations, and orders as may be necessary to carry out the provisions of this act: *Provided*, That nothing in this act shall be construed to interfere with the postage charged or to be charged on Government operated air-mail routes.

Mr. LAGUARDIA. Mr. Chairman, I yield 10 minutes to the gentleman from Pennsylvania [Mr. KELLY].

Mr. KELLY. Mr. Chairman and gentlemen of the committee, I sincerely hope that this measure which is really a companion or rather supplemental measure to the one just passed, may speedily be enacted.

It is the result of more than two years study and conference on the part of the Post Office Committee. We have had the leaders in the aviation industry, the officials of the department, and public-spirited citizens before us at extended hearings,

and this bill seems to be the consensus of opinion of all interests as to the most practical bill we can frame.

Our efforts in this new field resulted in the formulation of principles underlying the proper establishment and encouragement of commercial transportation of mail by aircraft.

These might be stated as follows:

1. The controlling factor in the initiation of any service by or through Government agencies is assumed to be the public interest in or demand for such service.

2. If regular, reliable, and safe transportation of mail by aircraft performs a service more valuable in certain respects to a portion of the public than is rendered by existing modes of mail transport, it is reasonable to assume that such a service will be supported by that public, who will readily subscribe a fair proportion of the increased value which the service yields them in order to support and sustain it. Anyone who believes honestly in the future of aeronautical transportation must subscribe to the belief that mails can be transported by aircraft in manifold instances in such ways as to perform a service of much greater value than can be rendered by existing modes of transportation. If this were not true, then the basis of hope in the future of air transport is false, or one is forced to admit that the present state of the art is inadequate.

3. If the public, however, can not be encouraged to patronize a reliable and safe air mail service offered at reasonable rates, it may be fairly assumed that such lack of support is evidence that said air mail transportation does not perform a more valuable service than existing modes of transportation.

4. The transport of mail by aircraft being more costly in almost every instance than its transport by other means, it follows that if it does not perform a more valuable service to the public, which they recognize and for which they are willing to pay, there is no reason to support it, except upon a subsidized basis, for military or other purposes.

5. Therefore a bill to authorize contracts for air mail service should give encouragement to the establishment of routes where the carriage of mail by aircraft will result in an obvious and direct value to the public, and the rates prescribed should represent a fair proportion of this special value sufficient to encourage and sustain the commercial operation of such routes.

6. Now, the transport of mail by aircraft during the hours between the close of one business day and the opening of the next, where the points of origin and destination of the mail are separated such a distance that an equivalent service can not be or is not performed by other modes of transportation, represents at once a service wherein the public recognizes an obvious and direct value. Moreover, the value of such service to the public may often be so great that the cost of the service becomes immaterial or of secondary importance.

7. Where the distance between the points of origin and destination of the mail is great enough to permit of a saving of more than one business day by air transportation the value of such service to the public is proportionately greater, as is the cost of rendering such service, and the rates prescribed may be correspondingly higher. The advantages of air mail service are more obvious the longer the routes. The bill therefore should provide for the encouragement of proper extensions to routes wherever a contractor shall have demonstrated satisfactory service in his initial operations.

8. A charge for the transportation of mail by aircraft, based on the value to the public of such air transport, results in a direct stimulus to the contractor to strive to render a service of maximum possible benefit to the public. In addition, it relieves the Postmaster General from exercising an arbitrary decision as to what air routes shall be authorized, placing the burden upon the parties seeking the contract to demonstrate to the satisfaction of the Postmaster General that they propose to carry mail by aircraft in such a way as to result in an obvious public benefit. It is to be expected that the Postmaster General will cooperate with the contractor in the encouragement of public patronage in such ways as are open and proper to him.

9. The initial charge should be sufficiently high, so that any revisions which in the future may be deemed advisable will result in lowering and not in increasing the rates. The proportion of the revenue from air mail allotted to the contractor should be sufficient to attract responsible organizations of sufficient capital and enterprise to assure continued success, while the proportion allotted to the Post Office should be adequate to provide for facilities for collection and delivery.

Now, Mr. Chairman, we have endeavored to carry out these principles in this bill.

We authorize the Postmaster General to contract with private companies and fix the maximum compensation at four-fifths of the revenues.

We fix a minimum postage rate of 10 cents an ounce and permit the making up of a capacity load out of ordinary first-class mail.

The gentleman from New York raised the question of the cost of carrying the mail by Government planes. I did not have at hand what I was looking for, certain testimony which appeared in the hearings on the bill of 1922, when a somewhat similar measure was under consideration. At that hearing Mr. Shaughnessy, Second Assistant Postmaster General, requested the passage of such a bill. His statement was as follows:

The CHAIRMAN. Have you any figures on the cost of this carrying mail from New York to San Francisco by air mail now?

Mr. SHAUGHNESSY. Yes; we know what it costs.

The CHAIRMAN. What does it cost?

Mr. SHAUGHNESSY. We put it this way: In the last fiscal year, charging every dollar that could be charged against the air mail properly, it cost \$1.43 a mile to operate it. This fiscal year, right now, charging every dollar against the air mail that can be charged, it is costing us \$1.04 a mile to operate.

The CHAIRMAN. For how many pounds, on the average?

Mr. SHAUGHNESSY. On the average, it would not be over 350 pounds—about 350 pounds. We can increase that next year to perhaps 800, but right now it is 350.

The CHAIRMAN. And 350 pounds cost \$1.04?

Mr. SHAUGHNESSY. \$1.04, or 3 mills a pound a mile.

Now, we established through the transcontinental route a rate of \$1.04 for carrying 350 pounds of mail. That was the basis we had in fixing the rate of postage and compensation to contractors.

The Postmaster General and the department do not expect to own all the airplanes in this country which are to be used in transportation of mail. It would not result in the greatest benefit for national defense. What we desire to do is to get private companies to put their ships in the air carrying the mail at a profitable rate to them and the Government and make the improvements that must be made in aircraft, and that is the basis of this bill.

As to what may be accomplished, I give the following memorandum prepared for me by the Post Office Department some years ago:

PITTSBURGH AND KANSAS CITY

By rail: Direct route, 902.94 miles; west, 24 hours and 50 minutes; east, 30 hours and 25 minutes. Via Cincinnati, 931.84 and 936.04 miles; west, 33 hours and 30 minutes; east, 32 hours and 50 minutes.

By air: Pittsburgh via Cincinnati and St. Louis to Kansas City, 850 miles; 11 hours.

TRAIN SCHEDULES AND MILEAGE (Central time shown)

WESTBOUND

Direct route: Leave Pittsburgh 8.40 a. m., arrive St. Louis 1.30 a. m.; 620.50 miles. Leave St. Louis 2.05 a. m., arrive Kansas City 9.30 a. m.; 282.44 miles. Total miles, 902.94.

Via Cincinnati: Leave Pittsburgh 7.50 a. m., arrive Cincinnati 5 p. m.; 310.40 miles. Leave Cincinnati 9 p. m., arrive St. Louis 7.45 a. m.; 339 miles. Leave St. Louis 9 a. m., arrive Kansas City 5.20 p. m.; 282.44 miles. Total miles, 931.84.

EASTBOUND

Direct route: Leave Kansas City 9 a. m., arrive St. Louis 5.45 p. m.; 282.44 miles. Leave St. Louis 7.45 p. m., arrive Pittsburgh 3.25 p. m.; 620.50 miles. Total miles, 902.94.

Via Cincinnati: Leave Kansas City 9 a. m., arrive St. Louis 5.45 p. m.; 282.44 miles. Leave St. Louis 8.56 p. m., arrive Cincinnati 7.30 a. m.; 339 miles. Leave Cincinnati 8.30 a. m., arrive Columbus 12.05 p. m.; 123.70 miles. Leave Columbus 12.40 p. m., arrive Pittsburgh 5.50 p. m.; 190.90 miles. Total miles, 936.04.

AIR ROUTE SCHEDULE AND MILEAGE

(Central time shown)

WESTBOUND

Leave Pittsburgh 4.30 a. m., arrive Cincinnati 8 a. m.; 270 miles. Leave Cincinnati 8.15 a. m., arrive St. Louis 12.15 p. m.; 330 miles. Leave St. Louis 12.30 p. m., arrive Kansas City 3.30 p. m.; 250 miles. Total miles, 850.

EASTBOUND

Leave Kansas City 5 a. m., arrive St. Louis 8 a. m.; 250 miles. Leave St. Louis 8.15 a. m., arrive Cincinnati 12.15 p. m.; 330 miles. Leave Cincinnati 12.30 p. m., arrive Pittsburgh 4 p. m.; 270 miles. Total miles, 850.

ADVANCED DELIVERY OF MAIL

West: From New York, New England, New Jersey, Pennsylvania, and Washington, D. C., for delivery in Cincinnati, 22 hours; for Kentucky and Tennessee, 12 hours; for St. Louis and connections, 12 to 16 hours; for Kansas City and connections, 16 to 20 hours. Mail from

Cincinnati for delivery in St. Louis advanced 16 hours, and Kansas City and connections 12 to 16 hours. Mail from St. Louis for Kansas City and connections advanced 6 to 16 hours.

East: Mail from Kansas City for delivery in St. Louis advanced 20 hours; for Cincinnati, 16 hours; for Pittsburgh and connections, 24 hours. From St. Louis for delivery in Cincinnati, 16 hours, and for Pittsburgh and connections, 12 hours. From Cincinnati to Pittsburgh and connections, from 7 to 12 hours.

That means it would be possible to cut the time down for a trip of 850 miles from Pittsburgh via Cincinnati and St. Louis to Kansas City from 33 to 11 hours. In other words, there would be a saving of 22 hours in the delivery of mail between those points. At a cost of not \$1.04, which it is costing the Post Office Department, but a higher rate, estimating it \$1.50 for 350 pounds carried 850 miles, there would be a cost to the contractor of \$1,275. That is, he would have to pay that much out for gasoline, pilot, equipment, and so forth. If he could get the entire load made up of this special air mail at 10 cents an ounce, he could make a big profit, but the trouble is that we are faced with the practical proposition that probably at no place in the United States can we start out and get a load of 350 pounds of air mail. That is something that has to be worked up. At first we would start in probably with 50 pounds, and it would be impossible for the airplane company to carry 50 pounds alone and live commercially. So we came to the next practical proposition of filling up the load with regular first-class mail, so that he would be sure of a capacity load, and on that we would pay him exactly the same percentage that we pay him on the other. If we could give him half a load at the 10-cent rate and half at the 2-cent rate, he would get a little over cost probably; but if we could give him the total, he would be able to get about \$1,000. The companies agreed that that would furnish a fair basis at least for an experiment.

It does not interfere with the rate on the route which we have provided for in the bill just passed. That is a transcontinental route, established by the Government, with every detail of it handled by the Government.

Mr. BLACK of New York. Mr. Chairman, will the gentleman yield?

Mr. KELLY. Yes.

Mr. BLACK of New York. What is the term contemplated for these contracts by the Postmaster General?

Mr. KELLY. The matter will be in the hands of the Postmaster General. The suggestion was made that there ought to be a contract for four years, the same as made by the star-route contractors at the present time. That is a matter that will have to be worked out. We could not say that it should be one year, two years, or four years. We had to leave it finally to the discretion of the Postmaster General, and that discretion will be exercised by him in the light of the knowledge and experience gained.

Mr. Chairman, this is a most appropriate day on which to pass this bill. Just 21 years ago to-day, on December 17, 1903, the Wright brothers made their first successful flight by airplane.

We are now embodying, I hope, that great triumph into the permanent Postal Service of the United States.

It is the longest stride we have ever made in binding the Republic into a neighborhood by the lessening of time and distance. By rail and the stagecoach, in the fifties, the mail was carried across the continent in 565 hours average time. In 1850 it required 3 days by rail and 21 days by stage, or 24 days from New York to San Francisco. In 1860 two and one-half days by rail from New York to St. Joseph, Mo., brought the mail to the eastern terminus of the pony express; from there by horse to San Francisco took eight more days.

In 1876, when locomotives were more efficient, a special train carried mail from New York to the west coast in 100 hours. Continued improvement in rolling stock, rails, and locomotives brought the time of the transcontinental mail by special train down to 87 hours in 1923. This is the acme of the speed by rail, but the average time by rail is 120 hours from coast to coast. By relay flying, day and night, the air mail made the trip in less than 27 hours. Moreover, during the week of experimental flying the air mail made a round-trip flight, including a lay-over of 11 hours and 36 minutes at San Francisco, in 18 hours and 47 minutes less time than the minimum time required for a letter to travel one way by train.

What is in effect a daily mail service between New York and San Francisco is one of those achievements which are so spectacular that it is almost impossible for the lay mind to grasp its significance. To be able to cut from three to five business days from the time required to do business by mail between any two industrial centers is a performance of incal-

culable benefit and one which, as time goes on and its advantages become better known, is but the forerunner of a network of such day and night air-mail routes which will be established as a result of popular demand throughout the country.

The passage of these two measures will make this one of the greatest days for aviation in the history of the United States. [Applause.]

Mr. GRIFFIN. Mr. Chairman, I rise in opposition to the bill.

The CHAIRMAN. Is the gentleman a member of the committee?

Mr. GRIFFIN. No.

The CHAIRMAN. The gentleman is recognized.

Mr. GRIFFIN. Mr. Chairman and gentlemen, we are at the parting of the ways. The Government has borne the burden and the heat of the day in developing the airplane industry. As Major LAGUARDIA indicated in the pictures which were on the floor a few moments ago, while the other bill was under consideration, the so-called companion bill, you saw how the Government has laid out millions of dollars in establishing beacon lights and in constructing hangars and landing places from the Atlantic to the Pacific.

It has developed the airplane industry not only in the Postal Service but in the War Department, in the Navy Department, and even in another branch of our Government—the Bureau of Standards. Altogether we are spending millions of dollars annually on airplane experimentation. The Government has paved the way.

Now we have come to the point where airplane navigation has been developed to such an extent that it is safe—in the opinion of some—to turn the industry over to profiteers and commercial exploiters. There have been hovering about Washington for several years men who have mulcted this Government out of vast sums during the war in unscrupulous airplane adventures. The Government's experimentation has made the air feasible. These foxes have been watching the tree blossom and ripen. They have only one idea, and that is that the fruit is ready to be eaten. They want to grab the air mail transportation service.

Mr. CONNERY, of Massachusetts, in his very fine speech while the other bill was under consideration, said that we ought to have vision with respect to aviation. That is true. Airplane navigation has passed the experimental stage, and in a few years will not only be carrying the mail but property and persons as well. In short, we ought to see that we are in the beginning of a great epochal transformation of transportation. Now we are confronted with this proposition: Shall we, by our action here to-day, dedicate this Nation to a policy which proved to be so unsatisfactory in the past with respect to railroad transportation?

Comparison is made to the opposition which developed in 1838 against the suggestion of allowing the railroads to carry the mails. My opposition does not come in that category. That ancient opposition was against any innovation. On the contrary, I take a liberal and progressive attitude in regard to air transportation. I am for the innovation, but I want the Government—not private, selfish interests—to profit by it.

We ought to retain the business of air transportation, as we have paid dearly for it, and ought not to relinquish it just as it is on the eve of a great and profitable development. After having spent millions of dollars in perfecting it, is it right that we should turn this great industry in its infancy over to men who will use it for their personal profit and mulct the Government and the people alike? I think, gentlemen, we ought to halt; we ought to hesitate before we proceed further. The gentleman from Pennsylvania [Mr. KELLY] confesses that the Government does not intend to continue the business of air mail transportation. Well, if the Government did not intend to carry on the air mail transportation, why did it commit us to such a tremendous outlay in expenditure?

Mr. SNELL. Will the gentleman yield for a short question?

Mr. GRIFFIN. I yield first to the gentleman from Illinois.

Mr. DENISON. The gentleman is making a very interesting talk about profiteers, saying they want to get hold of this service. Now, I am interested in that statement, and I would like the gentleman to be a little more specific if he can and inform the committee who the men are—the profiteers—who are trying to get this service. Can he give some of them, so we may know better in respect to this matter?

Mr. GRIFFIN. The gentleman has doubtless seen the Year Book of the Aeronautical Chamber of Commerce. In that is a list of scores of airplane manufacturers and concerns that are claiming to be in a position to carry mails as well as persons and property.

Mr. DENISON. Does the gentleman know of any firms not doing a legitimate business? Are they not doing a legitimate business?

Mr. GRIFFIN. Of course, they are doing a legitimate business. I do not object to their business aspirations, but I do not think that it is good policy for this Nation to surrender to these men the postal facilities of our Nation.

Mr. DENISON. Does the gentleman think we are surrendering to them the control of the postal facilities of the Nation by making contracts for the delivery of mail? We make contracts for the delivery of mail on the surface of the ground.

Mr. GRIFFIN. In my opinion, to be frank with the gentleman, I think we are opening the door for a repetition of the star-route scandals.

This bill is not drawn carefully; it is not drawn with sufficient concern for the welfare of this country or for the Government interest, but permits the Postmaster General now, of his own volition, at his own discretion, to hand out these air-mail contracts for the carrying of the mail. There ought to be limitations put upon it; and furthermore, he should not be permitted to allow these men to take four-fifths of the proceeds of the service.

Mr. SNELL. Mr. Chairman, will the gentleman yield?

Mr. GRIFFIN. Yes.

Mr. SNELL. From the statement as to the cost that has been made here, does the gentleman think there is a prospect of letting out a great amount of contracts for the future?

Mr. GRIFFIN. Indeed I do, because these figures are rather padded. The gentleman from Pennsylvania [Mr. KELLY] has disclosed the admission of the postal authorities as to the expense of carrying the mail. I have other figures that are even less than that, figures obtained from the same source; that is, from Mr. Shaughnessy, quoting 75 cents.

Mr. KELLY. A year ago it went up to \$1.04.

Mr. GRIFFIN. And it might go up to \$2.04 for the purposes of this bill.

Mr. MURPHY. Mr. Chairman, will the gentleman yield?

Mr. GRIFFIN. Yes.

Mr. MURPHY. The gentleman was not serious when he said that because the Government had gone to the expense of developing the airplane for the carriage of mail we ought to cut out competition?

Mr. GRIFFIN. No. I say that since the Government has laid out millions of dollars in the establishment of landing fields and beacon lights all over the country and developed and educated navigators of the air, and since the Government is familiar with all the intricacies of the air mail transportation, it ought to retain its advantage; and I am sure that when the final figures are announced as the result of the operation of the Air Mail Service at the end of the next fiscal year you will be surprised perhaps to learn that it will show a material profit.

Mr. JACOBSTEIN. Mr. Chairman, will the gentleman yield?

Mr. GRIFFIN. Yes.

Mr. JACOBSTEIN. Do I understand, then, that it is your idea that the Government ought permanently to remain in the transportation business so far as the Air Mail Service is concerned?

Mr. GRIFFIN. I think I am perfectly justified in taking that stand.

Mr. JACOBSTEIN. That is the policy you want to lay down, so far as the Air Mail Service is concerned, that the Government permanently shall be the transporter of its own mail?

Mr. GRIFFIN. That is my belief and conviction, founded upon past experience.

Mr. LAGUARDIA. Mr. Chairman, will the gentleman yield?

Mr. GRIFFIN. Yes.

Mr. LAGUARDIA. There is no intention on the part of the department to turn over the transcontinental routes and other large routes to private transportation. Two or three contracts are now being carried on by private enterprise, one in Louisiana and one in Alaska.

Mr. GRIFFIN. There is nothing in this bill to prevent the Postmaster General from entering into a contract with some of these airplane companies to carry the mail even on this transcontinental air route.

Mr. LAGUARDIA. There is not a company in the United States that is equipped to carry on a route between Washington and New York or from New York to San Francisco.

Mr. GRIFFIN. How long will that last? There is no assurance that it will last for any time.

Mr. LAGUARDIA. The industry has been in a deplorable condition for the last four or five years.

Mr. MURPHY. Mr. Chairman, will the gentleman again yield?

Mr. GRIFFIN. Yes.

Mr. MURPHY. Is the gentleman serious when he thinks that the Government should not spend money in developing the air service along this theory, that citizens of the United States may compete for the carrying of the air mail? Now, if the gentleman's contention is correct, of course, the Government ought then to stop spending money at New York, developing the harbor facilities there for carrying on the commerce of the world. One argument is just about as good as the other. Private enterprise could not develop the air service, but private enterprise has the right to go into it once it is developed.

Mr. GRIFFIN. By the Government?

Mr. MURPHY. Certainly. The Government develops all our harbors and all our canals.

Mr. GRIFFIN. And reaps much from the Government outlay.

Mr. MURPHY. I do not say that the Government is prepared now to compete in every way everywhere, but I am sure the gentleman does not want to use the air mail as an entering wedge for Government ownership and operation of public facilities of all kinds.

Mr. GRIFFIN. Well, that is a moot question. I do not think that that question ought to be taken up just at this stage.

Mr. MURPHY. Well, the gentleman took the position—

Mr. GRIFFIN. When that question arises I will be prepared to meet it, but I am looking now at the fate of this bill and its wisdom as a legislative enactment, in protecting the interests of the people. In my opinion, I solemnly declare to you that this bill is loosely drawn, aimed only in the interest of a few men who are standing ready to take contracts. Take a look at the hearings. You gentlemen here have the hearings and you have the report. Read what the report says:

These hearings were attended by representatives and individuals, firms, and corporations interested in commercial aviation.

Where were the people represented? Except by the Members of this House sitting on the subcommittee, who were supposed to represent their interest, only one side was heard. There was no demand from the general public for the transfer of this activity from the hands of the Postal Service into the hands of individuals. Why are they in this game? They are in it for profit not for the benefit of the Postal Service and not for the benefit of the people. It is too early as yet for us to venture upon the trial of transferring the airplane service to private individuals or corporations.

Mr. BLANTON. Will the gentleman yield?

Mr. GRIFFIN. Yes.

Mr. BLANTON. Would not the gentleman from New York prefer to see our Government follow Great Britain and unite all of the various branches of our air service, utilizing such as should be used by the Army, such as should be used by the Navy and by the Marine Corps, and by the Postal Department, but under one united air service, at the same time letting it be under the control and direction of the Government itself? Would not the gentleman prefer to see that done?

Mr. GRIFFIN. That is a policy with which I am very much in sympathy. I do not believe it is the part of wisdom for this Government to continually fritter away money in the different departments for the same activity. They could very well be consolidated. The men who are spending their time flying about the air in circles and trying to make speed records could better be employed in carrying useful articles of mail to other parts of this country. [Applause.]

Mr. BLACK of New York. Will my colleague yield to me?

Mr. GRIFFIN. Yes.

Mr. BLACK of New York. I am wondering how the gentleman would create air routes that might be used for private transportation purposes.

Mr. GRIFFIN. They are already created by our Government.

Mr. BLACK of New York. And in no other way could they be created. Then is the gentleman opposed to any commercial organization going into the business of air transportation for any purpose?

Mr. GRIFFIN. No. I hope I have not permitted myself to be misunderstood to that extent. I have no objection to men joining themselves together in the form of a corporation or other business unit for the purpose of carrying on business. The field is open to them. What I do object to is men taking advantage of the effort, the industry, and the expenditure laid

out by the Government and commercializing it for personal profit.

Mr. SUMMERS of Washington. Will the gentleman yield to me?

Mr. GRIFFIN. Yes.

Mr. SUMMERS of Washington. The Pacific Northwest is very far removed from New York and other great commercial centers of the East. We would like very much to have our mail service connect with the New York and San Francisco service, but the Government is not willing to do that. Could there be any objection to a commercial company tapping the Northwest—Oregon, Washington, Idaho, and Utah—and connecting with the main line in Nevada, as has been proposed, and act as a feeder to that Government line? What objection could there be to that?

Mr. GRIFFIN. There would not be any objection at all.

Mr. SUMMERS of Washington. We would like to have it.

Mr. GRIFFIN. In fact, under the bill just passed, which I did not oppose, the Postmaster General is permitted to maintain and operate lines of Air Mail Service wherever he may designate. That bill has been passed and it will probably be passed in the Senate, and if it becomes a law it will have two results: First, it will get rid of the annual objection to this item in the appropriation bill, and, in the second place, it will open up, such as you indicate ought to be opened up, new lines of Air Mail Service. The Postmaster General can do that. Under that bill he is empowered to designate a line, say, from San Francisco up to Portland, Oreg. He can do that, but under the limitation or understanding which we had on this floor when the bill was passed, as to the interpretation of the bill, the Postmaster General can not designate an airplane course or route without coming to Congress for the authorization or for the requisite funds to carry it out. But the Postmaster General can designate the route and then can come to Congress and get the money to operate it.

I am in favor of the extension of the airplane service to every part of the United States. Last year when this measure came up and it was proposed to extend it to Boston, I stood in favor of that proposition. I believe that it ought to be extended generally throughout the country, but here is where the rub comes. The gentlemen who are standing by waiting to grab this new activity of the Government want to get into the game before the Government shows that the postal airplane service can be operated economically and at a profit. They want to get in now, and I do not believe they ought to be permitted to reap the advantage of the Government's work before the Government has had an opportunity to give all parts of this country a fair deal.

Then when the Postmaster General indicates a route from San Francisco up along the Northwest into the territory of the gentleman from Washington, we will put it up to the people of your district and put it up to the gentleman himself to answer in his own heart whether he would want to see that service discontinued and turned over to private operation.

Mr. LOZIER. Will the gentleman yield for a question?

Mr. GRIFFIN. I yield.

Mr. LOZIER. In principle and as a governmental policy, is there any difference in the Government contracting with a commercial aviation company for the transportation of mail by air than in contracting with a railroad company for the transportation of mail by rail?

Mr. GRIFFIN. Absolutely none; no difference whatever, and that is just the rub.

We do not want to open the door. We do not want to open a Pandora's box of scandals. We had an experience with the star-route scandals in the past in the granting of postal contracts to favorites of this or that administration. We do not want to have a recurrence of that situation.

It does not require a vast expenditure of money for the Government to develop the airplane service as it has been developed in the past, intelligently, quietly, conservatively, going step by step, showing that it can be operated economically, and then when it is operated economically ask yourselves whether you want to turn it over to private corporations and to private individuals.

The phase of trained navigators has been accentuated in the debate on the other bill. Is it desirable to have trained navigators familiar with the navigation of airplanes? Then why not maintain control of them? We have them in the Army, and we have them in the Navy. Why not retain them in the Postal Service?

Gentlemen, in short, if you pass this bill, you are going to divest yourselves of a great opportunity for the conservative, honest development of airplane transportation. You are going to turn it over to a lot of struggling, snarling, competing con-

tractors, who will use every device and intrigue in order to get fat contracts. The time is not ripe for it. We are not ready for that step as yet.

I do not think the gentleman from Pennsylvania was quite candid in saying that this bill is a companion of the other bill. It is not a companion of the other bill. It is a supplement to the other bill. The other bill laid the foundation for the extension of these air mail routes, but none of us felt justified in asserting, although we were inclined to suspect, that the other bill was simply laying the foundation for this bill and to open up this avenue of fraud and intrigue and commercial exploitation of the Air Mail Service.

Mr. Chairman, I reserve the balance of my time.

Mr. LAGUARDIA. Mr. Chairman, I yield two minutes to the gentleman from Michigan [Mr. CRAMTON].

Mr. CRAMTON. Mr. Chairman, compared with the preceding bill, so far as concerns the Treasury, this bill is a life-saver. The other bill permits carriage by the Government at about 400 per cent of the revenue; that is, it costs four times as much as the Government receives. This bill proposes to encourage commercial aviation by turning over to them four-fifths of the revenue. I am not sure the bill goes far enough. We might better turn over 100 per cent of the revenues than have the Government operate all of these extensions. The experimental lines the Government has operated and may continue to do so, but I hope the extensions will be under the Kelly bill, and therefore save the Government millions of dollars.

Mr. LAGUARDIA. Mr. Chairman, I yield three minutes to the gentleman from Ohio [Mr. MOORE].

Mr. MOORE of Ohio. Mr. Chairman, I am venturing to speak as a member of the committee for just a minute or two and call attention to the mail service in Alaska as indicating the desirability and necessity for this legislation and that contained in the bill just passed.

To illustrate, from Fairbanks to McGrath, in Alaska, mail is being carried by sled now. The round-trip distance between these places is 544 miles by air line. By sled route it is approximately 700 miles. By sled route to-day it takes 18 days to make the round trip in carrying the mail between these points. The Post Office Department made an experiment and by air mail route that trip was made in one day. It costs approximately \$1,000 per trip now, and the Post Office Department believes it can carry the mail there by air route at a less cost if these two bills become laws. This is a good illustration of the desirability of carrying the mail by airplane.

Mr. TREADWAY. Mr. Chairman, I make the point of order that there is no quorum present. I will withdraw that; I thought the gentleman from Illinois had finished.

Mr. GRIFFIN. Mr. Chairman, I make the point of order that there is no quorum present.

The CHAIRMAN. The gentleman from New York makes the point of order that no quorum is present. The Chair will count. [After counting.] One hundred and eighteen Members present, a quorum. The Clerk will read the bill for amendment.

The Clerk read the bill for amendment.

Mr. LAGUARDIA. Mr. Chairman, I move that the committee do now rise and report the bill to the House with the recommendation that it pass.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. LEHLBACH, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill (H. R. 7064) to encourage commercial aviation and to authorize the Postmaster General to contract for Air Mail Service, and had directed him to report the same back with the recommendation that it pass.

Mr. LAGUARDIA. Mr. Speaker, I move the previous question on the bill to final passage.

The motion was agreed to.

Mr. GRIFFIN. Mr. Speaker, I make the point of order that there is no quorum present.

The SPEAKER. The gentleman from New York makes the point of order that there is no quorum present, and evidently there is no quorum present.

ADJOURNMENT

Mr. SNELL. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 26 minutes p. m.) the House adjourned until to-morrow, Thursday, December 18, 1924, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

735. A communication from the President of the United States, transmitting a supplemental estimate of appropriation for the fiscal year ending June 30, 1925, for continuing work on Dam No. 2, Muscle Shoals, Ala., \$3,501,200 (H. Doc. No. 487); to the Committee on Appropriations and ordered to be printed.

736. A communication from the President of the United States, transmitting a supplemental estimate of appropriation for the Treasury Department, for the fiscal year ending June 30, 1925, pertaining to the Public Health Service, \$275,000 (H. Doc. No. 488); to the Committee on Appropriations and ordered to be printed.

737. A communication from the President of the United States, transmitting supplemental estimates of appropriations for the legislative establishment of the United States, office of Architect of the Capitol, for the fiscal year 1926, in the sum of \$5,058.80 (H. Doc. No. 489); to the Committee on Appropriations and ordered to be printed.

738. A communication from the President of the United States, transmitting a supplemental estimate of appropriation for the Treasury Department for the fiscal year ending June 30, 1925, pertaining to the Internal Revenue Service, for refunding taxes illegally collected, \$50,000,000 (H. Doc. No. 490); to the Committee on Appropriations and ordered to be printed.

739. A communication from the President of the United States, transmitting supplemental estimates of appropriations for the Department of Justice for the fiscal year ending June 30, 1925, amounting in all to \$20,000; also a draft of proposed legislation extending and making available until June 30, 1925, the appropriation of \$9,000 contained in the second deficiency act, fiscal year 1924, for supplies for the United States courts and judicial officers (H. Doc. No. 491); to the Committee on Appropriations and ordered to be printed.

740. A communication from the President of the United States, transmitting a supplemental estimate of appropriation for the Department of the Interior, National Park Service, for the fiscal year ending June 30, 1925, to remain available until June 30, 1926, for the control and prevention of insect infection of growing timber within the confines of national parks, \$25,000 (H. Doc. No. 492); to the Committee on Appropriations and ordered to be printed.

741. A communication from the President of the United States, transmitting a supplemental estimate of appropriation for the District of Columbia for the fiscal year ending June 30, 1925, amounting to \$20,500 (H. Doc. No. 493); to the Committee on Appropriations and ordered to be printed.

742. A communication from the President of the United States, transmitting supplemental estimates of appropriations for the Treasury Department for the fiscal year ending June 30, 1925, \$223,500 (H. Doc. No. 494); to the Committee on Appropriations and ordered to be printed.

743. A communication from the President of the United States, transmitting a draft of proposed legislation making available the sum of \$15,000 from the unexpended balances of the appropriation of \$20,000,000 provided by the national defense act of June 3, 1916, as amended, for the purpose of defraying such expenses as may be necessary and incidental to the arbitration of the rate of royalty to be paid the American Cyanamid Co. on patents owned by said company (H. Doc. No. 495); to the Committee on Appropriations and ordered to be printed.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of Rule XIII,

Mr. SNELL: Committee on Rules. H. Res. 370. A resolution extending the time for rendering the report of the Committee on World War Veterans' Legislation to February 15, 1925; without amendment (Rept. No. 1050). Referred to the House Calendar.

Mr. BUTLER: Committee on Naval Affairs. H. R. 10685. A bill to authorize the Secretary of the Navy to extend the nurses' quarters at the naval hospital, Washington, D. C., and to construct necessary additional buildings at certain naval hospitals; without amendment (Rept. No. 1051). Referred to the Committee of the Whole House on the state of the Union.

Mr. BRITTEN: Committee on Naval Affairs. H. R. 10739. A bill to authorize the Secretary of the Navy to proceed with the construction of certain public works at the naval air station, Pensacola, Fla.; without amendment (Rept. No. 1052).

Referred to the Committee of the Whole House on the state of the Union.

Mr. DEMPSEY: Committee on Rivers and Harbors. H. R. 10894. A bill authorizing the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes; without amendment (Rept. No. 1053). Referred to the Committee of the Whole House on the state of the Union.

Mr. DREWRY: Committee on Naval Affairs. H. R. 9540. A bill to authorize the purchase by the city of Norfolk, Va., of the bridge across Boush Creek and approaches thereto; without amendment (Rept. No. 1054). Referred to the Committee of the Whole House on the state of the Union.

CHANGE OF REFERENCE

Under clause 2 of Rule XXII, committees were discharged from the consideration of the following bills, which were referred as follows:

A bill (H. R. 10403) granting a pension to James H. Osburn; Committee on Pensions discharged, and referred to the Committee on Invalid Pensions.

A bill (H. R. 10610) granting an increase of pension to Abbie Osborn; Committee on Pensions discharged, and referred to the Committee on Invalid Pensions.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. PAIGE: A bill (H. R. 10881) reclassifying the salaries of postmasters and employees of the Postal Service, readjusting their salaries and compensation on an equitable basis, increasing postal rates to provide for such readjustment, and for other purposes; to the Committee on the Post Office and Post Roads.

By Mr. GRAHAM: A bill (H. R. 10882) providing for punishment of assaults upon letter or mail carriers; to the Committee on the Judiciary.

By Mr. MORROW: A bill (H. R. 10883) for the development of the Carlsbad Cave in the Carlsbad Cave National Monument, N. Mex.; to the Committee on the Public Lands.

By Mr. GRAHAM: A bill (H. R. 10884) granting an increase of pension to certain Civil War veterans; to the Committee on Invalid Pensions.

By Mr. OLDFIELD: A bill (H. R. 10885) to amend the World War veterans' act of 1924; to the Committee on World War Veterans' Legislation.

By Mr. SHERWOOD: A bill (H. R. 10886) to promote the erection of a monument in honor of Gen. Anthony Wayne and his legion in Lucas County, Ohio, on the site of the Battle of Fallen Timbers, which was fought August 20, 1794, and was followed by the treaty of Greenville in 1795 and years of peaceful settlement of the Northwest Territory; to the Committee on the Library.

By Mr. ALLGOOD: A bill (H. R. 10887) granting the consent of Congress to the State of Alabama, through its highway department, to construct a bridge across the Coosa River at Gadsden, Etowah County, Ala., on State road No. 1; to the Committee on Interstate and Foreign Commerce.

By Mr. BULWINKLE: A bill (H. R. 10888) to provide for the securing of lands in the southern Appalachian Mountains for perpetual preservation as a national park; to the Committee on the Public Lands.

By Mr. HOWARD of Nebraska: A bill (H. R. 10889) to provide for the purchase of a site and the erection of a building thereon at Madison, Nebr.; to the Committee on Public Buildings and Grounds.

By Mr. KAHN: A bill (H. R. 10890) to extend the time for the exchange of Government lands for privately owned lands in the Territory of Hawaii; to the Committee on the Territories.

By Mr. REECE: A bill (H. R. 10891) to provide for the securing of lands in the southern Appalachian Mountains for perpetual preservation as a national park; to the Committee on the Public Lands.

By Mr. THOMAS of Kentucky: A bill (H. R. 10892) to correct the military record and provide for the granting of pensions to survivors of certain battalions of Kentucky Militia; to the Committee on Invalid Pensions.

By Mr. WEAVER: A bill (H. R. 10893) to provide for a suitable national park in the Appalachian Mountains for the perpetual preservation of the forests and wild life of the Appalachians and for recreational purposes; to the Committee on the Public Lands.

By Mr. DEMPSEY: A bill (H. R. 10894) authorizing the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes; committed to the Committee of the Whole House on the state of the Union.

By Mr. RUBEY: A bill (H. R. 10895) to prohibit the carrying by mail of the United States of any newspaper, circular, pamphlet, or publication containing any advertisement for the sale of any pistol or revolver, and to provide penalties; to the Committee on the Post Office and Post Roads.

By Mr. FREE: Resolution (H. J. Res. 311) to amend section 2 of the joint resolution entitled "Joint resolution to authorize the operation of Government-owned radio stations for the use of the general public, and for other purposes," approved June 5, 1920; to the Committee on the Merchant Marine and Fisheries.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. AYRES: A bill (H. R. 10896) granting an increase of pension to Samantha A. Carnefix; to the Committee on Pensions.

Also, a bill (H. R. 10897) granting an increase of pension to Reuben Waller; to the Committee on Pensions.

Also, a bill (H. R. 10898) granting an increase of pension to Clarence L. Wimer; to the Committee on Pensions.

By Mr. BELL: A bill (H. R. 10899) for the relief of N. H. Strickland; to the Committee on Claims.

By Mr. BOX: A bill (H. R. 10900) granting a pension to Theo Dorsett; to the Committee on Pensions.

By Mr. CHRISTOPHERSON: A bill (H. R. 10901) for the relief of W. H. King; to the Committee on Claims.

By Mr. CONNERY: A bill (H. R. 10902) granting a pension to John A. Powers; to the Committee on Pensions.

By Mr. COOK: A bill (H. R. 10903) granting a pension to Edward Jones; to the Committee on Invalid Pensions.

By Mr. FAUST: A bill (H. R. 10904) granting a pension to Samuel Andrew; to the Committee on Invalid Pensions.

By Mr. FULMER: A bill (H. R. 10905) granting an increase of pension to Andrew Long; to the Committee on Invalid Pensions.

By Mr. GREEN: A bill (H. R. 10906) granting a pension to Ralph Lotz; to the Committee on Pensions.

By Mr. HASTINGS: A bill (H. R. 10907) for the relief of A. B. Cameron; to the Committee on Claims.

By Mr. JOHNSON of Washington: A bill (H. R. 10908) for the relief of Mrs. Frank G. Sanford; to the Committee on the Post Office and Post Roads.

By Mr. JOHNSON of West Virginia: A bill (H. R. 10909) for the relief of James L. Barnett; to the Committee on the Civil Service.

By Mr. KEARNS: A bill (H. R. 10910) granting an increase of pension to Kate Sherman; to the Committee on Invalid Pensions.

By Mr. KNUTSON: A bill (H. R. 10911) granting an increase of pension to Helena Bunt; to the Committee on Pensions.

By Mr. KOPP: A bill (H. R. 10912) granting an increase of pension to Christena E. Waitman; to the Committee on Invalid Pensions.

By Mr. McDUFFIE: A bill (H. R. 10913) granting an increase of pension to Samuel A. Holt; to the Committee on Pensions.

Also, a bill (H. R. 10914) granting an increase of pension to Sidney S. Pugh; to the Committee on Pensions.

Also, a bill (H. R. 10915) for the relief of James A. DeLoach; to the Committee on Claims.

By Mr. McKEOWN: A bill (H. R. 10916) for the relief of Isaac M. Wood, also known as J. M. Wood; to the Committee on Military Affairs.

By Mr. McLEOD: A bill (H. R. 10917) for the relief of William H. Crampton, formerly a captain, United States Army; to the Committee on Military Affairs.

By Mr. MANLOVE: A bill (H. R. 10918) granting a pension to Thomas A. Heard; to the Committee on Pensions.

Also, a bill (H. R. 10919) granting a pension to Bertha O. Hammer; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10920) granting an increase of pension to Mary A. Hester; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10921) granting an increase of pension to Elizabeth M. Miller; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10922) granting an increase of pension to Amelia Miller; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10923) granting an increase of pension to Jennie McQueen; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10924) granting an increase of pension to Eady Elizabeth Ripple; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10925) granting an increase of pension to Charles McCarthy; to the Committee on Pensions.

Also, a bill (H. R. 10926) granting an increase of pension to William S. McGaha; to the Committee on Pensions.

Also, a bill (H. R. 10927) granting a pension to Elda Leota Rutherford; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10928) granting an increase of pension to Katharine K. Collins; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10929) granting an increase of pension to Margaret A. Saunders; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10930) granting an increase of pension to Mary P. McIntyre; to the Committee on Pensions.

Also, a bill (H. R. 10931) granting an increase of pension to Susan O. Adams; to the Committee on Invalid Pensions.

By Mr. PARKER: A bill (H. R. 10932) granting an increase of pension to Lydia F. Barkley; to the Committee on Invalid Pensions.

By Mr. RATHBONE: A bill (H. R. 10933) for the relief of Martin L. Duffy; to the Committee on Military Affairs.

By Mr. REECE: A bill (H. R. 10934) for the relief of William Jones; to the Committee on Military Affairs.

Also, a bill (H. R. 10935) granting an increase of pension to Roy Elrod; to the Committee on Pensions.

By Mr. SIMMONS: A bill (H. R. 10936) granting an increase of pension to Archie A. Warner; to the Committee on Pensions.

Also, a bill (H. R. 10937) granting an increase of pension to Mary A. Webbitt; to the Committee on Invalid Pensions.

By Mr. SPROUL of Illinois: A bill (H. R. 10938) for the relief of Wilder B. Thompson; to the Committee on Claims.

By Mr. STRONG of Pennsylvania: A bill (H. R. 10939) granting a pension to Maria L. Stewart; to the Committee on Invalid Pensions.

By Mr. THOMAS of Kentucky: A bill (H. R. 10940) granting an increase of pension to Christopher T. Grinstead; to the Committee on Invalid Pensions.

By Mr. UNDERWOOD: A bill (H. R. 10941) granting an increase of pension to William H. Poindexter; to the Committee on Pensions.

By Mr. VINCENT of Michigan: A bill (H. R. 10942) granting a pension to Mary E. Marvin; to the Committee on Invalid Pensions.

By Mr. WILLIAMS of Illinois: A bill (H. R. 10943) granting an increase of pension to Charles M. McDonald; to the Committee on Pensions.

By Mr. WILLIAMSON: A bill (H. R. 10944) for the relief of Benjamin Ghostbear; to the Committee on Claims.

By Mr. WILSON of Indiana: A bill (H. R. 10945) granting an increase of pension to Rachel Price; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10946) granting an increase of pension to Mary Wolven; to the Committee on Invalid Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

3244. By the SPEAKER (by request): Petition of Nettle Creek congregation and Sunday School of the Friends Church, Hagerstown, Ind., urging Congress to distribute literature dealing with the narcotic question; to the Committee on Printing.

3245. Also (by request), petition of M. A. Cooper, Austin, Tex., urging Congress to give favorable consideration to the claim of the Hunter Brown Co.; to the Committee on Claims.

3246. Also (by request), petition of W. S. McCrea, executive secretary of the Intermediate Rate Association, Spokane, Wash., urging that action be taken this session of Congress on the Gooding bill; to the Committee on Interstate and Foreign Commerce.

3247. Also (by request), petition of Laughlinton United Brethren Christian Endeavor Society, Laughlinton, Pa., favoring the distribution of literature by Congress relative to the drug menace; to the Committee on Printing.

3248. Also (by request), petition of the City Council of Chicago, Ill., requesting that the United States airplane flagship *Chicago* be placed in the custody of the city of Chicago; to the Committee on Military Affairs.

3249. Also (by request), petition of Army and Navy Union, Boston, Mass., favoring the passage of pending legislation to increase the pensions of Civil and Spanish War veterans and their widows and children; to the Committee on Pensions.

3250. By Mr. ABERNETHY: Petition of George A. Nicoll, W. T. Brinson, G. Lewis, W. H. Lee, W. H. Horton, Z. V. Parker, D. W. Richardson, R. B. Lane, T. D. Warren, W. L. Hand, William Dunn, Jr., Thomas O. Moore, A. J. Gaskins, D. P. Henry, Hellen Huff, L. H. Cannon, G. A. Barden, J. S. Miller, William T. Hill, F. M. Hahn, Edward Clark, W. W. Chadwick, L. H. Cutler 3d, Robert P. Lane, W. F. West, A. F. Patten, Lee N. Reed, William B. Lane, G. R. Fuller, J. H. Ziegler, C. M. Kehoe, T. P. Ashford, O. W. Lane, W. Henderson, and others favoring the game refuge bill (S. 2913, H. R. 745); to the Committee on Agriculture.

3251. By Mr. CELLER: Petition of residents of Patchogue and East Patchogue, for the dredging of Swan River; to the Committee on Rivers and Harbors.

3252. By Mr. CULLEN: Petition of metal trades department of the American Federation of Labor, favoring a well-balanced Navy in accordance with the ratio agreed to by the International Conference on Limitations of Armament; to the Committee on Naval Affairs.

3253. By Mr. FREDERICKS: Petition of citizens of Santa Monica, Calif., protesting against the passage of Senate bill 3218, providing for Sunday observance; to the Committee on the District of Columbia.

3254. By Mr. GALLIVAN: Petition of Cornelius A. Parker, Boston, Mass., recommending early and favorable action on House bill 5195, which provides for the establishment of the probation system in the Federal courts; to the Committee on the Judiciary.

3255. Also, petition of Local No. 25, National Federation of Federal Employees, Boston, Mass., urging early and favorable action on House bill 8202 and Senate bill 3011, to amend the present Federal employees' retirement act; to the Committee on the Civil Service.

3256. By Mr. GRAHAM: Petition of residents of Philadelphia, Pa., protesting against the passage of the compulsory Sunday observance bill; to the Committee on the District of Columbia.

3257. By Mr. SHREVE: Petition of residents of Titusville, Pa., and vicinity; residents of Spartansburg, Pa.; and residents of Corry, Pa., opposing the passage of the compulsory Sunday observance bill (S. 3218); to the Committee on the District of Columbia.

SENATE

THURSDAY, December 18, 1924

(Legislative day of Tuesday, December 16, 1924)

The Senate met at 12 o'clock meridian, on the expiration of the recess.

The PRESIDENT pro tempore. The Senate will receive a message from the House of Representatives.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Farrell, one of its clerks, announced that the House had passed bills of the following titles, in which it requested the concurrence of the Senate:

H. R. 6942. An act establishing transmission and carrying of mail by airplanes and flying machines;

H. R. 7064. An act to encourage commercial aviation and to authorize the Postmaster General to contract for air mail service; and

H. R. 9063. An act declaring pistols, revolvers, and other firearms capable of being concealed on the person nonmailable and providing penalty.

SAMUEL GOMPERS

Mr. DILL. Mr. President, I desire to avail myself of the privilege of not discussing the subject now before the Senate, by speaking for a few minutes regarding the life and work of Samuel Gompers, late president of the American Federation of Labor, who was buried to-day in Sleepy Hollow Cemetery at Tarrytown, N. Y.

For 40 years he has been president of the American Federation of Labor. He was not merely the titular head, but the real leader of the union-labor forces of this country. As leader he wrought such profound changes in the economic and industrial life of this country that the American people had come to consider him almost as an institution.

He stood always for the weak and the poor who were forced to live lives of toil, but compelled the respect of those to whom he was opposed. His funeral cortege across the country from Texas to Washington and from here to New York has

been second only to those of American presidents who died in office.

Another reason why it is fitting that some words be spoken of him in this Chamber is that he has been a tremendous influence in the political life of the country. For more than a quarter of a century now he helped to elect and defeat more Members of both House and Senate than any other single individual in the Nation. These fights were not personal fights. They were labor fights.

He cared nothing about the party politics of a man. It was their attitude on labor questions that determined his course. The dominating passion of his life was to unite and solidify the working people into organizations that would stand together "all for one and one for all." He knew the power of united action by those who toil, and to this end he bent every energy, and for this purpose he championed every labor cause. He was as tireless as the tide and had the courage of the lion.

He was fitted to represent those for whom he spoke, because he came from the ranks of labor. He was able to lead them successfully because he understood their needs and could appeal to them in terms of their own experiences.

Those who knew him personally will recall his short but stocky figure. He often said he would have been a tall man had his growth not been stunted by the child labor he was forced to perform to help make a livelihood for the family. Yet he seemed to make up in personality what he lacked in stature and was the tallest short man I ever saw.

He believed in the dignity of labor. As a representative of labor he did not beg or brag. He did not flatter nor abuse. In all his conferences and contests he stood foursquare to all the world, insisting firmly for justice to the rights of labor and prepared to fight for the cause of those for whom he spoke and acted. When he entered a meeting with his body erect, his massive head and shoulders thrown back and his level gaze meeting the eyes of all those who looked at him, he was the impersonation of his own conception of the dignity of labor.

Throughout all his turbulent and aggressive life his critics were many and severe, but he held always before the world the justice of the cause of those who toil. Sometimes he seemed unreasonable and uncompromising in his attitude, but that was in furtherance of his single purpose to hold the labor forces together and increase their power. The increase of membership of the American Federation of Labor from a few thousands when he became head of it to four millions attests how well he succeeded.

Not only that, but unorganized labor profited as much as and often more than union men as a result of the fights which Mr. Gompers made. He always maintained that he was fighting the battles of all who toil, whether they belonged to unions or not, and to-day the better wages and working conditions of nonunion labor as well as union labor are directly traceable to the work done by Mr. Gompers in the past 40 years.

His greatest service to those who toil was his successful struggle to secure acceptance by the general public of his contention that labor is not a commodity but a human thing. Labor can not be separated from those who perform it. When a man sells his labor he sells a part of himself and to that extent he goes with the sale. Labor is perishable, too, and must find a ready buyer. It can not stand and wait for favorable prices. Wives and mothers at home are dependent upon its sale. The destinies of little children are determined by the terms of its disposal. In a democracy like ours, the future of the Republic is often in the balance when the relation of labor and capital is involved.

The crowning glory of Mr. Gompers's life is the conceded and established right of American laboring men and women to-day to organize and bargain collectively through agents of their own choosing as to the terms upon which they will sell their labor.

Although he believed he was his brother's keeper and his heart went out to the wage slaves of the world, he was always truly and thoroughly an American. He contended that the constitutional rights of free speech, free press, free assembly, and freedom of religious belief were the greatest guarantees ever given the masses of the citizens of any country and he insisted they be maintained inviolate. While foreign born himself, he was more sturdy in his Americanism than many of native origin.

During recent years he has stood like Gibraltar against the proposals that labor organizations endorse socialism and communism. His last words, which he knew would be often quoted by his followers, were spoken advisedly. He said, "God bless our American institutions. May they grow better day by day."

Samuel Gompers is gone, but the hopes and aspirations of those who toil will be brighter and nobler and more likely of fulfillment because he lived. The road over which he led the hosts of labor was not pleasantly shaded nor smoothly paved. Instead it had to be built as they went, under the heat of bitter attacks, through canyons of disappointment, misunderstanding and suffering, and over mountains of opposition. But the way is easier and better now and it leads out toward the plains of the equality, independence, and contentment which he envisioned for all the toilers of earth.

Mr. HEFLIN. Mr. President, I listened with a great deal of interest to the speech of the Senator from Washington [Mr. DILL] paying tribute to Samuel Gompers. He was the able head or commander in chief of the great army of organized wage earners of America. He was the true and tried friend of those who toil. John Ruskin said truly—

There is an idle class among both rich and poor—weak, wicked, and miserable. There is a working class among both rich and poor—strong, healthy, and happy.

As the able Senator from Washington proceeded with his splendid speech I called to mind a few lines from Eliza Cook which I desire to quote just here:

There's glory in the shuttles' song,
There's triumph in the anvils' stroke,
There's merit in the brave and strong
Who dig the mine or fell the oak.

I doubt if he who lolls his head
Where idleness and plenty meet
Enjoys his pillow or his bread
As those who earn the meals they eat.

Hold up your brow in honest pride,
Though rough and swarth your hands may be,
Such hands are sap veins that provide
The lifeblood of the Nation's tree.

All honor to the millions of men and women who work with their heads and hands. I remember an incident in the life of General Pettus, who ably represented my State as one of its Senators in this body for 11 years. At the age of 82 on one occasion he was trying law cases in western Alabama while he was still a Member of the Senate. Some one said, "General, what are you doing over here?" The general said, "I am here looking after some cases that I have in court." His friend said, "I thought you were old enough to quit work." The general replied, "No; a man should never quit work. A few years of idleness and he loses his health. A few years of idleness and his mind is gone. It takes work, activity of some kind, to keep the body strong and the mind in good condition." General Pettus was right. Samuel Gompers believed in the gospel of work. He preached it and lived it to the day of his death. In fighting communism and advising the Federation of Labor against going off after socialism when a few of its members wanted to do so he rendered signal service to the American home, to American labor, and to the country as a whole. He had a big, sympathetic heart and mentally he was a very strong man. He loved our free institutions, and the reports of the press tell us that his last words were: "God bless the American institutions; may they grow better and better as the years come and go."

Mr. President, every patriotic American will applaud that prayer, and God grant that it may be answered.

Mr. STANLEY. Mr. President, the late lamented Samuel Gompers, in his passing, will be regretted by capital and by labor alike. He was a great democrat in the broadest sense. He was profoundly devoted to American institutions. He was a sincere patriot. He was the staying hand against the vagaries of bolshevism and socialism, always sane, well poised, clear of vision, firm of purpose. Whether we agree or disagree with him in his theories and in his policies, few will question his disinterested devotion to his country or to the great organization which he so ably represented for nearly half of a century. Tireless, astute, indomitable, he was without a rival or a peer in the great organizations which for 50 years made him their titular head. We may well say that it is more than probable we "shall not look upon his like again."

Mr. NORRIS. Mr. President, in the busy life we live and in the earnestness with which we engage in legislative controversies here we almost forget, I think, some of the finer sensibilities of this life. I confess, almost with a feeling of shame, that I should become so engrossed in the things that pertain to our duty here as to forget the passing of one of the great characters of our age. I am only reminded of it by what the three Senators who have recently spoken have said.

We quarrel and wrangle over things that often are only of a day or a night in the span of human existence, and we become so interested, so engrossed in them, that we forget the passing of time, and that while we are so engaged those who have likewise toiled and have done what they thought and what they believed was for the happiness and benefit of mankind have passed away.

I think Samuel Gompers was one of the leading minds of the age in which he lived, but like all the rest of mankind he was human. It is no injustice to him to say that as a human being he made his mistakes. That only demonstrated his humanity. His great heart, however, always beat for the downtrodden; his mighty voice was always lifted in behalf of those who toiled and those who suffered. He always spoke for the disadvantaged, who, after all, are the ones who bear the burdens of the world. As he passes beyond the veil it seems to me it can well be said of him as was said at the open grave of Brutus centuries ago:

His life was gentle, and the elements
So mix'd in him, that nature might stand up
And say to all the world, "This was a man!"

I think it could be said of his life, in the words of the poem written by Caroline A. Briggs:

When I am old—and oh, how soon
Will life's sweet morning yield to noon,
And noon's broad, fervid, earnest light
Be shaded in the solemn night!
Till like a story well-nigh told,
Will seem my life, when I am old.

When I am old my friends will be
Old and infirm and bowed like me;
Or else, their bodies 'neath the sod,
Their spirits dwelling safe with God.
The old church bell will long have tolled
Above the rest, when I am old.

Ere I am old, oh, let me give
My life to learning how to live!
Then shall I meet with willing heart
An early summons to depart;
Or find my lengthened days consoled
By God's sweet peace, when I am old.

Mr. ASHURST. Mr. President, in Waterloo Place, in London, is a statue of Gen. John Fox Burgoyne. On its pedestal is carved the eloquent line from Coriolanus:

How youngly he began to serve his country,
How long continued!

Paraphrasing that inscription and applying it to the life of Mr. Gompers, we can truly say—

How youngly he began to serve mankind,
How long continued!

REPORT OF THE ALASKA RAILROAD

The PRESIDENT pro tempore laid before the Senate the following message from the President of the United States, which was read and, with the accompanying report, referred to the Committee on Territories and Insular Possessions:

To the Congress of the United States:

In accordance with the provisions of section 4 of the act of March 12, 1914 (38 Stat. 305), entitled "An act to authorize the President of the United States to locate, construct, and operate railroads in the Territory of Alaska, and for other purposes," I transmit herewith the report of the Alaska Railroad covering the period from January 1 to December 31, 1923.

CALVIN COOLIDGE.

THE WHITE HOUSE, December 18, 1924.

SENATOR FROM MASSACHUSETTS

The PRESIDENT pro tempore laid before the Senate the certificate of the Governor of the State of Massachusetts certifying to the election of FREDERICK H. GILLET as a Senator from that State for the term commencing on the 4th day of March, 1925, which was ordered to be placed on file and to be printed in the RECORD, as follows:

THE COMMONWEALTH OF MASSACHUSETTS.

To the PRESIDENT OF THE SENATE OF THE UNITED STATES, Greeting:
This is to certify that on the 4th day of November, in the year of our Lord 1924, FREDERICK H. GILLET was duly chosen by the qualified voters of said Commonwealth a Senator, to represent said Commonwealth of Massachusetts in the Senate of the United States for the term of six years, commencing on the 4th day of March, A. D. 1925.

Witness his excellency, Channing H. Cox, our governor, and our great seal, hereunto affixed, at Boston, this 26th day of November, in the year of our Lord 1924, and of the Independence of the United States of America the one hundred and forty-ninth.

[SEAL.]

CHANNING H. COX.

By his excellency the governor:

F. W. COOK,

Secretary of the Commonwealth.

PETITIONS AND MEMORIALS

Mr. LADD presented a memorial of sundry citizens of Dogden, N. Dak., remonstrating against the passage of legislation providing for compulsory Sunday observance in the District of Columbia, which was referred to the Committee on the District of Columbia.

Mr. SPENCER presented memorials of sundry citizens of Carthage and Jasper County, all in the State of Missouri, remonstrating against the passage of legislation providing for compulsory Sunday observance in the District of Columbia, which were referred to the Committee on the District of Columbia.

Mr. WILLIS presented a resolution of the Chamber of Commerce of Portsmouth, Ohio, favoring the participation of the United States in the World Court as proposed by the so-called Harding-Hughes plan, which was referred to the Committee on Foreign Relations.

Mr. WARREN presented the petition of Local No. 590, Musicians' Protective Association, A. F. of M., of Cheyenne, Wyo., praying for the passage of legislation increasing the pay and allowance of Army musicians, which was referred to the Committee on Military Affairs.

Mr. CAPPER presented a memorial of sundry citizens of Rush County, in the State of Kansas, remonstrating against the passage of legislation providing for compulsory Sunday observance in the District of Columbia, which was referred to the Committee on the District of Columbia.

REPORTS OF THE COMMERCE COMMITTEE

Mr. LADD, from the Committee on Commerce, to which were referred the following bills, reported them each without amendment and submitted reports thereon:

A bill (S. 3621) granting the consent of Congress to the Louisiana Highway Commission to construct, maintain, and operate a bridge across the Ouachita River at or near Monroe, La. (Rept. No. 815);

A bill (S. 3622) granting the consent of Congress to the Louisiana Highway Commission to construct, maintain, and operate a bridge across the Bayou Bartholomew at each of the following-named points in Morehouse Parish, La.: Vester Ferry, Ward Ferry, and Zachary Ferry (Rept. No. 816);

A bill (H. R. 9518) to authorize the State of Alabama, through its highway department, to construct and maintain a bridge across the Coosa River at or near Leesburg, Ala., and Center, Ala., on the primary road system of the State (Rept. No. 817); and

A bill (S. 3584) to extend the time for completing the construction of a bridge across the Delaware River (Rept. No. 818).

BILLS AND JOINT RESOLUTIONS INTRODUCED

Bills and joint resolutions were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. JONES of Washington:

A bill (S. 3715) authorizing the issuance of patent to the Pioneer Educational Society and its successors for certain lands in the diminished Colville Indian Reservation, State of Washington; to the Committee on Indian Affairs.

By Mr. BALL:

A bill (S. 3716) to make available an officer of the Army of appropriate grade for service in charge of public buildings and grounds in the District of Columbia and for the exercise of certain other functions; to the Committee on Military Affairs.

By Mr. STANLEY:

A bill (S. 3717) conferring jurisdiction upon the Court of Claims of the United States or the district courts of the United States to hear, adjudicate, and enter judgment on the claim of Solomon L. Van Meter, jr., against the United States, for the use or manufacture of an invention of Solomon L. Van Meter, jr., covered by letters patent No. 1192479, issued by the Patent Office of the United States July 25, 1916; to the Committee on Claims.

By Mr. WADSWORTH:

A bill (S. 3718) granting leave of absence to officers and employees of the Government who attend the Citizens' Military Training Camps; to the Committee on Military Affairs.

By Mr. CAPPER:

A bill (S. 3719) creating a Federal marketing board to encourage and aid in the formation of cooperative marketing associations, cooperative clearing-house associations, and terminal market associations handling agricultural products; to correlate the activities of such associations; to develop efficient and economical methods of distributing and marketing such products; and for other purposes; to the Committee on Agriculture and Forestry.

By Mr. GEORGE:

A bill (S. 3720) for the relief of Lillie F. Evans; to the Committee on Claims.

By Mr. PHIPPS:

A bill (S. 3721) authorizing the Secretary of the Treasury to exchange the present customhouse building and site located in Denver, Colo.; to the Committee on Public Buildings and Grounds.

By Mr. WATSON:

A bill (S. 3722) to authorize the States of Indiana and Illinois in the States of Indiana and Illinois to construct a bridge across the Wabash River at the city of Vincennes, Knox County, Ind., and connecting Lawrence County, Ill.; to the Committee on Commerce.

By Mr. TRAMMELL:

A bill (S. 3723) providing for a survey of the natural oyster beds in the waters within the State of Florida; to the Committee on Commerce.

By Mr. FESS:

A bill (S. 3724) for the relief of Washington County, S. C. Kile estate, and Martha Frye estate; to the Committee on Claims.

By Mr. JONES of Washington:

A joint resolution (S. J. Res. 157) extending appropriation in connection with Columbia Basin investigations; to the Committee on Appropriations.

By Mr. FERRIS:

A joint resolution (S. J. Res. 158) for survey of public-school needs in the District of Columbia; to the Committee on the District of Columbia.

AMENDMENTS TO MUSCLE SHOALS BILL

Mr. McKellar, Mr. Wadsworth, and Mr. Jones of Washington each submitted an amendment, and Mr. Smith submitted two amendments intended to be proposed by them to House bill 518, the so-called Muscle Shoals bill, which were severally ordered to lie on the table and to be printed.

AMENDMENT TO INTERIOR DEPARTMENT APPROPRIATION BILL

Mr. Jones of Washington submitted the following amendment intended to be proposed by him to House bill 10020, the Interior Department appropriation bill, which was referred to the Committee on Appropriations and ordered to be printed:

Columbia Basin project: For investigation of the feasibility of irrigation by gravity or pumping, water sources, water storage, and related problems in connection with the Columbia Basin project, the unexpended balance of this appropriation contained in the act of March 4, 1923 (42 Stat. p. 1540), for the above purpose, for the year 1924, is hereby reappropriated and made available immediately and until used.

To be inserted at the proper place in the bill.

HOUSE BILLS REFERRED

The following bills were severally read twice by their titles and referred to the Committee on Post Offices and Post Roads:

H. R. 6942. An act establishing transmission and carrying of mail by airplanes and flying machines;

H. R. 7064. An act to encourage commercial aviation and to authorize the Postmaster General to contract for Air Mail Service; and

H. R. 9003. An act declaring pistols, revolvers, and other firearms capable of being concealed on the person nonmailable and providing penalty.

REPORT OF THE NATIONAL FOREST RESERVATION COMMISSION

Mr. LADD. The Committee on Public Lands and Surveys has had under consideration the report of the National Forest Reservation Commission. It has approved this report. I ask that the Committee on Public Lands and Surveys be discharged from the further consideration of this report, and that it be referred to the Committee on Printing.

The PRESIDING OFFICER (Mr. MEANS in the chair). Is there objection to the receipt of the report? The Chair hears none. It will be received and, without objection, the Committee on Public Lands and Surveys will be discharged from the further consideration of the report, and it will be referred to the Committee on Printing.

MUSCLE SHOALS

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 518) to authorize and direct the Secretary of War, for national defense in time of war and for the production of fertilizers and other useful products in time of peace, to sell to Henry Ford, or a corporation to be incorporated by him, nitrate plant No. 1, at Sheffield, Ala.; nitrate plant No. 2, at Muscle Shoals, Ala.; Waco Quarry, near Russellville, Ala.; steam-power plant to be located and constructed at or near Lock and Dam No. 17, on the Black Warrior River, Ala., with right of way and transmission line to nitrate plant No. 2, Muscle Shoals, Ala.; and to lease to Henry Ford, or a corporation to be incorporated by him, Dam No. 2 and Dam No. 3 (as designated in H. Doc. 1262, 64th Cong., 1st sess.), including power stations when constructed as provided herein, and for other purposes.

The PRESIDENT pro tempore. The question is on agreeing to the amendment proposed by the Senator from Montana [Mr. WALSH] to the amendment of the Senator from Alabama [Mr. UNDERWOOD].

Mr. UNDERWOOD. Mr. President, I merely desire to say a word. I think, although there is considerably more language in the amendment offered by the Senator from Montana than there is in the provisions of the substitute which he seeks to amend, the result would be the same except in one respect. The Senator from Montana seeks to take two of the clauses of the Federal water power act and insert them in the substitute in place of section 10. Section 10 provides for State regulation. The paragraphs taken from the Federal water power act provide for Government regulation unless there is State regulation, and then Government regulation shall be superseded by State regulation. So I am not concerned about the amendment except in this respect. The bill itself requires State regulation, whether the power is in the hands of the lessee, or, failing a lessee, is in the hands of a national corporation. I think the bill should so provide. The amendment as proposed by the Senator from Montana provides for substantially the same regulation as to a lessee, but provides no regulation whatever for a national corporation.

In answer to a question the other day the Senator from Montana said that a national corporation was the Government, and he did not think the Government should be regulated. Of course, I recognize that if the Government were functioning as a government, exercising primarily its government functions, it should not be regulated; but when the Government organizes a corporation for the purpose of performing acts and doing business as would any private corporation I see no reason why it should not be regulated just as are all private corporations. Therefore I hope the amendment will not be adopted.

Mr. BRUCE. Mr. President, I have been waiting patiently for an opportunity to say a few words in behalf of the amendments which I have offered to the pending measure; but it seems to me that the flow of speech in this debate is likely to prove almost as unceasing as the flow of the Tennessee River itself; so I feel warranted in adding just a few tributary drops to it at this time.

For the most part, the Underwood substitute meets with the entire approval of my judgment. I agree with the author of that substitute in thinking that its most important provisions by far are those proposing to create an abundant and a constant supply of nitrogen for the manufacture of war explosives. This country can not afford to rely merely upon a foreign source of supply for this commodity, for such a source of supply might at any time be cut off by a hostile fleet. So, if I did not favor the substitute for any other reason, I should do so because it proposes to establish a great domestic source of supply for such nitrates as we may need in time of war. Taking that view of this bill, I quite concur with the Senator from Alabama in believing that we might as well complain that a battleship is not profitable in a pecuniary sense as complain that this great plant at Muscle Shoals, if leased by the Government or operated by the Government, would not be so.

I also favor those features of the Underwood substitute which provide for the sale of any surplus nitrogen that may be produced at the plant. The only alternative to sale, as the Senator from Alabama has well said, would be to dump the surplus into the Tennessee River; and that, I imagine, is an idea that no reasonable man would regard for a moment with the slightest degree of toleration.

Nor do I object to the substitute because it contains contingent provisions for governmental operation. The provisions in it that relate to governmental operation are simply alternative provisions. They will not go into effect except

in the event of the Government being unable to lease the plant to advantage. I have reached these conclusions, notwithstanding the fact that if there is a Member of this body who cherishes a profound distrust for Government operation, it is I. I think that in industrial relations it is usually nothing but a snare, a delusion, and a cheat; and one of the things that have filled me with a sense of infinite amazement since I have been a Member of this body is the unquestioning, the bland, I had almost said the childlike faith which certain Members of this body seem to entertain with respect to Government operation. They push their confidence in it to a point that seems to me hardly to fall short of the credulity of a medieval monk in his relations to the philosopher's stone, or some secret process by which dross was supposed to be convertible into gold.

The history of the public operation of industrial enterprises in this country is nothing but a long trail of miscarriages and administrative disasters. It is not necessary to go back, as suggested by the Senator from Michigan, to the period of the World War to find illustrations of the utter inefficiency of the Government to conduct such enterprises.

The Emergency Fleet Corporation at this moment is as striking an example of that as anyone might ask for. Year after year since the conclusion of the great World War we have had it vainly attempting to grow marine orchids, with no results except abuses of patronage and huge pecuniary deficits.

I am not so familiar with the history of the Panama Canal service, but I infer from what was said by the Senator from Missouri [Mr. REED] yesterday that that, too, aside from the Panama Railroad, has been conducted at a loss to the Government; and this is true, if I am not mistaken, of every other enterprise in the nature of an industrial undertaking which the Government has ever attempted to carry on in my time.

It was said by the Senator from Missouri that the post-office operations of the United States constitute an exception. They do not. Everybody knows that a large part of the expenses of the Post Office Department are charged up to the General Treasury of the United States, and that it is only because of that fact that a deficit in the postal operations of the Government is not disclosed from year to year.

A few years ago Mr. Bursleson, who had a strong bias in favor of Government operation of public utilities, testified before an investigating committee of Congress that if the Rural Mail Delivery Service of the United States were let out to private contract there would be a saving to the Government of \$18,000,000 a year. I venture to say that there is no such thing as a large industrial enterprise carried on by the public that has resulted in anything except a pecuniary deficit.

Of course, I am not unmindful of the fact that the junior Senator from Nebraska [Mr. HOWELL] thought that he had found a conspicuous illustration to the contrary in the operation of an electric plant in the town of Lincoln, in Nebraska. Well, if that is an exception, then I say that it ought to be placed in the same class with a white crow or a black swan. I do not believe personally that it constitutes any exception. I should like to know whether in the management of that municipally conducted electric plant any allowance whatever is made for depreciation. I should like to know whether it is accorded any special privileges, perquisites, or concessions of any kind from the general treasury of the town of Lincoln. I should like to know whether its shortcomings are covered up in any respect in the general tax rate. I have often heard of these extraordinary municipal enterprises, but when I have run them down—

Mr. HOWELL. Mr. President—

The PRESIDENT pro tempore. Does the Senator from Maryland yield to the Senator from Nebraska?

Mr. BRUCE. At the present time I ask the Senator to pardon me; I would rather not yield, because, after all, that is simply an isolated instance bearing upon the question that I am discussing.

Why, not to go any farther, take the city of New York. A few years ago—and the Senator from New York will bear me out, I am sure, when I say what I do, notwithstanding any reluctance that he may have to do so—there were a number of ferries plying in the waters adjacent to that city, and all of them were conducted by private agencies with a single exception, and all of them were conducted with a pecuniary profit except that one ferry operated by the city of New York or the city of Brooklyn. All the other ferries came out with a clean balance sheet at the end of the year. Every year that municipally conducted ferry was involved in a grave deficit.

The experience of England has been exactly the same. A short time ago I read a book giving a history of municipally conducted enterprises in England, and it was nothing but a

story of tragic results. To such an extent was this true that municipally conducted industrial enterprises in that country were largely abandoned.

One apparent instance of success on the part of a municipality in conducting an industrial enterprise was the city of Glasgow. That city was heralded all over the world as furnishing proof of the fact that such an enterprise can, after all, occasionally be carried on with a pecuniary profit; but recently I have seen that even Glasgow is losing its character as an honorable exception. Be that as it may, I recollect that a few years ago, when one of the leading officials of Glasgow came to this country and went about and looked into our different industrial enterprises of one sort or another, he afterwards stated in an interview with one of our newspapers that in his opinion nothing could be more ruinous than the fate which would befall municipal industrial enterprises in this country if they were undertaken upon any considerable scale.

Mr. COPELAND. Mr. President—

The PRESIDENT pro tempore. Does the Senator from Maryland yield to the Senator from New York?

Mr. BRUCE. I shall have to ask the Senator to excuse me just now. He said that if they did not fail for any other reason they would fail because of the abuses of patronage arising out of the spoils system of administration that is only too well known to us all in the United States.

What is the philosophy of all this? It is perfectly manifest to any man who has ever had anything to do, as I have, with the practical tasks of public administration or who has ever entered into any real comparative study of the energy and efficiency with which private business enterprises are conducted and the languor and the inefficiency with which public business enterprises are conducted. The motives in the two cases are altogether different.

The strongest incentive to which any human breast can respond is that of selfish pecuniary gain. Everybody knows that is true. One of the sayings of Poor Richard was that "the eye of the master is worth both hands of the servant"; and so it is, because his eye is rendered vigilant by incessant self-interest, by pecuniary necessity, by knowledge of the fact that if he succeeds he must succeed by his own efforts, and not by any artificial aid of any kind that he may obtain from the State. So, when an industrial enterprise is managed by a private agency, everyone is keyed up to the highest pitch of activity. The owner of the enterprise has his eye upon the foreman; the foreman has his eye upon the laborer; and everything moves along, so to speak, in an unremitting rhythmical way.

How different is the animus that lies back of an industrial enterprise conducted by the public. In the first place, the public is utterly unable, under the practical conditions which surround government, to obtain the proper sort of a superintendent for such an enterprise. Everybody who is familiar with industrial projects knows that the character of the superintendents who supervise them spells the difference between success and utter disastrous failure. A great private business concern is willing to pay its superintendent \$25,000 or \$30,000 or \$40,000 or \$50,000 for his services, because it knows that these services are worth that much to it. The public, whether city, State, or National Government, is not in a position to give any such compensation.

Then, as I have said, how inert, how indolent, how languid, in comparison with the activity of the employees of a private industrial concern, is the activity of Government subordinates and employees. Their chief, unless he is a man gifted to an unusual extent with public zeal, does not keep up the same kind of alert, incessant oversight over those who are under him that a private superintendent does. For a large part of the time during the day the eye of the public subordinate is on the clock almost as much as on his work.

Of course, there are conspicuous exceptions to this. Every now and then we find some conspicuously honorable, able, and public-spirited man giving himself up with the most ardent measure of devotion to the public service; and the art of public administration mainly consists in getting as many men of that kind into the public service as you can. Then, of course, along the lower levels of the public service there are thousands of patient, conscientious drudges who do their work as faithfully as similar work is done in connection with the operations of any private enterprise.

That is the philosophy of the thing. You might as well endeavor to infuse the spirit of a woman into a man or the spirit of a man into a woman as to attempt to infuse the spirit of an alert private industrial enterprise into the sluggish veins of a municipally or State or Government conducted industrial enterprise.

But, as I have intimated, I do not feel that it is necessary to apply these considerations to the Underwood substitute at

all. We must have nitrates for war explosives from a lessee under that substitute if we can find one, and if we can not from a lessee then we must have them from Government operation itself, even though this operation should be conducted at a loss. I shall therefore vote for the Underwood substitute when the time for voting on it comes, and I shall do so even though my own amendments should fail to receive the approval of the Senate.

To repeat, I have no objection to the production of nitrogen at Muscle Shoals for war explosives; I have no objection to the production of such nitrogen for sale to the trade, to be converted by it into full commercial fertilizers; I have no objection to the sale of surplus electrical power generated at Muscle Shoals; but what I do object to, what I sternly, inflexibly object to, is that the Government or its lessee should utilize the nitrogen produced at Muscle Shoals for the purpose of manufacturing commercial fertilizers in competition with its own citizens.

In the city of Baltimore we have, I am told, \$75,000,000 invested in the business of making commercial fertilizers, and in Philadelphia, as I understand it, a great sum is invested in the same business. Indeed, doubtless the industry is a thriving one in still other cities. The fertilizers made in the city of Baltimore are distributed all over the United States, and especially throughout the South. The business of making them has been built up by patience, by industry, by honest dealing, by vision, and in some instances by industrial genius. Is this great business to be stricken to the ground by the hand of the National Government? Its owners have no general tax rate, no Public Treasury to fall back upon. They can not afford to suffer one tithe, one one-hundredth of the pecuniary loss that the Government could suffer and yet go on with the manufacture of commercial fertilizers. Year after year these great fertilizer enterprises in Baltimore have been paying immense sums in taxation to the General Government, contributing to its maintenance both in time of war and in time of peace. Have they not the right, the undeniable right, to believe that the Government should not be quick to forget its correlative obligation of protection? The justification for taxation is the protection which is accorded to the citizen and his property by the State in return for it.

Should this plant be operated by the Government, of course not a private fertilizer enterprise in the city of Baltimore could hope to compete effectively with the Government. They would all go to the wall; they would all pass into the hands of receivers. Nor do I forget that if the Government under this substitute should enter into competition with its own citizens it could extend the range of competition far beyond the manufacture of commercial fertilizers and make it include any other form of private industrial enterprise in the United States.

Indeed, should the Government directly or through a lessee operate that great plant at Muscle Shoals itself and use all of its tremendous pecuniary resources in competition with its own citizens it could practically put out of business a large portion of all the thrifty and prosperous citizens of the United States. What sort of treatment is that for any respectable government to mete out to its own people? Could any conduct on its part be better calculated to sow the seeds of disaffection, not to say of revolt, in the bosom of its citizens?

Of course, I know, and the fact, I am sure, has not escaped the attention of any of you, that the reasoning of the Senator from Missouri [Mr. RIED] yesterday fell entirely without the scope of the line of thought that I am pursuing. I agree with him that the Postal Department should be conducted by the Government and not by private enterprise. Unity of control, the more or less confidential nature of mail delivery, and other considerations besides mere pecuniary ones have to be taken into account when a community determines whether its post office department shall be a publicly conducted department or shall be a private enterprise. The Postal Department of the United States, even when it was in embryo during the colonial period, was conducted by the public. There is nothing back of it except primitive conditions, under which if a man wanted to send a letter he would go down to a coffee house or to a tavern and lay it on the table and ask the keeper of the house to be so kind as to see that it went by some passenger on the next ship. That was the way epistolary intercourse was maintained during the youth of Benjamin Franklin. The illustration of the Senator from Missouri is obviously not an apt one as respects such a case as I am discussing. There is no private post office agency of any sort in the United States competing with the Federal Post Office Department. Nor was the illustration of the Senator from Missouri de-

rived from the Panama Canal service a timely one. There is no private canal service in the United States competing with the Panama Canal service. Those cases differ toto coelo from the present one, where it is proposed that the Government or its lessee shall establish a great manufactory of fertilizers at Muscle Shoals and enter into competition with its own citizens.

And now, Mr. President, I need but call attention a little more specifically to the amendments that I have offered. The general effect of them all, there being five of them in number, is to prohibit the Federal Government or its lessee under the Underwood substitute from utilizing any nitrogen produced at Muscle Shoals for the manufacture of the full commercial fertilizers, of which nitrogen is but a single ingredient.

But before I take my seat I wish to revert to another phase of the general discussion which is not connected in any way with my present amendments. The Senate will remember that a few days ago I unavailingly endeavored to persuade the Senate to adopt an amendment that would bring any employees of the Government employed at Muscle Shoals under the provisions of the laws and rules and regulations relating to the Federal classified service. The wisdom of that, of course, was sharply and decisively challenged. One Senator, the Senator from Alabama [Mr. UNDERWOOD], for whom I repeat I entertain the profoundest respect, said he does not purpose to go to any school-teacher for the selection of employees of the Government at Muscle Shoals. The Senator from North Carolina [Mr. SIMMONS] said to me in this debate, "Do you mean that chemists for the Muscle Shoals enterprise are to be selected under the civil-service system?" Then the Senator from Mississippi [Mr. HARRISON], if I am not mistaken, said that these great works at Muscle Shoals had all been conducted free from the trammels of the merit system of appointment, and so on.

One of the truest things that ever was said by Disraeli was that knowledge is the soul of eloquence. I regret, and deeply regret, that when I offered that civil-service amendment my own knowledge of the subject that I was hastily called upon to deal with was not as ripe and full as it might have been, though I think that it would compare quite favorably with that on the same subject of the Senators to whom I have just referred. But I can speak with knowledge now. Such feeble eloquence as I may possess can be said at the present time to be animated by the knowledge which is the soul of eloquence, because I have just received a letter that I propose to read from an official in the employment of the Government who does know and knows precisely and accurately just what the Federal merit system of appointment had to do with the construction of that great plant at Muscle Shoals, and how far that system was tested by actual practical results there.

I ask that the Members of the Senate give their attention to this letter, and especially those Senators to whom I referred by name a moment ago. Mr. B. H. Clemmons, district secretary of the Civil Service Commission, under date of December 15, wrote to me as follows:

MY DEAR SENATOR: I desire to take this occasion to express my appreciation of the manner in which you have championed the merit system in your recent utterances on the floor of the Senate in connection with the Muscle Shoals bill. Of course, being connected with the Civil Service Commission as one of its field representatives, I am and have been for a number of years deeply interested in the progress of this great movement, and I noted with considerable regret some of the statements that were made by Senators who were not in agreement evidently with the things you had to say. It is quite evident to me that some of those who oppose the extension of the merit system to projects of the character of that under discussion have not gone to the trouble to fully inform themselves regarding the situation. One statement, for instance, was made as follows: "These great plants and dams and locks have so far been erected and constructed without the application of the civil-service rules."

If my memory serves me right that statement was made by the Senator from Mississippi [Mr. HARRISON] but I may be wrong, as I have had no opportunity to refer to the RECORD.

Evidently, the Senator who made this statement did not know that the Wilson Dam has been constructed entirely by civil-service employees.

I had the honor to represent the United States Civil Service Commission at Muscle Shoals during the construction of nitrate plants 1 and 2 and a large part of the Wilson Dam. During my handling of civil-service matters there a maximum of over 5,000 employees was recruited through civil-service tests and placed on the work of building the dam.

Five thousand employees selected under the civil-service system for the purpose of constructing that dam! I call the attention of the Senator from North Carolina [Mr. SIMMONS] especially to this statement:

These employees covered every class from the highest-skilled professional engineers and technicians through the clerical and skilled-trades positions to that of common laborer. I do not believe that a higher grade of artisan and workman has ever been placed on any job handled either by the Government or private contractors.

Mr. SIMMONS. Mr. President—

The PRESIDENT pro tempore. Does the Senator from Maryland yield to the Senator from North Carolina?

Mr. BRUCE. I yield.

Mr. SIMMONS. I have no desire to continue the discussion which I inadvertently precipitated with the Senator from Maryland a few days ago, but I want to ask the Senator if he sees no distinction or difference between the Federal Government doing work of this kind by persons selected through the civil service by its own officials and a private corporation which may lease from the Government being compelled to employ only such persons as may be selected by a Government agency upon such tests as that agency may see fit to apply instead of selecting them by itself and upon such tests as it may see fit to employ?

Mr. BRUCE. I have already made the statement, and it is hardly necessary for me to make it again, that my amendment did not contemplate the idea at all of any lessee under the Underwood substitute being required to select his employees with reference to the civil-service system of the United States. That situation takes care of itself. No lessee would be fool enough when he came to the selection of his agents and employees to ask whether they were Republicans or Democrats or to permit the paralyzing influence of the Federal spoils system of politics to creep into his private operations as lessee or contractor. No abuses of patronage whatever would cluster about the work if carried on by a lessee. If the Senator from North Carolina or I, the Senator from Maryland, were to go to such a lessee and ask him to appoint some one because he was a Democrat, he would laugh in our faces, and that is what he would do if any Republican were to approach him and ask him to appoint some one as an employee because he was a Republican. It is only in the event of this great work being carried on by the Government itself, with the danger of abuses of patronage springing up in connection with it, that my civil-service amendment would have any meaning.

I continue the reading of the letter:

The tests of the Civil Service Commission are so practical that they developed the highest class of employees. Besides this, there has never been any scandal regarding the employment and payment of the persons engaged on this work, as there was on other war-time projects, which you may recall, built for the Government without regard to civil service. It would seem from some of the statements made in the debates on this proposition that a number of the Senators are of the opinion that the Civil Service Commission at Washington would pass directly on the qualifications and employment of the employees at Muscle Shoals. They refer to the apportionment rule, when, as a matter of fact, the field service of all the departments of the Government is unapportioned, and I remember distinctly that employees were placed on those projects from practically every State in the Union, and this would be done very probably if the arrangement as proposed by you should be made effective.

With reference to the nitrate plants, I might say that plant No. 1 (the experimental plant) was completed and turned over to the Government before the war was concluded. While the construction of the plant was by contract, its operation after it was turned over by the Government was done by civil-service employees. Among these were included high-grade chemists and technicians and all of the other employees from that down to laborer.

I call the attention of the Senator from North Carolina, if he will allow me to invoke his attention, that the writer also states as follows:

While the construction of the plant was by contract, its operation after it was turned over by the Government was done by civil-service employees. Among those were included high-grade chemists—

That is the very class of persons that the Senator asked me whether I was willing to bring within the scope of my amendment—

chemists and technicians and all of the other employees from that down to laborer. Nitrate plant No. 2 was not operated to any extent under Government ownership but was turned over to the Government; and after this was done a great amount of research work was

carried on at the plant, and these employees, all highly trained, were selected under the merit system, except, of course, a few who were covered into the service having come with the plant from the contractor. The commanding officers at both of these plants, as well as the district engineer in charge of the construction of the dam, all said to me at different times that they were well satisfied with the operation of the merit system and appeared to be very appreciative of the results obtained under the commission's rules.

Not only has the merit system been tried particularly in the Muscle Shoals district but it is in operation, as is well known, at all navy yards, flying fields, and armor plants that are operated by the Government and, so far as I have ever been able to determine, has operated with the greatest satisfaction to the departments. I might also add that in the many veterans' hospitals that have been established throughout the United States practically all of the employees covering the skilled medical and surgical men, technicians, and lesser employees have been recruited through the merit system.

I hope that you will pardon this long letter from me, but I could not do otherwise than write it, having been as closely connected with the building of the plants at Muscle Shoals and the Wilson Dam as I was. I sincerely trust that you, as well as many other Senators, will continue in your good work looking to the extension of this system, which has proved practical, economical, and successful.

Believe me, I am,

Very respectfully,

B. H. CLEMMONS, District Secretary.

So I think that there is very little doubt that when my civil service amendment was voted down a few days ago it was voted down with a very imperfect understanding on the part of the Members of the Senate of the extent to which the Federal merit system of appointment had actually been carried into effect in the operations of the Government at Muscle Shoals.

I know that one of the most conspicuous things in the history of Congress, notwithstanding the gradual expansion of the scope of the merit system of appointment, has been the reluctance with which it has from time to time extended that system; but sooner or later, under the pressure of public opinion, it has always extended it. It can at least be said that not since the time of General Grant have we ever had a President, either Republican or Democrat, who did not have a sufficient sense of the exalted nature of his office to extend further such a wise, fair, and beneficent system of appointment.

I am going to bring this subject up again in the Senate from time to time; the Senate may rest assured of that. I shall not do so at this session; it would be useless for me to do that; the time is too short; but at the next session of Congress, and at the next session after that, if necessary, I shall do so. There is no reason why the merit system of appointment should not be applied in full to the entire Panama Canal service; there is no reason why it should not be applied in full to the Emergency Fleet Corporation service, if that service is to be continued; there is no reason why it should not be applied in full to the Muscle Shoals project, if the Muscle Shoals project shall be carried on by the Government. At the next session of Congress I propose to introduce a bill seeking to extend the merit system of appointment to every one of these branches of the Federal service. Unless I mistake the character of the sensible, practical, and patriotic President who now occupies the office of the Presidency, we may at some later session of this body have still another recommendation from him that the Federal merit system of appointment be extended even further than he has already recommended.

Mr. COPELAND. Mr. President, before the Senator from Maryland takes his seat I should like to say a word about his reference to the ferry service of New York. If I understood the Senator, he stated that perhaps the Senator from New York would confirm his statement that the ferry service at the present time is operating at a deficit, which it did not do when it was under private ownership. Undoubtedly that statement is true, but you could not get the people of the city of New York to turn the ferry service back to private ownership, because, if I am properly advised, the public was so mistreated and exploited during private ownership that under no circumstances would the people consent to have the bad service which they endured in order that any theory of government in regard to public ownership might be carried out.

I am in full sympathy with the Senator from Maryland in his opposition to public ownership and operation, in general, but I think the reference to the ferry service was very unfortunate. I desired merely to say that much to the Senator before he took his seat.

Mr. BRUCE. I can not agree with the Senator from New York at all. For all practical purposes he has confirmed what I stated, except that some of his observations as to what I

said are not entirely accurate. What I said was—and, of course, my knowledge is derived entirely from the public press—that at one time in New York all ferry lines were being conducted by private enterprise, with a single exception, and that exception was the only one of those lines whose operations were marked by a grave deficit at the end of every year.

The Senator is probably adhering just a little too closely to his own bias in favor of publicly conducted utilities when he says that the people of New York would not tolerate any privately conducted ferries. May I ask the Senator from New York whether, even at the present time, there are not privately conducted ferries between Brooklyn and New York?

Mr. COPELAND. I think not.

Mr. BRUCE. The Senator "thinks not"; but I rely on the legal presumption that when one establishes the existence of a state of things at a particular time it is incumbent upon the other party to the controversy to show that there has been a change.

Mr. COPELAND. Mr. President, if I may be permitted to interrupt further, I think there are some rowboats, perhaps, that go across the river, but no public ferry, as that term is generally understood.

Mr. BRUCE. Of course, the Senator, as I understand it, is himself an advocate of Government operation; at least his votes, so far as they have fallen under my attention here have been usually inspired by that prepossession; but, even if it be true that at the present time there is any reluctance in any quarter in New York to go back to the private operation of any ferry, I should like to know how far that fact is due to the incumbency in the office of mayor of New York at the present time of an individual with such views as those of Mayor Hylan.

Mr. COPELAND. Mr. President—

The PRESIDING OFFICER (Mr. MEANS in the chair). Does the Senator from Maryland yield to the Senator from New York?

Mr. BRUCE. Certainly.

Mr. COPELAND. There is not any question, Mr. President, which could be put to me which I would more gladly answer than the one which has been suggested by the Senator from Maryland.

I recall that when he was first a candidate for the office, the present mayor of the city of New York was elected by a very handsome majority—I think about a quarter of a million. Four years later, after having given the people of the city an honest and very capable administration of the office, he appeared again before the people and was elected by a majority of almost half a million. He received, if I remember correctly, all the votes of the city except about 300,000; and I venture to say, Mr. President, that if Mayor Hylan were to be a candidate to-morrow for that office he would be reelected by a larger majority.

This great popularity of his is dependent largely upon the fact that he has stood out in that great city against the encroachment of private interests and has insisted that our public service corporations should be so conducted that the people should be served and not that capital alone should be served.

I think I am right in saying that we have a 5-cent carfare in New York City largely because of the activities of our present mayor; and I am here to state further that, in my judgment, there is no more popular public official in my city or State than is Mayor Hylan, who now holds that office, and who in my judgment next year will be reelected by a larger majority than he has ever before received.

Mr. BRUCE. Well, Mr. President, I am certainly not disposed to test the extent to which the Senator from New York is endowed with the gift of prophecy. I have never been in the slightest degree inclined to accept anyone as a prophet so far as election returns are concerned.

My information with reference to the present popularity of the Hylan administration is very different from that which the Senator seems to possess. We all know what are his general convictions on all subjects relating to the larger private enterprises of the city of New York. As I look at it, the street transportation service of New York has been most unwarrantably impaired by unfair and unjust treatment on the part of the city administration of New York, and I confess that when I have read the attacks of his honor, the mayor of New York, on Wall Street—his savage, truculent attacks—my disposition has been not so much to side with his ideas as with those of the good old lady in the recent Democratic convention, Mrs. Barrett, who said she believed that Wall Street was just as much a part of the United States as Main Street. So do I, except I think it has to be watched just a little more vigilantly.

Mr. COPELAND. Mr. President—

The PRESIDING OFFICER. Does the Senator from Maryland yield to the Senator from New York?

Mr. BRUCE. I had concluded, but I will resume my feet for the purpose of accommodating the Senator from New York.

Mr. COPELAND. Mr. President, I was simply going to comment to this extent, that I look upon the Senator from Maryland as a very able lawyer, but I am sure, at least I hope, that the Senator formed his opinion about the pending bill not by such hearsay evidence as he has formed his opinion about the mayor of the city of New York.

Mr. President, we have had very much discussion of the pending measure, and in my judgment the time has been well spent. There is at stake here the future of a great enterprise, vital in many ways to the welfare of our country. It is vital because it will supply fixed nitrogen for explosive purposes in time of war. It is vital because it will supply fertilizer to the depleted farms of the country in time of peace.

At times the debate has been somewhat heated, and why? As I have discussed the matter with my colleagues it has seemed to me that the question uppermost in every mind is the theory of government involved in public ownership. They are asking whether or not it is wise under any circumstances for the Government to own and operate a plant of this sort.

I think I take second place to no one in the Chamber in opposition in general to the idea of public ownership and public operation; but we have here a property upon which the Government has expended already \$135,000,000. Before the plant is completed it will cost \$150,000,000. At this late moment, after this great expenditure, there are some in the Chamber who would vote for anything in the way of a lease or sale of the property in order that the Government might be relieved of its continued ownership and operation.

If a case of smallpox has been in a house for three weeks, there is no use in taking the patient out. The family is already exposed to the disease. If there is a case of smallpox just reported in the community, certainly take it away, so that nobody may be exposed. We have already been exposed to public ownership and operation of this enterprise. I do not think it would hurt us a bit if we should continue the public ownership and operation until we determine what is the ultimate good of the country in the final disposition of the property.

I favor the Norris bill in preference to the Underwood bill. That is, I prefer the Norris bill, with certain amendments which I should insist upon having if I were to support it. I want to speak of one of them now, while I have it in mind.

There is a proposition in the Norris bill to lease certain property, which is placed first under the Secretary of Agriculture. If he so wishes, he can lease it, which, to my mind, is a fatal defect in the bill. Until we have determined what should be the ultimate fate of the property it seems to me a wicked thing to tie ourselves up by a long lease of 50 years of any part of it. It is particularly absurd to do this simply because we do not now know what else to do with the plant.

My judgment is, Mr. President, that it is wise to let the Secretary of War finish the dam, complete the work. In the meantime, as the Norris bill provides, let the Secretary of Agriculture go forward with his experimentation in the making of fertilizer, in order that that product may be cheapened for the farmer.

After this experimentation has been completed, after it has been determined how much power is needed by the Secretary of Agriculture for the experimentation and ultimately for the manufacture of fertilizer, it can then be determined whether the remaining power shall be sold or leased. It can then be determined whether the manufacture shall be increased and the Government continue in the making of fertilizer on a larger scale than we now consider possible.

The point I have in mind and the thing I want to say to Senators is that, as I view it, we have not yet found out what is the wise thing to do in the final disposition of this property. We do not know whether it is wise to lease it or sell it. We do not know whether the making of fertilizer should be turned over to private hands.

Every expert who has testified has spoken of the work of Doctor Cottrell and the splendid investigation which has been made by the Agricultural Department—work which has cheapened the making of fertilizer, work which has resulted in methods of making fertilizer so that a reduced quantity of power is necessary in its making. So I say let us go forward with this work for the next 2 or 3 or 4 or 5 or 10 years, until we know what really should be done. As I view the matter, it

is unwise to enter into a long-term lease. If we do that, the property is out of our hands, and we do not now know what should be done with it ultimately.

Mr. McKELLAR. Mr. President—

Mr. COPELAND. I yield to the Senator from Tennessee.

Mr. McKELLAR. Does the Senator know of any power company that is now manufacturing nitrates for fertilizer purposes?

Mr. COPELAND. No, sir. I know that in my own State, at Syracuse, as a by-product, there is some fertilizer being made, but not by a power company.

Mr. McKELLAR. I take it that none of the power companies are manufacturing. There is no provision in this bill by which they shall experiment or manufacture.

Mr. COPELAND. Why should they use their power for the making of fertilizer when they can sell it and turn it to so much greater financial advantage by using it for power purposes exclusively?

Mr. McKELLAR. Mr. President, if the Senator will yield to me—

Mr. COPELAND. I yield.

Mr. McKELLAR. In 1912, when the Coosa power act was being debated in the House—and, by the way, that was a bill by which the Alabama Power Co. was given the right to dam the Coosa River in Alabama at the Coosa Shoals—the Senator from Alabama [Mr. UNDERWOOD] and I were both in the House, and here is what was said by the Senator from Alabama on that subject:

Now, what they propose to do—

That is, the Alabama Power Co.—

is to spend \$1,600,000 to help make this river navigable and allow the Government to use all the water it needs for navigable purposes and then take the balance of the power created, not for the purpose of selling electricity for light or heat, but for the purpose of manufacturing cyanamide, or lime nitrogen, and fertilizer for the benefit of the farmers of Alabama and of the South.

In 1912 the Alabama Power Co. was given the Coosa power site by the Congress on the argument that that company was going to manufacture nitrates for the use of the farmers of Alabama and the South. I have never heard of that company manufacturing a pound of fertilizer. It is selling the power, just as it said it would not do in that case. So I want to say to the Senator that sections 3 and 4, which require probably this very company to make nitrates for farmers, do not appeal to me very much. The same argument was used 12 or nearly 13 years ago—that the Alabama Power Co., if given this great grant of power on the Coosa River in Alabama, by which 60,000 horsepower was generated, were going to make fertilizers for the farmers of the South. It has not been done.

Mr. COPELAND. It must be assumed, Mr. President, that the reason why it has not been done is because it was not found to be profitable to make fertilizer. They could use that power to much greater financial advantage in another way. That is what would happen at Muscle Shoals, probably. We have had only one witness before us testifying to the effect that fertilizer could be cheaply made at Muscle Shoals. I think the Senator from South Carolina read into the Record a letter from one of the Government experts stating that it can be cheaply made, but it is the opinion of the Committee on Agriculture and Forestry, if I rightly understand the statement of the Senator from Nebraska, that the processes of manufacture of fixed nitrogen have not yet been so perfected and so cheapened that it can be made commercially and advantageously at Muscle Shoals.

So, then, it must follow that if this property were leased, and granting that the lessee would carry out the contract to the extent of making the 40,000 tons per year provided by the Underwood bill at the end of six or eight years, there is no reason to believe at this moment that any more than that quantity would ever be made.

We are not yet prepared to make final disposition of this property. Let the experimentation go forward. That is the most valuable thing, outside of the development of power itself. The experimentation at Muscle Shoals is the valuable thing for the country. Let that go forward. It can not go forward in a laboratory. The same thing which is successful in a test tube is rarely successful when applied commercially, when applied on a large scale. It strikes me that the wise thing is to continue our work there through the Department of Agriculture, in order that there may be developed, as undoubtedly there will be developed, cheaper methods and

better methods of making fertilizer. When we have settled that question, when we have demonstrated that fertilizer can be made cheaply, that it can be made commercially a profitable product, then the natural thing for the lessee, if we ever get one, will be to use the power for making fertilizer. So out of a wait of two or three or four or five years we may develop the knowledge of fertilizer making so that all the tremendous power at Muscle Shoals shall be used for this thing. That is what the farmers of this country are crying for, and to attain that is my appeal to the Senate.

Mr. WALSH of Montana. Mr. President, I regret that the Senator from Alabama seems to have changed his mind about the advisability of incorporating in his substitute bill the amendment proposed by me a few days ago.

Mr. UNDERWOOD. Mr. President, if the Senator from Montana will yield, I will say to him that if he will make his amendment extend so far as to apply both to a lessee and to the Government corporation I shall have no objection to it.

Mr. WALSH of Montana. No; I could not consent to that; but, Mr. President, if that is the only objection the Senator has to the amendment, it can be easily obviated by adopting the suggestion made by me the other day to the Senator from New York, namely, to add another brief section saying that "the provisions of the foregoing two sections shall equally apply to the corporation to be created under the provisions of the bill."

Mr. UNDERWOOD. I will say to the Senator that I think his amendment and the language of the bill will result in practically the same thing; and therefore, I am not willing, unless I am compelled to do so, to take any risk of striking out the provisions of the bill which apply to the corporation.

Mr. WALSH of Montana. I wanted to show to the Senator, and I think I can, that the provisions of section 10 are by no means equivalent to those offered by me. As a matter of course, if in my judgment they were, I never should have offered the amendments.

There are, therefore, two considerations to be borne in mind in connection with the determination of the advisability of adopting the amendments proposed by me. First, does section 10 cover the case as completely and effectually, so far as the lessee is concerned, as do the amendments offered by me? Second, is it advisable to put the Federal corporation, in its operations, under the control of the local authorities? If that is desirable, as I have indicated, it would be a very easy thing to make the provisions of sections 10 and 11 as proposed by me applicable to that corporation. I shall address myself to that presently.

I want to call attention to the fact that there is a very essential difference between section 10 as it appears in the substitute and sections 10 and 11 as proposed by myself. I might say, in this connection, that these two propositions represent concretely one of the most spirited contests waged in connection with the passage of the water-power legislation. Section 10 of the amendment known as the Underwood amendment is substantially the same as was the provision in the so-called Shields bill which was adopted by the Senate, but which the House at that time declined to concur in. That bill contained a simple provision that in the matter of rates to be charged, they should be subject to regulation by the States in which the power was used. The controversy went on for a long time, and the record is a very lengthy one. Eventually the two houses of Congress rejected that provision of the Shields bill, and incorporated in the water power act the provisions which have become the basis of this amendment proposed by me.

If I may have the attention of the Senator from Alabama, the first sentence of section 10 of my amendment is substantially the same as section 10 in the Underwood amendment. Section 10 in the Underwood amendment contains no such provision whatever as is found in the second sentence of section 10 in the amendment proposed by me. That amendment reads as follows:

That as a condition of any lease, entered into under the provisions of this act, every lessee hereunder which is a public-service corporation, or a person, association, or corporation developing, transmitting, or distributing power under the leases either immediately or otherwise, for sale or use in public service, shall abide by such reasonable regulation of the services to be rendered to customers or consumers of power, and of rates and charges of payment therefor, as may from time to time be prescribed by any duly constituted agency of the State in which the service is rendered or the rate charged.

With the use of a few more words that is substantially section 10 of the Underwood amendment, which reads:

The surplus power not required under the terms of this act for the manufacture of nitrogen or fertilizer, when sold or used shall be subject to the laws, rules, and regulations relating to the sale and use of electric power in the several States in which said power is used.

But the amendment proposed by me goes on as follows:

That in case of the development, transmission, or distribution, or use in public service of power by any lessee hereunder or by its customer engaged in public service within a State which has not authorized and empowered a commission or other agency or agencies within said State to regulate and control the services to be rendered by such lessee or by its customer engaged in public service, or the rates and charges of payment therefor, or the amount or character of securities to be issued by any of said parties, it is agreed as a condition of such lease that jurisdiction is hereby conferred upon the commission created by the act of Congress approved June 10, 1920, upon complaint of any person aggrieved or upon its own initiative, to exercise such regulation and control until such time as the State shall have provided a commission or other authority for such regulation and control: *Provided*, That the jurisdiction of the commission shall cease and determine as to each specific matter of regulation and control prescribed in this section as soon as the State shall have provided a commission or other authority for the regulation and control of that specific matter.

Mr. President, it is said that is entirely unnecessary here, because the only State in which the power will be produced is the State of Alabama, which already has a regulatory authority, or commission. But it by no means follows that the act establishing that authority may not be repealed by the legislature of the State of Alabama at any time, and then there would be no regulation. Moreover, it may be that the act is not sufficiently comprehensive, that it does not touch some specific matter referred to whereby the jurisdiction over that specific matter would be lodged in the Federal commission. For instance, under this the Federal authority is authorized to regulate the amount of securities which may be issued by any corporation which secures power from this source for distribution as a public utility, and that was put in the act because it was unfortunately a very common thing that securities of these utilities companies were scattered all over the country, and passed into the hands of what might be spoken of as innocent holders, and to regulate the price upon the basis of the actual investment would result in great hardship and injury to such so-called innocent purchasers. Accordingly, there was always a great pressure brought to bear upon the commission or regulatory authority to take into consideration the perplexing situation of these so-called innocent holders. So it was deemed wise that the Federal commission should have the authority to superintend the issuance of securities, at least as to the amount that was to be issued by these companies which were to become the ultimate distributors of the power thus developed. Whether or not the statute of the State of Alabama authorizes the commission to exercise any such authority my study has not fully convinced me. However, as I have indicated before, that commission may be abolished at any time by the Legislature of the State of Alabama, or its powers may be restricted in one way or another. I think it unwise not to have a provision of that character in the bill.

Section 11 of the amendment proposed by me covers a situation that is not touched at all by section 10 of the Underwood amendment, and that contemplates the case of a conflict between the laws or regulations of two or more States through which the power passes. As I indicated in a colloquy with the Senator from Louisiana a few days ago, the Underwood substitute provides that the rates shall be regulated by the regulatory authorities of the States in which the power is used, respectively. That is to say, it will be carried, we will say, into the State of Tennessee for distribution in the State of Tennessee, and the rates there will be regulated by the authority of the State of Tennessee. It will be carried into the State of Kentucky, for instance, and the rates will be regulated by the regulatory authority of the State of Kentucky. But there may be the most serious conflict between the acts of the regulatory bodies of these two States, and the tendency of course will always be to make the rates, for instance, in the State of Kentucky less than the rates in the State of Tennessee, for the purpose of attracting industrial enterprises to the State of Kentucky, and of course the State of Tennessee will come back at them and reduce their rates below the rates exacted in the State of Kentucky, and there will be constant competition between these various States to

reduce the rates and to reduce them to such a point as will threaten the success of the governmental enterprise.

Thus it becomes necessary to institute some kind of machinery that will harmonize the regulations of the various States through which the power is to go, and that is the condition that was contemplated by section 20 of the water power act, which has become section 11 of the amendment tendered by me, which reads as follows:

That when said power or any part thereof shall enter into interstate or foreign commerce the rates charged and the service rendered by any such lessee, or by any subsidiary corporation, the stock of which is owned or controlled directly or indirectly by such lessee, or by any person, corporation, or association purchasing power from such lessee for sale and distribution or use in public service shall be reasonable, nondiscriminatory, and just to the customer, and all unreasonable, discriminatory, and unjust rates or services are hereby prohibited and declared to be unlawful; and whenever any of the States directly concerned has not provided a commission or other authority to enforce the requirements of this section within such State or to regulate and control the amount and character of securities to be issued by any of such parties, or such States are unable to agree through their properly constituted authorities on the services to be rendered or on the rates or charges of payment therefor or on the amount or character of securities to be issued by any of said parties, jurisdiction is hereby conferred upon the said commission, upon complaint of any person aggrieved, upon the request of any State concerned, or upon its own initiative to enforce the provisions of this section, to regulate and control so much of the services rendered, and of the rates and charges of payment therefor as constitute interstate or foreign commerce, and to regulate the issuance of securities by the parties included within this section, and securities issued by the lessee subject to such regulations shall be allowed only for the bona fide purpose of financing and conducting the business of such lessee.

Two other formal provisions, of no consequence here, I do not read. These provisions were at that time all regarded as entirely necessary for the protection of the public interests. They are carefully thought out; they are the result of earnest debate and of very sincere consideration of the entire subject by both Houses of Congress, and I particularly desire to impress upon the Members of the Senate who do me the honor of listening to these remarks the view that these provisions were adopted by the Senate in substitution for exactly the provision which is now incorporated in the Underwood substitute and becomes section 10 thereof. So much for that.

With respect to the other phase of the question, I insist that if there is no other objection to these provisions than that they do not apply in the case of the operation of the property by the corporation, the creation of which is provided for in this bill, that can be easily taken care of by a simple provision making them applicable to that kind of a corporation. But I am convinced that that is fundamentally wrong. I am convinced that we should never invest forty-five million or a hundred and thirty-five million or a hundred and fifty-five million dollars, whatever the sum may be, in an enterprise of this character by the United States through a corporation which it itself creates, the managing authority of which is the Secretary of War and four other men to be appointed by the President of the United States, and then to turn over to some local authority the matter of the rates that shall be charged for the power thus developed. I do not know how that kind of a proposition can be sustained before a body as reflecting as this.

Mr. CARAWAY. Mr. President, may I ask the Senator a question?

The PRESIDING OFFICER. Does the Senator from Montana yield to the Senator from Arkansas?

Mr. WALSH of Montana. Certainly.

Mr. CARAWAY. The Senator's proposed amendment would regulate the use and distribution and sale of power by the lessee. He recognizes the wisdom of the State in controlling the conduct of a business if it is to be done by some one to whom the Government has leased the property. Ought the Government to want any advantage in itself? Ought it to be willing to hamper a citizen and make the citizen carry a handicap it would not carry itself if it were engaged in the business?

Mr. WALSH of Montana. That is not the situation at all.

Mr. CARAWAY. Why is it not?

Mr. WALSH of Montana. Simply because the Government is not going to engage in this business for the purpose of enriching itself. A private corporation is going to engage in it for no other purpose. The Government is not going to make a dollar out of the thing. It is going to create a corporation not for the purpose of pecuniary gain at all, and it is to be supposed that the Government corporation, directed by a board

of directors consisting of the Secretary of War and four officers of the Government appointed by the President of the United States and confirmed by the Senate, is not going to make rates which will be oppressive in any character. But if they are oppressive the consumer of the power has an opportunity to go before that board and complain and insist that the prices he pays are too high, and they have no interest whatever to observe, so far as anybody can discover, except to do what is just in the premises.

Mr. CARAWAY. Then if it does not intend to do it, why does it object to regulation? The principle underlying it is the unwillingness to permit the State to have anything to do with the regulation of business within its borders.

Mr. WALSH of Montana. Oh, no. The Senator really could not attribute that to me, and I do not think he can entertain any such an idea himself.

Mr. CARAWAY. Oh, Mr. President—

Mr. WALSH of Montana. Just a moment.

Mr. CARAWAY. Do not say I did not mean what I said without being willing to allow me to make a statement.

Mr. WALSH of Montana. I do not think the Senator meant that.

Mr. CARAWAY. I do not understand the English language, then.

Mr. WALSH of Montana. I regret always that the Senator and I never seem to engage in controversies about these matters without some heat being displayed. The Senator entertains a different view about the matter from my own.

Mr. CARAWAY. I was perfectly willing to concede that the Senator was entirely right, but the Senator said I could not entertain such an idea and could not get it from the language he used. I think I did.

Mr. WALSH of Montana. The remark of the Senator that the principle is that we do not want to allow the States to conduct business within their own borders could be hardly attributed to me.

Mr. CARAWAY. That is not exactly what I said, either. I said that it was unwilling to permit a State to regulate business within its borders. I do not think there is anything sacred about the National Government that it ought to be permitted to override State regulations and conditions under which private individuals do business in the States. The Government ought itself to be willing to accept them. I have never been able to make up my mind that all the wisdom there is is within the possession of those who happen to be upon the Federal pay roll.

Unless I do not just comprehend anything at all—and I am perfectly willing to concede the Senator knows much more about it than I do—I do not know what other theory there is than that we are not willing to let the State have anything to do with the business if the Federal Government is conducting it, and yet write into the bill that if the Federal Government turns it over to a private individual the State may regulate that business.

Mr. WALSH of Montana. I was trying the best way I could to point out the difference between the two situations. I think the situation was clearly put before the Senate the other day by the senior Senator from Missouri [Mr. REED]. The only purpose that was ever intended to be subserved by these regulatory bodies, the only occasion for their existence, arises from the fact that powers will be given to the public utility corporation. They exist for the sole purpose of making money for their stockholders and naturally it is to be expected that they will fix the rate with special regard to their own interests and to subserve their own purposes and regardless of the interests of the consumers. The Government of the State therefore steps in to preserve its citizens and the users of the service in the State from the greed and rapacity of the public utility corporation.

Mr. CARAWAY. May I suggest that the regulation goes beyond the question of fixing prices? It goes to its distribution, and I am persuaded, however mistaken I may be, that a board created in the State might have more information about what would be a wise and just and economic distribution of power in the State than somebody who never saw the State and who happens to be clothed for the time being with a little brief authority from the Federal Government. That is the idea I had.

I certainly beg the Senator's pardon, because I was wrong in what I said a moment ago. I had no intention when I said it of antagonizing the Senator personally. I have felt that the Federal Government ought to be big enough to recognize the rights of the States and not seek to thrust itself into business through the form of a corporation, and then say to the State, "You may regulate all other people, but when I come in I am

sovereign and you must not touch me. I can do no wrong." It is to me at least treating the States without proper consideration, without any regard to whether or not the State is inclined to be fair or unfair. It is just saying, "I will not trust you at all. When I create a business and put it into competition with people who are doing business in your State, I am not going to let you touch me. I will distribute the power and sell the power, and I will favor this and discriminate against that, and you can not prevent it. You can regulate everybody else's business, but you are not to be consulted how I do business in your State." That is the impression I have of the purpose.

Mr. WALSH of Montana. That argument has no force with me.

Mr. CARAWAY. I understood that.

Mr. WALSH of Montana. None whatever.

Mr. CARAWAY. I understood that.

Mr. WALSH of Montana. It has no force with me because the very basis of it is wanting. What reason is there for supposing that a State in reference to a matter of this kind will exercise a greater degree of judgment and wiser discretion than the Federal Government?

Another thing I should like to understand is where and when a sovereign has ever submitted its operations to the regulation of another sovereign authority. I do not speak of it on technical grounds at all, but there is something entirely repugnant in the idea. Go back to the establishment of the United States Bank. When the Government of the United States engaged in the banking business, would it tolerate for a moment that the operations of the United States Bank should be regulated and controlled by laws enacted in the various States? We all know that many of the States enacted laws that were inimical to the operations of that bank and intended to destroy its efficacy as a business institution and to drive it out of business.

It is not to be imagined that any of the States will do anything of the kind here, but here is a great enterprise into which the Government of the United States has put an enormous amount of money. More than that, the prime object of the entire enterprise is to permit the production of fixed nitrogen as a safeguard against exigencies that may confront us in case of a war. In order to do that it becomes necessary to conduct the enterprise with some degree of business success. The production of nitrogen is inextricably intertwined with the production of power, if not distribution, for industrial and other uses. It follows that the State authorities can not have the information and the knowledge concerning the relation which the one part of the plant bears to the other to do what is just and right concerning the whole enterprise. So that I think we would imperil the whole thing by placing under the control of the States the regulation of the prices if the whole thing is to be conducted by the Federal Government.

But, as I said, if that is the only objection to it, we can take care of that all right. Of course, the real objection to it is the objection that these regulatory features go further in the amendment proposed by myself than section 10 in the Underwood amendment. I believe the results achieved in the struggle through which we went in connection with the water-power legislation ought not now to be abandoned with respect to the great water power that is here to be developed, and that we ought to throw around the distribution of it exactly the same safeguards that we thought wise to provide for in connection with that legislation. That can only be done by the adoption of provisions such as those I propose.

Mr. HOWELL. Mr. President, the junior Senator from Maryland [Mr. BRUCE] during his remarks referred to the comparisons I had made between electric-light plants in Cleveland and Lincoln on the one hand and electric-light plants in certain other cities of the country, and suggested that the favorable showing for the two cities named might be due to the fact that their plants were municipally operated and therefore not operated in accord with business principles. I assume this much because he inquired whether provision had been made for depreciation and suggested that there might possibly have been other omissions. I call attention to the fact that with the exception of the Cleveland municipal plant my comparisons were between privately operated plants only. True, I did compare the rate for 40 kilowatts a month afforded by the municipal plant in Cleveland with rates in certain other cities, but otherwise my comparisons were between the rates charged by privately operated plants affected by and unaffected by public competition.

Let us consider the electric-light rates in Maryland, in the city of Baltimore, in which the junior Senator from Maryland [Mr. BRUCE] resides. The city of Baltimore has a population of about 775,000, and there are probably in that city

160,000 consumers of electric light. The energy supplied is secured from steam and water, and the charge for 40 kilowatts per month is \$3.20 net. Compare that rate with the rate charged by the publicly owned plant in Cleveland, and we find that it costs 166 per cent more in the city of Baltimore for 40 kilowatts per month than it does in Cleveland, which enjoys public competition. Comparing the rate charged in Baltimore with the rate charged in Cleveland by the privately owned plant, we find that the people in Baltimore pay 60 per cent more for 40 kilowatts a month than do the people of Cleveland to the privately owned plant, and 52 per cent more than do the people of Lincoln, Nebr., a city of 58,000 inhabitants, pay to a privately owned plant. I am using for comparison only one public enterprise, the Cleveland publicly owned plant; my other comparisons being wholly between privately owned plants, some of which are located in cities where there is public competition.

Mr. WATSON. If I understand, in Cleveland there are both publicly and privately owned plants?

Mr. HOWELL. Yes, sir. One-third of Cleveland is supplied by a publicly owned plant.

Mr. BRUCE. Mr. President, may I ask the Senator from Nebraska a question?

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Maryland?

Mr. HOWELL. Certainly.

Mr. BRUCE. If electricity is supplied by the publicly owned plant in Cleveland on such satisfactory terms, why should there be any privately owned plants at all there? There must be some inferiority of service or something else that keeps the privately owned plants alive and active.

Mr. HOWELL. One of the reasons why the people enjoy a lower rate in Cleveland or elsewhere where there are two plants, one owned by the public and one by private individuals, is because of public competition. It appears that the lower rate is obtained in various cities by merely affording competition for a part of the business. Potential, threatened competition as a result of partial service gives a lower rate to the entire city.

Now, let me give the Senator another example in his own State of Maryland. I find that in Cumberland, Md., with a population of 32,000, the consumers pay the same rate as in Baltimore, but I find that in Hagerstown, Md., a town of 30,000 inhabitants, the consumers pay the same rate there that they do, for instance, in Omaha, where the rate has been reduced from 14 cents to 5½ cents per kilowatt hour; in other words, in Hagerstown, Md., in spite of the rate charged in Baltimore, the people have this low rate. Why? Because there is in Hagerstown a publicly owned plant, and as a consequence the privately owned plant serves Hagerstown, Md., at \$2.20 for 40 kilowatts per month.

Mr. BRUCE. Mr. President, may I interrupt the Senator for a moment?

Mr. HOWELL. Certainly.

Mr. BRUCE. Does the Senator know whether the publicly owned plant in Hagerstown derives any special advantages or privileges or perquisites of any kind from the general municipal government of Hagerstown? Does he know what rent it pays for the space that it occupies? Does he know whether it makes any proper allowances for depreciation, such as a private concern has to do?

It is no uncommon thing—and I am sure the Senator has had such instances brought to his attention—for a publicly conducted utility or industrial enterprise to exist in a community and for private enterprises of the same description to be in active competition with it, notwithstanding that they charge higher rates, because very often the service of the public plant is so inferior and so unsatisfactory that the people of the town prefer to pay the higher rate to the private enterprises. I have known that to be true in Maryland more than once. It is true in a measure of the competition between the Federal parcel post and the express companies. Why do not the express companies all go out of existence, notwithstanding their rates, if I am not mistaken, are higher than those of the Federal parcel post? It is because their service is more efficient and satisfactory on the whole than is the parcel-post service, if I can believe the testimony that has come to me from many different sources. I personally feel that way myself about the matter. When I want to send something that is very valuable to any great distance, I usually intrust it to the hands of the express company rather than to the parcel post, because I know that the express service is a highly satisfactory and efficient service.

It seems to me that the error of the Senator from Nebraska consists in the fact that he does not tell us what special

conditions environ each one of these publicly conducted plants. There are all sorts of things we must know before we can enter into the comparative merits of publicly owned plants and privately owned plants which are engaged in business enterprises. As I have said, we want to know how much space the municipally conducted plant gets free of cost, or practically free of cost, and what other concessions are made to it.

In the State of Maryland we have some considerable exemptions from taxation in the case of enterprises of one sort or another. I should also want to know whether or not proper allowances are made for depreciation; but the Senator from Nebraska does not enter into those factors at all. He selects a municipal plant in Cleveland and compares it with a private plant in Baltimore, or he selects a municipal plant in Lincoln, Nebr., and compares it with a private plant in Cumberland, Md., or in some other town. The Senator does not let us know what are the factors which we must consider before we can make the comparison.

Mr. HOWELL. The Senator misunderstands me. I am not merely comparing a municipal plant in Cleveland with a privately owned plant in Baltimore. I am comparing a private plant in Cleveland with a private plant in Baltimore. I am not comparing a public plant in Hagerstown, Md., with a privately owned plant in Baltimore. I am comparing a privately owned plant in Hagerstown, Md., with a privately owned plant in Baltimore. I am showing that in Hagerstown, Md., 40 kilowatts a month are supplied by a private plant for \$2.20 a month, whereas in Baltimore the charge is \$3.20 a month; further, that the reason why the private plant in Hagerstown supplies 40 kilowatts at that rate is because there is a municipal plant in Hagerstown which is in competition with the private plant. If such a reduction were made in Baltimore, Md., assuming a saving per service of merely 50 cents a month and not \$1, it would save the people of the Senator's city about \$1,000,000 a year.

Mr. BRUCE. Hagerstown, of course, I remind the Senator, is a relatively small town. Rents doubtless are lower there than they are in Baltimore. Less is paid there for street franchises, I imagine, although I do not know that such is the case, and I would have to inform myself on that subject. But the several elements of expense that enter into the operation of a plant in Hagerstown are different in scale of magnitude from the elements of expense that enter into the operation of an electric plant in a great city of 750,000 inhabitants. One great difference, I suspect, is the matter of taxation. As is true of every great city in the country, we have a high tax rate in Baltimore.

Mr. HOWELL. Do I understand the Senator to suggest that it costs less to furnish electrical energy in Hagerstown, a city of 30,000 inhabitants, than it does in Baltimore?

Mr. BRUCE. I want precise assurance as to that.

Mr. HOWELL. The Senator is suggesting that it is so, and I presumed he knew.

Mr. BRUCE. I say I wish to know what the peculiar special conditions in each case are. It may be true.

Mr. HOWELL. I wish to say that the larger the units engaged in developing electric energy the cheaper the energy can be produced. I wish to state further that in Baltimore the electrical energy is supplied by both water power and steam, while in Hagerstown it is supplied by steam alone. Such facts should call to the attention of the Senate the tremendous rates that are being charged throughout the country for electrical energy—unreasonable rates, rates that apparently can not be, as they have not been, justly regulated by public-utility commissions. Such bodies seem to have utterly failed in this respect.

I am further pointing out and drawing the lesson that the only way the people of this country can be rescued from these excessive rates is through public competition or threatened public competition. That is why I am urging that this great plant at Muscle Shoals shall be maintained by the public for the purpose of bringing down electric-light rates throughout the country. Mr. President, if such competition were made effective in a single year there would be saved throughout the country the \$140,000,000 which the plants at Muscle Shoals have cost. Consider the city of Baltimore, with 160,000 consumers, assuming that the saving would not be a dollar per month—although that is the difference between the rate in Hagerstown and the rate in Baltimore for 40 kilowatts—but that it would be 50 cents, that would equal \$80,000 a month or about a million dollars a year saved to the people of Baltimore alone.

When we realize that here in the city of Washington the consumers are paying 10 cents a kilowatt-hour while in Balti-

more they are paying 8 cents, or in Washington the consumers are paying \$4 for 40 kilowatts while in Baltimore they are paying \$3.20, and in Hagerstown, Md., a little town of 30,000 inhabitants, but \$2.20, is it not apparent the unnecessary burden the people of Washington are laboring under? It must further be borne in mind that the public-service commission has been endeavoring since 1917 to reduce the rates for, say, 40 kilowatts here in Washington from \$4 to \$3.20, and the commission's impotency is illustrated by the fact that it has not been able to accomplish it yet.

Mr. BRUCE. Mr. President, may I ask the Senator a question?

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Maryland?

Mr. HOWELL. I yield.

Mr. BRUCE. Does not the Senator think that if the people of Baltimore city could get their electricity more cheaply through a public plant they would do so, in place of the present Consolidated Gas & Electric Light Co. of Baltimore?

The people of Baltimore city have a reasonable measure of intelligence. They are not under the compelling sway of any sinister political influences, I am happy to say, in the administration of their government. They have, on the whole, a judicious, honest, efficient government. They most assuredly would set up a municipal electric plant in Baltimore but for the fact that they think that if they did their electricity would cost them a great deal more than under the present conditions.

As to the contrast between Hagerstown and Baltimore, I have in my lifetime known many a citizen of Baltimore in rather declining circumstances to leave Baltimore and go out and take up his residence in one of the provincial towns of the State because it was so much cheaper to live there than it was in Baltimore. Comparatively speaking, it is just as expensive for a corporation to live in Baltimore as it is for an individual. The whole scale of expenses of operation in Baltimore is different from the scale in Hagerstown, or Annapolis, or Frederick, or any small town in Maryland, of course.

Mr. HOWELL. Mr. President, it must be recognized that it costs less to develop electrical energy in great units, such as are possible in Baltimore, than in a city like Hagerstown, Md., with 30,000 people.

Mr. BRUCE. Mr. President, may I interrupt the Senator again?

Mr. HOWELL. Just a moment, if I may continue.

The PRESIDING OFFICER. The Senator from Nebraska has the floor.

Mr. HOWELL. Then, further, I want to assure the Senator from Maryland that the people in Baltimore and the people in Omaha are not different. They are quite alike. For years they submitted to tremendous charges for electrical energy—in Omaha, 14 cents a kilowatt-hour in 1912, in the piping times of peace; but there were forces in Omaha that rebelled and said: "We will not stand for this longer. We will put in our own plant." Down came the rate to 12 cents, then to 11 cents, and then in 1916, just before the war, down to 8½ cents; and the day before the legislature met in 1917, fearing that authority would be granted the city of Omaha to put in a municipal plant, the rate went down to 6 cents, right in the midst of war, and since has gone down to 5½ cents, because of the fear of public competition. If the people of the city of Baltimore knew this lesson as they ought to know it, if the able men of Baltimore would lead their people in a fight for reasonable rates, they could have 5½-cent electricity in Baltimore—if not less—just as we have it in the city of Omaha.

Mr. BRUCE. Mr. President, may I interrupt the Senator just once more? Then I shall have nothing more to say on this subject.

We attempted once, on a very small scale, to set up a public electric plant in Baltimore. We set up one in our courthouse building for the purpose of illuminating the courthouse, the city hall, and municipal buildings generally. As small, comparatively, as that plant was, the results were so unsatisfactory that we abandoned it. We found that only with difficulty could the city of Baltimore run a small electric-light plant requiring a high degree of technical skill as a private corporation would have run it.

In other words, the operation even of that small plant was attended with the usual waste and inefficiency and pecuniary loss which, so far as my observation goes, invariably attends an attempt on the part of a city or of a State or of a government to conduct an industrial enterprise.

Mr. HOWELL. Mr. President, the mere suggestion that the installation of a plant sufficient to light a courthouse or one or two other municipal buildings would afford effective competition in connection with a great plant provided to light a great city is all but absurd. Such a plant could not be expected to result in that way. There is only one condition under which you can afford to put in a small plant of that kind, and that is with a view of using the exhaust steam for heating. However, in great cities, with great plants, they will often make the rate so low for electrical energy that a big building owner can not even afford to put in such a plant. When it comes to dealing with the common people, however, the man in the cottage, those who need to save, there they boost the rates; there they bear down, just as they do here in Washington.

Mr. GLASS. Mr. President—

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Virginia?

Mr. HOWELL. I do.

Mr. GLASS. I am a little curious to know why it is, if the public plant in Cleveland sells its electricity so much cheaper than the private plant in Cleveland, that the public plant supplies only one-third of the city, and the private plant two-thirds of the city.

Mr. HOWELL. The reason for that, as stated to me when in Cleveland last summer and on previous visits, is that all they have desired in Cleveland was an automatic regulator of rates; that the municipal authorities did not care to go further. Had ex-Secretary Baker continued as mayor of the city, he undoubtedly would have covered the city; but the big interests in Cleveland, just as in the case of the big interests in other great cities of the country, are against that sort of thing; as, for instance, we generally know that in some way, somehow, the chambers of commerce throughout the country are usually controlled by men who are opposed to the public doing anything for themselves. I know that, because we have had the experience in Omaha. Whatever has been done in public ownership in my city has been done in spite of the big interests. As you travel along the route this opposition becomes strong enough to hold you, at least for a time; and that I believe is the situation that has developed in Cleveland.

Mr. UNDERWOOD. I ask for the yeas and nays on the pending amendment to my substitute.

Mr. WATSON. Mr. President, may we have the amendment to the amendment read?

The PRESIDING OFFICER. The Secretary will read the amendment to the amendment.

Mr. WALSH of Montana. Mr. President, if the Senator will yield for a moment—

Mr. WATSON. Certainly.

Mr. WALSH of Montana. I suggest the absence of a quorum.

The PRESIDING OFFICER. The absence of a quorum is suggested. The Secretary will call the roll.

The roll was called, and the following Senators answered to their names:

Ashurst	Ferris	Ladd	Shipstead
Bayard	Fess	McKellar	Simmons
Borah	Frazier	McKinley	Smith
Brookhart	George	McNary	Smoot
Broussard	Gerry	Mayfield	Stanfield
Bruce	Glass	Means	Stanley
Capper	Hale	Metcalf	Swanson
Caraway	Harris	Neely	Trammell
Copeland	Harrison	Norbeck	Underwood
Couzens	Heflin	Norris	Wadsworth
Cummins	Howell	Oddie	Walsh, Mass.
Curtis	Johnson, Calif.	Pittman	Walsh, Mont.
Dial	Jones, N. Mex.	Ralston	Warren
Dill	Jones, Wash.	Ransdell	Watson
Edwards	Kendrick	Reed, Mo.	Weller
Ernst	Keyes	Reed, Pa.	Wheeler
Fernald	King	Sheppard	Wills

The PRESIDENT pro tempore. Sixty-eight Senators have answered to the roll call. There is a quorum present. The yeas and nays have been demanded upon the amendment offered by the Senator from Montana [Mr. WALSH] to the amendment in the nature of a substitute proposed by the Senator from Alabama [Mr. UNDERWOOD].

The yeas and nays were ordered.

Mr. WALSH of Montana. A request has been made that the amendment to the amendment be read.

The PRESIDENT pro tempore. The Secretary will read the amendment to the amendment.

The READING CLERK. The Senator from Montana proposes to strike out section 10 of the substitute submitted by the Senator from Alabama and in lieu thereof to insert:

SEC. 10. That as a condition of any lease, entered into under the provisions of this act, every lessee hereunder which is a public-service corporation, or a person, association, or corporation developing, transmitting, or distributing power under the lessee either immediately or otherwise, for sale or use in public service, shall abide by such reasonable regulation of the services to be rendered to customers or consumers of power, and of rates and charges of payment therefor, as may from time to time be prescribed by any duly constituted agency of the State in which the service is rendered or the rate charged. That in case of the development, transmission, or distribution, or use in public service of power by any lessee hereunder or by its customer engaged in public service within a State which has not authorized and empowered a commission or other agency or agencies within said State to regulate and control the services to be rendered by such lessee or by its customer engaged in public service, or the rates and charges of payment therefor, or the amount or character of securities to be issued by any of said parties, it is agreed as a condition of such lease that jurisdiction is hereby conferred upon the commission created by the act of Congress approved June 10, 1920, upon complaint of any person aggrieved or upon its own initiative, to exercise such regulation and control until such time as the State shall have provided a commission or other authority for such regulation and control: *Provided*, That the jurisdiction of the commission shall cease and determine as to each specific matter of regulation and control prescribed in this section as soon as the State shall have provided a commission or other authority for the regulation and control of that specific matter.

SEC. 11. That when said power or any part thereof shall enter into interstate or foreign commerce the rates charged and the service rendered by any such lessee, or by any subsidiary corporation, the stock of which is owned or controlled directly or indirectly by such lessee, or by any person, corporation, or association purchasing power from such lessee for sale and distribution or use in public service shall be reasonable, nondiscriminatory, and just to the customer and all unreasonable discriminatory and unjust rates or services are hereby prohibited and declared to be unlawful; and whenever any of the States directly concerned has not provided a commission or other authority to enforce the requirements of this section within such State or to regulate and control the amount and character of securities to be issued by any of such parties or such States are unable to agree through their properly constituted authorities on the services to be rendered or on the rates or charges of payment therefor, or on the amount or character of securities to be issued by any of said parties, jurisdiction is hereby conferred upon the said commission, upon complaint of any person aggrieved, upon the request of any State concerned, or upon its own initiative to enforce the provisions of this section, to regulate and control so much of the services rendered, and of the rates and charges of payment therefor as constitute interstate or foreign commerce and to regulate the issuance of securities by the parties included within this section, and securities issued by the lessee subject to such regulations shall be allowed only for the bona fide purpose of financing and conducting the business of such lessee.

The administration of the provisions of this section, so far as applicable, shall be according to the procedure and practice in fixing and regulating the rates, charges, and practices of railroad companies as provided for in the act to regulate commerce, approved February 4, 1887, as amended, and that the parties subject to such regulation shall have the same rights of hearing, defense, and review as said companies in such cases.

In any valuation hereunder for purposes of rate making no value shall be claimed or allowed for the rights granted by this act or under any lease executed thereunder.

Mr. CARAWAY. Mr. President, I dislike very much to delay a vote on this amendment, but I wanted to say with reference to it that as it stands I shall vote for it unless some amendment might be accepted to it. But I had thought and still think that if the Government wishes to assume the guise of a business corporation and engage in an industry which has heretofore been conducted by private individuals it should do so under such conditions as the private individual must meet. I had not thought the Government ought to tax individuals to raise capital to finance a corporation and put that corporation into business in competition with those who contributed the capital by taxation and then say to those engaged in private business, "You shall submit to certain regulations, but the corporation which you furnish the capital to create, a part of the sovereignty that delegates itself to the conduct of private business, shall be exempt from all those handicaps you carry."

It seems to me, the Senator from Montana to the contrary notwithstanding, that it is indefensible for us to insist upon a citizen dividing his earnings with the Government, in the nature of a tax, and then take the capital which we get from him and organize and finance with it a corporation to go into business against him and exempt it from any contribu-

tion to the Federal upkeep and strip it of every regulation, so that it may compete with an individual who is compelled by the same sovereign to contribute to the capital that put its competitor into business and submit to all regulations in the conduct of its business.

That may be perfectly understandable to some Senators. It is utterly beyond my understanding.

In the first place, I have not been able to convince myself that the minute one ceases to be a private citizen and goes upon the public pay roll as a Federal employee all selfishness and all limitations as to clarity of understanding fall away from him and he can make no mistakes. That is the assumption we must indulge in if we say it is preposterous that the State should seek to control the activities of a corporation which comes within its borders to conduct business in opposition to private citizens and at the same time write into the very same measure a provision that if a private citizen shall become the lessee he shall submit to all these regulations.

I have for a number of days listened to some very remarkable deductions. It seems perfectly clear to the junior Senator from Nebraska [Mr. HOWELL] that a man engaged in private business who expects to make a profit is already outside the pale. It was emphasized over and over again that the crime of private industry was that it expected to make a profit. Yet I have heard urged right upon the floor of the Senate by a representative from the same State that the monumental crime of the ages was that the farmers had been denied the opportunity to make a profit.

I believe that any man engaged in a lawful industry ought to have the right to make a reasonable profit. If his business is of such a nefarious character that profit should not be permitted to be made from it, it ought to be suppressed. It seems to me it is unthinkable that we should announce as a solemn declaration of the Senate that private business is utterly outside the pale of respectability if it seeks a reasonable profit. I am sure that the way they conduct business in Lincoln, Nebr., is very much better than the way it is carried on anywhere else, because I remember that Mr. Charlie Bryan was the mayor of that city, and evidently put it upon the road to righteousness. I am told he is to be mayor again, and of course he will still further perfect it, and lead it in the way it ought to go.

Let me say this, too. Some Senators who, ever since I have been a Member of this body, have been weeping over the condition of the farmer and the injuries he received from the Government, are now doing everything they can to prevent the Government from doing something for the farmer. Let us take the proposition of making this a power bill. If there is anybody here who believes that if it shall become a part of a superpower system, or a power plant standing alone, it is going to contribute very materially to the health and wealth and comfort of the farmer, I am curious to have him stand up and give his reasons for his belief.

I know that if the committee amendment should become the will of the Senate, and should be accepted in conference, it would not result in any advantage to the farmers. It would not result in power lines being strung out to the little farm houses along the highways in Alabama, Georgia, and Tennessee. It would result in the sale of power to industries located in towns. It might be that some municipality would contract with it so that industries within that particularly favored town would have a lower rate than other less fortunately situated communities, but there is no use presuming that the farmer does not know that it is not there for him. He knows, if he knows how to read, that making this a power project would not do the farmer any particular good. It would not offer him anything, because he would not be upon the lines of distribution. Everyone knows there is no intention, if the committee substitute be adopted, of stringing power lines from Muscle Shoals to the individual homes of the little farmers in those States adjacent to it.

Therefore let us be honest with the farmers. If we do not intend to give the farmer anything, and let us just say, "You do not fall within the scope of our particular benevolent institution called the Muscle Shoals power plant. We are reaching out now to do something for your more fortunate neighbor who lives in more populated communities, and who is engaged in more lucrative business." Everybody knows that is what it means.

You are not deceiving a single farmer. I know, and say, with an apology to everybody who has participated in the debate, that two facts have run side by side with but a single purpose in this repeated effort to amend this bill, the first to make it lend itself to a theory that the Federal Government alone ought to be permitted to engage in business; that the

farmer must find some means to pay taxes with, but nothing shall be done for him; that we are going to create a benevolent institution called the Government to look after the business of the country, to do all the business in the country. The Lord knows somebody may profit by it. I am curious to know who it will be. Nobody has pointed that out very specifically.

That is not all. There is going side by side with it that other legislative ghost stirrer, the so-called postal increase bill. Nobody believes Congress is going to write into law a provision to increase the postage on parcel post. If they attempt that, they certainly think that the people living in the rural communities are without friends in this body, because that is the only means the farmer has of getting his produce to the market and getting things from the town to his home. Therefore, unless they want to tax the very means by which the farmer lives and increase the cost of living to people who live in towns by increasing the cost of distribution they are not very serious when they propose that other provision to increase the cost of postage on newspapers and periodicals unless they think it is wise to make ours a country of isolated communities, stirred by local prejudices, without national spirit, without national information, because they want to deny us a source of information that comes from a wider distribution of newspapers and periodicals. It was not seriously brought here. It was brought here to give some one an excuse to vote against overriding the President's veto on the postal salary bill. That is all. Those who are lending themselves to the same purpose by filibustering against the bill under the pretense that they think there is some way of making it a power plant and helping the farmer are unconsciously aiding the same purpose.

Now, let us be frank with ourselves. We do not get anything by trying to deceive the American public. We do not deceive anyone but ourselves. If the honest conviction of the people who are fathering the so-called committee substitute is that it ought to be the duty of the Government to create a great power company at Muscle Shoals—some of them think for possibly as much as 500,000 horsepower—and distribute that to the industrial users of power, let us say we now are not looking after the interests of the farmer. It is not his day in court; but we are lending ourselves for the time being to the creation of a big power plant. That we expect it to sell power to users of power at very low rates because the taxpayers of America are to furnish the capital and it is to be free of all regulation and control; that the Government, without any overhead charges and without capital charge, shall distribute power to the users of power at a very phenomenally low sum, and all the taxpayers are to absorb its losses. That would be understandable. It might be wise to do it. If that is our intention, we ought so to declare.

I have been somewhat grieved to hear Senators here proclaim with so much fervor that to lease this power plant would be a crime, and yet those Senators wanted not to lease it but almost to give it to Henry Ford, and there was not then a suggestion that there ought to be any kind of regulation or condition attached to the grant. It was not to be a crime of 50 years. It was to be for a whole century. Title to all except the dam was to be in Ford or in a corporation which he was to create. There was to be an absolute transfer of title to him, and he then was to have a lease for 100 years of the power and do whatever he saw fit with it, subject only to a vague and uncertain provision that he was to manufacture fertilizer.

I do not question other men's motives. They have a right to pursue whatever course they prefer. I am a member of the committee that dealt with this measure and attended its sessions with a great deal of care. I voted for the Henry Ford lease. I would do it again. I am not protesting against private individuals going into business. I have never thought it was a crime for them to do so. If there is a crime at all, it is in the Government invading the field of private industry, because again I want to say that because somebody has gotten on the Federal pay roll and has a lifetime job it does not make him any more patriotic, and it does not make him any wiser than was he while a private citizen. I will venture the assertion that it leaves him less wise, because it takes away the incentive that goes with the struggling of matching one's wits with other men in order to succeed, and it thereby stops intellectual development. When a man gets on the Government pay roll and all in God's world he has to do to stay there is to live, he is not quite as active as those who have to match their wits in the field of private industry to succeed or fail by reason of their ability and character.

Coming back again to the "crime" and to the "absurdity" of wanting to regulate Government industry when it takes upon itself the form of a private corporation and engages in

private business, I want to say this: To a large extent we recognized that principle when we created the shipping corporation and made it subject to certain provisions that the individually owned company or corporation had to carry. If it was not wise to do that, we ought to repeal that law.

Mr. President, I do not know whether this plant will be leased or not. I am under no compulsion to say what I am about to say, because I belong to a different party, but I have quite a great deal of respect for the judgment and character of the Secretary of War. I have found him to be a man of unusual ability. The few times I and my State have had occasion to deal with him we have found him honest and exceedingly generous. If he can not be trusted to lease Muscle Shoals I am curious to know how the Senate can justify itself in having voted for his confirmation when it was known that we were putting into his hands not the management of a power plant in the State of Alabama but the entire defense of the country, so far as the Army is concerned, with all of its hundreds of millions of dollars worth of property, with all of the perplexing problems that come with Army control and regulation. If any Senator knew he could not be trusted to lease a project like Muscle Shoals, I think he ought to have made it known to the Senate when he was nominated to be Secretary of War and before the Senate was asked to vote to confirm him in that high office.

It is being charged and the question of Tea Pot Dome is now being raised on the floor of the Senate. That was referred to in a statement made by a Senator. There can be but one purpose in associating the Muscle Shoals matter with that question and that is to convey to the listener the belief that Muscle Shoals is also a national resource that is being sold by some public official to some private individual and that corruptly, because that is the only reason why the two would be coupled together. No one would speak of a gentleman as Benedict Arnold, and then say he did not intend to charge that he, too, was a traitor. The statement carries its own charge. I want to say now if any Senator has any evidence that there is to be a corrupt leasing of this property he owes it to himself, he owes it to the Senate of the United States, he owes it to the American people whose commission he bears, to point out that evidence so that all may know it. It is not right, and I say it with deference, to undertake by so coupling one measure with another to leave the impression that there is something morally wrong about this measure, unless the evidence exists, and if any Senator has such evidence he can not withhold it and be honest because of his position as a trustee of the American people in this body.

I do not know who is to get this property, and I want to say again I am under no obligation to defend the present President of the United States, because if anybody took pains to read what little I had to say about him they will remember that I insisted very earnestly that the American people ought to substitute another whose name I mentioned for that high office which he held. I honestly think they made a mistake in not doing so, but the great majority of American people did not agree with me and they made Mr. Coolidge President of the United States. While perfectly willing to vote for him and make him the Chief Magistrate of 110,000,000 people and give to him all the influence and power that goes with that high office, to now insist at the very first opportunity that he can not be trusted to be a party to the leasing of a power plant in Alabama, which a majority of those sitting here voted at one time to abandon because it was absolutely worthless, is a remarkable situation.

I ought not to have to come here and defend the Secretary of War and the President against charges made by Senators who voted for him, but I feel impelled to do it because I have not a question of doubt in my mind that both are intelligent, that both are honest, and both are patriotic. I believe that either one of them could be trusted to lease Muscle Shoals. I believe if Muscle Shoals were leased and the plant put into operation the American farmers would get some relief from the exorbitant prices now charged for fertilizer. I know that if it is converted into a power project, no farmer now living would get one ounce of fertilizer cheaper because of the fact that we had created a power plant at Muscle Shoals.

Mr. PROOKHART. Mr. President—

The PRESIDENT pro tempore. Does the Senator from Arkansas yield to the Senator from Iowa?

Mr. CARAWAY. I yield.

Mr. BROOKHART. Nobody has explained to me, and I can not understand how under the Underwood proposition the farmer is going to get any cheaper fertilizer.

Mr. CARAWAY. I am sure that if nobody has been able to explain it to the Senator, considering the many Senators who have tried to do so, there is no use of my trying.

Mr. BROOKHART. There is not anybody who has tried to do it.

Mr. CARAWAY. If there is not, then of course the Senator does not expect me to try it. I can say this to the Senator, however, that he was one who was willing to create a corporation to ship wheat out of this country because it was thought that the surplus was breaking the price of the commodity and destroying the farmer and that if the Government would go into the pockets of all the people to get the money to buy the surplus wheat and ship it to Europe and take the loss the farmer then could sell the remaining part of his crop at a profit.

Mr. BROOKHART. Mr. President, the difference between those two propositions—

Mr. CARAWAY. Just a moment. Then the Senator said that was sound economics because it is the surplus that breaks the price. Now, if there is so much fertilizer in the country and we add to it, it tends to create a surplus; and if there is logic in the first proposition that the surplus breaks the price, I do not know of any reason why it will work with wheat and will not work with fertilizer. Of course I know that proposition will not satisfy the Senator from Iowa.

Mr. BROOKHART. The Senator is always referring to 40,000 tons of fertilizer as making a surplus.

Mr. CARAWAY. The 40,000 tons of nitrogen to be made at this plant would result in nearly a quarter of a million pounds of fertilizer, and it would tend to be a surplus unless there is something wrong with the theory that a surplus of fertilizer is never a surplus while a surplus of wheat is always a surplus.

Mr. BROOKHART. The Senator's own explanation shows that it would not be a surplus.

Mr. CARAWAY. I know when I deal with a proposition that runs counter to the Senator's convictions I am wrong. I know that reason has no standing in a court that is already committed to the idea of putting the Government into all private business.

Mr. BROOKHART. Does the Senator claim as a matter of fact that the 40,000 tons will create a surplus?

Mr. CARAWAY. The Senator does claim that the 40,000 tons would be that much more than we now have.

Mr. BROOKHART. But the Senator came at me with a surplus, and I want to know if that 40,000 tons will make a surplus.

Mr. CARAWAY. It never will make a surplus with the Senator from Iowa. I concede that. If it were 500,000,000 tons it never would be a surplus so long as it was fertilizer, but if it were a million bushels of wheat it would be such a surplus as would destroy every farmer in Iowa unless the Government bought the wheat and shipped it to Europe.

I am perfectly willing for a man to stand by his local industries, and it looks like that is all there is here. Everybody stands by his prejudices and his home town. If a man has an interest in a manufacturing plant, or if he wants to see people get cheap power, and thinks he will be justified in taxing all the American people, even the downtrodden farmer, who has been wept over here for four years, in order to lighten the burden of men who buy power, why, God bless his soul, I expect him to do it; but I do not want him to insist that he thinks he is doing something for the farmer by so doing. That is all I am protesting against.

I come from a State of agriculturists; I come from a family of farmers; I am myself a farmer, and I do not want to be reflected upon by a pretense that in creating a power plant here we are going to aid the farmer. I know that nobody who has studied the question and who really wants to do something for the farmer is deceived by it. Therefore, all I want is that those who assume the attitude to which I have referred shall stand up and say, "This is not the farmer's day; but now that there is a chance to do something for some one, we have decided to do it for the manufacturing industry and not the farmer. We are going to give that industry cheap power and tax everybody else in America to do it."

Let me go further. There is a sentiment here that indicts the intelligence of the people of every State in the Union. When it is suggested that the States have patriotism and intelligence to be trusted to regulate their own affairs, it is said "you can not trust the States"; and long lists of statistics have been read here to show how corrupt the commissions are in the various States; how little they may be trusted. There never has been, so far as I have been able to learn here, a single honest administration except in the case of one or two cities. Lincoln, Nebr., was one that shone out very

brightly on the firmament of intelligent and honest administration. The State of Nebraska unfortunately could not live up to the high standard set by Lincoln, and therefore the State could not be intrusted with the power to regulate its own affairs.

Mr. HOWELL. Mr. President, did not the Democratic Party try to spread Governor Bryan out from Lincoln?

Mr. CARAWAY. Yes; and I thought inasmuch as Governor Bryan had made Lincoln such a wonderful city the Senator from Nebraska ought to have supported him, but he did not do it. [Laughter.] That is why I rise now to express my surprise that after Governor Bryan had demonstrated that he was the only man in the country who knew how properly to administer a public office, the Senator from Nebraska should have appealed to the people to turn him down. [Laughter.] Of course, that is as understandable as is the other proposition. I think I understand it perfectly also, but I would rather like to express my surprise that it should have happened.

Mr. BROOKHART. Mr. President, for the Senator from Nebraska having to turn Governor Bryan down in that way is not any worse than for the Senator from Arkansas to turn him down right now.

Mr. CARAWAY. Oh, no; but you have already defeated him, and why should I go out how and weep over his grave? [Laughter.] You folk have crucified him while he was alive and now you complain because I am not weeping at his grave. It does not profit us, but if it affords us any intellectual stimulus to play the farce to the last, why, we ought to do it. Do not, however, let us try to fool the audience, which is the American farmer. He knows, I repeat, if he knows anything—and those farmers with whom I have come in contact do—that he is not to be enriched by creating a power company at Muscle Shoals. He knows that will not offer him cheap light or fertilizer. He knows that it will be in the interest of the people living in the urban communities.

I think the committee hearings were dragged on for months and months not so much to get light as to get time to kill Henry Ford's offer. Those of us who were for Henry Ford's offer were there day in and day out insisting upon a vote. The hearings were had upon perfectly nefarious schemes, as it now turns out. Private individuals were asked to come and submit bids and offer evidence that the committee would be wise to accept them, and now we discover that those who asked them to come knew from the beginning that it would be a crime to let them have the plant. Why were they asked to submit bids? If private business was to be driven out of the field, why not have closed the hearings, and said, "There is no use for you gentlemen to make your offers, because we have made up our minds to create a corporation and put it in business against you, and therefore save whatever you have to pay taxes in order to help finance our business that we are to create to compete with you."

I hope that the Senator from Montana will accept an amendment to his amendment providing for the regulation of the proposed corporation that is to go into business at Muscle Shoals. Let it be like any other corporation. I do not see anything so tremendously foolish about asking a corporation that has been created to engage in a private business to subject itself to all the limitations which a private business would have to encounter if it engaged in the same business. I think it ought to be suable in the courts of the various States like any other corporation that does business there. I think it ought to be compelled to answer to the people under all the regulations that any other business is compelled to submit to if it engages in a similar enterprise.

Let me say briefly that the greatest part of the regulation is not in connection with fixing the price to be charged, but is in connection with distributing the power; in deciding who shall be favored and whose application shall be denied; in determining into what States the power shall be transmitted and into what States its transmission shall be denied; what towns shall have it and what towns shall not have it. Those are going to be the greatest fields of regulatory action. The Government here at Washington, I submit, does not know as much about those questions in Arkansas as do the people living in Arkansas.

I have not found the Government to be superwise in such experience as I have had with it. It has done a good many things in my State; it has done some of them well, and it has done some of them in an exceedingly clumsy way. I have heard—and I repeat it with an apology—some of the very people who have most continuously and consistently condemned the Government when it undertakes river and harbor improvements, saying, "the Government is making recommendations for the improvement of rivers on which a fire insurance policy

has to be taken out in order to keep it from burning up because there is no water in it," claim that as to this matter the Government can make no mistake, that in Government agencies wisdom and virtue dwell. It is a curious thing to me that the Government knows all about power plants and can make no mistake as to them, but does not know a river from a dry fish pond. Senators insisting that the Government enterprises must not be regulated in this matter will vote against every river and harbor improvement that comes before the Congress, because, they will say, the Government is not to be trusted in these matters.

Mr. President, there is no profit in pointing out the inconsistencies. We all have them. But let us do something for the American agriculture with this plant.

Mr. REED of Missouri. Mr. President, I want to address myself to what is known as the Walsh amendment for a few moments, but, first, I desire to make a few general observations.

This debate has taken a turn which I regret. I can see no reason for any man to impugn the motives of any Senator on this floor or to accuse those who may favor this bill in any form of endeavoring to work in the interest of any power monopoly or of being inspired with any improper motives. Differences of opinion exist here, and they ought to be expressed wholly without attacking the motives of any man.

I know well the Senator from Alabama [Mr. UNDERWOOD] who has proposed this amendment, and I know that his public life has been as clean as that of any man who has lived in our country during my time. I know that his motives in presenting his proposition are dictated only by what he believes to be the public good. I attribute the same sentiments to the Senator from Nebraska [Mr. NORRIS]. I accord the same high motives and purposes to those who may agree with me or who may differ from me touching this measure, and I think that a moment's analysis will show that there is no man who is in favor of either of these propositions who has any right to throw bricks at any other man.

What are the points of difference?

The Senator from Nebraska [Mr. NORRIS] brings in a bill in which he proposes that the public authorities shall manage and control this great plant. He is at once attacked by certain Senators upon this floor as being the protagonist of a wicked and vicious doctrine, to wit, public control of a business enterprise; and one would think, as he listened to these dissertations, that he was a socialist, a bolshevist, and that everybody who was for his measure was a bad, wicked, or misinformed man. Yet the gentlemen who make those charges are in favor of the Underwood proposition; and what, pray, is the Underwood proposition? It is that we shall run this plant by public management and control unless we can lease it upon terms that are acceptable.

Whenever you put in the alternative that in the event this plant is not leased it shall be run by public control, you have on that alternative placed yourselves exactly in the same category with the Senator from Nebraska and with this wicked plan of public ownership; so that the man who stands and proposes to vote for a bill which proposes public control and public ownership if a lease can not be made may well argue that a lease is more advantageous and that it is hoped that it might be made, but he certainly ought not to go to the extent of denouncing the man who proposes that which is found in his own bill as one of the alternatives.

So I think we might just as well quit abusing each other. The Underwood bill concedes the propriety of public ownership and public control just as much as the bill of the Senator from Nebraska, save and except that the Underwood bill prefers a leasing proposition.

There is another observation: It is said that those who favor leasing are putting an unjust power in the hands of the Secretary of War; and some of those who favor the Norris amendment have charged that that will result in making a very bad bargain, and there have been even insinuations here that I think reflect indirectly upon the Secretary of War. I do not think that is just. I know John W. Weeks. Many of us served with him here in the Senate. I question whether any man would seriously raise any possible kind of criticism against his honesty or his intelligence or his patriotism. I should not hesitate to make him my executor without bond to-morrow, and I would know that my estate would receive as honest an administration as he was capable of giving it and that he would bring to the task a high degree of intellectuality. If the proposition submitted by the Senator from Alabama were to turn over the matter of handling this property to the Secretary of War to make the best bargain he could make, and, if he could not make a bargain which was

advantageous, then to manage and control this plant, I should be much better satisfied than I am in the present situation. The difficulty I find in the Underwood proposition is that it ties the hands of the Secretary of War and ties the hands of all the public authorities in a way which, it seems to me, may contain many elements of disadvantage, if not danger.

By this bill the Secretary of War is commanded to use the plant, if it is run as a Government enterprise, or to lease the plant, conditioned upon the manufacture of fertilizer to the extent of 40,000 tons of fertilizer per annum. This lease is to run for 50 years. I hope that what I say will not be taken as an unkindness; but which one of us, owning a great property of this kind, would for a moment think of requiring a proposed bidder to agree to manufacture 40,000 tons of fertilizer per annum for a period of 50 years, regardless of the question whether the manufacture could be carried on without being done at a terrific loss? If we pass this bill as now framed and the Secretary of War starts to lease the plant, he must require the lessee after the first three or four years to make 40,000 tons of fertilizer per annum regardless of whether it can be done at a profit, regardless of the amount of loss that is to be sustained, regardless of whether in the meantime some process for making fertilizer may have been invented entirely different from this, not requiring the employment of this great power in its production. For 50 years, for the lifetime of an individual, we are to go on making fertilizer willy-nilly, without regard to loss and without regard to changed conditions.

Mr. UNDERWOOD. Mr. President, will the Senator allow me to interrupt him just at that point?

The PRESIDENT pro tempore. Does the Senator from Missouri yield to the Senator from Alabama?

Mr. REED of Missouri. I do.

Mr. UNDERWOOD. If we get a lessee who is willing to make us nitrogen for national defense for 50 years at his own risk the Senator would not object, would he?

Mr. REED of Missouri. Yes, I would, under the terms of this bill.

Mr. UNDERWOOD. But let me continue one step further. At least it seems to me that there would be no ground for objection. If a lessee wants to do it, and agrees to furnish this amount of nitrogen to the Government, this bill does not confine him in any way as to how he shall do it, but it says that he must agree to furnish 40,000 tons of nitrogen with which to make our powder for national defense, and that in time of peace he must convert that nitrogen into fertilizer to build up our depleted soil. If the lessee wants to do that and is willing to do it, I do not see that there is any objection.

On the other hand, the Senator may say, "But the corporation is compelled to do it." It is true that the corporation is compelled to do it in this bill; but it is a Government corporation, and any session of Congress can recall its hand if it is a Government corporation. It merely makes the corporation start, but every share of stock is in the name of the President. There are no outside contracts that would bind the corporation, and therefore Congress can recall it if it thinks a mistake has been made.

Mr. GLASS. Mr. President, the Senator does not exactly mean that his bill requires a corporation to furnish 40,000 tons of nitrogen?

Mr. UNDERWOOD. To manufacture it.

Mr. GLASS. The Senator means to manufacture it?

Mr. UNDERWOOD. Yes.

Mr. GLASS. "Furnishing it" might mean buying it from Chile.

Mr. UNDERWOOD. I meant to say "manufacture." I am using general terms. Of course, the bill contemplates the manufacture of 40,000 tons of fertilizer.

Mr. REED of Missouri. Mr. President, upon the statement I have just made, the bill requires the production in this plant of 40,000 tons of nitrogen annually.

Mr. UNDERWOOD. No; if the Senator will allow me, if he will look at the bill I am sure he will see that it requires the production on this property—

Mr. REED of Missouri. Very well.

Mr. UNDERWOOD. Not in this plant, because it is left so that under changing conditions the plant can be changed.

Mr. REED of Missouri. The Senator does not really mean to tell us that he interprets this bill to mean that the man who gets this power is not to use the power in making fertilizer, but that he may set up some independent device on that same ground for making fertilizer? The Senator does not mean that?

Mr. UNDERWOOD. I certainly do, and that is done with my reading of the testimony of the experts. Everybody ex-

pects advances to be made in the production of nitrogen, and possibly in the production of fertilizer; and if the Senator will read the bill he will see that the lessee is compelled to make it on this property. The bill furnishes him with a great nitrate plant that he can use, but if he makes the 40,000 tons of nitrogen on that property by any other process and furnishes it to the Government or to the farmers he has lived up to his contract.

Mr. REED of Missouri. Mr. President, I do not so construe this contract. I must differ from my distinguished friend, and it is the first time it has been intimated in this debate that it was not intended that the contract should provide that this plant should be employed to make this fertilizer, and that is why we are leasing the plant. I refuse to discuss a chimera of the kind that has been suggested.

Mr. President, I have stated that the fertilizer that is to be made here might be made during all of the years at a tremendous loss; but the Senator meets that by saying: "Suppose a company is willing to make that contract." Well, if a company were willing to make that kind of a contract and to give a good bond for its execution, and the execution of it were to cost the people of the United States nothing, but the lessee took the risk, that would be one proposition; but that is not this proposition. The proposition here is that we are going to lease to the lessee all of this water power that is now produced, and he agrees to use a part of it to make fertilizer, and he agrees that he shall not make more than 8 per cent profit on his fertilizer, but the surplus power he can sell at his own price; and it has been plainly understood throughout this debate that it was intended that if the fertilizer was made at a loss, that loss would be recouped through the sale of power. Otherwise, nobody but a lunatic would make the lease. So the proposition is to tie up this property for a half-century of time, compel the person who makes the lease to make the fertilizer without regard to loss, and during that entire period of time, to place him in possession of the power so that out of the surplus power he can recoup those losses.

That is to say, if there are any losses made they are to come out of the pockets of the Government of the United States, which means out of the pockets of the people.

I say that is not a sound proposition, in my judgment. After hearings lasting for months, there is an honest dispute and an honest difference of opinion, not only among those who heard the evidence, but among those who testified, and I think it is fair to say that the best we can assert with reference to the manufacture of nitrogen by the processes contemplated is that it is a fairly seductive prospect. It may work out; it may fail. To undertake to say that we would tie up this great property for 50 years, and tie it to a proposition which may fail, and then make the profit up by adding it to the cost of the power which is to be sold to the American people, seems to me to be bad business. I am not saying that something along the line of the Senator's bill might not be worked out, but I am pointing out what seems to me a very great difficulty.

Mr. President, that is not all. There is another feature in this bill which would lead me, if I were the attorney for a client who owned this property, to almost take him in a corner and choke him before I would let him sign a lease. We are told that the total production of power at the present time is how much?

Mr. UNDERWOOD. Some people estimate the direct primary power at 87,000 horsepower. I think it is fair to say, though, during a period of five days less than a year the lowest flow of the water has shown 120,000 horsepower as primary power outside of the use of steam, but, of course, if you came down to the last analysis of an engineer for the 365 days, he would tell you 87,000 horsepower; but that would not be a real accurate estimate.

Mr. REED of Missouri. It is estimated that if the whole plan is carried out and completed we will have how many horsepower? I have heard so many figures that my mind is confused.

Mr. UNDERWOOD. Under this bill—

Mr. REED of Missouri. No; I mean if the entire plan is carried out; not what would happen under this bill.

Mr. UNDERWOOD. This bill relates to Dam No. 2, but the Norris bill relates to the whole Tennessee River—includes Dams Nos. 2, 3, and the dams on the upper waters. The Senator from Nebraska stated that that would produce about a million horsepower; and I do not think he is far wrong in that; but that is not contemplated by my substitute.

Mr. REED of Missouri. I understand. We have a project partially completed, and in its incomplete state it furnishes 87,000 horsepower, but the plan contemplates improvements so that there will be 1,000,000 horsepower produced. We

propose to lease the 87,000 horsepower for 50 years, and then we propose, if we go on and carry out the great plan of improvement, which I think should be carried out, to say that upon the completion of Dam No. 3, the dam, power plants, and appurtenances thereto shall be leased or operated in conjunction with Dam No. 2, as is provided for in this act, on such terms as Congress shall hereafter provide.

Mr. UNDERWOOD. If the Senator will yield just a moment, there was some objection to that clause, and as I did not think it was essential to the bill, several days ago, when the Senator was not here, it was stricken out by unanimous consent.

Mr. REED of Missouri. Very well; it is now out by unanimous consent, and then where are we? Is not this the situation, that you have leased that part of this plant which must be used when the greater power is created above, and having given to a lessee the control of the key of the situation, does it not follow that the United States has placed itself in a position so that when it completes the work it deals with the lessee, and being in a place where it must deal with that man, and he having a contract for 50 years, are we not in fact obliged to deal on his terms?

Mr. UNDERWOOD. I will say to the Senator that he treats my bill as if it were a contract. The bill I have introduced is drawn identically on the terms he suggested, to allow the Secretary of War to make a contract, subject to the approval of the President, with only three limitations; that is, the limitation that a lessee must make 40,000 tons of nitrogen, that he must convert it into fertilizer, and that the lease must not be made for less than so much money. I agree with all the Senator has said, but I am sure that the Secretary of War, with the approval of the President, will in his lease cover the very questions the Senator is arguing, as anybody else would.

Mr. REED of Missouri. Of course, the striking out of this clause removes from the bill one positive command which I think was very inimical. With it in, the question would arise in my mind whether we would have left a condition where it would be fair to ask if it would be possible for the Government to lease the key to the house and not at the same time practically turn over the control of the house. I say frankly that the taking of that language out has improved the bill. I think the bill would be improved more if some other things were taken out.

In the present development of affairs, in the march and progress of science, a 50-year contract to make any particular thing for war purposes or for peace purposes is a pretty doubtful proposition. To-morrow some man may discover a means for making explosives that will do away with the use of nitrogen for that purpose. We may not hear of it five years from now as an element to be used in the making of explosives. Not only is that possible, but I think we may almost say it is probable. In like manner, fertilizer may be produced by processes entirely different from the present method, which will be so much cheaper than anything that can be produced in any power plant that it would be utterly ridiculous to run a power plant. So I suggest, in the spirit of one who has had a kindly attitude toward this legislation, that you have dangers to confront which it seems to me argue strongly against making any half-century contract.

Again, Mr. President, there have been many attacks made here upon the mere matter of public ownership, yet this bill contains the proposition of public ownership and public control. It is true that it offers another alternative, and prefers another alternative, but it seems to me that all of the argument that is made against public ownership would carry us to the point, if the arguments be admitted, of striking out of the Underwood substitute every single thing except the proposition to lease, and force us, if those arguments be sound, if these denunciations are to be entertained, to strike from the Underwood substitute all except the leasing clause, and to stand here solely as the champions of private control and the denouncers of all kinds of public control.

So far as I am concerned, I do not believe generally in the proposition of government entering business. I think I am as thoroughly wedded to the doctrine of individualism as almost any man. I know I am as far removed from the doctrine of socialism as I know how to get, but I do not believe in the doctrine that it is impossible for government to engage in certain affairs which are ordinarily called business. We need not discuss Cleveland or any other particular city. The fact is—and I think I am safe in making the statement, as it was true a few years ago—that the majority of American cities to-day own their waterworks plants. When it was proposed to begin taking them over the cry was raised that they could not be suc-

cessfully operated by the municipality. They were in their nature monopolies, and because they were in their nature monopolies the people had to decide between being under the heel of a monopoly or being subjected to the somewhat imperfect management that is called political, and they preferred the political management, which they could control, to the monopolistic management, which they could not control. So in these cities they have acquired their own waterworks plants, and I think it is safe to say that in the vast majority of them the rates have been reduced and the service has been improved.

Mr. WALSH of Montana. Mr. President, I was a little curious to know what the situation was in the city of Baltimore. Perhaps the Senator from Maryland will be able to tell us. Does the city of Baltimore own its waterworks?

Mr. BRUCE. Yes; it does. I had hoped the Senator would ask me what profit was derived from it.

Mr. REED of Missouri. Of course, I will yield if the Senator wants to make the statement.

Mr. BRUCE. Never mind.

Mr. REED of Missouri. I want to hurry through, because I do not want to take much time with this discussion. In fact, my time is limited.

In my own city we had a waterworks plant that was simply an abomination. The rates were extortionate. The city acquired the plant, and was required, under a decree of a Federal court, to pay about two or three times what the plant could have been reproduced for, as nearly as I can recollect, the Federal court making them pay for good will. Notwithstanding that, as I now recall, the rates have been reduced nearly 40 per cent. The property is being amortized. A sinking fund is being created to take care of the bonds as they mature.

I think I can call it a first-class service; at least a service two or three hundred per cent better than we had before has resulted. It is true we do not always have perfect management, but when we do not have perfect management we can discharge the management. We are not under the control of the president of a foreign corporation as we were before. What I am saying now with reference to my city can be extended in many directions.

It has been said here with great vehemence that we failed in the matter of our shipping, that we have many ships tied to the docks and not in use, and that is a condemnation of the Government's business. Mr. President, I think that other nations, where they have had privately owned boats, have many of them tied to the docks. I think we have had bad enough management in the Shipping Board. I think we had a management there at one time that was absolutely indefensible. But I think, sir, that when any one undertakes to apply to the shipping of the United States the rule that is being here applied it is a great injustice. The boats were built during the war. They were literally thrown together. I saw some of them in process of building. One plate would be made in one mill and another in another mill hundreds of miles away. They were trying to build boats not to make first-class ships, but to make something that could carry material over to Europe where they had to have it. It was a rush order. The expense was enormous. The work was of an imperfect character and we produced a surplus of ships, more ships than we could reasonably expect to use. If a private individual had been put in the same situation he would have been compelled to make about the same kind of ships. He would have had the same amount of surplus on his hands. He would have had to tie them to the docks as those ships of ours are tied to the docks. Now, to say that that is any test is utterly ridiculous. I am not advocating the Government staying in the shipping business. I am not discussing that proposition, but I am discussing the illustration.

Again, we are told there was a great loss in the management of our railroads. Why, Mr. President, when we started into the war one of the first things the President did was to assemble the presidents of all the roads and ask them to agree upon and work out a plan for the coordination of the railroad systems. They undoubtedly did the best they could, but they had to meet conditions they had never seen before and the result was not satisfactory. Then the roads were turned over to Mr. McAdoo and he struggled with the proposition. For Mr. McAdoo I hold no brief, but Mr. McAdoo had no chance to run the enterprise as an ordinary business enterprise. He was obliged to move men and metal, material and guns, to handle the commerce of the country that had multiplied overnight, and to hope to do it without an economic loss was an absolute absurdity. So that is no test of the proposition of public ownership.

But what about the post office? We do not have to make profits out of an enterprise of a public character in order to

justify it. We run the post office not for the purpose of making money but for the purpose of furnishing service to the people of the United States. It is the largest single business in the world. It does business with 110,000,000 people at home and I do not know how many abroad. It comes in contact with almost every conceivable sort of problem relating to the transportation of information. It is the cheapest service furnished in the world by public or private individual. There is no comparison with it anywhere in the world. If we make our rates a little too low one day, we raise them a little the next day; but we try to give the people the service at cost, and that is what ought to be done. That is what ought to be done with the power plant at Muscle Shoals, in my opinion.

We had the Panama Canal constructed as an experiment, in a way. Nobody knew how much commerce would move through it. Nobody knew how many slides were to come down from the mountains. Nobody knew much about it, except as they could gather information from experiences with other canals. And yet is there a man here who would turn the canal over to a private corporation to-morrow? Although mistakes were probably made, is there an individual here who would turn it over to some private concern to use as an instrumentality of profit? I take it there is not.

It is suggested to me by the Senator from Virginia [Mr. GLASS] that private control of the Panama Canal was a failure when it was attempted. De Lesseps had some trouble down there and bankrupted thousands of people.

The singular thing about all of those who argue against the pending bill and argue vehemently against every kind of public control is that they forget all of the mistakes and all of the enormities of private control, but they can see every mistake of public control and magnify it a hundredfold. If a single city failed to make money out of its waterworks, that fact is held up as an eternal condemnation of all municipal ownership. Yet if we look along the pathway of commercial enterprises we find it strewn with the records of corporations that have been mismanaged and have gone down to their death, but we never hear of those.

This sort of unfair argument, it seems to me, we ought to abandon. There are certain enterprises that can be run by the public better than they can be run by private citizens. I do not mean that the management will be as perfect. I do not mean that there will not be some mistakes in management. But against that I put the overcapitalization, the enormous salaries, the wastefulness and the excessive prices that are charged by all of those ventures which are in their nature monopolies.

I think the true line of demarcation is this: Bear in mind that the Government ought not to thrust itself into ordinary business enterprises. Bear in mind the disadvantages of what is termed here "political control." Also remember that when a thing is a natural monopoly we must choose between remaining under the heel of the monopoly and subject to its exactions or we must appoint some one to represent the public. Bearing those facts in mind, we ought to apply the principle to each particular case.

Now, what are the facts in this case? They are absolutely unique. We entered upon the construction of this great work on the Tennessee River for war purposes. We had a war on then. We have not one on now. We needed nitrates then for war purposes. It may be we will need them again, but the mere fact that we started in for the purpose of making nitrates during the war does not furnish any conclusive argument that we should continue the process at the present time, so far as war is concerned. But I waive that. I do not care to dwell upon it. It seems to me to be inconsequential, at least to a degree. But, first and last, we invested \$135,000,000 of the people's money in the enterprise. We undertook something nobody else would undertake. Private enterprise has stood by and watched the water flowing down that river for a century and a half of time. It had seen all this mighty power going to waste, and it had never done anything to harness it and to make it of benefit to man.

The Government began construction of the works, partially completing them. Now, we are told on what seems to be good authority that with the expenditure of not nearly so much money a million horsepower can be created on this stream. Having invested this money and owning the property to-day, the sole question is, What are we going to do with our own property that we now own? Are we going to junk it as was suggested here by some extremists a few years ago? Are we going to give it to Henry Ford, as was almost done here not many months ago? I was opposed to that proposition so that nobody can charge me with being a party to it. Are we going to lease the property for a term of 50 years and tie our hands

by an improvident contract, as it is laid out in the bill, compelling the employment of the plant for the purpose of making fertilizer and nitrates, regardless of whether it is done at a loss or done at a profit? Or are we to hold the property still firmly in our own hands, directing some agency of the Government to begin its employment, and then directing that agency of the Government to use any reasonable amount of energy and money to see whether or not they can perfect a nitrate that will enable the farmers really to be benefited, and in the event they can not do that to go on and employ the power?

There are the two propositions. I confess, much as I regret to see Government agencies extended even over its own property, that my mind is drifting very rapidly toward the conclusion that in view of the slight knowledge we have of the business of making fertilizer, and in view of the fact that it is practically admitted that no one would be willing to make a contract to make fertilizer unless the lessee had the opportunity to make great profits out of the power, which is only another way of our paying him a bonus for the fertilizer, and in view of the fact that we are required to make a contract for 50 years of time, I doubt the wisdom of the proposition. I doubt it very seriously.

We can not speak by the card, sir. I remember reading in the Record the other day—my attention having been called to it by a Senator—that when the Coosa Dam proposition was before the Senate the distinguished Senator from Alabama [Mr. UNDERWOOD] asserted with great positiveness that the Alabama Power Co. was in no manner under the control of the General Electric Co. He undoubtedly asserted what he believed to be true, but it transpired in a very short space of time that he was mistaken in the fact at that time, or that subsequently and very shortly thereafter the General Electric Co. did gain control of that company.

Mr. McKELLAR. The Senator from Alabama also had something to say about the regulation of rates at that time which I think is very pertinent to the controversy over this amendment; and with the Senator's permission, I will read it. It is very short. This statement was made on August 22, 1912, in the House of Representatives:

Mr. UNDERWOOD. I will say to the gentleman that the principal objection I have to his amendment—

That was an amendment by Mr. B. G. Humphreys, of Mississippi, providing for the national regulation of rates—

there may be some smaller objections—is that I deny the right of the Federal Government to tax the people of the State for the use of water running in a stream in their State. If the Government itself builds a dam, I admit the right, if it has created power by building that dam, to charge what it pleases for that.

Here is a case, I may point out, if the Senator will permit me, where the Government has built the dam; and the Senator from Alabama, in 1912, in discussing the Coosa Dam act, as it was then known, admitted the right of the Government to control rates, while here he is opposing the Government's right to control rates.

Mr. REED of Missouri. Mr. President, without taking the time to draw together the points that I have tried in a very imperfect way to make, I come to what is known as the Walsh amendment. I sincerely trust that the Senator from Montana will either withdraw or modify that amendment. It really pains me to be found at difference with him in regard to it. My opinion is that he gave to my question of the other day the best answer that anyone could give, but I think the answer unsatisfactory. As I remember the question, it was, in effect, whether the Senator was willing if the Government operated the property to give the public service authorities of the different States the right to control the property. Some other Senator had asked that question, indeed, and the Senator from Montana answered emphatically, "No." Then I asked the Senator the question whether his proposition was not, in substance and effect, subject to the same objection, his proposition being that if the property shall be leased, in that event it shall come under the control of the public service commissions of the States.

It seems to me, Mr. President, that the United States being now the proprietor of this property has the right to operate it, and, being a governmental power, it has the right to fix its own rates. If it were to turn the right over to State boards to regulate the rates upon its property we would have the situation of one governmental agency regulating and controlling another governmental agency. That might be destructive of the Government's whole plan of work, and is untenable because it is unnecessary, for all that is obtained from any public board is the decision of a supposedly disinterested body touching the

rates that are to be charged. The Federal Government can be trusted as well as the State agencies not to demand extortionate rates from the people or to put any imposition upon them. I do not say "better," but I say the Federal Government can be trusted quite as well. That seemed to be the view of the distinguished Senator from Montana.

If we propose to lease this property and then attach the condition that the lessee shall immediately come under the control of these State agencies we shall be doing to our property in the second degree exactly that which we allege ought not to be done in the first degree, to wit, when we control it ourselves.

What we ought to do is to retain in the Federal Government, whether the property is leased or not leased, the right to control. Then we can make regulations that not only will protect the people from extortion but that will protect our property so that it may be redelivered to us at some time intact.

Mr. President, before we turn the property of the Federal Government now subject to Government control—and it can be kept subject to Government control as to rates even though we lease it, for we can reserve the right to revise rates—over to State control it would be well to give ourselves pause. We say when we do that that the States can better regulate the rates than can we, which is an admission I should not want to make. But we do more than that. The State boards now have enormous powers, and the Almighty alone knows how soon those powers will be magnified and multiplied.

Among the powers held by many of the State boards is the power to determine whether a line for the distribution of electricity can or can not be laid or whether a new railroad can or can not be built. The State board being empowered to pass upon the question as to whether there is a public necessity, it can, if it sees fit, refuse to grant a certificate of public necessity, in which event not a line of wire can be put up and not a single rail can be laid on the right of way of a railroad.

That is one power among many. Suppose that the Government were to finish the plant; suppose we wiped out all intervening difficulties and were making nitrates and using but a small part of the power and had a large surplus to dispose of which we wanted to distribute to the farmers, the beloved and wept-over farmers, as well as to other people, and we wanted to put up lines in the State of Alabama or Tennessee or any other place, and a State board told us we could not put up those lines, that there was no public necessity, that there were already enough lines in the State. Do we want to tie that sort of a hobble to our Government agency or to a lessee who is going to operate this Government property? I think it would be highly unwise.

Mr. WALSH of Montana and Mr. BRUCE addressed the Chair.

The PRESIDENT pro tempore. Does the Senator from Missouri yield to the Senator from Montana?

Mr. REED of Missouri. I do.

Mr. BRUCE. Excuse me. I did not see the Senator from Montana had risen.

Mr. WALSH of Montana. I will wait until the Senator from Maryland has concluded.

Mr. BRUCE. Mr. President, there is not a Member of this body of whom I am in the habit of thinking as being a sounder Democrat, to say nothing more, than the Senator from Missouri. I do not know of anyone who is so constantly faithful to the old Democratic creed. Of course, I am not saying anything about the Wilson attachments. I should like to ask the Senator this question: Does he think that the Government ought to enter into competition in the manufacture of full commercial fertilizers at Muscle Shoals with its own citizens? I called attention to-day to the fact that in Baltimore city we have no less than \$75,000,000 invested in the business of making such fertilizers. In other words, does the Senator think that the Government would be justified in setting up a great commercial fertilizer factory, or a dozen of such factories, at Muscle Shoals for the manufacture of full commercial fertilizers and in entering into crushing competition with its own people who have been paying taxes to it and discharging their duties of every kind to it and who naturally deem that they have a right to look to the performance by the Government of its correlative obligations?

Mr. REED of Missouri. I will answer the Senator in this way: I see the objections that he has in mind, and I appreciate them, but we have this plant and we must do something with it. It ought, however, to be handled in such a way that would be fair to honest investment; but if it be true that a process can be developed at Muscle Shoals which will cut the price of fertilizer in two, I think we would be justified in going ahead and working that problem out,

although as a mere matter of entering into general competition, of course, I would agree with the Senator as to that.

Mr. BRUCE. I will say to the Senator from Missouri that I am not opposed to the Government producing nitrates at Muscle Shoals, nor am I opposed to its lessee producing nitrogen there for sale to the trade, to be converted by it into full commercial fertilizers, because, as the Senator from Alabama has said, when the Government or its lessee undertakes to produce nitrogen for war explosives of course it would not be reasonable to expect it to dump any surplus nitrogen that it may produce into the Tennessee River. There is, I think, some confusion on that point in the Senate; I do not know that there is any in the mind of the Senator from Missouri. I am not opposed at all to the production of nitrates by the Government or to the sale by the Government of the nitrates that it produces to ordinary purchasers of such commodities, nor as I opposed at all to the sale of the surplus electric energy that may be generated at Muscle Shoals. What I am opposed to is the establishment by the Government, directly or indirectly, of commercial fertilizer factories at Muscle Shoals, or the establishment of any other kinds of industrial factories and to the Government entering into competition with its own citizens with all its gigantic power and capacity for absorbing pecuniary deficits, no matter how great.

Mr. REED of Missouri. I think I have already expressed my view in regard to it. As a general proposition, the Government ought not to be engaged in a competition of that kind; but if a condition exists in the country where a great improvement can be made, and private enterprise has not done it, and the Government has a plant, it seems to me the Government might well employ its plant.

Mr. WALSH of Montana. Mr. President—

Mr. REED of Missouri. I yield to the Senator from Montana.

Mr. WALSH of Montana. I simply wanted to inquire concerning the attitude of the Senator, that his position might be made entirely clear. I understand that he takes the view that whether the property is leased as provided by the Underwood bill, or whether it is operated by the corporation the creation of which the bill contemplates, in neither event should the rates be regulated or the service rendered in obedience to regulations of the local authorities; that the Government of the United States ought to keep in its own hands the control of that matter, and that these rates should be regulated either by the directors of the corporation or by the Water Power Commission or by some other Federal authority rather than the State authority.

Mr. REED of Missouri. That is the point I was making.

Mr. WALSH of Montana. I may say in that connection, Mr. President, that much can be said in favor of the contention made by the Senator, and were it not for the fact that the other system has been established by the water power act and is now in operation I dare say I might be found agreeing with the Senator; but I call attention to the fact, and I should like to have the Senator address his thought to it, that there is not so much difference between the two—not enough, as it seems to me, to require the institution of two different systems. It is true that we put more into this particular development than we do into a development made under the water power act; but under the water power act we contribute the site, in the case of lands owned by the Government in the West, or, in the case of a navigable stream, we contribute the right thus to obstruct the navigable stream. In both of those instances we have devised a system for the regulation of rates and service and that kind of thing which is actually now in operation; and it did seem to me that when we do the same thing here and give to some one a lease of this particular property, the systems ought to be in harmony.

Mr. REED of Missouri. Mr. President, that was the argument made by the Senator when the colloquy occurred, I believe on yesterday; and it is, as I have stated, as powerful a statement of that view as any man could make. I am impressed by the distinction between the two much more strongly than the Senator from Montana, however.

Here is a stream that has been running down hill ever since creation. Nobody has done anything with it. It runs through a State. The Government's sole jurisdiction over it is to regulate navigation. A man comes along and proposes to put in a dam, and he is going to run that business for profit, and the Government permits him to go in and utilize that which has never before been utilized. It may have a great potential value, but it certainly did not have a very great investment value, or it would not have lain in an unused condition.

That is the kind of case that the Senator—who, if I recall aright, had much to do with the water power bill—had in mind when he was dealing with the water power legislation; and I agreed with him fully at that time that if the Government yielded to a private party the right to go in and take possession of a valuable water site, and he obtained that for nothing, he simply then had a private business which he was running for profit, and that, like any other private business, the Government having no interest in the profit and no interest in the management, he should come under the control of the same boards and bureaus that control similar enterprises within the State. That seemed to me to be sound.

Mr. GEORGE rose.

The PRESIDENT pro tempore. Does the Senator from Missouri yield to the Senator from Georgia?

Mr. REED of Missouri. In one moment I will. The Senator will pardon me until I complete the sentence. In this case, however, the Government took the water power, and has spent this immense sum of money to develop it. It is not proposed by the Government to run this as a money-making venture in the ordinary sense. The most the Government can ever hope to get out will be a return upon its investment, I think. I think it is not worthy of debate that we will ever get more than that. We shall not be out here, like the ordinary private enterprise, trying to make a large profit upon our stocks and to pay off our bonds; and if we lease the property it will undoubtedly be, I think, on terms that at the best will enable us finally to get an interest upon our investment. Having that great investment, it seems to me we are entitled to protect it. The other property went from us when we yielded it. We had no further concern in it. We had no particular reason to want to control it. We had not put any money in it. It was simply a natural advantage which somebody saw fit to employ, and we permitted him to do it.

I think there is a great difference between the two cases—so much that it impresses me, and I again express the hope that the Senator will not press his amendment. If it is in, and if the bill of the Senator from Alabama goes through, then bear in mind that the man who makes this contract, when he goes to bargain with the Federal Government, must take into consideration the fact that he has to meet whatever conditions are put in the lease, that he then has to go down into these various States and become subject to the State courts, and that if there be such things as great monopolies of power in the South, as has been intimated, those monopolies may be powerful enough to place so many obstacles in the way of this new venture or its development that in the end any man about to contract with the Government would hesitate, and at least insist upon very favorable terms.

Mr. WALSH of Montana. Mr. President, will the Senator suffer a further interruption?

Mr. REED of Missouri. Yes; I will.

Mr. WALSH of Montana. If the amendment offered by myself should be withdrawn, in accordance with the suggestion of the Senator, or if it should be defeated, section 10 of the bill will remain, and that provides for regulation by the State authorities without any other restriction. Of course, the Senator must contemplate, in that event, the presentation of some amendment which will express his views as now so interestingly put.

Mr. REED of Missouri. I certainly think that an amendment should be put into this bill providing for regulation by the Federal Government, but leaving in the lessee the right to look only to the Federal Government for his control.

Mr. WALSH of Montana. Exactly. Now I want to call attention to the fact that the only objection made to the amendment tendered by me is that it does not go far enough, and include as well operation under the Government corporation, if the corporation operates it. The Senator from New York was the originator of that objection to the amendment. Of course, the Senator will appreciate that his amendment will evoke more powerful opposition than even mine. Can he give us any kind of assurance that his amendment will command any more support than mine?

Mr. REED of Missouri. I hardly know how to answer that question, because it is not quite susceptible of an answer.

Mr. WALSH of Montana. I mean is it practical at this time, in the state of sentiment in this body, to get an amendment which would divorce the whole thing from local control? That is the one objection that the Senator from Alabama urges to my amendment, namely, that it is not sufficiently comprehensive; it does not include the regulation of service and rates by the Government corporation.

Mr. UNDERWOOD. Mr. President, I have repeatedly said to the Senator from Montana that, in my judgment, there is so

little difference between his amendment and the clause in my bill that if he would make it extend to the Government corporation as well as to the lessee I would raise no objection; but I think that the Government corporation should be regulated if we are going to regulate the lessee.

Mr. REED of Missouri. I agree to the proposition that if we turn over this great power somebody must possess a right to limit the charges that may be made. That right could be reserved in a lease to the Federal Government; but between the Federal Government regulating the rates and the rates being regulated by a State commission, when we are told that great power monopolies exist in those States, and when we know that the laws of some of the States, if not those particular States, provide that you can not put up a wire or a pole without a certificate of public necessity, it seems to me that we would be wise to retain the control in ourselves, whether we lease it or whether we run the property as a Government proposition.

That is my judgment on it. I may be wrong. I am not gifted with any infallibility. If I were making this contract for a private individual—if, in other words, a private individual stood in the place of this Government, and I hoped to make a good lease, I would very much rather agree with the lessee upon the conditions under which he was to operate and hoped to get a good contract than to turn him over to the tender mercies of commissions, when he knows that he must go into a territory already occupied with wires and poles and power plants, and that that property is controlled by great and powerful institutions. I think under those conditions you will find some difficulty in making a lease.

If the Senate please, I have, as usual, taken about five times as much time as I wanted to take. I am obliged to leave the Chamber. I wanted to express these views and let them be considered for what they are worth.

Mr. CURTIS. Mr. President, I should like to have the attention of the Senator from Alabama and the Senator from Nebraska, if I may, for a minute.

I desire to ask if there is not some way in which we can enter into a unanimous-consent agreement to have a vote on this measure some time on Saturday. I know that it is a very important one, probably one of the most important that has ever been here, and that the debate has been largely limited to the measure, probably more so than in the case of any other measure we have had up; but it seems to me that in the two weeks during which it has been under consideration the Members have about made up their minds how they are going to vote, and I should like to have some understanding, if possible, as to a final vote.

Mr. UNDERWOOD. Mr. President, I will say to the Senator from Kansas that so far as I am concerned I should be very willing to agree to enter into an agreement now to limit the debate on all the amendments to a certain time—5, 10, or 15 minutes to each amendment for each speaker—or I should be willing to fix an hour for voting on Saturday.

Mr. CURTIS. What does the Senator from Nebraska say?

Mr. NORRIS. Mr. President, the Senator himself said in his opening statement what has been conceded by every one, that the debate has been going along with everybody talking to the questions involved. It is conceded that it has been enlightening, has been casting more light every day on the subject, and inasmuch as the principal contention of a large number of Senators on both sides of the Chamber is for a bill that has never been considered a moment by a standing committee of the Senate, I think it is out of the question, in the midst of a debate which every one concedes is going along all right, to think of such a thing as a limitation.

I want to say frankly to the Senator from Kansas that I myself will not agree at the present time to fixing a time for a vote. There will be a dozen amendments proposed which have not been offered yet. We may reach a final vote, it is true, at any time, but I want the debate to go along until there is at least an indication that it is not going on fairly.

Mr. CURTIS. Would the Senator consent to a limitation of debate to, say, 20 minutes on an amendment?

Mr. NORRIS. No; there may be many amendments as to which no objection would be raised if a limit were fixed. For instance, I have no objection, if the Senator from Montana has none, to having the debate on his amendment limited to 10 minutes, or 20 minutes, or 5 minutes. As far as I am concerned, I do not want to take any time on it. But until an amendment is before us and we know what it is, I am not willing to make an agreement in advance that speeches shall be limited to 20 minutes.

Mr. CURTIS. Mr. President, I want to give notice that I shall ask Senators to stay here for a night session to-morrow night.

Mr. NORRIS. Mr. President, if that is the position the Senator is going to take—and of course he has the approval of the real leader on the other side of the Chamber—I want to give notice that if that is attempted I shall move that the Senate adjourn after we have been in session until 5 o'clock, say, and the Senate then can take its choice and vote as it pleases. But, because I am not willing to agree to the fixing of a definite time for a final vote, it is not fair, it is contrary to all precedents of this body, to do anything now to force a vote by a test of physical endurance. A final vote will not be secured by that means. I notify Senators now that that attempt will not succeed.

Mr. CURTIS. It was not the intention to try to wear anyone out, but I thought that if we should have a night session to-morrow night we could get rid of some of the amendments. There are some important amendments pending, and there are some not so important. It does seem to me that we ought to get down to a debate on the two or three important amendments. The Senator knows as well as I do that there are only two or three very important questions in connection with this measure. Many of the other amendments are virtually immaterial, and I do not suppose it will make much difference whether they are voted up or voted down, and I would like to get rid of them. I have no intention of trying to wear anybody out.

Mr. NORRIS. There are some of the amendments the debate on which will probably not exceed 5 or 10 minutes when they are reached. Some I have in mind now will probably really be adopted by unanimous consent. But the Senator knows that under the rules of the Senate a Senator may talk about the general bill and the general proposition involved here when any amendment is pending; he need not discuss the particular amendment.

If there were a tendency to discuss outside matters, I would lend my assistance, what little it might be, to try to curtail the debate, but if a Senator wants to talk, say, about the Underwood amendment or the committee bill, and takes the opportunity to elucidate some part of it while some little unimportant amendment is pending, he will be giving the Senate information, and we will receive the information he could give us just the same as though he waited until that particular question were before the Senate. If we could control the Senate and have everybody talk to the particular amendment pending, it would be different; but we do not do that here.

Mr. HEFLIN. Mr. President, I make the point of order that the discussion is not pertinent to the question before the Senate, and if Senators are not going to agree I desire recognition.

The PRESIDENT pro tempore. The question before the Senate is the amendment proposed by the Senator from Montana to the amendment in the nature of a substitute submitted by the Senator from Alabama.

Mr. CURTIS. May I ask the Senator from Nebraska one question? Could we enter into an agreement that debate shall be limited on all the amendments except the Underwood amendment, and—

Mr. NORRIS. No—

Mr. CURTIS. Wait until I finish; also the Norris amendment, the Jones amendment, and the amendment of the Senator from New York. I think those are the four principal amendments. Could we agree that debate shall be limited to, say, 10 minutes on all other amendments?

Mr. NORRIS. No, Mr. President. I have given my reason for refusing to consent to such an agreement. I do not know but that some Senator would want to talk an hour on some amendment, and perhaps some other Senator would want to talk an hour on another. I am not going to differentiate between Senators and say that the debate on the amendment of the Senator from New York shall be unlimited and on some one else's amendment shall be limited.

Mr. CURTIS. If any Senator desired to talk longer, he could say he wished to talk on the bill.

Mr. NORRIS. Then, what is the use of making an agreement if it is to have no effect?

Mr. CURTIS. I think in that way we could get some of these amendments out of the way.

Mr. NORRIS. I do not believe we could make any headway.

Mr. CURTIS. I withdraw my request.

Mr. HEFLIN. Mr. President, a few days ago the Senator from Tennessee [Mr. McKellar] made some criticism of the public service commission of my State. I received a telegram from the commission replying to the attack made by the Senator from Tennessee, which I had read into the Record yesterday. I received another telegram to-day from the public service commission of my State stating that the criticism

made by the Senator from Tennessee was unjust to the commission.

The gentlemen who compose that commission in my State are splendid men. All three of them are Democrats. They were nominated in the Democratic primary and elected at the polls by the people of the State. The chairman of the commission was nominated recently by an overwhelming majority, and was reelected on the 4th of November to the position which he now holds. He is a man of rigid integrity and of very high character, and so are his associates.

I feel that my friend from Tennessee has labored under a misapprehension as to the facts regarding the public service commission of my State.

I have never heard a complaint against one of them. They set out in the telegram which they sent to me that they had had sharp differences with the Alabama Power Co., and that the commission had always settled the questions at issue according to what the commission thought was right and just. I simply rose for the purpose of saying, so far as I know, no complaint has ever been made against these men, and no attack has ever been made before upon their integrity.

Mr. McKELLAR. Mr. President—

Mr. HEFLIN. I yield to the Senator.

Mr. McKELLAR. I hardly know that it is necessary for me—

Mr. HEFLIN. The Senator has complained about the high rates in my State, and he has them in his own State. If they are too high in Tennessee and Alabama, and they may be, they ought to come down. I have been informed that in Toledo, Ohio, the local plant belongs to the community and that they charge 8 cents per kilowatt-hour, so that 40 kilowatts would be \$3.20. That is a community-owned concern I am told. I do not know what it costs to produce electric power in one community or another, nor do I know the difference in the cost of supplying it. I hope to have an opportunity to study that question. I rose merely to say that these gentlemen in my State are high-toned men, men of courage, of rigid integrity, and very high character, and I do not think that anybody can induce them to do an unfair or unclean thing. They are capable, honorable, trustworthy men. I believe the commission is doing its best to faithfully serve the people of my State.

Mr. SMITH. Mr. President, I submit several amendments to the committee amendment, which I ask may be printed and lie on the table.

The PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. JONES of Washington. Mr. President, a few days ago I proposed a substitute. I have modified it by making some additions to it and corrections in it. I desire to resubmit it in the modified form and have it printed and lie on the table.

The PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. WADSWORTH. I ask permission similar to that just granted the Senator from Washington. I desire to modify the amendment which I have introduced and have it reprinted and lie on the table.

The PRESIDENT pro tempore. Without objection, it is so ordered.

EXECUTIVE SESSION

Mr. CURTIS. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After five minutes spent in executive session, the doors were reopened.

RECESS

Mr. CURTIS. I move that the Senate take a recess until to-morrow at 12 o'clock.

The motion was agreed to; and the Senate (at 5 o'clock and 10 minutes p. m.) took a recess until to-morrow, Friday, December 19, 1924, at 12 o'clock m.

Lona Mae LeCroy, Langley.

HOUSE OF REPRESENTATIVES

THURSDAY, December 18, 1924

The House met at 12 o'clock noon.

The Chaplain, Rev. James Shera Montgomery, D. D., offered the following prayer:

O love of God and love divine, Thou art always near. Dependent on Thy bounteous mercy as we are, we seek Thy grace to cleanse, Thy power to heal, and Thy wisdom to direct. The best evidence of Thy presence is not in the world without, but in the goodness that Thou inspire in the lives of men. It is not a gift, but a choice. Let our selection be an index to more perfect strength and greater achievement. Let the unknown to-morrow bring us peace, health, and the continued gladness of our firesides, through Christ. Amen.

The Journal of the proceedings of yesterday was read and approved.

THE LATE MARTIN H. GLYNN

Mr. BOYLAN. Mr. Speaker, I ask unanimous consent to address the House for three minutes.

The SPEAKER. The gentleman from New York asks unanimous consent to address the House for three minutes. Is there objection?

There was no objection.

Mr. BOYLAN. Mr. Speaker and gentlemen of the House, yesterday, amid his native hills, in northern New York, a distinguished American was laid to rest. Martin H. Glynn was a Member of the Fifty-sixth Congress. Afterwards he was elected controller of the State of New York, lieutenant governor, and then Governor of the State of New York. During his administration as governor the workman's compensation bill was passed in our State, and the direct primary law was enacted.

He instituted such measures of economy that he has been rated as one of the four great governors of the Empire State. He was a distinguished scholar, a successful editor, starting at the very lowest rung of the ladder, achieving a success recognized by the entire press of the country. He was a brilliant orator. He delivered the keynote speech at the convention that nominated Woodrow Wilson at St. Louis in 1916 for the Presidency, at that time making a speech that will go down in the annals of American oratory among those of the most famous orations of his time.

He was a man who loved his State, a man who loved humanity in general. He was successful as an arbiter in settling the dispute between the Free State and the Republican Party in Ireland. He was a profound scholar, and his chief hobby was his library.

With all and through all he suffered from an infirmity of physical disability which would have caused an ordinary man to give up his task in despair, but nevertheless he carried on. In the passing of Martin H. Glynn the State of New York has lost a distinguished citizen, and the country as a whole has suffered in the loss of a noble, patriotic, and devoted American. [Applause.]

At a meeting of the New York delegation in Congress the following resolution offered by Congressman THOMAS H. CULLEN was adopted:

Resolution

Whereas the Members of Congress from the State of New York have learned with profound sorrow of the tragic and untimely death of the Hon. Martin H. Glynn, who served as a Member of the House of Representatives from March 4, 1899, to March 3, 1901, and who afterwards was controller of the State of New York, and who during the years 1913 and 1914 was Governor of the State of New York; and

Whereas in his death the State and Nation have lost a fearless and militant citizen of splendid achievements, and the world a fearless champion of justice and freedom for all nations; Now therefore be it

Resolved, That we mourn the loss of the Hon. Martin H. Glynn, our friend, a splendid citizen, Representative in Congress, governor, and advocate of international justice; that we tender to his family our sincere condolence and sympathy in their bereavement, and that this expression of our grief be sent to his widow and members of his family.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Craven, one of its clerks, announced that the Senate had passed without amendment bills of the following titles:

H. R. 10650. An act to authorize the settlement of the indebtedness of the Republic of Lithuania to the United States of America; and

H. R. 10651. An act to authorize the settlement of the indebtedness of the Republic of Poland to the United States of America, and for other purposes.

The message also announced that the Senate had passed bill of the following title, in which the concurrence of the House of Representatives was requested:

S. 3576. An act for the relief of Margarethe Murphy.

MESSAGE FROM THE PRESIDENT OF THE UNITED STATES

A message in writing from the President of the United States was presented by Mr. Latta, one of his secretaries, who also informed the House of Representatives that the President had approved bill and joint resolution of the following titles:

On December 16:

H. R. 7652. An act for the relief of Geston P. Hunt.

On December 17:

H. J. Res. 310. Joint resolution authorizing payment of salaries for the officers and employees of Congress for December, 1924, on the 20th day of that month.

PENSIONS

Mr. FULLER. Mr. Speaker, I call up the conference report upon the bill H. R. 6941, granting pensions and increase of pensions to certain soldiers and sailors of the Civil War, and certain widows and dependent children of soldiers and sailors of said war.

The SPEAKER. The gentleman from Illinois calls up a conference report, which the Clerk will read.

The Clerk read the conference report.

CONFERENCE REPORT

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 6941) granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent children of soldiers and sailors of said war, having met, after full and free conference have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its amendments numbered 79 and 100.

That the House recede from its disagreement to the amendments of the Senate numbered 1 to 78, inclusive, and 80 to 99, inclusive, and agree to the same.

CHAS. E. FULLER,
RICHARD N. ELLIOTT,
SAMUEL E. COOK,

Managers on the part of the House.

H. O. BURNUM,
DAVID I. WALSH,
BERT M. FERNALD,

Managers on the part of the Senate.

STATEMENT

The managers on the part of the House at the conference on the disagreeing votes of the two Houses on the amendments to H. R. 6941, granting pensions and increase of pensions to certain soldiers and sailors of the Civil War, and to certain widows and dependent children of such soldiers and sailors of said war, submit the following statement explaining the matters agreed upon by the conference committee, the effect of which agreement is to agree to all of the Civil War private pension bills which comply with the rules of the Senate Committee on Pensions, and of the House Committee on Invalid Pensions, and to eliminate from the bill the Senate amendment No. 100, which has no relation whatever to the subject matter of the bill providing for special pensions only on account of service in the Civil War.

CHAS. E. FULLER,
RICHARD N. ELLIOTT,
SAMUEL E. COOK,

Managers on the part of the House.

Mr. FULLER. Mr. Speaker, this is a unanimous report from the committee of conference. The report was held up in the Senate in the last session in the closing days and has now just been adopted by the Senate. The effect of the report is simply to strike out a rider which was added by placing a general bill on a private bill.

The SPEAKER. The question is on agreeing to the conference report.

The conference report was agreed to.

REFORESTATION

Mr. ELLIOTT. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by printing therein, in

S-point type, an address delivered by the gentleman from New York [Mr. CLARKE] before the Indiana Conservation Convention, on reforestation.

The SPEAKER. The gentleman from Indiana asks unanimous consent to extend his remarks in the RECORD in the manner indicated. Is there objection?

Mr. KIESS. Mr. Speaker, I object to the S-point type part of the request. Under the rules at present that can not be done.

Mr. ELLIOTT. If it can not be done, I withdraw it.

The SPEAKER. The gentleman from Indiana withdraws his request that it be printed in S-point type. Is there objection to the request of the gentleman from Indiana so modified?

There was no objection.

Mr. ELLIOTT. Mr. Speaker, under the leave granted to extend my remarks in the RECORD I insert the following address delivered by Hon. JOHN D. CLARKE before the Indiana Conservation Convention on the subject of reforestation, the national policy established under the Clarke-McNary bill:

SPEECH DELIVERED BEFORE STATE OF INDIANA CONSERVATION CONVENTION, DECEMBER 9, 1924, ON REFORESTATION—THE NATIONAL POLICY ESTABLISHED UNDER THE CLARKE-McNARY BILL—BY HON. JOHN D. CLARKE

My text will be found in the picture Bryant had in mind when he wrote:

"Before these fields were shorn and till'd
Full to the brim our rivers flow'd
The melody of waters fill'd
The fresh and boundless wood;
And torrents dash'd and rivulets played
And fountains spouted in the shade."

My inspiration cometh from my boy, typical of the youth of America, when, knowing of my interest in and work for a national reforestation law, reared and living in the enchanted land made famous by Cooper in his Leather Stocking Tales, the land of the Glimmerglass and Glimmerglass, of Uncas, and Chingachgook and a myriad of the boyhood heroes, he came to me after a forestry committee meeting at my farm, the Last of the Mohicans in his hand, and remarked, "Daddy, would not it have been wonderful if our granddaddies had not cut all the trees to make money and left to us boys more hunting and fishing, health and happiness?" That boy had the picture in his mind, as it should be brought back into our minds, and its reality we, if worthy of our trust, are called on to lend our best efforts toward bringing back.

Your conservation commission, through its splendid chairman, W. A. Guthrie, has been kind enough to invite me here, asking me for helpful hints and constructive suggestions on how to play your part, as a forward-looking State, in getting going a State reforestation program that will keep step with a national reforestation program made possible under the Clarke-McNary reforestation bill.

The picture, as I see it, of your great State of Indiana, is about as follows:

1. Your original forest area, God's endowment, was about 20,000,000 acres, nearly all hardwoods, now reduced to about 3,500,000 acres, very little of virgin growth, mostly farm woods.

2. In 1920 you had an average of about 7,300 wage earners employed in the lumber industry of the State, and the value of the products was thirty-five millions.

3. The average stumpage value of saw logs was—

1899	\$5.39
1904	7.65
1919	15.59

4. Indiana uses over three times as much timber as she grows.

5. Over 95 per cent of the lumber you use in the building trades is imported.

6. Indiana contains possibly 2,500,000 acres (the definite acreage is not known because there has been no adequate, detailed survey and classification) that is better suited to growing trees than to growing crops, and no definite program ahead to take this almost total economic loss to your State from such a vast, unused acreage, and transfer it into a big, live, growing asset.

Thousands of acres, like Topsy, "just grow'd," you still continue to "let nature take her course," with practically no forest management, and just one woodland lot in your whole State with good business management.

Thousands of other acres of hilly, impossible-to-farm lands in southern Indiana that should be set to work growing trees instead of allowing the soil to be carried off by erosion to impede navigation in the Ohio and Mississippi and finally help fill up the Gulf of Mexico. Soil is a valuable asset, and yet you continue to "let her go Gallagher," as if God's heritage was not worth preserving, and do not forget, "as you sow your children will reap," even down to the "third and fourth generations." Even where forests are attempting to come back those tender young trees have no fair chance, because livestock is permitted to graze there, practically destroying

any possibility of growth. Your wood lot owners need educating in the perniciousness of this practice, and if your legislature will provide the funds this forward-looking conservation commission will help in educating them.

I understand from the Indiana Yearbook of 1923 that you have a small, new nursery, wholly inadequate to your needs, seeking to do its best, with mighty little encouragement from your State legislature, and only a very small appropriation to do with. A sum unworthy of so great and so rich a State as Indiana. I do not blame the State legislature, however, as much as I blame the citizenship that is so wrapped up in its own self-centered problems that it has allowed its conscience to go to sleep with no picture in your general public's minds of the needs and necessities of all the to-morrows. Under the Clarke-McNary bill you can get helpful co-operation with the Federal Forest Service that will assist your nurseries to greatly enlarge and more widely distribute tree seeds and trees. Why not get busy?

My own State of New York has been for over 20 years working on its forest problems. It has established nurseries that in 1924 distributed over 8,000,000 trees all through the State. It is building up great forest preserves that already contain over 2,000,000 acres in the Adirondacks and Catskill regions, and at the last election we voted a bond issue of \$5,000,000, to be used for the purchase of additional land within these areas. This will provide funds for a five-year purchase program. In addition to these two great parks there are 8,500 acres in the Alleghany State Park, around 38,000 acres in the Palisades Interstate Park, approximately 1,000 acres in the Letchworth Park, and there are 38 other parks with smaller areas scattered throughout the State. In making the purchases for forest-preserve purposes the State has paid from \$1 per acre for land entirely denuded of timber and severely burned over to \$200 per acre for land covered with a heavy growth of pure, virgin, softwood timber. The average price for all lands is somewhere between \$15 and \$20 per acre, and the basis for land purchases, for unburned land and young growth, is about \$4 per acre plus the value of the standing timber of merchantable size and quality. We have the cooperation of individuals, fish and game clubs, farm and home bureaus, women's clubs, chambers of commerce, and by next spring we hope to have a forest day that will see every school child in my district with a tree to plant according to a definite plan—and not any old kind of tree, but a suitable one—if our good women, under Mrs. Clarke's leadership, can bring it to pass.

What is the answer for your almost treeless State?

You need a definite, adequate, scientific survey, classification, and mapping of your lands so as to ascertain with certainty where you are at.

(a) The acreage that may properly be found better adapted to the growing of trees than agriculture.

(b) A study of the lands and soils, the land better suited for growing trees, so as to know the kind of trees that it will grow best, looking to the location of the land—high land or low land—drainage, etc.

(c) You need a policy that will provide for the establishment of State, county, town, and school-district forests to serve as demonstration forests and at maturity provide a future supply of timber.

You need a permanent forestry organization, enlarged to meet your pressing needs. The small amount of your experimentation work you have already done should help to make a beginning. You already know something of the kind of trees that do best in certain locations, the enemies of the trees, etc., and you need greatly enlarged State parks, more of them; think of it, the great State of Indiana with only 2,000 acres in your parks, and New York State has over one thousand times greater acreage in its parks. Wake up, dear old Hoosiers!

Another question that is first in importance in forest areas is the question of adequate fire prevention and suppression, for about 75 per cent of the Nation's losses in timber are due to fire. You will find under the Clarke-McNary bill that the Federal Government will help to cooperate with the States and with private agencies under the States in fire protection and suppression, once you get going forward, and even now you could cooperate under the Weeks law in the protection of your timber in the southern part of the State, but are not doing so.

I doubt if your present tax law meets the situation, and while it exempts classified woodland from any increase in the tax rates and does encourage individuals and organizations to grow trees, yet I think, in justice to the State and the counties where your forests are to be developed, you should possibly provide for a yield tax. The Forest Service in the Department of Agriculture will gladly study and suggest tax laws, for there is a provision in the Clarke-McNary bill for the study of the tax laws of the respective States, and while the authority for taxation is within the States, it is well to get the results of this study of the tax laws of the various States, such as is to be made by the Secretary of Agriculture under the provisions of my bill so as to make certain you have the tax law best adapted to your needs and certain to promote the growing of trees.

There is provided in my bill, under section 4, an authorization for the Secretary of Agriculture to cooperate with the various States in

the procurement, production, and distribution of forest trees, seeds, and plants, for the purpose of establishing windbreaks, shelter belts, and farm wood lots upon denuded or nonforested lands, with co-operating States, as well as the provision under section 5 to assist the owners of farms in establishing, improving, and renewing wood lots, shelter belts, windbreaks, and other valuable forest growth, and in growing and renewing useful timber crops, and your commission should seek the development of a policy that will bring you under this bill and thus obtain the benefits of the law.

An appropriation to meet the authorization of the Clarke-McNary bill, and make it effective, will soon come up for consideration in the House of Representatives. Your forward-looking commission and State forester could, by appropriate resolution, urge upon your Representatives in the House and Senate of the United States, that they support the appropriations necessary to make thoroughly effective this bill, that seeks to establish a national leadership in a national reforestation policy adequate to the demands of this day, for our youngsters are in sight of the treeless age such as we behold in the tragedy of a treeless China, due to its lack of foresight in not developing a national reforestation policy.

It is peculiarly fitting at this time that I should make acknowledgment to the "home folks" of the invaluable aid given us by that splendid Representative in Congress from your State, EVERETT SANDERS. At my earnest solicitation, he sat with our distinguished chairman of the Agriculture Committee, GILBERT N. HAUGEN, and myself, when we were presenting the Clarke-McNary reforestation bill to the House of Representatives, and contributed materially to its successful passage. I should also add my meed of praise to your other Representatives who were as a unit in its support.

In the New England States, largely in New Hampshire, is the White Mountain National Forest. Why a national forest instead of a State forest, is the question that naturally propounds itself, and here is my explanation: It was my privilege to be invited by the select committee of the United States Senate to accompany it in its investigations that were carried on in 18 different States. We held our meeting in New York State and journeyed to Boston; from Boston our objective was this White Mountain National Forest.

As we journeyed toward it, we traveled for miles along the Merrimack River. We found community after community with their great manufacturing establishments dependent upon that stream for the employment offered to many thousands of people, dependent upon the evenness of the flow of that river for power that was harnessed, used, then harnessed and used again. We found the increase in the flow of the water and the steadiness of the flow of the Merrimack, even to its lowest reaches in Massachusetts, was due to this national forest, way up in the New Hampshire hills. Looking to the west you could see the Vermont hills, and trickling down through the valleys were streams, feeders of the mighty Connecticut. With extreme fluctuation in the flow of the river largely eliminated because the run-off of the water was slower, due to the forests, with a greater amount of water in the river during the entire year, meaning increasing the depth of the flow by 5 or 6 inches, thanks to a national forest in the hills of New Hampshire. As we journeyed from the Androscoggin River into Maine, we found history again repeating itself, mills and more mills, water power after water power, employment and more employment to thousands of people. We also learned that during the summer, in that national forest, well over 2,000,000 people spent their vacations. So it follows, as the day the night, that every New England State shared in the benefits of a national law that is gradually building up a greater White Mountain forest that will prove of immense service in every phase of the economic and industrial life of the New England States, as well as in the commerce of the nation. We need such national forests established in and about this State, and in and about many of the other forest regions to the north, south, and west, and it is up to the State of Indiana and the other States to enlarge on and broaden out their State policy of reforestation and get it going so that they can join hands with the National Government in a program that shall tell the world of to-day that they are not falling down in their great opportunity to bring back to our hills and dales the trees, to adorn and make more helpful the to-morrows under that national leadership offered in the Clarke-McNary bill.

I desire to bring to your attention the fact that your State has not passed an enabling act to grant the proper authority to the Federal Government to buy lands in the State of Indiana and establish a national forest or, if you wish, a State forest. There is a vast acreage that is estimated to contain from 200,000 to 500,000 acres of land that your own State could purchase for a State forest. It certainly is no great burden upon so great and rich a State, and the endless benefits that would accrue in a variety of ways are almost beyond the possibility of compilation. For recreational purposes alone it would be invaluable to your people. Think what it would mean to the people of the southern section of your State because of the great number who would visit there and make it their vacationing ground. It would bring added income; it would bring health; and its development would prove the same great boon to Indiana that such forests have proven to the peoples of other States.

Great changes are going on in our life that are equally astounding, that paint the same picture I am trying to paint. Wasting our inheritance. Lack of a forward-looking conservation policy in States, as in the Nation. Lack of thought by our public, its representatives, and therefore lack of funds and failure to appreciate the position we are in now with reforestation.

Once the passenger pigeon numbered billions, within the lifetime of men not yet past middle age; to-day there is not one passenger pigeon left. Great herds of buffalo and elk once roamed our plains, and yet they, too, have reached almost the vanishing point. Our native flora, if it could speak a language, would tell the same sad, tragic story, for the process of annihilation is going on. Some species are practically extinct, and entire sylvan families are in dire danger of disappearance.

Where is the white pine that sheltered the hardy pioneer upon the bleak New England shores or protected the emigré and his family when breaking through the Alleghenies to the west and south to people the now great industrial center, the Ohio Valley and to its south? Where is the southern yellow pine that a brief 30 years ago was called upon to fill the gap when the rapidly dwindling white pine became scarce? From a boasted 650,000,000,000 feet strong it has found itself within sight of exhaustion within the next 30 years.

In southern swamps the cypress, too, is making its last stand and commercialism and the demand for the dollar is speeding up its tragic end.

The sinister interests that used to run their sleek and sinuous way, their selfish ends to achieve, are rapidly disappearing from the timber industry. The old swashbuckling days of Coal Oil Johnny and the speedy and splendidly successful spenders of God Almighty's heritage in the to-day draw to an end. There cometh a John out of the wilderness crying to the Representatives in State and National Legislatures, "You are your brothers' keepers and you have a duty not only to this day and its people but even a far greater duty to all children of all the to-morrows."

I do not intend to insinuate that the majority of the lumbermen were not honest, did not serve a definite public, though no one can deny that many great timber tracts were built up through sharp practices, bogus entrymen, and criminal conspiracy. There was a day they tell us when some thought regarding a future reforesting policy for the Government was scoffed at by the lumbermen and newspapermen, but a welcome change has come over their dreams, and the president of the California White and Sugar Pine Manufacturers' Association says:

"We lumbermen are quite able to take care of ourselves. We have followed the receding forests from the Atlantic to the Lakes, to the South, and on to the Pacific. We can go no farther, but we can cut our forests and let the blackening fires lick up the undergrowth and culls beneath. We come here not to beg but because we feel that the public has commanded us to put ourselves in line with the new age and a new policy or be run over. We realize that henceforth forests must be as perpetual as farms. Give us fire protection and give us taxes adjusted to a crop that matures but once in 120 years."

George W. Sisson, a very extensive forest owner and paper maker in my own State, says:

"We now concede that a forest has become analogous to a public utility. It is no longer a private enterprise."

Time prevents my painting to you the picture of the great gains that follow indirectly from an enlarging State and National forest policy in game and wild life that have a great value in economies as well as from a utilitarian viewpoint, nor can I tell you of the great progress being made through our laboratories in the utilization of all the debris or left overs of the lumberman or other phases of progress. Nor can I further impose on your time and patience by taking up the direct relation of the quantity to the quality of the water, not alone in its bearing on healthfulness but in its economic and industrial relation, for the quality of water chemically or otherwise pure and reforesting in its final analysis are inseparably bound up in this problem.

The forest primeval, noble, majestic, and inspiring, has almost disappeared, and left in its place a wilderness, ragged, stunted, and unkempt. Truly a tragedy, with people so centered upon the to-day that they could not think of the to-morrow and our duty to our children and children's children. Citizens of Indiana, the story of this great State is one in which you can take just pride; every national crisis has found you playing your heroic part, catching step with the spirit of the age. I look to your citizenry, confident that in this great reforestation program, State and national, you will measure up to your duty and obligation to all the to-morrows.

WHAT DO WE PLANT?

What do we plant when we plant the tree?
We plant the ship, which will cross the sea.
We plant the mast to carry the sails;
We plant the planks to withstand the gales—
The keel, the keelson, the beam, the knee;
We plant the ship when we plant the tree.

What do we plant when we plant the tree?
We plant the houses for you and me.
We plant the rafters, the shingles, the floors;
We plant the studding, the lath, the doors,
The beams and siding, all parts that be;
We plant the house when we plant the tree.

What do we plant when we plant the tree?
A thousand things that we daily see.
We plant the spire that out-towers the crag;
We plant the staff for our country's flag;
We plant the shade, from the hot sun free;
We plant all these when we plant the tree.

(Henry Abbey, 1842-1911.)

CHILD LABOR

Mr. KIESS. Mr. Speaker, I present a privileged report from the Committee on Printing, which I send to the desk and ask to have read.

The Clerk read as follows:

House Resolution 371

Resolved, That the hearing held before the Committee on the Judiciary, Sixty-eighth Congress, first session, on the proposed child labor amendments to the Constitution of the United States be printed as a House document, and that 2,000 additional copies be printed for the use of the House Committee on the Judiciary.

Mr. BLANTON. Mr. Speaker, I make the point of order so as to get a ruling of the Chair, that that is not a privileged report from the Committee on Printing. It does not come within the rule which grants the privilege to reports from this committee.

The SPEAKER. The Chair will hear the gentleman.

Mr. BLANTON. The Committee on Printing was created for the purpose of prescribing general rules with respect to the printing of the Record and documents, and so forth. This request is to have certain hearings before a House committee printed as a House document. That is not a matter specially referred to the committee for action, but could come with equal privilege from any Member of the House with respect to a hearing before any committee of Congress. Anyone could request to have a particular hearing printed as a House document. I submit it does not come within the general rule that gives a privilege to a report from the Committee on Printing.

The SPEAKER. The Chair does not see why it does not come within the rule. Clause 56 of Rule XI provides:

The following-named committees shall have leave to report at any time on the matters herein stated, viz—

Then the rule gives the list of committees. The rule mentions the Committee on Printing and provides:

on all matters referred to them of printing for the use of the House or the two Houses.

The Chair overrules the point of order.

Mr. RAMSEYER. Mr. Speaker, will the gentleman yield?

Mr. KIESS. Yes.

Mr. RAMSEYER. What is the purpose, then, of having these hearings printed as a document? Is it for the purpose of propaganda for or against the ratification of the proposed amendment?

Mr. KIESS. The chairman of the Judiciary Committee, the gentleman from Pennsylvania [Mr. GRAHAM], is flooded with requests for copies of these hearings. The question of the child labor amendment, of course, is a live question all over the United States. While we are through with it here in Congress, we have submitted it to the States, and naturally there is a lot of interest in the matter. It is only because of the urgent request of the gentleman from Pennsylvania [Mr. GRAHAM], chairman of the Judiciary Committee, that the Committee on Printing decided to report the resolution favorably. It is the unanimous report of the committee.

Mr. RAMSEYER. Does the gentleman think that 2,000 copies will supply the demand? Should not we provide for a copy for every State legislator in the United States who will be called upon to pass on the amendment this year?

Mr. KIESS. Of course, the usual number will be printed and go to the document rooms, and the resolution provides for 2,000 additional copies to go to the Committee on the Judiciary.

Mr. RAMSEYER. These hearings contain arguments for and against the proposed amendment?

Mr. KIESS. Yes. It is not propaganda for or against the amendment.

Mr. HASTINGS. Will the gentleman permit me to say I think a great many Members have received requests for in-

formation on this subject? It is not only being considered by members of legislatures but the people generally, by debating societies in the country, and I know I have received a great many requests and I hope the request will be granted.

Mr. BLANTON. Will the gentleman yield for a question?

Mr. KIESS. I will.

Mr. BLANTON. The gentleman, I am sure, knows that practically all the large farm organizations of the United States are against this amendment, against it being adopted by the legislatures in the different States. Now, this particular hearing before the committee, I am sure the gentleman must admit, is largely in favor of the adoption of the amendment. The other side is not presented until it reaches the floor of the Congress, and this scattered over the land with the legislators of the country would have an undue influence on that matter, and I think that is rather taking advantage of those who are opposed to the amendment.

Mr. KIESS. Mr. Speaker, I have nothing to say at this time for or against the amendment. This resolution provides for the printing of the hearings as they were held by the committee, and I think it should be passed on account of the demands throughout the country for these hearings.

Mr. DOWELL. Will the gentleman yield?

Mr. KIESS. I will.

Mr. DOWELL. What is the number the committee asks to have printed, 2,000?

Mr. KIESS. The usual number, 1,247 and 2,000 additional copies for the use of the Committee on the Judiciary.

Mr. DOWELL. But the gentleman will realize that it will not supply the great demand that has been manifested, and is it not possible if it is printed it will be much less expensive to print a larger number of copies at the present time than it will be to reprint it again as soon as the demand is made greater by having a few sent out?

Mr. KIESS. I will say in reply, it is my intention to see that it is kept in type at the Printing Office until we know whether additional copies will be needed. I do not think we should print more than the resolution authorizes at the present time.

Mr. LAGUARDIA. If the gentleman will permit, the suggestion was made that these hearings contain only one side of the argument. That is not correct, is it? Those opposed to this legislation were given days before the committee and their arguments are contained in this document?

Mr. KIESS. That is correct. The hearings contain arguments on both sides of the question.

The SPEAKER. The question is on agreeing to the resolution.

The question was taken, and the resolution was agreed to.

EXTENDING REPORT OF COMMITTEE ON WORLD WAR VETERANS' LEGISLATION

Mr. SNELL. Mr. Speaker, I call up House Resolution 370, which is privileged, being reported from the Committee on Rules.

The SPEAKER. The Clerk will report the resolution.

The Clerk read as follows:

House Resolution 370

Resolved, That the time for rendering the report of the Committee on World War Veterans' Legislation under H. Res. 351 shall be extended to February 15, 1925.

Mr. SNELL. Mr. Speaker, there has been considerable discussion among Members of the House in the last two or three years relative to the care of soldiers of the various wars in Government hospitals, and also in contract hospitals. There has been a feeling among some of the Members that the general policy of the Government in regard to the maintenance and care and charge of these hospitals must be materially changed. Several resolutions were introduced during the first session of this Congress providing for investigation committees in regard to this proposition. It was considered by the Rules Committee and finally it was decided the best thing to take care of it was to grant the Committee on World War Veterans' Legislation the right to make investigation during the summer vacation. It was understood that that committee would make up subcommittees from their own committee. They would be made up on a geographical basis so as not to be obliged to spend much money or time in travel, and these small committees were to visit the various institutions in their section of the country and in turn report to the full committee and the full committee report to the House. This work has practically all been done except the work in hospitals in some of the Southern States, and I understand that subcommittee will visit them during the Christmas vacation, but they will not be able to make a com-

plete report by December 31 as provided in the old or original resolution, and this is simply to extend the time for making their report until February 15.

Mr. GARNER of Texas. If the gentleman will yield—is that a unanimous report of the Rules Committee?

Mr. SNELL. It is and, as far as I know, there is no opposition.

The SPEAKER. The question is on agreeing to the resolution.

The question was taken, and the resolution was agreed to.

PLACING THE U. S. AIRPLANE FLAGSHIP "CHICAGO" IN THE CUSTODY OF THE CITY OF CHICAGO

Mr. RATHBONE. Mr. Speaker—

The SPEAKER. For what purpose does the gentleman rise?

Mr. RATHBONE. Mr. Speaker, I ask unanimous consent to extend my remarks by printing in the Record a memorial adopted by the City Council of the City of Chicago on December 3, 1924, in reference to placing the U. S. airplane flagship *Chicago* in the custody of the city of Chicago.

The SPEAKER. The gentleman from Illinois asks unanimous consent to extend his remarks for the purpose indicated. Is there objection? [After a pause.] The Chair hears none.

Mr. RATHBONE. Mr. Speaker, pursuant to permission granted to extend my remarks in the Record I submit the following memorial:

To His Excellency the President, and the Senate and House of Representatives of the United States in Congress assembled:

The people of the city of Chicago recall with great pride and gratification the recent performance of the distinguished aviators of our Army Air Service in their historic round-the-world flight, the premier accomplishment of aeronautic navigation thus far achieved. They are deeply appreciative of the honor conferred upon the city of Chicago in the naming of the flagship of the expedition, the *Chicago*, and of the selection of the city of Chicago as one of the stopping places of the flyers on their triumphant return to the United States, and of the opportunity thus afforded to welcome and greet these able and distinguished men and extend to them the hospitality of the city.

The people of Chicago are keenly mindful of the growing importance of aviation to the military and commercial supremacy and stability of our country, and feel that no opportunity should be lost to foster and encourage the development and progress of the science of aviation.

In order to perpetuate, therefore, the recollection of this historic achievement, marking, as it does, the commencement of a new era of development in the field of transportation and science, it is believed and considered by the people of Chicago that the flagship *Chicago* should be kept and maintained in this city properly preserved in some museum or other suitable place, as a memorial to the courage, ability, and fortitude of the distinguished soldiers who so capably manned it, as a physical evidence of their great achievement, and of the commercial and military possibilities of aerial navigation.

Accordingly, the City Council of the City of Chicago, acting for and on behalf of the people of Chicago and of the great Middle West, many thousands of whom periodically visit this city, respectfully suggest as a fitting and suitable disposition of the flagship *Chicago* that it be given into the custody of the city of Chicago to be kept and preserved for the uses and purposes herein set forth.

STATE OF ILLINOIS,

County of Cook, ss:

I, AL. F. GORMAN, city clerk of the city of Chicago, do hereby certify that the above and foregoing is a true and correct copy of the certain memorial adopted by the City Council of the City of Chicago at a regular meeting held Wednesday, the 3d day of December, A. D. 1924.

Witness my hand and the corporate seal of the said city of Chicago this 15th day of December, A. D. 1924.

[SEAL]

AL. F. GORMAN, City Clerk.

COMMERCIAL AVIATION

The SPEAKER. The gentleman from Idaho.

Mr. LAGUARDIA. Mr. Speaker, is not the unfinished business of yesterday the vote on the bill?

The SPEAKER. Yes; the previous question was ordered. The gentleman is correct. It is the unfinished business. The Clerk will report the bill.

The Clerk read as follows:

A bill (H. R. 7064) to encourage commercial aviation and to authorize the Postmaster General to contract for air mail service.

The SPEAKER. The previous question had been ordered on the bill last evening. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

Mr. GRIFFIN. A division, Mr. Speaker.
The SPEAKER. The gentleman from New York demands a division.

The House divided; and there were—ayes 102, noes 3.

Mr. GRIFFIN. Mr. Speaker, I object to the vote, and make a point of order on the ground that there is no quorum present.

The SPEAKER. The gentleman makes the point of order that there is no quorum present. Evidently there is no quorum present. The Doorkeeper will close the doors, the Sergeant at Arms will bring in the absentees, and the Clerk will call the roll. As many as are in favor of the passage of the bill will, when their names are called, answer "yea"; those opposed will answer "nay."

The question was taken; and there were—yeas 15, answered "present" 1, not voting 124, as follows:

[Roll No. 124]

So the bill was passed.

The Clerk announced the following pairs:
On this vote:

Mr. Dallinger (for) with Mr. Peavey (against).
Mr. Cummings (for) with Mr. Davis of Minnesota (against).

Until further notice:

Mr. Garber with Mr. Hastings.
Mr. Fenn with Mr. O'Sullivan.
Mr. Johnson of South Dakota with Mr. Drane.
Mr. Morin with Mr. Carew.
Mr. Williams of Illinois with Mr. Gallivan.
Mr. Swoope with Mr. Wright.
Mr. Simmons with Mr. Bell.
Mr. Roles with Mr. Corning.
Mr. Kendall with Mr. Salmon.
Mr. Merritt with Mr. Weller.
Mr. Fairchild with Mr. Clark of Florida.
Mr. Mills with Mr. Mead.
Mr. Porter with Mr. Doyle.
Mr. Hill of Maryland with Mr. Garrett of Tennessee.
Mr. Scott with Mr. Sullivan.
Mr. Gifford with Mr. Morris.
Mr. Madden with Mr. Browning.
Mr. Cooper of Ohio with Mr. Larson of Georgia.
Mr. Linberger with Mr. Wilson of Mississippi.
Mr. Luce with Mr. Celler.
Mr. Fish with Mr. Bulwinkle.
Mr. Kahn with Mr. Wolff.
Mr. Paige with Mr. McClintie.
Mr. Britten with Mr. Crosser.
Mr. Magee of New York with Mr. Dominick.
Mr. Free with Mr. Geran.
Mr. Tinkham with Mr. Barkley.
Mr. McLeod with Mr. Lee of Georgia.
Mr. Dyer with Mr. Mooney.
Mr. Foster with Mr. Harrison.
Mr. Perkins with Mr. Ward of North Carolina.
Mr. Rogers of Massachusetts with Mr. Sabath.
Mr. Vare with Mr. Oliver of New York.
Mr. Snyder with Mr. Thomas of Oklahoma.
Mr. Tincher with Mr. Hawes.
Mr. Sears of Nebraska with Mr. Kindred.
Mr. Larson of Minnesota with Mr. Lilly.
Mr. Michaelson with Mr. Black of Texas.
Mr. Fredericks with Mr. Egan.
Mr. Murphy with Mr. Lyon.
Mr. Periman with Mr. Buckley.
Mr. Reed of New York with Mr. Smithwick.
Mr. Gibson with Mr. Howard of Nebraska.
Mr. Roach with Mr. Shallenberger.
Mr. Colton with Mr. O'Brien.
Mr. Brand of Ohio with Mr. Logan.
Mr. King with Mr. Evans of Montana.
Mr. Curry with Mr. Sherwood.
Mr. Christopherson with Mr. Vinson of Kentucky.
Mr. Fitzgerald with Mr. Tague.
Mr. Funk with Mr. Kunz.
Mrs. Nolan with Mr. McNulty.
Mr. Williamson with Mr. Wefald.
Mr. Miller of Illinois with Mr. Kvale.

The result of the vote was announced as above recorded.

The SPEAKER. A quorum is present. The Doorkeeper will open the doors.

On motion of Mr. KELLY, a motion to reconsider the vote whereby the bill was passed was laid on the table.

CHANGE OF REFERENCE

The SPEAKER. House bill 10624, a bill to enlarge the powers of the Washington Hospital for Foundlings and to enable it to accept the devise and bequest contained in the will of Randolph T. Warwick, was referred by the Chair to the Committee on the District of Columbia. The Chair thinks that in all propriety it could go either to that committee or to the Committee on the Judiciary, but the chairmen of both committees agree it should go to the Committee on the Judiciary. Without objection, the Chair will change the reference to the Committee on the Judiciary.

There was no objection.

ALASKA RAILROAD

The SPEAKER laid before the House the following message from the President of the United States, which was read and, with the accompanying papers, referred to the Committee on the Territories:

To the Congress of the United States:

In accordance with the provisions of section 4 of the act of March 12, 1914 (38 Stat. 305), entitled "An act to authorize the President of the United States to locate, construct, and operate railroads in the Territory of Alaska, and for other purposes," I transmit herewith the report of the Alaska Railroad covering the period from January 1 to December 31, 1923.

CALVIN COOLIDGE.

THE WHITE HOUSE, December 18, 1924.

LEAVE OF ABSENCE

By unanimous consent, the following leave of absence was granted:

To Mr. EVANS of Iowa, for two days, on account of sickness.

To Mr. BULWINKLE, for four days, on account of official business.

To Mr. SIMMONS, for four days, on account of official business.

To Mr. SHALLENBERGER (at the request of Mr. RUBEN), for four days, on account of illness.

To Mr. BROWNING, for three days, on account of official business.

NAVY DEPARTMENT APPROPRIATIONS

Mr. FRENCH. Mr. Speaker, I move that the House now resolve itself into Committee of the Whole House on the state of the Union for the further consideration of the bill (H. R. 10724) making appropriations for the Navy Department and the naval service for the fiscal year ending June 30, 1926, and for other purposes.

The motion was agreed to.

Accordingly the House resolved itself into Committee of the Whole House on the state of the Union, with Mr. CHINDELM in the chair.

The CHAIRMAN. When the House adjourned on Tuesday the gentleman from Idaho [Mr. FRENCH] had 19 minutes remaining, and the gentleman from South Carolina [Mr. BYRNES] 49 minutes.

Mr. BYRNES of South Carolina. Mr. Chairman, I yield 10 minutes to the gentleman from Texas [Mr. LANHAM].

The CHAIRMAN. The gentleman from Texas is recognized for 10 minutes. [Applause.]

Mr. LANHAM. Mr. Chairman, as one interested in the proper development of aviation in this country, I think it pertinent in the consideration of this bill to refer to the wonderful progress that has been made in the short space of a few years in the helium project. I shall devote to such discussion the brief time at my disposal.

Seven years ago there were in the whole world but a few cubic feet of helium which had been separated from its chemical associates. It was a mere chemical curiosity and an expensive plaything of the laboratory. Not very much longer ago an eminent scientist made the prophecy that it would be as difficult to get enough of it to float one small dirigible as to find a store of diamonds that would cover completely the Washington Monument. Only seven years have elapsed since our initial effort to extract helium from its gaseous host: and yet, since we were last in session at the Capitol, we have seen two large dirigibles, each containing more than 2,000,000 cubic feet of helium, float serenely and majestically above us. And the Army and Navy have many other smaller ships that are also inflated with this wonderful gas.

One of these leviathans of the air, the *Shenandoah*, recently completed successfully a trip from Lakehurst, N. J., to the Pacific coast and return. Another, the *Los Angeles*, came to our shores from across the Atlantic and was christened a short time ago here in Washington.

I say that the results achieved in this project have been phenomenal, and there have been also many attendant advantages to other industries. It seems that invention follows very closely upon the heels of necessity. Naturally, in the operation of lighter-than-air craft, the weight of a ship is lessened very considerably when a great quantity of fuel has been consumed. This results in a greater tendency to ascend, and the consequent strain and stress upon the mechanism is necessarily great. To obviate the customary valving of the gas, that is made necessary by this lightening of the load, the ingenuity of the American mind has given us apparatus which condenses the exhaust from the motors and recovers in water

more than the weight of the fuel used in the operation of a dirigible. This recovery of water for ballast is one of the remarkable discoveries of the helium project, and its importance is found in the fact that it obviates the necessity of valving this valuable gas under the usual conditions of ordinary flight.

Another thing of interest closely connected with the progress of the helium project is the development in this country of the duralumin industry. Of course, it is expedient in the successful operation of lighter-than-air craft, especially in the rigid type, to have the ships as light as possible, with due regard to safety and durability, and this has led to the discovery and use of duralumin, an alloy which has all the tensile strength of steel with just one-third of its weight. A piece of duralumin that may be balanced upon one's finger will bear the weight of eight men if placed upon upright supports. This alloy is used in the construction of the framework of our large dirigibles. This discovery is of value in the making of automobiles and the manufacture of all those things which call for a light metal of great tensile strength.

Helium-filled airships have been in operation only since December 5, 1921. On that date the first flight was made by the Navy blimp C-7 from Norfolk, Va., to Washington and return, in a snowstorm. In the brief intervening time we have evolved this method of water recovery and have profited by the use of this wonderful alloy, and perhaps these things are but an earnest of the accomplishments yet to come.

It should be borne in mind, also, in this connection, that the *Shenandoah* was built in this country, and that we are taking our place as the foremost nation in the construction and operation of dirigibles.

We have developed also within this period the mooring mast. We have four of these masts in the United States—one at Lakehurst, N. J., one in my home city of Fort Worth, Tex., one at San Diego, Calif., and one at Camp Lewis, in the State of Washington. By the use of the mooring mast, it is possible for large dirigibles to conclude or resume a flight under weather conditions usually considered unfavorable. These masts are less expensive than hangers and they have the additional advantage of being more feasible for actual operation, because, by reason of cross currents of air, a ship may be injured in taking it in or out of a hangar. So the mooring mast is another element of progress that has followed in the wake of this great project.

When recently the *Shenandoah* made its transcontinental flight, it was my good fortune to see it moor at the mast in the city of Fort Worth. Here was a ship 680 feet long. It had never been to Fort Worth before; it had never tied up to this mooring mast. If a ship 680 feet long, a trans-Atlantic liner, were to come into New York Harbor to-night, despite the facts that it had docked there many times before and would have a tug or two to assist it, it would remain outside and wait for the light of day to-morrow morning before proceeding to the dock. It was half after seven in the evening when the *Shenandoah* reached Fort Worth for the first time. The world was in darkness and the crew unfamiliar with the site, and yet this great leviathan of the air docked with ease in this strange port. We are living, gentlemen, in an age of progress, and the history of the helium project affords a notable example of the fact.

A number of new uses are being found for helium. What may yet be done is entirely conjectural, for this new element is a chemical infant. It has been found that the use of it may give us more effective electric-light globes. It may prove valuable as a refrigerating agent. It seems that those who labor in various kinds of subterranean work, like the building of the tubes in New York and the operations in caissons under water, frequently suffer as a result of their efforts from a dire malady known as "the bends." It is now thought that the pumping of helium into the air which they breathe may prevent the possibility of contracting this disease.

What may yet be done, I repeat, is altogether problematical. A year or two ago a gentleman came into my office and said he wanted to talk to me because I was interested in helium. He told me he had an invention that would nullify the resistance of the wind in the use of dirigibles, and that his discovery would enable an airship to go just as fast against a wind as it could with a wind pushing it along. This sounds incredible, and yet I understand that he has acquired a patent on that invention. He had a little working model which was most startling in its revelations to me and brought to my attention some physical principles of which I had never heard. On a subsequent visit he surprised me all the more with a device that seemed to indicate that a contrary wind might even be used to accelerate the speed of an airship.

In the light of what has been done, I am no longer a doubting Thomas as to what may yet be achieved. When I reflect that seven years ago helium was a chemical curiosity, costing at a minimum of \$1,500 per cubic foot, and that to-day we are getting it at our Government plant for from 5 to 7 cents per cubic foot, I am prone to agree that perhaps the wonderful things we have done are but an inkling of the accomplishments the future holds in store for us.

I make at this time, gentlemen, these brief references to the progress made in this project because of the fact that one-half of the appropriation to carry on this work is carried in the pending Navy bill. The other one-half is carried in the Army supply bill, the plant being operated on a 50-50 basis by the Army and the Navy.

But there are some other matters of prime concern with reference to the helium project besides the annual appropriations for maintenance, upkeep, production, and research. I refer principally to the important matter of the conservation of helium. Our country is a favored nation in the possession of this wonder gas. Other nations have searched for it within their borders in vain. Just a little was found in Canada, a little in Italy, a little in Czechoslovakia, but not in sufficient volume to be of much practical value. But in the United States we have, relatively, an abundance of it, and it is estimated that we are wasting about 500,000,000 cubic feet a year. Why, I understand they regard it so highly in Japan that a naval commission was appointed there to undertake the hazardous experiment of trying to find it in volcanic gases. And I fear that while the other nations are looking assiduously for it we are allowing it to go to waste with what some one has termed our customary and proverbial prodigality. So I say that the matter of conservation of this great asset, valuable both in peace and war, is one of prime importance in view of the fact that we have in this country a practical monopoly of the known sources of the world's supply.

The CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. BYRNES of South Carolina. I yield to the gentleman three minutes more.

Mr. JONES. Will the gentleman yield?

Mr. LANHAM. I will.

Mr. JONES. Is it not a fact that other nations are trying to discover and develop this gas, while we in this country are allowing large quantities to go to waste?

Mr. LANHAM. That is true.

Mr. HOWARD of Oklahoma. Will the gentleman yield?

Mr. LANHAM. Yes.

Mr. HOWARD of Oklahoma. What suggestion has the gentleman to make for conserving this gas? I ask because, in my district, the great Osage Nation has millions of feet of gas containing helium that is being consumed without extracting the helium.

Mr. LANHAM. I shall be glad to answer the gentleman's question as well as I may in the short time I have left. Practically all of the helium-bearing gas in this country is privately owned. You understand that we get our supply from natural gas, but not all natural gas contains helium. Why it appears in some gas and not in others the scientists themselves have not yet been able to determine. But the fact remains that very little gas with helium content has been discovered on public lands. We did find a field on public lands in Utah and the President has set it aside as a reserve. That reserve will hardly be useful in times of peace as a source of helium supply, because it is so remotely situated that it is difficult to get sufficient water and power for its development within a reasonable limit of cost.

There is pending on the calendar of the House a bill reported from the Committee on Military Affairs, which deals, among other things, with the subject of conservation. This measure may need amendment in some particulars, but it seeks to give authority for helium conservation. It seems to me that it would be advantageous to the Government to get control of some geological structure containing a large volume of gas with high helium content, and at the same time low in British thermal units, and keep that supply of gas for necessary war purposes stored in the ground. I understand that there are such fields in this country which are of practically no present commercial value. It is possible, even probable, that by removing the helium and certain other constituent elements which are taken out in the process of extraction these stores of gas which are now almost useless may also be made profitable commercially. The saving of such gas for our future needs will entail no great sacrifice. Until a necessity for its use arises, of course, we shall have to continue

to get our current supply from the sources most available under the conditions which exist. [Applause.]

Mr. BYRNES of South Carolina. Mr. Chairman, I yield 5 minutes to the gentleman from Louisiana [Mr. O'CONNOR].

Mr. O'CONNOR of Louisiana. Mr. Chairman, the conflicting reports that have come from varying sources as to what should or should not be done with respect to our Navy are, I am sure, regarded by many Members of both the House and Senate as making necessary a thoroughgoing investigation by Congress before additional money is appropriated for modernization or new construction. It is suggested that such an investigation should be proposed by the Senate Naval Committee in the near future. I understand from the Record and the public prints that it will be urged that Congress has not sufficient information for it to outline a comprehensive plan for the Navy or for future naval development. It is said that some of the things that Congress will be asked to inquire into are:

Why the 5-5-3 naval ratio treaty has not been lived up to.

Whether Great Britain and Japan have altered gun elevations upon capital ships.

Whether any American battleships are obsolescent or whether they are in condition justifying the spending of millions on them in repairs.

As to the number of submarines, cruisers, airplane carriers, and other auxiliaries necessary to balance the fighting fleet.

As to the number and types of airplanes required and whether there should be cooperation in designing and construction between the Army and Navy.

Whether there is a sufficient number of naval bases.

As to the plans of the Navy for the protection of the Philippines and Guam.

Whether the Naval College and the general board have projected a rational plan of naval development.

Whether the Government should construct its own warships in its own yards or depend upon private builders.

Whether the present method of promotion in the Navy is wise and whether it has affected the morale of the Navy.

The cause of so many resignations of officers and desertions of enlisted men from the Navy.

Why, with an expenditure of from \$300,000,000 to \$400,000,000 annually on the Navy since the war, the Navy is not in as good condition as it was before such large expenditures were inaugurated.

I certainly hope that the inquiry, if ordered, will go a step further and endeavor to ascertain whether or not the naval stations and all other shore establishments of the Navy Department are located to the best advantage from the standpoint of national defense. I for one would like to know why the North Atlantic and the Pacific coasts have so many shore stations and establishments and what good reason can be given for there not being a single navy yard from Charleston down along the South Atlantic and the Gulf coast to the Rio Grande.

Mr. BYRNES of South Carolina. Mr. Chairman, will the gentleman yield?

Mr. O'CONNOR of Louisiana. Yes.

Mr. BYRNES of South Carolina. In making out his case could not the gentleman as well say from Norfolk down, because the gentleman knows that the navy yard at Charleston has been practically abandoned during the last two years?

Mr. O'CONNOR of Louisiana. I am very glad the gentleman suggested that, and I hoped it would be made by some one. The Charleston yard is a negligible thing. It is an outrage that it should be neglected. That condition fortifies the remarks that I have made, and I am making them only in the interest of the Navy, because I believe in preparedness. I wish I could believe that the millennium was at hand. Until I get some evidence of its proximity I will fight for a strong Naval Establishment and a strong Military Establishment. But such an unequal distribution and location of the first aids to the Naval Establishment that we have necessarily arouses the thought that it is purely sectional in its view and not nationalistic, as a broad-minded vision would make it. Such a distribution and such locations as exist suggest to many Americans that political considerations count heavily and that shipbuilding interests and industrial plants which have made hundreds of millions out of construction are the guiding influence of the present order instead of a purpose with an eye single to the national defense of our country or offensive action, if necessary, to the honor and welfare of this Union. I speak more in sorrow than in anger of this situation, for I am a thorough and firm believer in naval and military preparedness. It has been my song by day and by night. I have felt it to be my duty to my countrymen to yell with all the force that resides in me, "Millions for defense, but not one cent for tribute," and the

elaboration that may go with that sublimely lofty and patriotic declaration to all the world. But I want a scientific, broad-visioned, far-sighted preparedness that will command a full support of all the people of this country and not a policy that will be suspected by the people as one shaped by shipbuilding and industrial interests. [Applause.]

Mr. WATKINS. Mr. Chairman, will the gentleman yield?

Mr. O'CONNOR of Louisiana. Yes.

Mr. WATKINS. Is not the same indefensible policy being pursued on the Pacific, where for approximately a thousand miles no attempt is made to protect this Nation along the Pacific coast?

Mr. O'CONNOR of Louisiana. I understand that is true.

Mr. WATKINS. And on the second largest river in the United States, the Columbia River, no adequate attempt is made to protect this country in case of a hostile attack?

Mr. O'CONNOR of Louisiana. I understand that to be true. I was endeavoring to put the case as strongly as possible, and hoped that my argument would be supplemented by the interrogatories which have been propounded.

Why is it that the New Orleans Navy Yard is not maintained and supported by the Naval Establishment like navy yards of the North Atlantic and Pacific coasts? And do not misunderstand me. I am not hostile, not antagonistic to either coast. As a member of the Naval Affairs Committee, for several years I persistently endeavored at every meeting, when an opportunity presented itself, to secure from officers of the Naval Establishment who were before the committee, some satisfactory reason for not operating the New Orleans yard on a proper scale. I failed in every instance most dismally to get a ray of light on a subject that was apparently as inkly to naval officers as to myself. It was useless to suggest to them that if ever there be a great naval engagement between this country and any European nation, that action would be fought in the Caribbean Sea, or in the Gulf of Mexico. I do not think there is much dispute about that statement. If an Asiatic power took the Panama Canal the controlling engagement would then be fought in the same waters. In the event that an oriental power did not take the canal but would come by the Horn or the Straits of Magellan, the final theater of war, on sea anyhow, would be in the same waters. There is no use saying that a fleet could not make such a long trip. The *Oregon* made it and possible combinations or seizures of coal and oil would make now for a successful trip. For we must contemplate probabilities of this sort when figuring upon naval engagements. The idea that the country could not be invaded via the Gulf and Mississippi River is untenable. That is the way Pakenham came when it was the purpose of England to take the entire Louisiana Purchase for her ally Spain, possibly for herself, on the ground not only of military conquest and occupation, but because Great Britain and Spain both asserted that the transfer of that great territory to France was a fraudulent one, ultra vires, and beyond the delegated authority of the Spanish commissioners who in a secret treaty made the transfer. And that when we made the purchase from France we knew of that so-called fraudulent transfer and were merely pretending to acquire that which we knew France had no lawful title to. Of course, Jackson's victory on the plains of Chalmette, below New Orleans, settled that question once and for all.

It was fear of an invasion by way of the Gulf and the Mississippi River or Lake Borgne and Lake Pontchartrain, which are arms of the Gulf of Mexico, that led to the construction in 1818 or thereabouts of forts on the Mississippi River, on the Rigolets, on Chef Menteur in Lake Borgne, and in the Mississippi Sound. It was up the Mississippi River that Farragut came when he and Butler took New Orleans and dealt the Confederacy a mortal blow. The statements that big battleships would not go up the Mississippi River is ridiculous when considered in the fact that there is 32 feet of water in the South Pass and nearly 35 in Southwest Pass, and these are the lowest and shallowest places for hundreds of miles up the big river. But why would it be necessary to send big battleships up the river when smaller ones—light cruisers, submarines, submerged torpedo destroyers, and similar vessels—could do just as effective work as a big battleship. The nearest I ever got to anything like a recognition of this most palpable fact in respect to any naval engagements that would be fought out on sea by this country and any enemy that might challenge us was a statement from one of the big wigs of the Naval Establishment that a naval base in the Caribbean Sea and a shore station on the Gulf of Mexico or the Mississippi River in support of it was being discussed within the inner circle. I am for the investigation that I have outlined, and I hope most fervently that it will be a far-reaching inquiry that will be

made, for I am sure that the investigation will not only make for efficiency and economy but will advance our thought considerably along the line of what will make for a proper defense for the country through a scientifically planned location of our shore yards and stations. I am strong for national defense. I want a Navy second to none. I want an Army that can promptly answer whatever demand that may be made upon us by the challenge of any country to martial conflict. It may be a brutal law that is announced in "Kingdoms by blood gained must be by blood maintained," and "They shall take who have the power; they shall keep who can." But it is a law that has never been suspended, altered, or amended; it is ceaseless in its operation and as fixed as the northern star in the firmament or as the sun in the solar system. Wee be to the people that ever become unmindful of that law, grim and brutal as it is in its operation. When they do forget, the hymn of the conquered will become their mournful refrain. Then they will pass on to the tomb of time and oblivion.

So runs the scroll of human destiny,

Written in fire and blood and scalding tears,

Scrawled with wrecked hopes and blasted visionings,

The weary record of ten thousand years,

The dreary record of peoples and of kings,

Of empire and of race,

Which to the law that ruleth earthly things

In ruin yielded place.

I hate to differ from the President of the United States on this matter, for, according to the newspapers, he deprecates any investigation. He apparently believes that no good results can flow from such an inquiry, and generally seems to think that the proposition is lacking in wisdom. I repeat, I am reluctant, extremely reluctant, in expressing my different viewpoint, because, after all, the responsibility of the President in the case is an unusually heavy one. I feel, however, that in all probability his attitude and those of a similar mind will be used against the very position he occupies. It will not be long before it will be whispered first and then thundered that those who are opposing an investigation are doing so because they are afraid that an inquiry would show the miserable condition into which the Navy has fallen and that we are not only not as strong as Great Britain on the seas but not as strong even as Japan.

I have no doubt that the professional agitators who have for years past sought to alarm the public just before any great naval bill came to the Congress are now at work, and will continue to work in order to secure their own ends. I have no doubt that they are abusing and misusing the patriotism of the American people in order to make another financial killing out of the vast armaments they hope to see come into existence as a result of their agitation and a sinister agitation by men of their own kidney in England and Japan. The investigation proposed would uncover the propagandist, and whether or not the Navy is being run from the inside or unconsciously swayed by big business, shipbuilding and industrial plants through emissaries who know how to throw the public mind into a delirium over a picture painted in words that convince the unthinking and unwary that we are woefully and menacingly inferior on the seas, and in that way bring pressure on Congress. I believe that it would be the part of wisdom to investigate naval conditions and the Navy Department thoroughly. For through the knowledge secured from such an investigation we would make a better showing at the next conference suggested by the gentleman from South Carolina [Mr. BYRNES] than we did at the first conference, which has been ridiculed, laughed at, jested at, and sneered at by national humorists and wits, who have blistered with fine irony and satire that historic but lamentable attempt at diplomacy on our part. Will Rogers cut to the bone and aroused the laughter, and at the same time, the indignation of the American people by declaring that we agreed to sink one vessel for every one that was constructed by England or Japan, and that in a mood of side-splitting humor the representatives of those two countries exhibited blue prints of what they intended to build, and said they would destroy the prints if we would destroy as many real vessels. This evidence of their self-abnegation and sacrifice was received with tears of sympathy and we agreed to destroy war vessels in course of construction upon one of which we had spent \$35,000,000.

Feeling that they had obtained a magnificent victory, our representatives could not conceal their triumph and rejoiced openly, to the amusement of the sly, foxlike, astute, shrewd, cunning, and highly trained diplomats from abroad, according to the great humorist.

Yes; I believe it would be the part of wisdom to investigate and ascertain what follies were committed in order to avoid blunders that may lie ahead. Let us find out whether we were outclassed, outgeneraled, outtricked, and outwitted at the conference; and if so, to what extent. Perhaps we were not hoodwinked to the extent that the American people were led to believe we were and that our representatives at that conference were not the chumps that editorial writers, pamphleteers, wits, and humorists have pictured them to be. I reiterate I am reluctant to differ from the President of the United States on any matter, because his is a great responsibility and he has a fearful burden to bear and carry. I am reluctant to admit that I am not convinced, though I have every confidence in them, by the report of the members of the subcommittee, for upon the heels of that report came the statement from the Secretary of the Navy that that establishment required an expenditure of a billion dollars within 10 years in addition to the annual appropriation, in addition to the modernization bill that is in conference, in addition to the construction bill that recently passed and which will cost one hundred and ten million more at least. Is there any wonder that there is proposed an investigation that will go from top to bottom and inquire into every phase and activity of the Naval Establishment and its future developments? Both the gentleman from South Carolina [Mr. BYRNES] and the gentleman from Idaho [Mr. FRENCH] in their attitude and expressions would be convincing on ordinary occasions. Of their intense sincerity and their high patriotism and their lofty purpose in endeavoring to reassure their countrymen there can be no question; there can be no doubt. But this is not an ordinary case. It is an extraordinary situation. Newspapers, national in their circulation, scope, and power, have suggested an investigation as the way to ascertain the facts. Newspapers, local in their influence, have taken the cry up. If the inquiry is not made, we might expect soon to see headlines suggesting that we were afraid to investigate and thereby expose the weakness of our naval condition. In my judgment we will be ultimately driven to the inquiry that we are urged to avoid.

A raging controversy is now on, and the irrepressible conflict between the forces looking to partial disarmament and those who believe in the maxim, "semper paratus," and a navy at least as large as that of any afloat confronts the Nation.

I will support the amendment that I understand will be offered by the gentleman from South Carolina [Mr. BYRNES] looking to another conference. I have no great faith in it, however. But as it is a motion apparently in the right direction and may produce results, I will vote for it. I do not believe that the people of our country want disarmament, for if they did they would enter the League of Nations and would, by their influence, ultimately, if not immediately, dwindle and reduce the armies and navies of the earth to mere police establishments. But the League of Nations is another story, as Kipling would say, and may well await discussion at some time in the future.

But my time is limited and I must hurry on. In asking practically for a reopening of the New Orleans Navy Yard, I ask for it not as one sighing for the fleshpots, but as one urging a national defense policy on scientific lines. I am not interested in public positions. I wish the entire Federal service and State and municipal service from every imaginable standpoint were covered by civil service laws that would be a relief to Congressmen and make for the protection and complete independence of public employees. But I am interested in promoting my country's welfare, and in urging you not to neglect the vast coast lines of the South Atlantic and the Gulf of Mexico from Charleston to the Rio Grande. I am urging a policy that will remove the Naval Establishment from the suspicion that must dwell in the minds of millions that the attitude of the Navy is not broad and national enough to inspire that whole-souled and sympathetic confidence which should be the basis of so great an institution. New Orleans is a great city and is destined to be one of the greatest cities of the world. Our Navy is designed to protect our commerce and destroy that of any enemy that we may have to engage in war. To accomplish that purpose with certainty and quickly it is necessary to destroy as soon as possible the enemy naval establishment. New Orleans is the second port in the United States. Its imports and exports are tremendously large. For that reason an enemy would seek to destroy it. For that reason we should seek to protect it and destroy the enemy who would endanger it. New Orleans is near the entrance of the Gulf of Mexico and is the great port for the Mississippi Valley. By its doors and over the waters of the Gulf of Mexico and through the seven seas the commerce of that empire of wealth and territory must pass to final destination. The navy yard

at New Orleans would take care of the vessels that would have to guard and protect our southern lanes whenever those vessels were in need of repairs and overhauling. As long as its claims for recognition as a part of the scheme of national defense are ignored just so long will the Navy Department be on the defensive and have to try to explain that which is apparently unexplainable.

With the permission of the House, I am going to make a part of this address a brief prepared for me by Walter Parker, of New Orleans, in which he by masterly touches shows the future greatness of the southern metropolis. From that splendid paper you will draw as a corollary, which will be more convincing than my feeble attempts, showing the necessity of a proper naval establishment in the Gulf of Mexico.

Mr. LOZIER. Mr. Chairman, will the gentleman yield?

Mr. O'CONNOR of Louisiana. Yes.

Mr. LOZIER. Does not history conclusively demonstrate that more nations have been destroyed by great armies than were ever preserved by them, and that more people have been enslaved by great armies than were ever freed by them? Is not that the truth of history?

Mr. O'CONNOR of Louisiana. I never heard anyone in my life make that statement until the distinguished gentleman from Missouri just now announced it on this floor. [Laughter and applause.]

The brief prepared by Walter Parker, above referred to, is as follows:

AMERICA'S NEW STATUS

North America, long the farm and the forest for the Old World, must now become the factory for the New World and the Orient and must readjust its industrial and transportation economy.

Western Europe will continue to take North America's cotton, lumber, foodstuffs, and the like in so far as its finances will permit, but North America will desire more and more to sell the finished articles of commerce rather than raw materials, and to this end there will be an ever-increasing favoring spirit for the development of new overseas markets in those overseas regions where raw materials are to be had.

Such regions available exist in Mexico, Central and South America, where the overflow populations of Europe may seek homes, and in the Orient, where huge populations and a relatively undisturbed economic life permit the creation of exchangeable products.

It is from the great valleys of the country, particularly of the Mississippi and its tributaries, that the food and the raw material supply of the United States must come. Within such valleys easy grade railroads and navigable waterways may be made to supply efficient transportation at low cost.

By centering the processes of industry within those valleys in close juxtaposition to food supply, raw materials, and the means of low-cost transportation along trade channels of low natural resistance, a new and lower cost equation is created, and when such processes be carried to their logical goal, a new economic margin for business is evolved just as surely as was done when steam power and machinery replaced hand labor.

When to these processes in the interior there be added the factor of scientifically coordinated port economy, the net saving to commerce and industry should prove great enough to offset in overseas markets, lower labor cost levels in less-favored regions which long have been strong competitors of the United States in foreign fields.

Changing world trade routes made Carthage, developed Venice, forced the Panama Canal, and now give New Orleans a world port opportunity of a new order—an opportunity to serve the Mississippi Valley efficiently and at low cost.

To capitalize that opportunity New Orleans, with public money, has built wharves, warehouses, elevators, and terminals, and, at the beginning of 1923, completed an inner ship harbor and industrial canal at a cost of \$20,000,000. This makes possible complete coordination between transportation, factory, and warehouse and clears the way for continuing uninterrupted development under the following four-phase policy:

Public ownership of river harbor front commercial sites and facilities available to all users on equal terms—the system long in operation.

Public ownership of inner harbor sites and commercial facilities thereon subject to short-term leases by business enterprises.

Public ownership of inner harbor sites, subject to long-term leases, and business ownership and operation of commercial facilities thereon.

Private ownership of sites on ship laterals of the main canal and private ownership and unhampered use of industrial facilities thereon.

WORLD CHANGES

This world-port opportunity of a new order arises as a result of several major causes.

The war curtailed Europe's buying power, hastened the period in which Latin America must develop, greatly augmented the industrial

capacity of the United States, increased the cost of rail transportation, forced a return of inland-water transportation, and left the world more largely dependent than before upon the Mississippi Valley, the only producing region of the first magnitude capable of fully functioning at this time.

The huge debt imposed by the war upon all enterprise has forced men to reduce waste and lost motion, and to develop and use new economies.

Commerce can no longer be moved over indirect routes or mountain grades, when direct routes and easy grades are available, except at an uneconomic cost, which means loss of advantage in competitive fields.

The United States now needs overseas markets for the finished articles of its factories. Such markets, of great promise, now lie in Latin America, Asia, and Africa, and not in Europe.

Europe will continue to need raw material from North America, but more and more North America will manufacture its own raw material at home and seek to sell the products of its mills abroad.

Competition will be keen, keener than ever before, and so the process of translating raw material into finished products must take place within easy reach of the raw material, food supplies, and low-cost transportation.

THE MISSISSIPPI VALLEY

Broadly, the region lying between the Appalachians, the Rockies, Canada, and the Gulf is an economic entity. It is called the Mississippi Valley. Within it are produced 80.8 per cent of all the wheat yield of continental United States; 86.9 per cent of all the corn; 97 per cent of the iron ore; 82 per cent of the agricultural implements; 95.8 per cent of the coal; 61.6 per cent of the cotton; 52.9 per cent of the lumber; 74.8 per cent of the livestock; 97.5 per cent of the sulphur; 66.4 per cent of the salt; 79.8 per cent of the oil.

Navigable waterways radiate from New Orleans to Pittsburgh, to St. Paul and Minneapolis, to Kansas City, and soon will reach Chicago.

An intracoastal canal for barges will, in a short while, extend complete from Pensacola to Brownsville, Tex., crossing the Mississippi at New Orleans.

Easy-grade railroads radiate from New Orleans to Atlanta and beyond; to Chicago and St. Paul, to St. Louis, to Kansas City, Omaha, and beyond.

The valley and its transportation lines, all capable of the most effective economy of operation, form a great funnel down to the port at the mouth of the Mississippi, thence by short sea routes to the world's new markets of great promise.

That port, both with far-visioned policy and carefully worked out project, has planned its facilities in such a way as to assure safety from congestion and the development of a character of economy possible only where ample space permits efficient coordination.

New Orleans has many miles of yet unused river harbor frontage, 11 miles of inner harbor ship frontage, and 96,000 acres of now unused and very low-value lands capable of being changed into private harbors at a mere expense for dredging ship channels through it to connect with the great now ready ship locks on the river's bank.

In this way the four-phase port policy is made possible, and the valley is given its choice of sites and facilities.

PUBLIC OWNERSHIP

Public ownership of harbor sites as practiced at New Orleans is not confined to the mere building and operation of port facilities, but embraces a complete policy under which both public and private enterprise may find free play under the most wholesome conditions. The idea is to supply with public funds facilities for shippers and transportation lines who are not ready to create facilities for themselves, leased sites for those who desire temporary occupancy, and an opportunity for fee simple ownership of harbor sites for those who desire to invest in facilities for permanent occupancy.

The working out of this broad policy has required many years of effort. Prior to 1896 the public owned all the river harbor frontage but had not created any machinery for the practical operation of the port under public ownership.

A board of commissioners of the port of New Orleans was created by law in 1896. It sold some bonds against the revenues of the port and built some covered wharves, then some warehouses and other facilities. Ultimately this board was taken out of politics and given enormous powers in the constitution of Louisiana. Its vision developed as its work progressed.

To-day the board is composed of five of the strongest business men, appointed by the governor for definite terms. This board serves without pay and acts as a board of directors. It names a general manager, who need not at the time of his appointment be a resident of the State, and empowers him to operate the port in the same way any other large enterprise is operated. He employs his staff, who in turn employ the workers. The surest way for an applicant to fail to obtain employment is for such applicant to attempt to bring political influence to bear.

Department heads are employed because of executive ability and salaries are paid accordingly. There is nothing in the law to prevent a proper salary reward for merit and service.

The world's greatest cotton warehouse and terminal has been built on the river front by the board. Similarly the world's most efficient grain elevator and a splendid coal tipple and storage plant have been created.

Many miles of wharves, with inclosed steel sheds over them, have been built.

INNER HARBOR AND INDUSTRIAL CANAL

Now the opening of the inner ship harbor and industrial canal, a facility which was paid for by the people of New Orleans, with no Federal aid whatever, makes possible the leasing of harbor-front sites to business enterprise, and the fee simple ownership of harbor sites on ship channels by business enterprise.

Under the conditions of public ownership of the river harbor front, business enterprise can not lease sites there.

New Orleans covers an area of 196 square miles—all of Orleans Parish or county. Much of this area has not been needed by the city and has remained undrained and unused. This area, part of which has recently been drained, lies between the Mississippi River and Lake Pontchartrain, an arm of the Gulf of Mexico, and large portions of it are within 3 miles of the center of New Orleans's business district. Lake Pontchartrain is 5 miles from the river.

Because of the rise and fall of the river a ship lock was necessary in order to adjust the levels in the canal and inner harbor, between the Gulf and the river.

The area of low-value land adjacent to the canal and inner harbor, which is available for development into privately owned harbor frontage through the dredging of lateral ship channels and canals, is 96,000 acres in extent. The land is low and level. There are no rocks in it. Spoil from the dredging of laterals and harbors raises the remaining land, giving it natural drainage.

The value of this land as harbor frontage so greatly exceeds the present value, plus the cost of changing it into harbor sites, that there should be ultimately enough profit out of the increment alone to pay off the \$20,000,000 cost of the lock and primary canal and inner harbor. At least, that is the basis upon which port economists are now working.

DRIFT OF TRADE

Because the markets of great promise now lie in Latin America, the Orient, and Africa;

Because the bulk of the resources of raw material and food supply and low-cost transportation are in the Mississippi Valley; and

Because of a port policy which is open and all-embracing, New Orleans, on the valley's direct trade route to the new markets, anticipates a sharp, favorable diversion from the normal tonnage graph of commerce and industry, and has planned its development only after comprehensive study and thorough analysis to take care of this increase.

It has sought all the good there is in public ownership and all the good in private ownership of facilities, and is using its great powers to so guide and influence both as to avoid the limitations of the one and the tendency toward monopolization in the case of the other.

NEW SHIP CHANNEL TO THE SEA

Silt and current create a channel problem at the mouth of the river, 110 miles below New Orleans. South Pass, where the Eads Jetties are, has served as a 31-foot channel since 1879. Some years ago the Government began work on a 35-foot channel through Southwest Pass, but has not yet succeeded in getting the desired depth there.

The completion of the inner harbor and industrial canal lock now makes possible the dredging of a ship channel of 40 or 45 feet depth direct to the Gulf through Lake Pontchartrain which will be free from silt and currents. Such a channel would strike the Gulf many miles east of the mouth of the Mississippi. Ninety per cent of the ships coming to New Orleans approach from the east. Through such a channel 9 out of every 10 ships would save possibly 24 hours' time on every voyage to and from New Orleans. The money value of such saving, it has been estimated, would equal the cost of such a channel in a period of less than three years.

By opening such a channel the Federal Government would greatly facilitate the commerce of the Mississippi Valley and ultimately save much monetary outlay. Sailing ships could then reach the main harbor of New Orleans under their own sails. The inner harbor lock into the river harbor would also serve the new channel to the sea, which would reduce the cost of such a channel by half. Such a channel is a probability of the near future.

PORT ECONOMY

As a rule bulk commodities are produced and made ready for market at one season of the year, and must rest in store somewhere until gradually consumed by the world. The producer needs money, and so must call upon the middleman to carry the load until consuming markets become available. It follows that the greater the cost, risk, and difficulty ahead of the middleman, the greater the margin of profit and expense required by him. This means lower returns to the producer and higher prices to the consumer.

It also follows that where world-used commodities are rapidly passed into consuming markets before required for actual consumption they often lose relative value because they can not again be offered for sale

in world markets, as would be the case were they held in store in primary supply markets until actually required in some consuming market. This is well illustrated by the case of cotton. Once cotton crosses the ocean to Liverpool, it must carry the cost of ocean transportation, and it can not be resold to American or oriental mills. But so long as such cotton remains in a primary supply market such as New Orleans, it maintains its parity and may be resold into any consuming market. In most years cotton values in winter, spring, and summer reflect a greater increase over fall values than the mere carrying charges amount to.

Lost motion in handling, unnecessary drayage, high costs of insurance and money, and delays, which impose a burden on transportation, are factors of moment in every American port and reduce the advantage American traders should naturally enjoy by reason of an abundance of raw material, unimpaired credit, and potentially low cost of transportation.

Port congestion, resulting from lack of proper planning, from personal greed, and from an absence of unselfish guidance and authority, has resulted in high charges in many American ports, which in turn narrow world competitive markets for American products.

Knowing these facts, and given a wide-open opportunity for the testing out of schools of thought and competitive policies, and for encouraging enterprise and business endeavor, the New Orleans port authorities have planned for to-day and to-morrow and are in position to provide policies under which any wholesome tendency in commerce and industry may be fostered.

A market of deposit for the products of the valley on their way abroad and for the products of the world on their way to the valley is on the cards. The facilities for such a market of deposit embrace complete coordination between rail, highway, and inland water and ocean transportation, storage, and mill. There is provision for certificates of storage, bearing the guaranty of the sovereign State of Louisiana, showing character, class, weight, and condition of commodities in store. This means low-cost money. Fireproof water-side warehouses means low-cost insurance. Coordination means low-cost handling.

Such warehouses may be built on leased harbor frontage by warehousemen or built by the port authorities and leased to warehousemen or be both owned and operated by the public through the port board, as the case may require.

A municipally owned and operated belt railway system coordinates all rail lines entering the city, all wharves and warehouses, and all factory sites.

Through privately owned harbors and harbor sites on ship laterals of the inner harbor industry using either the raw products of the valley or of foreign fields and coordinated with all port facilities and transportation by publicly owned belt railroad and by lighter may, singly or in combination, develop and employ economies of a very rare character.

GROUND WORK

Before port development plans on such a scale and so complete in policy could be made effective New Orleans had to do many important things. It had to devise a sewerage and drainage system for a region devoid of natural grades. This it did, in the case of sewerage, through the installation of underground automatic electric pumps which created pipe-line grades between each station. In the case of drainage a new type of low-lift, high-capacity pump, many of them 10 feet in diameter, had to be designed for this work.

With a mighty but muddy river passing its front door, New Orleans had relied on a rain-water supply for domestic use. Wells would not do, because they yield salt water only. A real water supply was required, and so a monster filtration plant, depending primarily upon coagulation and precipitation, was built, which now delivers a filtered pure water supply so cheaply that it is freely used to wash the streets and put out fires.

Then there was the old yellow-fever problem. This problem was solved through mosquito elimination. Two hundred and fifty thousand surface cisterns were destroyed by law. These cisterns afforded the only great breeding place for the particular mosquito which can transmit the poison from one sufferer to another. The fever does not originate in any portion of the United States. It is not contagious. With no *stegomyia facialis* mosquito to transmit it there can be no transmission. And so yellow fever, if brought into the port, can not now become epidemic.

The same is true of bubonic plague. This is a rat disease, and is transmitted through the rat flea to the human when the rat dies.

To make bubonic plague impossible in New Orleans every residence, building, wharf, warehouse, and terminal has been rat-proofed. More than 2,000,000 rats have been trapped and millions more have been poisoned. The saving in goods alone not destroyed by rats justifies the cost of rat-proofing, aside from its value as a health measure.

With safety from yellow fever and bubonic plague, New Orleans, a semitropical port, need maintain no more stringent health regulations against other ports than are required by the ports in the colder climate far to the northward. This means open commercial movement.

BARGE LINES

Prior to 1846 boats on the Mississippi, Ohio, and other rivers enjoyed a monopoly of Mississippi Valley commerce, and none destined for a seaport could escape New Orleans. The boat owners, never fearing competition from artificial transportation, fought among themselves, but no terminals, through bills of lading, or truly economical methods were developed. They wasted steam, gave over space they needed for freight to promenade decks, and relied on the muscles of men to do work machinery should have done. Their patrons welcomed the railroads as a relief from an arbitrary monopoly which had never made effective the basic economy of water transportation.

The valley was developing, resources were abundant, and the residents were wasteful in many ways.

And so the railroads, building out fanlike from the North Atlantic ports, tapped the valley at many points. The public was agreeable, and the boat lines fell fairly easy victims. Midnight tariffs, and sometimes unfair competition, finished the job. Railroad exploiters of those days did not believe there would ever be commerce enough for rails and boats, too. Anyway, the valley's foreign markets were then almost solely in western Europe, which is nearer New York than New Orleans.

Finally the Civil War permitted a situation to develop which fostered the North Atlantic ports and retarded New Orleans.

Out of it all came rate structures, laws, and other factors which stood as a barrier to private enterprise whenever it attempted to redevelop inland water transportation.

THEN THE GREAT WAR CAME

At the request of the people of the Mississippi, Ohio, Missouri, and other great valleys the Federal Government created a barge-line service between New Orleans and St. Louis, on the Mississippi, and between New Orleans, Mobile, and Birmingham, on the Warrior River. There was a double purpose. First, to augment rail transportation. Next, to wipe out actual service handicaps on inland waterway use which had developed through long abuse. The idea was and is for the Government to complete a practical demonstration of the feasibility and economy of inland water transportation, and then sell out its equipment to business enterprise.

The demonstration thus far has proven successful, more freight is being offered than the barge line can carry, and on every pound of freight moved the shipper saves a very material percentage of the normal rail rate.

This saving applies through joint rail and water rates between inland towns and ports, as well as between ports.

With the completion of the lock and dam system on the Ohio, the channel-improvement projects on the upper Mississippi and Missouri Rivers, and the Lakes-to-the-Gulf channel from Chicago, the former largely completed and the latter fully provided for, there will be water interchange between Minneapolis, Chicago, Kansas City, Pittsburgh, St. Louis, New Orleans, Pensacola, Birmingham, Mobile, Galveston, Houston, and Brownsville, Tex., the last four being on the now nearly completed Intracoastal canal. New Orleans is the main junction point of this waterway system.

NATURAL RESOURCES

The world's largest sulphur deposits are on the Intracoastal canal. So are the world's largest salt mines.

The Mesaba iron mines are about as near Minneapolis on the Mississippi as they are to Duluth on Lake Superior.

Pittsburgh's coal and iron supply is on the Ohio and its navigable tributaries.

Similarly, Alabama's iron and coal are on the Warrior, which is a part of the system, as is also much of Alabama's limestone.

The wheat of the upper valley and the cotton of the lower valley are now finding their way to shipside over joint rail-and-water routes at material saving in transportation costs, and these savings should increase.

Louisiana's sugar, molasses, and rice and Brazil's coffee are being moved up the river on barges at low rates.

Nicaragua's mahogany is moving along the same route, while agricultural implements, automobiles, and many other export products are coming down.

Early in 1923 a great fleet of towboats loaded with export steel for the Orient arrived at New Orleans from Pittsburgh. It was the first of a series.

The facts all appeal strongly to the economist and to the industrial and transportation engineers, and, more or less to their surprise, the people of New Orleans are now hearing much about plans and projects for basic steel industries on their just completed inner harbor; about projected lumber and timber harbors which contemplate a trade in Central and South American hardwood and hardwoods and pine from the Southern States; woodworking plants; and waste material for paper pulp, the chlorine to be available from a planned chemical harbor near by.

This chemical-harbor project has received a great deal of attention. Oil, sulphur, gas, and salt are available from near-by sources of

abundant supply. There are cotton, coal-tar products, limestone, and gypsum near, in addition to foreign chemicals.

Plans for these great basic enterprises include coordination each with the other and the maximum use of waste material.

Mr. BYRNES of South Carolina. I yield 13 minutes to the gentleman from Texas [Mr. BLANTON].

Mr. BLANTON. Mr. Chairman, this naval bill, providing all together \$290,000,000, was framed by bureau chiefs in the Navy Department, and that bill was then submitted to the admiral who is the budget officer in that department for presentation to the Budget Commission. They cut down some items and changed some provisions, and then the bill came to five Members of Congress who are on the subcommittee of the Appropriations Committee, and they made some little changes in phraseology and amounts, which, after all, may be designated insignificant changes, and thus they introduced the bill into the House, which is the bureau bill after all, and they now cause it to be read to us for passage; and we take up some time in general debate talking about every kind of subject on the face of the earth, and then it is going to be read hurriedly under the five-minute rule and passed substantially as it has been presented. If any Member raises his voice against any part of it, these 5 men will summon the other 30 members of the Committee on Appropriations, who by some kind of an implied agreement are bound to help each other, and they all combine together and put it over us anyway.

My judgment is that the membership of this House does not agree with the gentleman from Louisiana who has just spoken. They are not for spending this tremendous sum of \$290,000,000. They are not for a big Navy, and if they could, my judgment is that the majority of the Members would change it and they would reduce it, but they can not. They are helpless and powerless to do it.

What are the great influences that surround these big Navy and big Army measures that force their passage? Ever since the armistice was signed I have many times sat in my office for hours at night thinking over the way these bills are handled and trying to find out what is it that causes these bills to pass when I know that they are against the judgment of the Membership of Congress. I have reached some conclusions and I want to put them before you in the Record. I will tell you the first thing that keeps us from changing them. We are more or less subdued and intimidated and held in check by criticism.

You let one of us get up here and protest against passing these bureau bills and we are immediately—in the press, from the floor, and everywhere else—called narrow-visioned, short-sighted men and that we have not the best interest of the Republic at heart. We do not like to be thus criticized, and that deters us to a certain extent. And then there are some irrepressible influences that surround us with overwhelming propaganda. The first is the Army and Navy Club of Washington. There is no man on earth who knows just how far-reaching that influence goes in this Nation, the influence of that great Army and Navy Club, with all of its big Army and Navy officers, and its influence through their many friends permeates every district in the United States. The naval officers and Navy Department are no longer satisfied with just the big salaries we give them, the emoluments of office, their pleasant surroundings, their retirement privileges, their connection with big enterprises, the pleasant lives we permit them to live on land in many instances; they are not satisfied with all that, but they want big sums of money to spend for the Government in their leisure time and in peace time. They like to spend money. That is human nature, and they want to spend it, especially if it is Government money. They want to build big battleships, cruisers, and so forth, and they are continually pushing such enlargements before us. They are continually insisting on our giving them more money to spend and bringing every kind of propaganda to bear upon us to make us see their way.

Let me mention a second influence. Did you notice in the paper the other day a little item which looked insignificant but means much? It said if this building program was not adopted, why, the Government would have to lay off numerous workers in the navy yards over the country. Did that mean much to you? It meant much to me as part of the influence that passes this bill through. Why, it is the influence of these workers in our navy yards scattered over the United States; they do not want to be laid off. They want to continue in their jobs, and in order to continue in their jobs they want to continue with the big building program.

Then there is another influence. It is the influence of the big shipbuilding corporations; the New York Shipbuilding Cor-

poration, with yards at Camden, and the other big companies scattered over the country want fat contracts. Why, if you stop this building program, they do not have these thirty and fifty million dollar contracts. We must continually enlarge this building program to keep their yards going and keep their employees in jobs and keep their exchequers filled and permit them to have large income taxes that are not paid because probably the income is in bonds that are not taxable.

Mr. HUDDLESTON. If the gentleman will yield, will the gentleman tell us something about the Navy League?

Mr. BLANTON. I was just getting to that. The gentleman from Alabama never overlooks anything. He is alert all the time, smart as any man in the United States, although his method of doing business might be on somewhat different lines and I can not always agree with his economic policy; but I admire him greatly because he is everlastingly seeing things all the time. Everyone of you this morning got an envelope half an inch thick with propaganda, propaganda from this Navy League, insisting on us carrying out the big naval program; and who, if you please, is this Navy League of America? I can not forget, because it is a record of Congress, undenied and undeniable, that the founders of that league—a majority of the founders of it—were men who profited by these big preparedness programs, profiting in it by dollars and cents; and I can not help but remember that some of their connections are still on the official register of this great Navy League of America.

How long are we Members of Congress going to stand for this system? Why do not we effect an organization of our own, an organization of Congressmen to protect the people and the Treasury? It is easy to defeat these five men on this Appropriations Committee that bring in a bill we do not want, and their committee, if we make up our minds; and we can do it if we will act together and are willing to stand a little criticism from the press and our colleagues on the floor.

Are you afraid of criticism? Are you afraid to take a little of it once in a while? It does not hurt you. It does not hurt you to vote by yourself if you are right, because after a while your people find out about it and commend you for it. Vote by yourselves when necessary, if you are right.

Just let me show you exactly what battleships were scrapped under our disarmament conference. I just want to recount again the list, lest you should forget. We scrapped the *Washington*, the *South Dakota*, the *Indiana*, the *Montana*, the *North Carolina*, the *Iowa*, and the *Massachusetts*. They were brand-new ships. None of them had ever been used. They had cost the taxpayers of this country millions upon millions of dollars. What else did we scrap? We scrapped the *Virginia* and the *Nebraska* and the *Georgia* and the *New Jersey* and the *Rhode Island*, the *Connecticut*, the *Louisiana*, the *Vermont*, the *Kansas*, the *Minnesota*, the *New Hampshire*, the *South Carolina*, and the *Michigan*; and we have also scrapped the *Lexington*, the *Constitution*, the *Constellation*, the *Saratoga*, and the *Ranger*. Last, but not least, we have scrapped the ship "United States." We scrapped them.

Did you hear from any of these influences that I have mentioned a single protest against those scrapping procedures? No; not one. They are always willing for you to scrap valuable battleships. They know that whenever you scrap them, you will have to build new ones. The Army and Navy Club did not object. The Navy League of America did not object. The New York Shipbuilding Corporation did not object. The men in our own navy yards did not object. The private employees in those private shipyards did not object. They were all anxious to scrap what we had and to build new ones.

Mr. KVALE. Mr. Chairman, will the gentleman yield?

Mr. BLANTON. Yes.

Mr. KVALE. Does the gentleman think that the United States Steel Corporation objected?

Mr. BLANTON. Not at all. They never will object to scrapping a vessel and sinking the steel under water, because they know they will furnish new steel to build new ones.

Mr. BANKHEAD. Mr. Chairman, will the gentleman yield?

Mr. BLANTON. Yes.

Mr. BANKHEAD. Along this line of destruction and scrapping, it is now proposed by those high authorities to scrap three or four hundred of our first-class steel cargo ships.

Mr. BLANTON. Yes. Let me tell you, my colleagues, that in 1916, when all of the countries of Europe were not yet demoralized, because they were still in good shape financially, many of them, and still able to muster armies, many of them—why, in 1916 the appropriations for our Army, with the World War in progress, were only \$119,000,000. In 1916 they were \$119,000,000, and this very fiscal year the Army appropriations are \$250,000,000. In 1915 the appropriations for our Navy,

the entire appropriations in 1915, were \$157,000,000. And what were they for the fiscal year that ended last June, the fiscal year 1924? They were \$330,000,000. What is it for the fiscal year ending this coming June 30, 1925? It is over \$300,000,000.

The CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. BLANTON. Will the gentleman give me a little more time?

Mr. BYRNES of South Carolina. I yield to the gentleman five minutes more.

The CHAIRMAN. The gentleman from Texas is recognized for five minutes more.

Mr. BLANTON. What is it in this bill? This bill carries \$290,000,000. The bill passed the other day by the Senate provided for a program of \$110,000,000. The gentleman from South Carolina [Mr. BYRNES] told you day before yesterday, truthfully, that there have already been prepared estimates from the Navy Department for an additional \$45,000,000, and an additional \$9,000,000 on top of that, which makes the stupendous sum for this coming fiscal year of over \$370,000,000 for our Navy Department alone. Yet we sit here like a bunch of mocking birds and swallow it all and pass it. I do not say that offensively, but that is what we are doing.

Why do we not stop it? The United States Government ought to set an example to the peoples of Europe. We ought to cut in two both our Army and our Navy. We are separated from England by 3,122 nautical miles. We are separated to-day from Japan by 4,536 nautical miles. What great danger is there from across those oceans? If we would disarm, the other countries would. Yet we spend the tax money of the people keeping up a tremendous Army and a tremendous Navy. As long as we keep it up, Japan is going to keep it up, and England is going to keep it up, and France is going to keep it up. Every European country is going to burden its people with taxes so great that they can hardly bear them. And you say that we will keep it up as long as they do. As the gentleman from Illinois [Mr. BRITTEN] is reported by the press to have said that he will permit an investigation of the Navy, but he wanted it to be conducted by those who will be friendly to the Secretary of the Navy. I predict that the ones who will hold the investigation will only ask the Secretary such questions as he wants them to ask. Have we not got the right to investigate if we want to? What strange power has come to the Navy Department or to the Secretary of the Navy so great as to keep us from an investigation if we want it, if we make up our minds to have it?

I hope there will be enough of our colleagues who do not believe in this wild spending of the people's money to stand up on this floor here when voting time comes and say to the Committee on Appropriations, "You can go thus far, but no farther than we want you to."

The CHAIRMAN. The time of the gentleman from Texas has again expired.

Mr. BYRNES of South Carolina. Mr. Chairman, I yield nine minutes to the gentleman from Kentucky [Mr. KINCHELOE].

The CHAIRMAN. The gentleman from Kentucky is recognized for nine minutes.

Mr. KINCHELOE. Mr. Chairman, I want to address myself to the recent naval disarmament conference that was held here in Washington, and I ask leave to add as a part of my remarks a writing by Will Rogers on sinking battleships.

The CHAIRMAN. The gentleman from Kentucky asks unanimous consent to extend his remarks by including therein a writing on sinking battleships by Will Rogers. Is there objection?

Mr. JOHNSON of Washington. I object.

The CHAIRMAN. Objection is heard.

Mr. KINCHELOE. Mr. Chairman and gentlemen of the committee, we all remember that shortly after the Republicans came into power in March, 1921, a naval conference was called here in Washington in spite of the wishes of the administration then in power. No one in authority in that administration wanted the conference called, but by reason of his great ability the distinguished Senator from Idaho [Mr. BORAH] aroused public sentiment of the country to such an extent that he made this administration call it, and they had it in Washington. And in the recent campaign just closed the Republican orators went all over the country and said that one of the great accomplishments of this Republican administration was that disarmament conference.

In my judgment, if we have another disarmament conference on naval affairs, called here or anywhere else, and our country gets the hot end of it as much as it did in the recent one, we will have no Navy to start with upon which to build in the

future. If there ever was an international conference of any kind held anywhere where our great country participated and at which our country is holding the bag, it was at this conference. But after the deliberations of that conference they finally agreed on a ratio of 5-5-3, 5 for the United States, 5 for England, and 3 for Japan, and after the countries had ratified that those in authority in this administration said we were so far above our 5 of the ratio that it was necessary to scrap our battleships then under construction. At that time this country was building seven big battleships and four battle cruisers which, if completed, would have made the United States have the greatest Navy that floats the seven seas. We had already spent \$153,814,000 in the building of those battleships and battle cruisers. So those in authority said, "This country is so far above our 5 of the 5-5-3 ratio that in order to get down to the 5-5-3 ratio we must scrap the seven battleships and four battle cruisers," and they did scrap them. This country had already spent, as I say, \$153,814,000 on those battleships and cruisers; it cost \$28,000,000 more to scrap them, and after they were scrapped there was an outlay of over \$182,264,000 from which the people of this country received no more good or benefit than if you had taken this money and thrown it into the stove. Well, they said England was long on cruisers and short on battleships and that this country was long on battleships and short on cruisers and, therefore, in order to bring about an equilibrium between the two countries it was necessary for this country to scrap those battleships which cost \$40,000,000 apiece. I imagine the representatives of England at that conference did not have much trouble in coming to an agreement to scrap their extra cruisers, which cost comparatively very little money. I do not blame England's representatives for looking after her interests.

By the bill that passed the Senate the other day, instead of our country getting down to our 5 of the 5-5-3 ratio we got so far below it that an appropriation was authorized of \$110,000,000 to build eight scout cruisers and six gunboats in order that this country could get back to the 5-5-3 ratio. The last naval appropriation bill which passed in the last session of Congress appropriated \$30,000,000 more in order to enlarge our Navy. So we scrapped \$182,264,000 worth of battleships and cruisers in order to get down to the 5-5-3 ratio, and now we are asked to appropriate \$110,000,000 to build these eight scout cruisers and six gunboats in order to get up to it, and the Secretary of the Navy now comes here and says we are only 4 instead of 5 of the 5-5-3 ratio. This bill carries an appropriation of about \$289,000,000 to carry out the program made necessary by reason of this disarmament conference.

Mr. FRENCH. Will the gentleman yield?

Mr. KINCHELOE. I am sorry, but I have only nine minutes. That \$289,000,000 is to be spent under the supervision of the present Secretary of the Navy. The present Secretary of the Navy, Mr. Wilbur, evidently did not know the Civil War was over in the last campaign. He had prepared a speech, I presume with a great deal of care and caution, and was to deliver it on the Pacific coast, but as soon as the President of the United States got wind of the contents of that speech he called the Secretary of the Navy back to Washington and prevented its public delivery. After his speech appeared in the Washington Post it seemed he was going to fight the Civil War over again. If the Secretary of the Navy does not know that the North and the South have been welded together again, and that that union has been sanctified by the blood of our young American manhood in the Spanish-American War, and in the war through which we passed from 1917 to the 11th of November, 1918, my own private opinion of him, publicly expressed, if he does not know that, is that he would not know a big, modern battleship built in this country from one of the gunboats we are now trying to build out of the present appropriation. [Applause.] I will now yield to the chairman of the subcommittee.

Mr. FRENCH. I just want to know whether the gentleman is not aware that the statement of the Secretary of the Navy in the matter of a reduced ratio had relation to last spring, when the maneuvers were occurring. Four of the battleships were withdrawn from the maneuvers because they could not make the speed on account of engine difficulties. The report stating that our ratio had been reduced to four, which was made by the Assistant Secretary of the Navy, had relation to those things and nothing else.

Mr. KINCHELOE. Perhaps he did in referring to our ratio, but the speech which the Secretary of the Navy was making an attempt to deliver in the campaign was that the people in the North ought not to vote the Democratic ticket

because of the Civil War. That was the main purport of his speech. But after this disarmament conference the Secretary of the Navy does say that many of the battleships we now have are practically out of commission, and that it will cost hundreds of thousands of dollars in appropriations to put them in good shape.

Under the agreement made at this last disarmament conference for the scrapping of our battleships why did not our representatives at that conference, if they knew what they were doing, provide for the scrapping of the old battleships we already had, and which were practically out of commission, as the Secretary of the Navy now says they are, and then proceed with the building of the seven new, modern battleships?

The other day they undertook to sink the *Washington*, and notwithstanding its incomplete condition it took nearly all the ammunition out of our arsenals to sink it; yet we allow these battleships that are obsolete, if the Navy experts are to be believed as well as your present Secretary of the Navy, to remain as a part of our Navy, and they are the ones we are asked to appropriate for.

I am for an adequate Navy; I am for a disarmament conference; our party has always stood for it, and for a long time there has been a provision in the Navy appropriation bills requesting the President of the United States to call such a conference. But if we must have conferences like the last one, which will result in our scrapping the modern battleships we are already building at a cost of \$153,000,000, and then appropriate hundreds of millions of dollars more in order to modernize the battleships we already have, I think this country would do well to pick representatives for the next disarmament conference that would be able to hold up our interests and properly protect our welfare. [Applause.]

Mr. Speaker, pursuant to unanimous consent to extend my remarks, given me by the House since delivering the above address, by inserting a newspaper article written by Will Rogers, entitled "Sinking battleships," I now insert same, as follows:

[From the Washington Post, Sunday, Dec. 7, 1924]

SINKING BATTLESHIPS—AMERICA'S TREATY WITH ENGLAND AND JAPAN READS: "FOR EVERY BATTLESHIP YOU BUILD WE WILL SINK ONE"

(By Will Rogers)

Well, we have had a very strenuous week in the sinking department of our Navy. We were all last week trying to sink our greatest battleship, the *Washington*. It's hard to go against public sympathy. When a thing is carrying the good wishes and hopes of a majority of the people it may get licked in the end, but it generally puts up a pretty good fight. And the *Washington*—that would have been our most magnificent battleship—was no exception. She was hard to sink, not only on account of her armored plate, but because everybody hated to see her sunk. In other words, she was carrying too much sympathy to go down easy.

Here is a boat we had spent \$35,000,000 on, and we go out and sink it. And the funny part about it is that it cost us more to sink it than it did to build it. We shot all the ammunition we had left over from the war into it, and those big guns on the *Texas* they were using, they only are good for so many shots during their lifetime. So we spoiled the guns of our next-best boat trying to sink the best one.

A great many people don't understand just how this sinking came about. You see we had a conference over here a few years ago. It was called by America. We were building a lot of battleships and we had plenty of money to do it on, and it looked like in a couple of years we might have what would be the largest Navy in the world. Well, the League of Nations gathering in Paris had attracted a lot of attention and got quite a lot of publicity, most of which had been shared in this country by the Democrats. So when the Republicans got in they conceived the idea of a publicity stunt for the Republicans. Why not them have a conference? So they decided that was a good thing. But what would they confer about? Well, that was kinder of a sticker because the League of Nations had conferred about six months, and in that time had taken up about every question on the calendar.

So Secretary Hughes happened to think of the idea: "Let us confer on sinking battleships." Well, the idea was so original that they immediately made him the toastmaster. You see, up to then battleships had always been sunk by the enemy, and when he proposed to sink them yourself it was the most original thought that had ever percolated the mind of a statesman. So, when we communicated the idea to England and Japan that we had an idea whereby we would sink some of our own battleships, why, they came over so fast even the butler wasn't dressed to receive them when they arrived.

In order to add a quorum, and also to make a colorful picture, why, we invited other nations, some of which didn't even have a river running through them much less being near an ocean. Well, all the powers got seasick coming over, as it was their first voyage.

Nations who heretofore had no navy had to fake up some kind of naval uniforms. When they arrived in Washington everybody wondered where the masquerade ball was going to be held. Of course, the foreigners had to furnish most of the picturesqueness, but our members did the best they could. They got out their old inauguration suits and turned them upside down and scattered moth balls all over the carpet. What we lacked in personal appearance at the conference we made up in generosity.

The toastmaster arose, reassembled his beard, and spoke as follows: "Friends and debtors (because they all owed us money), at the rate we are building battleships in this country in three years we will make the song *Britannia Rules the Waves* sound like *Yes, We Have No Bananas*. Now, we don't want to destroy the truth and merit of a song which a nation has already gone to the trouble to learn, so we want to do what is right. We don't want to be the biggest naval power, because we have no song to that effect. So we figure it is better and cheaper to stop and destroy what we have than it is to go to the trouble of writing a new song. Now, let us get right down to brass tacks and lay our plans on the table. England, what have you got?"

England replies as follows: "Well, my plans call for the building within the next six months of 51 battleships of the first line, 280 destroyers, and 500 miscellaneous gunboats. Now, we are willing for the sake of world peace to tear these blue prints in half. We will, for national unity, sacrifice half what we intended to do. Now, I don't think that any nation could be fairer than that; these plans that we made up on the boat coming over cost us time, and paper is high, and I don't think that we should be asked to give up any more than that."

Mr. Hughes responded as follows: "That is the kind of spirit that I was sure you would exhibit, and I think that what you offer is not only fair but more than fair. Now, Japan, what are you preparing to do to help America get rid of some of our superfluous Navy?"

Togo, with apologies to Wallace Irwin, replied as to wit: "Honorable gentlemen, ha, ha (excuse laugh, I don't speak very good English), Japan she have a dream of having more ships on seas as any nation under rising sun. Now, Japan is willing to do what she can to help America from being too big on ocean. So Japan propose as these facts: She, Japan, will forget half of her dream. Well, not quite half (excuse me, I know not American figures very well). She will forget two-fifths of her dream, she will promise to be just three-fifths as big as America and England. Of course, she is now only one-ninth as big, but we will build as fast as we can and we think that by us doing away with our big dream and only remembering three-fifths of it we are acting in a very honorable and generous mood. I thank you."

Mr. Hughes arose, bowed, and thanked our Nipponese guest as now related: "I had no idea when I called this conference that I would get the wholehearted support that I am now receiving. England is tearing up half of her blue prints and Japan has discarded two-fifths of her dreams and I have just been informed that Switzerland has promised to cut her bobsleds in half. Now, gentlemen, I will show you what America is prepared to do. For every battleship you fellows build America will sink one."

Well that just brought down the house. He was appointed Secretary of State for life. It was good economy, because with him Secretary of State they would soon need no Secretary of the Navy. And for an encore of this knockout speech he replied: "Yes; and to show you we will live up to it I don't care how big a battleship you build, we will sink a bigger one."

Well, there was nothing left to do but for England and Japan to go home and start building and us to start sinking. Of course, if Mr. Hughes had known then that our battleships were going to be as hard to sink as they are, why he could have put it in the contract that they were to stand their pro rata share of the cost of sinking. It would be cheaper for us than to have to sink them ourselves. Now, they are talking of having another naval disarmament conference. We can only stand one more. If they ever have a second one we will have to borrow a boat to go to it.

You see, we do not like to ever have the start on any nation in case of war. We figure it looks better to start late and come from behind. If we had a big Navy some nation would just be picking on us all the time. But as it is now, with us and England 5-5—that is, we are supposed to be equal—why, if we ever had a war it would be a tie. But why fix it so two nations will fight a tie in a war? They will only want to fight it over again. Agreeing on how many boats each nation shall have would be like agreeing on how many shots each soldier could fire a day in case of war. Before you went to war you would have to look at your contract to see what you was allowed.

Now, we find that a storm was instrumental in sinking the *Washington*. Mr. Wilbur, our Navy Secretary, said: "The results of the experiments on the attempted sinking of the *Washington* were of great military value." I guess it showed him where to have a boat located in case a storm was coming and you wanted it sunk. He also says: "The treaty required this vessel sunk or broken up, but permitted us

the privilege of using it as a target before sinking. This was one of the advantages accorded us by the treaty."

Now those are his very words. If I purposely thought a year I could not think of anything as ridiculous as that. One of the advantages gained was to use our own boats as a target. My Lord, can't we shoot at all of them if we want to? Maybe that is why we are going to hold another conference, so we can get permission to shoot at the rest of them.

He says he don't want the other nations to find out how we did it. Don't worry, they are not going to sink any of theirs. Sinking your own boats is a military strategy that will always remain in the sole possession of America.

Here is the funny part about the disarmament treaty. It says there is to be no more war, so we must sink our boats, but we are allowed to practice shooting at them as they go down, in case there is another war and we need the marksmanship.

If they are trying to outlaw war, why don't they quit practicing shooting? But I should be the last one to kick. They furnish me with material to make a good living. Next week—"England and Egypt and the League of Nations." I think it is a funnier act than this one. (Copyright, 1924, by the McNaught Syndicate, Inc.)

Mr. FRENCH. Mr. Chairman, has all time expired?

The CHAIRMAN. All time of the gentleman from South Carolina has expired.

Mr. FRENCH. Mr. Chairman, I yield the balance of my time to my colleague on the committee, the gentleman from New York [Mr. TABER].

The CHAIRMAN. The gentleman from New York is recognized for 19 minutes.

Mr. TABER. Mr. Chairman and gentleman of the committee, so much has been said here and in the press throughout the country with reference to our naval situation that is confusing and misleading that I felt it my duty, after having spent at least 3 months out of the last 12 in going over the matters relating to our Naval Establishment to see if I could not in some slight degree set it right.

In 1922 we had a disarmament conference and this disarmament conference directed the scrapping of a great number of old ships that were about worn out and also 11 new ships that were under construction. Now, why did we scrap them? Why was it advisable and in the interest of this country to scrap them? Not because they had not served any purpose, because they had served a great purpose for American peace.

The other nations of the world were ready to enter into this disarmament conference just because we had these boats built and under construction. It was not because they wanted peace any more than the rest of us, but because we had these boats and because in making this deal they were able to stop a great expenditure of money. That great expenditure of money was stopped.

We had spent \$153,000,000 on the ships that were not completed, but what would it have cost us if we had gone on and finished them? Upward of \$250,000,000, and it would have cost us from \$50,000,000 to \$75,000,000 to maintain them after they were built. They were great, big ships, upward of 30,000 tons apiece, costing \$30,000,000 and upward apiece.

We scrapped them, and when we got through scrapping them our ratio of battleships or capital ships was still 5-5-3 under the treaty. We have to have cruisers, small boats, and that is all that we have had since, and that is all we have appropriated money for, and that is all that the modernization bill, which was passed by the Senate the other day, calls for. These cruisers are 10,000 tons only, and they cost somewhere around \$10,000,000 apiece as contrasted with \$30,000,000 or \$40,000,000 for the capital ships. They require to operate them from 300 to 350 men apiece as compared with 1,250 for the battleships. This is why we scrapped those ships and why it was in the interest of America to scrap them.

Our ratio of ships as established by the treaty was right, and not only that, America did not get the worst of it. We had 10 ships out of the 18 which had a longer average range than the guns on the best British ships. The average age of our ships was from two to three years less than the age of the British ships. There were only eight ships which had a range less than any eight of the British ships, and that will be corrected when we are permitted under the treaty to elevate the guns so as to take care of that situation.

This treaty provided, among other things, that the nations should be permitted to install on the capital ships that were already built deck protection known as blisters and torpedo protection under water, so that these ships might be kept right up to date and might be balanced. We really did not need this to balance with the rest when the treaty was made, but the British were permitted, as the years went along, to put into commission three ships which were not in commission

at the time, and as those ships came into commission with a longer range and greater displacement it was necessary for us, and has become necessary for us, to put the blisters on the deck and to install the torpedo protection under water. That is just what this modernization bill provides, and that is just why we have passed it.

The Acting Secretary of the Navy in a statement last spring said:

The battleships *Florida*, *Utah*, *Wyoming*, and *Arkansas* require boiler repairs in order to maintain their speed. Until this could be done the speed of these four ships was reduced and they had to drop out of battle line. This reduces our ratio to 5-4-3.

Remember, "this."

Three of these battleships have already been put in condition so they can steam up to their full original tests and some of them better. The *Florida* is in reserve, because the repairs to her boilers would cost more than the \$100,000, and this was thought to be a waste because of the great cost, but when this modernization bill is passed and an appropriation is made under it new boilers will be installed on the *Florida*; and this does not mean brand-new boilers out of a boiler shop but means new boilers that the Navy Department has saved out of the scrapped ships; and all that it is going to cost to put in the new boilers is going to be the installation expense, and this same thing applies to the other ships which are still coal burners.

When this modernization is completed we are going to be right up to the mark, 5-5-3, with Great Britain, and if we keep our ships in shape—and I might say to you that we are keeping them in shape, and I will give you just one illustration. In 1920 the engines on our ships were about as good as those of the others, but it took 2½ gallons of lubricating oil to enable a capital ship to go a mile. In 1924 it only took 1 gallon of lubricating oil to enable a boat to go a mile. Anybody who knows anything at all about engines knows how that works out.

Mr. SNELL. Will the gentleman yield for a question?

Mr. TABER. Yes.

Mr. SNELL. There has been a good deal said about the scrapping of ships and the cost of \$27,000,000, I believe. Were there not some things to come back from that? Did we not save various parts worth more than the \$27,000,000, or was that an absolute loss?

Mr. TABER. Enormous quantities of boilers, engines, motors, and auxiliary equipment of all kinds have been preserved which can be used, and a good deal of it will be used in the modernization program and in other work of construction.

Mr. SNELL. If that were to be credited against the twenty-seven millions, would there be any loss or gain?

Mr. TABER. A gain.

Mr. BYRNES of South Carolina. If the gentleman from New York will yield, I would like to ask the gentleman from New York [Mr. SNELL] if his question was whether the \$27,000,000 was a loss or whether the material taken from the ships would more than pay it?

Mr. SNELL. Whether the materials taken from the ships were worth \$27,000,000.

Mr. TABER. I think it would be a gain; I think we saved more out of all the ships than the \$27,000,000.

Mr. MacLAFFERTY. Will the gentleman yield?

Mr. TABER. I will.

Mr. MacLAFFERTY. In addition have we not received large sums of money for iron and steel taken out of the hulls?

Mr. TABER. Some, but not an extremely large amount.

Mr. MacLAFFERTY. They have been sold to the highest bidder.

Mr. TABER. That is true.

Now with reference to the cruiser situation, when the treaty was signed the United States had completed and building 10 modern cruisers. Some other countries had more; Great Britain had probably double or treble; Japan had a few more. But those British and Japanese cruisers were all of smaller tonnage, almost all under 5,000 tons. We had 300 destroyers and Great Britain had 180, not so many as we. Japan had 68 or 70. So when you come to balance the thing up, America did not have any of the worst of it on high-speed cruising ships. Great Britain has gone ahead and built a number, and Japan has gone ahead and built a number. Great Britain has now under construction 11 large cruisers of about 10,000 tons each, while Japan has 12 above 5,000 tons and 8 below. The result of that is that we need to go ahead in accordance with the program laid down in the modernization bill and construct probably 8 new cruisers. But that is not

going to add one hundred and ten millions to the bill this year, probably not more than ten or fifteen millions. The other things called for in the modernization bill altogether are not going to require more than thirty-five or forty million dollars.

This bill provides for the maintenance of the Navy \$290,000,000, and we are going to add forty or fifty million dollars more. No loyal, full-blooded, true-blooded American wants us to drop the Navy beyond the point where it can rightly and truly protect American lives and American property and American honor. [Applause.] The people of this country are not going to be, as some of our pacifists would be, so careless of their obligations that they will permit our Navy ever to run down to the point where we would invite attack. These extreme pacifists are the harbingers of war; those who would have an adequate Navy and an adequate defense are the bulwarks of peace. [Applause.]

Mr. FRENCH. Mr. Chairman, I am inserting in the Record the chart that is before you and upon which is indicated the moneys appropriated, and the balances carried forward from preceding years, for the support of the Naval Establishment covering a period of 10 years. You will notice that the chart divides itself into two sections; the part above the line pertains to appropriations and money balances brought forward; the part below the line indicates what was done with the money appropriated and the balances referred to for the given years. Below the line you will recognize, first, the amount expended for each year, followed by an indication of the disposition that was made of the amounts not used. These amounts were either brought forward through reappropriation, or on account of their having been obligated, or they were turned back into the Treasury as surplus.

You will also notice on the chart the outline of a cargo ship. This ship is suggestive of the vast quantities of materials purchased for the Naval Establishment from year to year over a period of years and drawn upon from time to time without charge therefor being made against appropriations for the year within which the materials were used. During the war large quantities of materials were purchased that have practically no deterioration, if they are properly kept. These materials have been used to supplement the maintenance of the Navy and the construction programs in measurable degree though the amount of material used in a given year does not appear upon the chart. From year to year we will add to this reservoir and at the same time we will be drawing from it.

[For chart see page 799.]

The CHAIRMAN. The time has expired, and the Clerk will read the bill for amendment.

The Clerk read as follows:

OFFICE OF THE SECRETARY

SALARIES, SECRETARY'S OFFICE, NAVY DEPARTMENT

Secretary of the Navy, \$12,000; Assistant Secretary and other personal services in the District of Columbia in accordance with the classification act of 1923, \$146,400; in all, \$158,400: *Provided*, That in expending appropriations or portions of appropriations contained in this act for the payment for personal services in the District of Columbia in accordance with "The classification act of 1923," the average of the salaries of the total number of persons under any grade in any bureau, office, or other appropriation unit shall not at any time exceed the average of the compensation rates specified for the grade by such act, and in grades in which only one position is allocated the salary of such position shall not exceed the average of the compensation rates for the grade: *Provided*, That this restriction shall not apply (1) to grades 1, 2, 3, and 4 of the clerical-mechanical service, or (2) to require the reduction in salary of any person whose compensation was fixed as of July 1, 1924, in accordance with the rules of section 6 of such act, (3) to require the reduction in salary of any person who is transferred from one position to another position in the same or different grade in the same or a different bureau, office, or other appropriation unit, or (4) to prevent the payment of a salary under any grade at a rate higher than the maximum rate of the grade when such higher rate is permitted by "The classification act of 1923," and is specifically authorized by other law.

Mr. JOHNSON of Washington. Mr. Chairman, I move to strike out the last word. Mr. Chairman and gentlemen of the House, I would like to suggest to one member of the Committee on Naval Affairs, the distinguished Representative from Illinois [Mr. BRITTEN], that it is not necessary to appear before a social gathering of the Senators and Representatives of three Pacific Coast States in order to proclaim that he intends to introduce a resolution in the House of Representatives to authorize "a call of the white nations bordering on the Pacific for discussion of means of promoting a better economic, commercial, and

political understanding between the nations." This I understand he has done to-day, which in my opinion is simply provocative of trouble and can not come to any good. It will not be considered by the Committee on Foreign Relations and will be misunderstood by the people around the Pacific Ocean. The Pacific coast Members are not a party to it, and were never a party to it. The Pacific coast chambers of commerce will resent the attempt to involve them.

Last night Members from three Pacific Coast States, and the Senators from those States, were present by invitation at a banquet, a get-together meeting, given by the representatives of the four chambers of commerce of four of the principal cities of the coast, Seattle, Portland, San Francisco, and Los Angeles. The gentleman from Illinois [Mr. BRITTEN] was asked by those giving the banquet to preside as toastmaster. The Members of the coast delegation attended. It was understood that the purpose would be to discuss some matters upon which the Representatives of the three States might act in harmony. At the conclusion, after the speaking in the banquet program on these matters, the gentleman from Illinois, I hope not meaning to involve the Members present and the chambers of commerce of those States, announced that he would to-day propose a resolution for a conference of the white nations bordering the Pacific coast as a means of promoting a better economical, commercial, and political understanding between the nations.

At that time, when he made that announcement, I asked the gentleman from Illinois, with his long experience, to reconsider his determination to introduce such a resolution, and said that in my opinion that it did not represent the consensus of opinion of the western Members and the western chambers of commerce. I have taken the floor at this time because I so expressed myself last night, and because it is assumed that inasmuch as I am chairman of the Committee on Immigration and had something to do with the perfecting of the exclusion law, that I might be in hearty accord with this proposed resolution.

It is not so. The immigration incident is passed. Relations are normal with Japan. Their best men have so said. Trade is going on as usual. We are the best customer that Japan has. To attempt to influence either the Members of this House by an inflammatory, exciting, and war-provoking statement such as that printed this morning, apparently in the name of the Members of the Pacific coast and the representatives of the chambers of commerce of those great cities, is to do something beyond my comprehension. I am sorry it was done. You will not get battleships or strengthen your Navy by paying any attention to such resolutions as that, or to the printed statement in connection therewith.

Mr. SUMMERS of Washington. Mr. Chairman, will the gentleman yield?

Mr. JOHNSON of Washington. Yes.

Mr. SUMMERS of Washington. All other Members from the Pacific States, so far as I have heard express themselves, concur in what the gentleman from Washington is now stating.

Mr. JOHNSON of Washington. I thank the gentleman.

Mr. WATKINS. Mr. Chairman, will the gentleman yield?

Mr. JOHNSON of Washington. Yes.

Mr. WATKINS. As a matter of fact, an effort was started to stop the matter by the men of the Pacific coast.

Mr. JOHNSON of Washington. Yes. The proposal is an unnecessary thing. If the Committee on Foreign Affairs even undertook to ask the Secretary of State to invite representatives from the so-called white nations bordering the Pacific into a conference, you would find, first, that you would have to deal with the self-governing dominions of the British Empire, and those self-governing dominions and their parliaments would undoubtedly not act without the consent of the chief foreign office, and, secondly—

The CHAIRMAN. The time of the gentleman from Washington has expired.

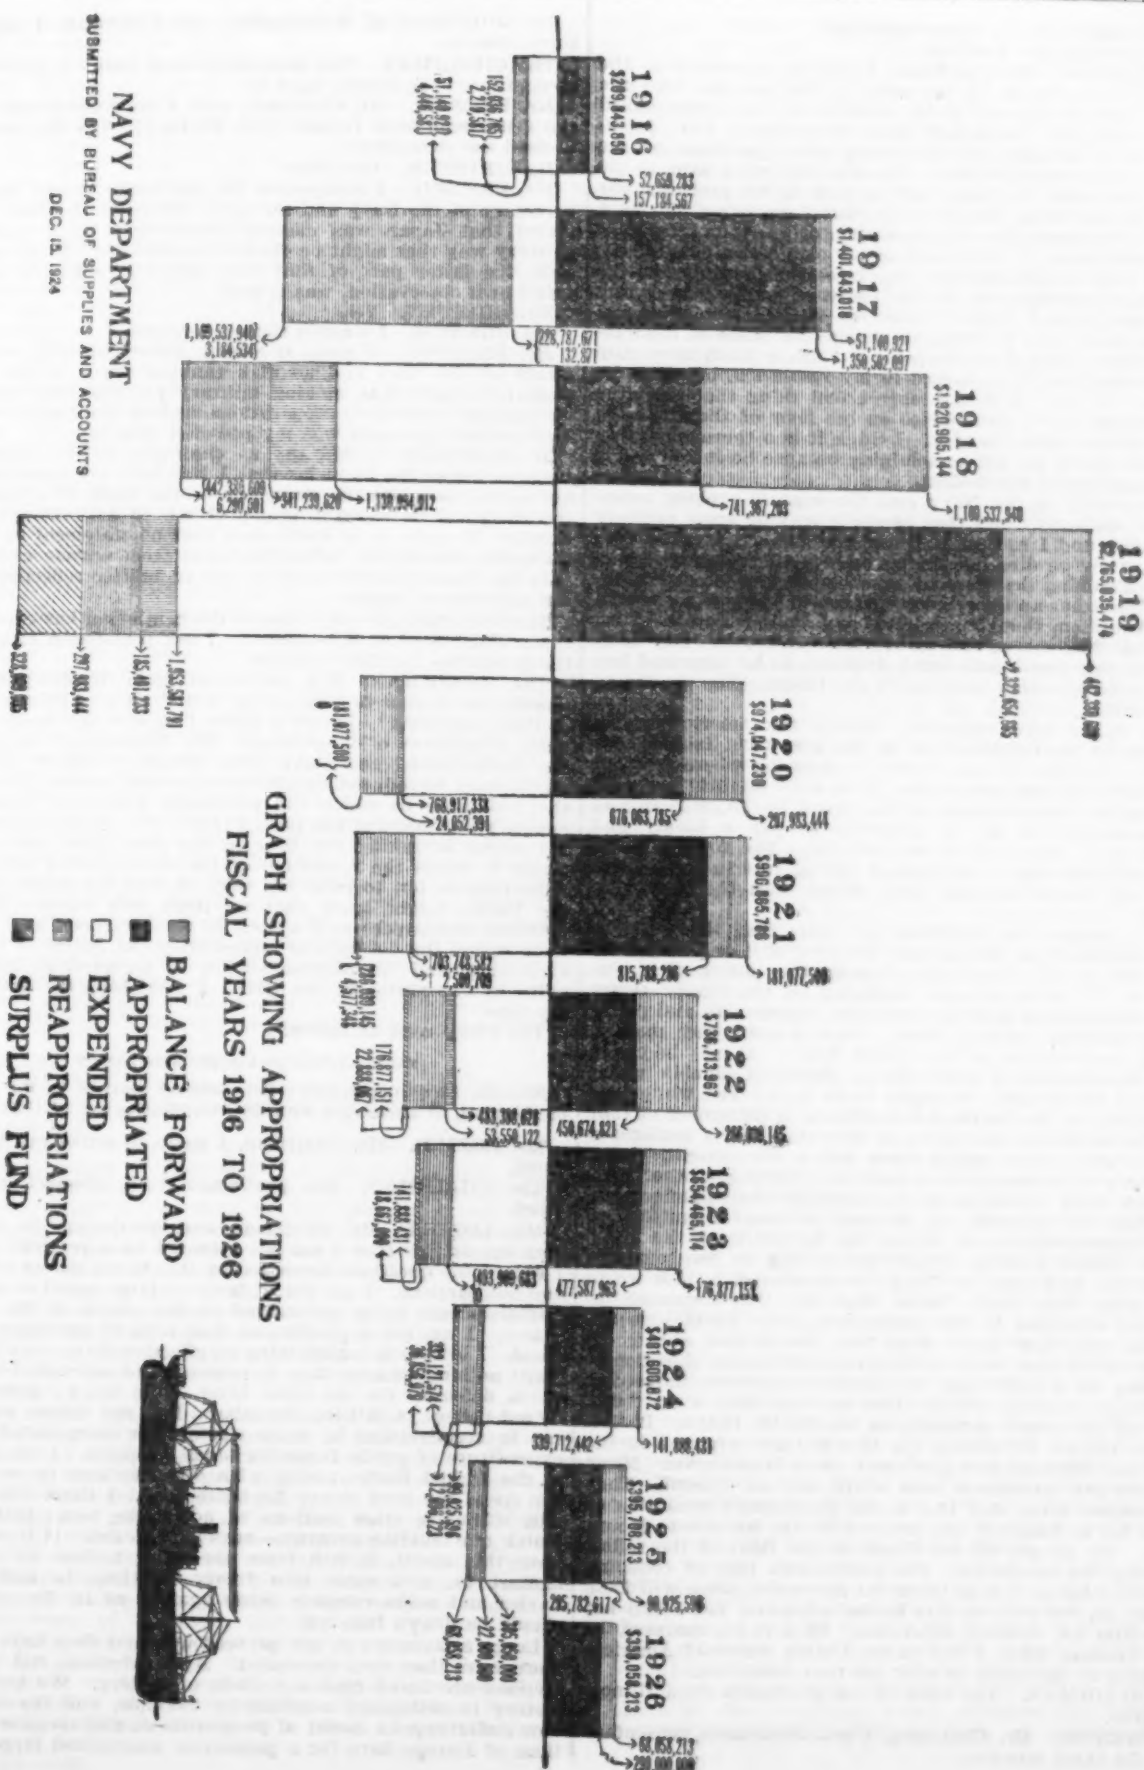

Mr. JOHNSON of Washington. Mr. Chairman, I ask unanimous consent to proceed for three minutes more.

The CHAIRMAN. Is there objection?

Mr. KINCHELOE. Reserving the right to object, does the gentleman think he was quite fair to me when he objected to my extension?

Mr. JOHNSON of Washington. Oh, the gentleman understands that I am a member of the Committee on Printing, as did my colleague who also objected. We did not think additional jokes from a professional jokester should be put into the Record.

Mr. KINCHELOE. But there are more than jokes in them. Mr. JOHNSON of Washington. Very well, Mr. Chairman, I withdraw the request and ask unanimous consent simply to revise my remarks in the Record.

The CHAIRMAN. Is there objection?

Mr. KINCHELOE. I object.

Mr. BRITTEN. Mr. Chairman, I rise in opposition to the pro forma amendment. I am sorry I did not get into the House in time to hear all of the remarks of the distinguished and serious-minded gentleman from Washington [Mr. JOHNSON], who is carrying all the immigration problems of the country on his own shoulders. He did send word over to me that he was going to make such a talk as he probably has made. I do not want him to think that I am using him as a vehicle for the promotion of a resolution of any kind. I do not need his shoulders. I have some of my own and a head of my own, and I am responsible for that resolution and not the various delegations from the Pacific coast. I was raised on the Pacific coast, and I think I know as much about it as the gentleman does, who is trying to change the name of a mountain out there which, from my point of view, is much more silly than anything that is contained in my resolution, of which he complains. I think it is the biggest fool thing that has ever been proposed, but I do not rise on the floor of the House to offer gratuitous criticism of it. I think it is a thoroughly silly proposition, but I am not complaining because he introduced a resolution or about his desires.

The Secretary of the Navy and the highest ranking naval officers in our service say that Japan is making great military preparations, and I assume that any warlike activity of Japan may ultimately be directed against us. Is there any objection to America's doing the same thing? The serious-minded immigration expert has an idea that a conference of the kind desired by my resolution, though not quite so broad, might be called through his instigation and before his committee. His ideas encompass only North and South America, as he suggested last night. There are other thinkers in the House. The gentleman is not alone.

Japan, it has been suggested, opposes the American naval maneuvers in the neighborhood of the Hawaiian Islands, our Territory. I object to any country suggesting where we may or may not hold our maneuvers. It is none of their business. The Hawaiian Islands belong to us; and if in the promotion of these maneuvers we go to Australia to pay a kindly and courteous visit, that also is our business. The former Prime Minister of Australia is in favor of calling just such a conference as my resolution calls for. What does the resolution provide?

Does it suggest by direction or indirection that various Representatives from the coast are in favor of it or are opposed to it? Not at all. It merely suggests the calling of a conference of the white nations bordering on the Pacific Ocean for the promotion of a better economic, commercial, and political understanding between them. Such a conference may be called by the President of the United States. It may be called by the Government of Australia or British Columbia might call such a conference. It ought to be held. The white people bordering on the Pacific are entitled to a conference of that kind. The gentleman may have an idea that only a conference should be called that might come before his committee and dealing only with immigration matters. There are other matters, much more important to us nationally than immigration. I say that the question of national defense is entitled to serious consideration now, when the Secretary of the Navy and our highest ranking officers are calling to the country's attention the fact that the Navy has degenerated. Are we to believe what they say? When they say that Japanese interests are objecting to our maneuvers in the Pacific, we are to assume that they know what they are talking about. In the name of Heaven, what is the great and serious objection to the calling of a conference to consider economic, industrial, and political problems which affect us—and when I say "us" I mean all the people bordering on the Pacific Ocean. Is that a terrible thing? Of course, the idea did not originate in the mind of the distinguished gentleman from Washington. Many resolutions are introduced here which are not passed. They are introduced every day just as the gentleman's resolution or his idea, for a change of the name of Mount Rainier to Mount Tacoma. We do not all see things in the light of the fellow introducing the resolution. The gentleman's idea of changing the name of nature's most beautiful recreation place will have no chance on the floor of this House whatever, but I can not criticize him for thinking otherwise. That is his business, he lives in Tacoma, while I live in the United States of America. And I have no apologies to offer for that resolution.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. FRENCH. Mr. Chairman, I ask unanimous consent to proceed for three minutes.

Mr. JOHNSON of Washington. Mr. Chairman, I ask for three minutes.

The CHAIRMAN. The gentleman from Idaho is entitled to recognition, if he insists upon it.

Mr. FRENCH. Mr. Chairman, may I have the attention of the gentleman from Illinois [Mr. BRITTEN], who has just addressed the committee?

Mr. BRITTEN. Certainly.

Mr. FRENCH. I understood the gentleman to say that the Secretary of the Navy and the high officers of the Navy have stated that Japan was making preparations in a naval or military way that might be directed against the United States. Now, the latter part of that was intended to be the gentleman's own observation, was it not?

Mr. BRITTEN. Yes.

Mr. FRENCH. I wanted that understood.

Mr. BRITTEN. I want it clearly understood that no Secretary of the Navy and no high ranking officer of the Navy indicated Japan was making military preparations with the view of directing those preparations against the United States. That latter expression was my personal opinion.

Mr. FRENCH. I will say as chairman of the committee that conducted the inquiries that I was sure my colleague did not intend to quote the Secretary of the Navy or officials of the Navy. This thought prompted me to ask the question. Further, it ought to be made clear that no statement or representation, directly or indirectly, came from anyone connected with the Naval Establishment to our committee reflecting upon the activities of Japan.

The CHAIRMAN. The time of the gentleman has expired.

Mr. JOHNSON of Washington. I ask permission to address the committee for three minutes.

The CHAIRMAN. The gentleman from Washington asks unanimous consent to address the committee for three minutes. Is there objection? [After a pause.] The Chair hears none.

Mr. JOHNSON of Washington. Mr. Chairman, I would like the distinguished gentleman from Illinois to know that the resolution I introduced stands upon its own bottom. However, the resolution to which the gentleman refers as mine is a Senate resolution and has passed that body. So much for that. My object in taking the floor in the first place was not to assail in detail the resolution of the distinguished gentleman from Illinois, but to raise my voice so that the people around the Pacific might know that no jingo talk written for the morning newspapers at 5 o'clock in the afternoon and sprung later before the delegations representing the States of Oregon, California, and Washington should be accepted at any face value by any nation of the earth. I yield back the balance of my time.

The Clerk read as follows:

NAVAL EXAMINING AND RETIRING BOARDS

Salaries, Navy Department: For personal services in the District of Columbia, in accordance with the classification act of 1923, \$9,880.

Mr. LOZIER. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Missouri is recognized.

Mr. LOZIER. Mr. Chairman and gentlemen, in what I may say at this time I am not actuated by a partisan motive. I regard the questions presented by this naval bill as economic and not partisan. I am not in favor of large naval or military establishments being maintained by the people of the United States. I am not a pacifist, as that term is generally understood. I believe in maintaining an effective Navy, and I would leave nothing undone that is necessary to safeguard the national defense. On the other hand, I am not a "jingo," and do not believe in rattling the saber. I do not believe any good can be accomplished by being wasteful or extravagant in the expenditure of public funds for naval purposes. I am opposed to the United States racing with other nations to see which can spend the most money for battleships. I think this course will stimulate other nations to adopt the same policy and match our building program—vessel for vessel. If it does not have this result, it will force the other nations to combine against us, and enter into treaty relations to unite their navies and make common cause against us in the event we should be drawn into war.

Large armaments do not prevent war and they have caused more wars than they prevented. My conclusions and my convictions are based upon my study of history. We know that history is philosophy teaching by example, and the world is now suffering as a result of preparedness, and because the nations of Europe have for a generation maintained large stand-

ing armies and great battle fleets, which have at all times menaced the peace of the world.

Germany lies in the dust of defeat to-day because she staked all on her military and naval forces; hurled from the mountain top of preeminence in the councils of the world because of her devotion to the idea of preparedness. The dual monarchy of Austria-Hungary suffered a similar disaster from the same causes. The great autocracy of Russia has ceased to be a first-rate power because she also sacrificed her all at the altar of militarism. France rattled sabers for a thousand years, and initiated countless wars of rapine and conquest, but she was stricken almost to death by internal and external militarism. England, that has, with her armies and navies, ravaged more defenseless lands and enslaved more helpless races than all other nations combined, has in like manner been the victim of preparedness. Nations that have lived by the sword and trusted in the sword have suffered, and many have perished by the sword.

History demonstrates the fact that standing armies have enslaved more people than they ever liberated, and they have destroyed more governments than they have ever preserved. In the annals of time I do not recall a single instance where a people in their struggle for freedom were not compelled to fight the military forces of tyrants. Every struggle of the human race for liberty has been won over the opposition of armies that have always been the pliant tool of despots.

Mr. RATHBONE. Will the gentleman yield for a question?

Mr. LOZIER. I will.

Mr. RATHBONE. Does the gentleman consider the condition of China to-day is due to her preparedness and large standing army?

Mr. LOZIER. If China had a standing army of ten or even twenty millions of men, she would still be impotent. The Chinese are not a military people. They are a pacific and docile race. They have no genius for war. With a superb military and naval establishment China would not be able to use those instrumentalities for her own protection for the reasons I have stated. China is a sleeping giant. China is behind the other nations in development. The time will come in a hundred years—perhaps it may be 200 years—when the Mongol, Manchu, and kindred races will be a tremendous factor in the civilization and affairs of the world. But in her present undeveloped condition a strong military organization in China would not render that nation, though great in number, a forceful factor in the military affairs of the world. With the combined fleet of the United States and Great Britain, in her present undeveloped condition, China could not successfully defend herself against the aggression of Japan. China does not furnish a logical example of the so-called evils of unpreparedness.

Mr. RATHBONE. Will the gentleman yield for another question?

Mr. LOZIER. Yes; I will yield.

Mr. RATHBONE. Will the gentleman cite us to one instance in all history where a people or country has been enslaved by a navy?

Mr. LOZIER. Was it not the British Navy that ravaged our seacoast, sought to enslave the American colonists, and suppress our aspirations for self-government? Was it not the British Navy that in the War of 1812 plundered and destroyed our shipping, bombarded our cities, and desperately endeavored to drive our commerce from the seas? Did not the Persian Navy menace the liberties of democratic Greece? On every page of history are we not confronted by the tragic fact that whenever there has been a struggle between tyrants and the people who had aspirations for liberty—have not, in practically every instance, the armies and navies sided with the despot who sought to enslave, exploit, and oppress the people? [Applause.]

In every great war of conquest navies have cooperated with armies in gratifying the greed of despots for dominion. Navies have not only ravaged helpless and unprotected nations but they have transported armies to foreign shores to subdue and enslave defenseless people.

Great armies and great navies work hand in hand as willing instruments by which tyrants impose their arbitrary will, not only on their own subjects but on neighboring races. The navy of Charlemagne extended his dominions, consolidated his power, and fastened his yoke on distant seaports and regions. The army of St. Louis that ravaged the states of northern Africa was transported by the navy of this great monarch. By naval warfare, in the middle ages, numerous provincial rulers in Italy preyed on neighboring states and ruthlessly exploited defenseless peoples. For centuries Spain was overlord of Europe, largely as a result of her superior

navy, which attained its greatest power under the reign of Charles V and Philip II. Without her superb navy Spain would not have been able to dominate the earth and impose her baneful influence on a helpless world.

Under Louis XIV the French Navy was the strong arm of that arrogant despot, whose unbridled power and unspeakable infamy subsequently engulfed Europe in a sea of human blood. By the ruthless use of her naval power England seized and now holds nearly all of the great strategic positions in the world. Without her battleships England would never have been able to acquire and hold Egypt, Aden, Cyprus, Gibraltar, Minorca, Ceylon, Malta, Singapore, India, Canada, Australia, Burma, Hongkong, South Africa, Zanzibar, the Straits Settlements, and numerous other places and dominions of inconceivable wealth and inestimable strategic importance. Without the brutal advantage accruing to her because of her naval preeminence, England would not now rule one-fourth of the earth's population, dominate the sea, and reign over the largest body of land under one jurisdiction in the world.

Since the Venetians, in 1370, in their war against the Genoese, manned their ships with cannon, great navies, like great armies, have often been a menace to the peace and happiness of mankind, though at other times performing services of great virtue and value.

There is something in military and naval life that destroys the spirit of democracy and breeds a contempt for the common people and the rights of mankind. These enormous appropriations for military and naval activities not only impose an unnecessary burden of taxation on the people but they must inevitably result in an abandonment of our traditional attitude of hostility toward militarism and a departure from the landmarks and fundamental policies which underlie our free institutions. [Applause.]

The CHAIRMAN. The time of the gentleman from Missouri has expired.

Mr. LOZIER. I ask unanimous consent that I may proceed for five additional minutes.

The CHAIRMAN. The gentleman from Missouri asks unanimous consent to proceed for five minutes more. Is there objection?

There was no objection.

Mr. LOZIER. I can not escape the conviction that the pending bill carries appropriations largely in excess of the real needs of the Navy Department. Appropriations of this character and amount are obviously a heavy burden on the taxpayers of the Nation and should not be granted unless they are absolutely necessary for the efficient functioning of our Navy and Navy Department.

This bill seeks to appropriate the enormous sum of \$290,000,000 for the Department of the Navy for the fiscal year of 1926.

Under the modernization and new building bill recently passed by Congress, on the recommendation of the administration, the President, during the present session, will make a requisition, we are told, for approximately \$55,000,000 more. Moreover, to carry out the program heretofore adopted, the President will ask for \$25,000,000 to complete aircraft carriers and planes with which to equip them. This means a total of \$80,000,000 in addition to the \$290,000,000 carried by the regular naval appropriation bill we are now considering, or an aggregate of \$370,000,000 for the Navy Department and naval activities for the year of 1926. The Army appropriation bill, soon to be considered, will probably carry an appropriation of \$300,000,000, or a grand total of nearly \$700,000,000 for the War and Navy Departments, a sum, in my opinion, grossly in excess of the actual needs of these two branches of our Government, and not required to provide for any existing, anticipated, or probable national emergency.

May I say that the cost of government, State and National, is increasing so rapidly that if it continues to increase at the rate maintained during the last 10 years, in another generation the people will scarcely be able to earn a livelihood and an amount sufficient to defray the cost of government, even after we make due allowance for our national growth, economic expansion, and increased earning power.

Over my protest and vote, this Congress and the present national administration are embarking on a Navy building scheme that will cost the American people hundreds of millions of dollars and impose on them a tax burden that will bend their bodies double. As evidence of this definite, and may I say, extravagant plan, I refer to the bill that passed this House last session, recently passed the Senate, and now in the hands of the President, which initiates this new and costly battleship-building program, with an authorized ex-

penditure of \$150,000,000. This measure authorizes the expenditure of \$18,360,000 for the alteration of six capital battleships and a subsequent expenditure of about \$12,000,000 for the alteration of other battleships. It also provides for the building of eight new scout cruisers at a cost, including armor and armament, of \$112,000,000, and the construction of six river gunboats to cost, including armament, approximately \$6,000,000, or a total of approximately \$150,000,000. This bill, recommended and pressed by the administration is, I am sorry to say, but the beginning of a competitive naval building program in which the United States will endeavor to outdo the other nations in the building of battleships, the treaty for the limitation of naval armaments to the contrary notwithstanding. The Harding administration negotiated the treaty for the limitation of naval armaments, by which the 5-5-3 ratio was adopted for capital ships; that is to say, in capital battleships, the United States and Great Britain might maintain navies of equal strength, while the strength of the Japanese Navy should not exceed three-fifths of the strength of the United States Navy or the navy of Great Britain. But this treaty limiting naval armaments did not limit aircraft or submarine production, nor the number nor total tonnage of cruisers of any class, but only applied to capital battleships and aircraft carriers. When this treaty was negotiated and ratified, in capital battleships, our Navy was vastly superior to that of Great Britain and obviously superior to that of any other nation.

Under this treaty the Harding-Coolidge administration proceeded to scrap and destroy naval vessels of the value of \$350,000,000, \$200,000,000 of which represented new and modern construction. It was claimed that this ruthless destruction was necessary in order to bring our Navy down on an equality with that of Great Britain. But before this destruction was completed the Secretary of the Navy and many Members of this Congress claimed that our Navy was so inferior to that of Great Britain that we must expend hundreds of millions of dollars to bring it to a parity with the British Navy. In capital battleships, where the United States had superiority, the treaty required us to destroy a very considerable portion of our battleship fleet so as to reduce our strength to an equality with that of Great Britain; but in submarines, aircraft, and cruisers, where England and France had superiority, the treaty did not require those nations to reduce their submarine, aircraft, and cruiser strength to an equality with that of the United States Navy. In this respect, under the disarmament treaty, the other nations secured and still retain a decided advantage over the United States.

Hon. Curtis Dwight Wilbur, who recently came out of the West to become Secretary of the Navy, has lost his head and gone "hog wild" over the building of battleships. Dressed in a little brief authority and taking himself very seriously, with reckless aplomb he shocks our war-weary and tax-ridden people with the amazing statement that our Navy has deteriorated to such an extent that it will be necessary for us to expend \$110,000,000 each year for the next 20 years, or a total of \$2,200,000,000, to bring and maintain our Navy on a parity with that of Great Britain and to maintain the 5-5-3 ratio prescribed by the Washington arms conference treaty.

Is it not strange, indeed, that Secretary Wilbur should be the first Secretary to make this remarkable discovery as to the inferiority of our Navy and as to the necessity for the expenditure of this staggering sum for its rehabilitation? No one will claim that Mr. Wilbur has any naval training or technical knowledge whatsoever in reference to naval affairs, and certainly he has no access to sources of information which are not equally available to Congress, the general public, and any student of naval conditions. "Upon what meat doth this, our Caesar, feed that he has grown so great," that he is able by the wave of his hand to reverse the traditional attitude of our Government and by departmental fiat "scrap" the treaty for the limitation of naval armaments and inaugurate an extravagant battleship-building policy that will place the burden of \$2,000,000,000 on the American taxpayers in the next 20 years and which will inevitably cause other nations to adopt similar naval building programs, to the woe and unspeakable misery of an already overburdened and tax-ridden world?

There is no change in the international situation since the Washington arms conference was held and no reason why we should engage in a competitive naval building program. President Coolidge, in his annual message, stated that our foreign relations are now more satisfactory than they have been at any time during the last 12 years.

Who is to determine the necessity for these large expenditures? I am not willing to accept all the conclusions of these so-called naval experts and swivel-chair naval officers, who see

active service so seldom that many of them have an aggravated attack of seasickness every time they smell salt water; who make one recommendation one year and an entirely different recommendation the next year; who never have agreed on what is the best type of battleship for the present or future; who have illy advised us in the past and grievously mismanaged our shipbuilding program for a generation; who approve a certain type of ship one year and next year condemn that type as obsolete, out of date, and useless.

No greater calamity, in my opinion, can come to this Nation than to permit the Army and Navy officers to fix the amount of money we should appropriate for the War and Navy Departments or to determine our military and naval policies.

In any event, I insist that this bill appropriates millions of dollars that could be saved if the Navy Department would introduce and follow economical plans and methods in the operation of the department. These appropriations ought to be cut to the bone and the total expenditures for both our Army and Navy Departments should be held down to \$300,000,000 or less annually.

Those who favor a big Navy and always vote extravagant sums for building battleships frequently charge those of us who oppose this profligate policy with being unpatriotic and shortsighted and with endangering the national defense. It is easy to make this charge, but it proves nothing. I yield to no man in loyalty to my country, and I am just as anxious to safeguard its welfare and provide for its defense as any Member of this House. Frequently appeals for large expenditures for naval and military purposes are advanced to camouflage or cover up raids on the Public Treasury. May I paraphrase the language of Madam Roland? "Oh, patriotism! how many crimes are committed in thy name, and how many millions of dollars are wrung from the taxpayers of our Nation, and needlessly and extravagantly expended, under the guise of promoting our national defense!" I will not vote to withhold any necessary appropriation for the Navy, but I will continue to oppose extravagant and reckless expenditures of public funds under the false claim that such outlays are necessary for our national defense.

The hour has struck for a radical reduction in our expenditures for naval and military purposes. The time is ripe for real economy in governmental affairs. Tax reform and reduction in the cost of Government are iridescent dreams and impossible of attainment unless we very largely reduce appropriations in every department of Government, especially for military and naval purposes. [Applause.]

The CHAIRMAN. The time of the gentleman from Missouri has again expired.

Mr. KINCHELOE. Mr. Chairman, I again ask unanimous consent that I may be permitted to extend the remarks which I recently made by inserting in them a newspaper article by William Rogers on the sinking of battleships.

The CHAIRMAN. The gentleman from Kentucky asks unanimous consent to extend his remarks by inserting a newspaper article by Will Rogers, previously mentioned. Is there objection?

Mr. LONGWORTH. Mr. Chairman, I think it is the custom not to permit the insertion of articles by outside people in the Record. Personally I enjoy reading the articles of Mr. Rogers.

Mr. KINCHELOE. The gentleman from Ohio can object if he wants to.

Mr. LONGWORTH. I will confer with the gentleman later.

Mr. KINCHELOE. The gentleman who objected before said he would withdraw the objection.

Mr. LONGWORTH. For the time being I object. I will speak to the gentleman later.

Mr. KINCHELOE. All right.

The CHAIRMAN. Objection is heard. The Clerk will read. The Clerk read as follows:

For stationery, furniture, newspapers, plans, drawings, and drawing materials; purchase and exchange of motor trucks or motor delivery wagons, maintenance, repair, and operation of motor trucks or motor delivery wagons, and one motor-propelled passenger-carrying vehicle, to be used only for official purposes; garage rent; street-car fares not exceeding \$500; freight, expressage, postage, typewriters, and computing machines; and other absolutely necessary expenses of the Navy Department and its various bureaus and offices, \$77,000; it shall not be lawful to expend, unless otherwise specifically provided herein, for any of the offices or bureaus of the Navy Department in the District of Columbia, any sum out of appropriations made for the naval service for any of the purposes mentioned or authorized in this paragraph.

Mr. McKEOWN. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Oklahoma moves to strike out the last word.

Mr. McKEOWN. Mr. Chairman and gentlemen of the committee, if I were to attempt to interpret the decision of the people of America in the last election or attempt to give my belief as to the cause which resulted in the large victory of President Coolidge, it would be the belief on the part of the American people in the fact that he believed in economy, that he had always practiced economy, and that he would give this country economical government.

We here in this House continuously talk of retrenchment; and some no doubt think many of us who come from the smaller States, where our people do not pay as much of the taxes as those in some other States, ought to be content to sit by in a measure and let the Representatives of the people who do pay the taxes take the responsibility for spending the enormous sums the Government spends. You talk about retrenchment, and yet on this very day you launched out in a great program of Air Mail Service in this country.

There is one of two things that must be done. You either must quit talking about retrenchment and economy or quit voting to give additional services to the American people. You can not have these services and have lower taxes. If the people want the services and are willing to pay for them, then let them pay for them and quit talking about economy in government and reducing taxes. I have about come to the conclusion that the people do not want their taxes reduced. Maybe they prefer to have the service rather than to have their taxes reduced. Right now you are talking about raising salaries. During the war we had to raise salaries because the living expenses in the cities became so great that it was necessary to raise salaries, but now things have become so cheap and money scarce and hard to get, and yet it is said we must raise salaries. No circumstances can arise under which you can reduce salaries or expenses. Day in and day out on the floor of this House men talk about retrenchment, but, gentlemen, there is one thing which must be done; you must quit creating new departments, new commissions, new positions, and paying more money and really do what the President has asked you to do, and that is to economize.

You talk about economy, and as soon as you commence to talk about economy the newspapers begin to talk about the necessity for greater expenditures and they carry on a great propaganda which is instigated by the department that would be affected by the economy. Will you show me any department that has ever come into this House voluntarily, or to any committee of this House, and submitted a radical reduction of its force or a radical reduction in the amount of money it can spend?

Mr. BLANTON. No; and you never will.

Mr. McKEOWN. They say we must have a budget. Well, a budget is all right and is good as far as it goes. But some men in this House interpret the Budget to mean what some of them interpret the treaty to mean when it comes to reducing armament. Some say the treaty means we must keep up the Navy of the United States to the 5-5-3 agreement.

The CHAIRMAN. The time of the gentleman from Oklahoma has expired.

Mr. McKEOWN. Mr. Chairman, I ask unanimous consent to proceed for five minutes more.

The CHAIRMAN. The gentleman from Oklahoma asks unanimous consent to proceed for five additional minutes. Is there objection?

Mr. STENGLE. Reserving the right to object, I will not object if the gentleman will kindly inform me where the cheap things are. He says things are so cheap. I have not found them so in Washington.

The CHAIRMAN. Is there objection to the request of the gentleman from Oklahoma? [After a pause.] The Chair hears none.

Mr. McKEOWN. I will say to the gentleman that if he will visit some of the rural communities in the United States where farmers have things to sell he will find they are cheap, and very cheap. Now, the proposition was, as I understood the conference to disarm, to set an example, to try to induce the world to agree to reduce its armament and that you must not go above the level set. We agreed to start to reduce and not to raise and not to maintain, but now we hear it interpreted that we are not up to the ratio and that we are in danger of getting into another war. For God's sake, who is going to fight another war? Look at the countries of the world to-day. What one of them is in shape financially to wage a successful war? Keep it up to the standard. That is the proposition. Now, my heart was in the disarmament con-

ference, but my understanding was that it was the purpose of that conference to induce the nations of the world to reduce their armament and set an example, so that we would have a reduction in taxes, a reduction in armament, and not to maintain it up to the very highest peak. What will you gain by it if that is the construction to be placed on it?

Now, gentlemen, you come and say through this bill that we are going to appropriate so many millions of dollars. Well and good. The bill is going to pass. Anything I may say would not affect its passage, but there is one thing I do want to call to your attention which I think is a bad practice, and that is that in every one of these naval bills there has been a provision to the effect that if they do not spend all of the money in the last year, we will give it to them again in the following year. You never try to put a premium on the fellow who wants to save any money. You provide in the last part of this bill—and only a few Members of the House outside of the Appropriations Committee know what it means—that "If you do not spend all the money we gave you last year you are going to have it appropriated for next year."

Mr. BLANTON. Will the gentleman yield?

Mr. McKEOWN. Yes.

Mr. BLANTON. How are you going to stop it when the big Navy generalissimo, the gentleman from Illinois [Mr. BRITTEN], comes in and says that our naval officers say Japan is preparing for war because they have big naval bills and big army bills. If Japan should look at this bill would it not conclude that we were preparing for war, too?

Mr. McKEOWN. I will say to the gentleman that the gentleman referred to, the gentleman from Illinois [Mr. BRITTEN], is a man who is well acquainted with the affairs of the Navy. He has been on the Naval Affairs Committee for many years and he is a very ardent supporter of the Navy. I am not criticizing anybody who is honestly trying to discharge his duty, but I am trying to call the attention of Congress to the fact that the Budget does not mean that we are to pass everything that passes the Budget. If we do that then we surrender our rights as Representatives of the American people in this House, and I say the time has come when we ought to follow the program as announced by the President of the United States. Some men have criticized him because he did not take a private car to go to Chicago. I want to commend him, because in his past life he has never exhibited anything to show that he was a man who spent money with great freedom, but he was an economical man in his private affairs, and, as I say, I commend him for that action. He was willing to practice economy, and I say to you that the time has come when we have got to practice economy in this Congress and not merely preach it. [Applause.]

The CHAIRMAN. The time of the gentleman from Oklahoma has again expired.

Mr. POUL. Mr. Chairman, I move to strike out the last two words.

Mr. Chairman, I avail myself of the privilege of making this formal motion to submit a few remarks which I believe will not be considered out of place.

Mr. Chairman, a great American has fallen. During the World War I was quite often brought in contact with Hon. Samuel Gompers, president of the American Federation of Labor, and now that he has passed into the great beyond, it gives me very great pleasure to recall his unflinching support of the Wilson administration during every moment of the great crisis. I do not believe it is putting it too strong to say that the influence of Samuel Gompers in behalf of victory for America was only second to that of President Wilson himself. He was a great outstanding leader in mobilizing and putting in action the economic forces of the Nation. But he will be long remembered, Mr. Chairman, not only because of the high position he held, but because he taught by his life the beautiful gospel of humanity. He was a sincere lover of his fellowman.

One expression frequently used by Mr. Gompers is striking and will be long remembered: "If the good Lord will keep me from poverty I will try and keep myself from riches."

He made no schisms, he inspired no conflicts, he lit up no fires of hate, but until the last moment of his life he followed with unflinching footsteps the shining star of justice. No king, no ruler, ever bequeathed a fairer legacy to his people. Here was a "tall man, sun-crowned, who lived above the fog in public duty and in private thinking." [Applause.]

The pro forma amendment was withdrawn.

The Clerk read as follows:

TEMPORARY GOVERNMENT FOR WEST INDIAN ISLANDS

For expenses incident to the occupation of the Virgin Islands and to the execution of the provisions of the act of providing a temporary

government for the West Indian Islands acquired by the United States from Denmark, and for other purposes, approved March 3, 1917, to be applied under the direction of the President, \$270,150, plus so much of \$29,850 additional as may equal the sum of revenue collected and paid into the treasuries of said islands in excess of \$270,150; toward the construction of permanent water-supply system for the town of St. Thomas, \$45,000; in all, \$315,150.

Mr. NEWTON of Minnesota. Mr. Chairman, I move to strike out the last figure in the paragraph.

I would like to ask the chairman of the subcommittee a question in reference to this appropriation for the water-supply system of St. Thomas. When quite a number of Members of the House and of the Senate were down there a year ago last April there had been more or less of a drought for about 18 months preceding, and the people there were in considerable distress because of the failure to have enough fresh water for all practical purposes. This matter was gone into somewhat at length, and I would like to know just what the Navy Department has in mind in order to correct that situation.

Mr. FRENCH. The Navy Department does not have anything in mind beyond the cities on the islands; in other words, the cities of St. Thomas, Christiansted, and Frederiksted. All three of them, it was recommended, should be provided with a water system at a total cost of \$125,000. The members of the committee were not impressed with the necessity for a supply system at the cities of Christiansted and Frederiksted in comparison with the necessity at St. Thomas. Our activities under the Government are largely centered at St. Thomas. May I say, too, that the water supply suggested in this paragraph is for domestic purposes? It is not for irrigation purposes. It is doubtful even if much water, if any, could be available for use in lawns and gardens within the city itself. An engineer of the Navy Department, Commander Warfield, visited the islands, made an examination, and estimated that it would be feasible to work out the water systems for the several towns along the lines that the people there now have adopted in developing in a small way their water systems.

Mr. NEWTON of Minnesota. By catch basins?

Mr. FRENCH. By making sort of catch basins or reservoirs below watershed areas and thereby conserving water.

May I say further that the situation is such at St. Thomas that we are not even endeavoring to provide water in this way for the flushing of the sewers? At the present time we are pumping water from the bay into reservoirs and using that for the flushing of the sewers, and it will be necessary to continue that process in order to have adequate drainage and sewage disposal.

The members of the committee felt that this is necessary for the city of St. Thomas, and that the amount indicated here will be sufficient. The city is the largest city in the islands, and the water system proposed could serve as a sort of model and experiment in the matter of furnishing water to these people.

Mr. NEWTON of Minnesota. The amount that is appropriated here will not begin to do the work itself, will it?

Mr. FRENCH. I think it will in the city of St. Thomas in connection with the partial water-supply system that is there now.

Mr. NEWTON of Minnesota. It was my impression from the gentleman's statement that it would not be enough.

Mr. FRENCH. I think it will be enough for this one city. We have not attempted to take care of the situation at Christiansted and Frederiksted. For those two cities an additional \$80,000 was requested.

Mr. NEWTON of Minnesota. Of course, the need from the standpoint of the civilian population as well as the Government is far greater at St. Thomas than on the islands of St. Croix and St. John, as I recall it.

Mr. FRENCH. Members of the committee so believed.

Mr. NEWTON of Minnesota. But with our responsibility there, exercising, as we do, complete authority over the islands and the government, we certainly ought to take steps to see that these people are not placed in the position they were in two years ago in reference to a water supply. I believe the gentleman was there himself.

Mr. FRENCH. I was there and my visit gave me an opportunity of knowing at first-hand some of the conditions to which I have referred.

The pro forma amendment was withdrawn.

The Clerk read as follows:

NAVAL RESEARCH LABORATORY

For laboratory and research work and other necessary work of the naval research laboratory for the benefit of the naval service, as au-

thorized in the naval appropriation act approved August 29, 1916, including operation and maintenance of a laboratory, additions to equipment necessary properly to carry on work in hand, maintenance of buildings and grounds, and the temporary employment of such scientific civilian assistants as may become necessary, to be expended under the direction of the Secretary of the Navy, \$150,000: *Provided*, That \$10,000 of this appropriation shall be available for the temporary employment of civilian scientists and technicians required on special problems: *Provided further*, That the sum to be paid out of this appropriation for technical, drafting, clerical, and messenger service shall not exceed \$40,000 in addition to the amount authorized by the preceding proviso.

Mr. WATSON. Mr. Chairman, I move to strike out the last word. I notice in this paragraph the word "experimental" has been omitted. It is not used in the paragraph, nor is it stated in the title. I notice also that there is \$25,000 more appropriated than last year. What was the object of striking out the word "experimental"? Have you another bureau for that purpose?

Mr. FRENCH. So far as the activities carried on in the naval research laboratory, I will say that they have not been changed at all in the bill we propose from the purposes carried on at this time and heretofore provided for in the bill. Leaving out the word "experimental" was because of this situation. Over at Annapolis we have what is called a naval experimental laboratory, while here we have what had been called a naval experimental and research laboratory. The activities at Annapolis pertain to experiments or the examination of devices that have reached the experimental stage. The work of the research laboratory pertains to seeking out a solution of the problems as an original proposition. Its work has to do with investigation, say in hydrography, investigations that lead to the development of sound depth finders, radio activity, and so forth. On the other hand, if an instrument were developed and brought in by some one connected with the Navy or not, it would not be taken to the research laboratory.

Mr. WATSON. Then this bureau has nothing to do with experimental work?

Mr. FRENCH. Nothing.

Mr. WATSON. Why is the appropriation increased from last year? Last year it was \$125,000, and this year it is \$150,000. I am asking for information and not criticism.

Mr. FRENCH. It is necessary to develop one field that at this time has not been developed, and that has to do with metallurgical matters in which the Navy Department is interested. For instance, aircraft and radio instruments, various sound finding devices, technical engineering devices and machinery all turn upon the most excellent machinery we can get and the most excellent metals and type of metals that we can get. It is for that purpose, the conducting of research work, that this allowance is made; it has to do with metallurgy that we have increased the scope of the work.

Mr. WATSON. The extra is for research in the progress of science.

Mr. FRENCH. Most of it is for the purpose indicated, and a small part to be spread over other matters of research work.

Mr. WATSON. Mr. Chairman, I withdraw the pro forma amendment.

Mr. DEMPSEY. Mr. Chairman, I move to strike out the last word. I ask unanimous consent to proceed for 10 minutes out of order, in order to say something upon the pending river and harbor bill.

The CHAIRMAN. The gentleman from New York asks unanimous consent to proceed out of order for 10 minutes. Is there objection?

There was no objection.

Mr. DEMPSEY. Mr. Chairman and gentlemen, the pending rivers and harbors bill is a most important measure, but before speaking on the bill itself let me say to you that safeguards are thrown about rivers and harbors bills such as do not accompany any of the other legislation which comes before the Congress of the United States.

In order that a project may be included in a bill it must first be examined by the resident engineer of the United States Army. If it passes the gantlet of his examination, it must then go to the district engineer, who has a larger territory over which he has jurisdiction. Next it must go to the Board of Engineers, comprised of the most eminent men as engineers in the United States Army, and, last of all, it must run the gantlet of the Chief of Engineers. So every safeguard is thrown about measures of this kind, and it is well that this should be so, because one bad bill will attract more criticism, one bad project will invite more scandal and slander, than a hundred good projects which have been adopted.

But it is well to remind you, too, that all these safeguards are thrown about the Treasury of the United States, so far as rivers and harbors appropriations are concerned, and it is rare, indeed, that a bad project escapes all of these successive examinations. Of course, Army Engineers, however eminent they may be, however wide their experience may have been, are men, and they are subject to mistakes the same as the rest of us; and in spite of their training, in spite of their experience, occasionally matters will not result as they have anticipated they would, and so an occasional mistake occurs, but such mistakes are rare, indeed. They are few and far between.

Now, you say: How is it that after a century and a half of national existence you come here with a new rivers and harbors bill, and the answer is twofold: First, the rivers and harbors program of the United States is far from completed, and a century and a half is but a short time in the life of a nation; and, second, in a new country like this growth is so rapid, development is so speedy, that we have to enlarge projects which when they were adopted seemed adequate to meet the needs of local conditions. And, then, up to the present time almost, necessarily rivers and harbors development in the United States has been sectional and local. We had the two oceans, but they were separated, and to-day we have them connected by the Panama Canal. Soon the Great Lakes and the Mississippi will be connected with the sea, and when that is done we will have a complete, a unified system of waterway development, and our projects for the future must be adopted with reference to this unified plan of development as a whole throughout the country.

Now, let us look for a moment at this present rivers and harbors project bill. Three projects stand out in it; and let me examine them in succession and present their merits to you.

First of all we have a project for the completion of the breakwater at Los Angeles and Long Beach Harbor, in California. There is only a small protected area in the harbor to-day. It will soon all be in use, and there will be no protected area available for new tonnage. The new breakwater will afford ample space for future commerce. Now, it is not necessary for me to say to any American audience that Los Angeles is the marvel city of all history. Its growth has no parallel. It is simply a fairy tale. Its growth was phenomenal in commerce up to the time that they discovered the tremendous deposits of oil there. And then, at a single bound, commerce in that port jumped from 2,000,000 tons per year to 2,000,000 tons per month; and you say to me, "Why, yes; they have this tremendous commerce, making it the second port in importance in the United States, but it is based upon oil, and oil may fail." Well, I grant you that oil is not continuing to flow in quite the same abundance as when it was first discovered, but I say to you that it is keeping up remarkably, and I say to you further that long-distance pipe lines are bringing in distant fields and making up for the failure in local production, and as a result of that you may be sure that the supply of oil will continue at its present volume for many years to come.

But, aside from oil, the commerce and tonnage of Los Angeles Harbor is growing by leaps and bounds and the general merchandise increase will rapidly take the place of, if it does not exceed, that of oil production. In the harbor to-day but 15 per cent of the total area is occupied by the oil business. All the rest is occupied by merchandise, and long before the present project for the enlargement of the breakwater and the project for the enlargement of the harbor is complete we will need additional space there for the tonnage that develops from year to year; and where can we get that space except by this enlargement of the harbor?

Los Angeles has a tonnage that, as I say, has no parallel in growth, and you can only use the old simile of a snowball, because Los Angeles is not going to grow simply as it has grown in the past, but it is going to grow in percentages. It is going to grow in proportion to its ever-increasing size. And then let me direct your attention to another most important aspect of this Los Angeles improvement. That city matches every dollar which the Government expends on the new breakwater with a dollar of its own, and so while we expend \$7,000,000 a single city in the United States expends also \$7,000,000 on the breakwater alone; but that is only the beginning of what it does. It is going to expend also \$30,000,000 in port facilities of various kinds, in warehouses, in docks, in loading and unloading facilities, in constructing railroad connections and exchanges, in all of the various things that go to make a complete, great, and modern port, and it is only on the Pacific coast, as you know, Mr. Chairman, where there is contribution practically at all, and never have we had larger contribution than dollar for dollar, as is given in this case.

Now, let us pass to the next improvement. That is an improvement in another section of the country, the improvement known as the Intercoastal canal, leading 573 miles west from the Mississippi River to Corpus Christi, Tex. Now, what are the reasons for that improvement? Why, the reasons are both general and local. Let us take the local reasons first. Here is a country so intersected by streams that the cost of the railway improvement within 100 miles of the coast is practically prohibitive. The only kind of transportation available or possible is by water, and so if this country, rich in natural resources, if this country with its tremendous and exclusive supply of sulphur, if this country with its great production of rice and sugar, if this country with its salt mines, if this country with its great timber tracts is to be improved at all, if it is to have transportation of any nature, it must be transportation by water. And so the local needs could not be greater than they are. They are unique, they are peculiar, because nowhere else in the United States is railroad construction impossible by reason of a prohibitive cost.

Mr. McKEOWN. Mr. Chairman, will the gentleman yield?

Mr. DEMPSEY. Yes.

Mr. McKEOWN. What is the necessity for a canal along the coast to the Gulf of Mexico? Why can not they transport their products on the water of the Gulf outside of the coast?

Mr. DEMPSEY. For two or three reasons. In the first place the transportation by the Gulf of Mexico would not reach the important products which are to be reached; next, transportation is not in the class of vessels which could safely navigate the Gulf. Those are two controlling reasons.

Now let us take the general situation. I am talking now and I have talked so far about what those people down there need. Now let us see what the needs of the country are so far as this canal is concerned. One of the great basic commodities of the United States is sulphur. Without sulphur we can not raise fruit. Without sulphur you can not raise many vegetables, because it is the basic commodity which goes into the production of many insecticides which kill the pests of various kinds which destroy fruits and vegetables. Without sulphur all the great fruit region in the South, without sulphur all the great fruit regions in western New York, would cease to produce their great and valuable crops. We would see the fruit trees even destroyed; and the only place where you can get sulphur in the United States, because it is the only place that has it, is along the course of this intercoastal canal. They have three mines, and they are practically inexhaustible. So we are making this improvement for the benefit of all the people who are interested in the use of sulphur. Now, you say, "But we have been getting sulphur." Yes; you have been getting sulphur, but do you know how you have been getting it? Why, all of the middle country in the United States brings the sulphur up to Baltimore by vessels and then transports it back by rail at high cost to the Mississippi Valley, there to be used. Do you want that prohibitive cost? Is that in the interest of all that tremendous section of the country lying along and lining the banks of the Mississippi and the Ohio? Of course not. And so in the interest of the United States as a whole—and this is but illustrative of the effect of all of the provisions of the bill—so in the interest of this country as a whole you want this intercoastal canal. And then we go over and see Pittsburgh, and we find there that we have the greatest steel center in the country, and the manufacturers there say to us: "If you will only give us this intercoastal canal and connect it up with the Mississippi system and make it a part of it, we will ship all our steel products down to that section of the country for its use by the Ohio and the Mississippi and this canal, and we will bring back from that section all of its products, and we will do it at a cost one-quarter of what the country has paid heretofore for all these products." And so we say to you that this improvement is justified, not alone by the exceptional needs of the locality, but it is demanded in the interest of the progress of the whole country.

And then we come to the third of the great improvements in this bill, and that is the development of the Hudson River up to Albany. At present deep water stops at Hudson. It might just as well stop in a forest. It might just as well pause at a village. There is no commerce there. There are no exchanges at Hudson. And when people say to you, "Why, the commerce on the Hudson is not what it used to be, is not what it ought to be," you might as well say that the New York Central Railroad was not doing business if stopped at a village 36 miles away instead of going on to Buffalo. Why, of course, you can not expect commerce if you stop in the woods; but when you reach Albany you reach one of the greatest exchange

points in the whole United States, with six great railroads. From there commerce goes north into all of northern New York and into Canada; and from there it goes south to the metropolis of the country and to the whole southern section of the United States; from there it goes west into the Mississippi Valley and on to the Pacific. There is no greater exchange point, no more natural exchange point, in the whole United States.

New England is fed by it. So for local purposes we bring all the local freight more cheaply the distance up to this exchange point, and for through purposes we bring the freight to this point by cheap water navigation, so that it may be transferred there and pay the increased cost by rail only from that point.

And, then, another important view of this question is this: For years we have been talking, talking, and continuing to talk about connecting the Great Lakes and connecting the Gulf with the sea. We have talked but we have not accomplished, and here is the first step in accomplishment, because when you have improved the Hudson River, as you will do under this bill, up to Albany you have gone one-half of the distance across the State of New York with a deeper waterway. You have cut in two the distance between the Great Lakes and the Atlantic, because, if you will look up the map and measure it, you will find that it is 142 miles from New York to Albany and it is only 184 miles from Albany to Oswego; and when once you have finished this improvement, when once you have given us deep water to Albany, you will find, as I say, that you have lessened by one-half the distance between the Great Lakes and the Atlantic.

So these three great projects in the bill, these three mountain peaks, these three items which stand out as the great items in the bill, are amply justified, not alone by local considerations—and local considerations are entitled to great weight—but they are justified and required as well in the interest of the transportation of this country by water as a whole, as a unified and complete system, and they are demanded by the interests of the country in order that it may secure adequate transportation and the cheapest transportation available. [Applause.]

Now, I am not going to attempt in this brief address to cover anything like all the projects embraced in this bill. I am going to refer very briefly, very shortly, to only a few of the more important items. I am first going to speak of one way down at the south end of the country—the deepening of the harbor at Miami. Of all of the cities in this country, blessed with a phenomenal growth, animated by a remarkable energy and civic pride, of all the cities, you can see if you travel to every corner of the United States which has energy and growth and development and prosperity and a marvelous future, Miami occupies the second place only to Los Angeles, and yet to-day it has a depth in its harbor of only 18 feet. Up to within a few weeks Miami had no connection with the North by regular steamship service. In spite of this inadequate depth, regardless of the fact the steamers can not operate to advantage or load to capacity, steamship lines have put on regular service between Miami and the North, and we propose to give them 25 feet so that they may have an adequate depth and may enjoy the commerce to which they are entitled. And that, too, is not simply a local question, because to-day if a man in Miami wants to go to the West Indies, to Central or South America, he can not take a boat from Miami. It is not even a port of call for the ships which ply between the United States and all those vast countries to the south of us, where we must hope for our great trade, where we must look for our great growth in the future. He must go from Miami north to New York or Philadelphia in almost every instance to get a boat to go south again to the West Indies, to Central and South America. And we hope and expect that when we give them an adequate depth Miami will be at least a port of call for all of these vessels, if it does not turn out to be a point from which navigation will start for all of those countries.

So the deepening of Miami Harbor is a great national question, not a local question. It is one that interests every man who expects to profit and expects his country to profit by the increased and growing commerce with all of that country to the south of us. As a result of the deepening of this harbor, too, tropical fruits and vegetables will be placed on the tables in the North at a less cost and in better condition than ever before.

I am only going to speak of one other project—although there are many that I would like to cover—and that is the survey of the Tennessee River and its tributaries. Up to a very short time ago not alone the general public but the engineers as well believed that there was no water power there outside of Muscle Shoals available at least for practical development and for placing upon the market.

Three years ago—when we passed the last rivers and harbors bill—the engineers asked the committees of the House and Senate to appropriate a half a million dollars for a survey of that river and its tributaries and we threw up our hands in holy horror. “Why,” we said, “in the whole history of the United States such a demand for a survey had never been made,” and Chairman Jones and I, in what we believed to be great generosity, cut the amount to \$200,000, and what resulted? Back came the engineers when we held our hearings on the present bill and they said to us, “Gentlemen, we have used your \$200,000 with this result: We find that on the Tennessee River and its tributaries, aside from Muscle Shoals, there are 3,000,000 horsepower, the equivalent of 30,000,000 tons of coal annually, which can be developed at a cost so that the power can be placed upon the market at about \$15 per horsepower.” Now, what does that mean? Why, coal costs nearly \$15 per ton—hard coal. And you are going to get 1 horsepower, the equivalent of 10 tons of coal, for \$15. Here is one of the greatest water-power developments that has ever been known in the history of the world. Go to Niagara Falls, supposed to be the greatest water-power center in the world. On the American side until a year ago we had only 260,000 horsepower. We have 400,000 now, but on 260,000 horsepower Niagara Falls has become the leading electrochemical center of the world, and in the World War, in its stress and in its difficulties, we found that without Niagara Falls we would not have been able to wage successfully our part in the great World War. We found that 80 to 90 per cent of the basic things which go into the production of munitions came from Niagara Falls.

Now, if you can accomplish that by what has been done at Niagara Falls—if you can accomplish more, for over there we carried that power to Buffalo, we have carried it halfway across the State to Syracuse, and we have supplied the needs in all those directions. If you can do that with 260,000 horsepower, what a tremendous stride forward in industrial development will this country have made when it has 3,000,000 located on the Tennessee and its tributaries! And until this bill passes we are not even on the road to the use of that 3,000,000 horsepower.

Now, I am going to speak about the general provisions of the bill. First, the object lesson on the Tennessee has taught us a very useful lesson indeed, because we provide for a general survey of all navigable streams where water-power development is feasible with the object of making the best development for water power and for navigation combined that is possible. And then we declare in favor of finishing all work in five years. Now, that is not much more than a declaration, because it is not binding upon succeeding Congresses; but it shows that in solemn session and after due consideration the Congress has resolved that we shall not have the spectacle of a second Ohio River where we have been proceeding, Mr. Chairman, for some 15 years or more and have spent \$87,000,000 and yet our money is there locked up in that improvement because a third of that great river is not opened yet to improved navigation. We shall not repeat such unbusinesslike object lessons as that in the future if the voice of this Congress is heeded. [Applause.]

Let me come to my concluding remarks upon this bill. The bill will involve an expenditure of \$53,000,000—\$10,000,000 a year for five years. A large sum, you will say. A large sum? Why, no; it is not large. It is a very small and insignificant sum considering what is to be accomplished by the bill. Let us look to the north of us. We find the Great Lakes system carrying last year 121,000,000 tons of commerce. We find the Monongahela River a short stream, only 125 miles in length, carrying 25,000,000 tons. We find the port of New York receiving 50,000,000 tons of traffic. We find that in 1923 the railroads of the country carried 2,333,787,044 tons of freight, and our waterways carried over one-sixth as great a tonnage as our railroads.

The railroads transported in the year 1923, 2,333,787,044 tons of freight, while our waterways carried 442,097,328 tons. In other words, the waterways carried more than one-sixth as much freight as the railroads. For the year 1923 the railroads set aside \$1,077,000,000 for improvements. On the same basis we should expend \$200,000,000 annually on our waterways. In view of these facts the expenditure of not to exceed \$10,000,000 for the fiscal year 1927, and of not to exceed \$10,000,000 annually thereafter until these projects are completed is so small as to be almost insignificant.

Nor does the comparison grow less by taking into consideration projects already adopted, for all of them can be completed by an expenditure of \$204,000,000, one-fifth of the amount ap-

propriated by the railroads for like purposes for the single year 1923.

The amount to be expended under this bill is small, too, when we compare it with previous bills adopting new projects. For instance, in 1910 Congress adopted 179 new projects at an estimated cost of \$263,726,609, while the present bill—the first bill in three years—adopts only 35 projects and authorizes the expenditure for their improvement of only \$10,000,000 the first year, and of \$10,000,000 annually thereafter until they are completed, the total cost being estimated at \$53,565,650, less than one-fifth of the amount authorized by the 1910 bill.

But the figures quoted do not give the real difference in the cost to the country, for in 1910 the wealth of the country was but \$143,139,573,114 while in 1922 our total wealth was \$320,803,862,000, and the burden of a country's expenditure is in proportion to its wealth when they are made.

It is to be borne in mind, too, that the freight of the country doubles every 10 years and that the pressure for facilities for shipment is twice and a half as great now as it was in 1910.

There has been a misapprehension in the belief that this bill is in conflict with the Budget. It has, of course, nothing whatever to do with the Budget. The Budget deals only with appropriations, and this bill appropriates nothing, but simply authorizes future expenditures. The Budget will deal with these expenditures when the appropriations for them are made.

We listen too much to the talk that all waterways are not successes. But are all railroads successes? Does every railroad carry the tonnage of the New York Central? Do not men make occasional mistakes in other branches of business? Is every factory that is started a success? Do you not see failures here and there? But when you can point to such tremendous successes as the Great Lakes, the greatest transportation system with the largest tonnage in all history, when you can point to the fact that the steel and the iron business in the United States has developed and become a world business, because of cheap transportation on the Lakes, and it would not be possible for us to-day to compete with England except for that transportation, and we never did compete with England till we brought transportation on the Great Lakes to its present marvelous efficiency. We went there and bought our rails until we had utilized transportation on the Great Lakes. When we point to water transportation as the life of the steel industry and the iron industry, when we point to the enormous tonnage of the Great Lakes and the Monongahela, when we point to every seaport that we have as a success, let us not be blinded by the fact that the small mistakes or failures that occasionally appear in every other business are bound to appear in efforts to improve our waterways. This bill is a good bill. It is a bill in the interest of the various localities, but it is a bill just as much in the interest of the country at large and it should be passed and passed speedily.

Mr. GARNER of Texas. Mr. Chairman, I ask unanimous consent that the gentleman from New York [Mr. DEMPSEY] may proceed for two additional minutes in order to answer some questions.

The CHAIRMAN. The gentleman from Texas asks unanimous consent that the gentleman from New York may proceed for two additional minutes, also out of order. Is there objection?

There was no objection.

Mr. GARNER of Texas. Will the gentleman tell the committee if he expects to get up the rivers and harbors bill at this session of Congress?

Mr. DEMPSEY. It is my expectation that the rivers and harbors bill will pass the House at this session and that it will be reached about the 15th of January. While I have no promise to that effect, that is my understanding of the attitude of those who have control of the business of the House. I will say to the gentleman from Texas that I am, of course, personally, and the Committee on Rivers and Harbors, regardless of party, is unanimously, very earnest for the passage of this bill, because we deem it of the greatest public importance.

Mr. GARNER of Texas. If I understand it, this is a privileged bill?

Mr. DEMPSEY. Yes.

Mr. GARNER of Texas. The gentleman can call it up at any time he can get recognition from the Speaker?

Mr. DEMPSEY. Yes.

Mr. GARNER of Texas. I want to say to the gentleman that so far as I can ascertain—and I have made some inquiries—there are more than enough votes to pass this bill if he can get it up, and the question I asked him was whether or not he had made arrangements, either with the steering com-

mittee or with the Speaker, for recognition? If the steering committee will not give the gentleman an opportunity to consider it, if the gentleman can get the Speaker to recognize him, he can get the votes to pass the bill.

Mr. DEMPSEY. I believe, with the acquiescence and help of the management of the House, the bill will be brought before the House at an early date after the recess, and I am in hopes that is what the result will be.

The Clerk read as follows:

BUREAU OF NAVIGATION

TRANSPORTATION AND RECRUITING

For mileage and actual and necessary expenses and per diem in lieu of subsistence as authorized by law to officers of the Navy and Naval Reserve Force while traveling under orders, and officers performing travel by Government-owned vessels shall only be entitled to reimbursement of actual and necessary expenses incurred; for mileage, at 5 cents per mile, to midshipmen entering the Naval Academy while proceeding from their homes to the Naval Academy for examination and appointment as midshipmen; for actual travelling expenses of female nurses; for travel allowance or for transportation and subsistence as authorized by law of enlisted men upon discharge; transportation of enlisted men and apprentice seamen and applicants for enlistment at home and abroad, with subsistence and transfers en route, or cash in lieu thereof; transportation to their homes, if residents of the United States, of enlisted men and apprentice seamen discharged on medical survey, with subsistence and transfers en route, or cash in lieu thereof; transportation of sick or insane enlisted men and apprentice seamen to hospitals, with subsistence and transfers en route, or cash in lieu thereof; apprehension and delivery of deserters and stragglers, and for railway guides and other expenses incident to transportation; expenses of recruiting for the naval service; rent of rendezvous and expenses of maintaining the same; advertising for and obtaining men and apprentice seamen; actual and necessary expenses in lieu of mileage to officers on duty with traveling recruiting parties; transportation of dependents of officers and enlisted men; in all, \$4,000,000.

Mr. KETCHAM. Mr. Chairman, I move to strike out the last word for the purpose of asking a question of the chairman of the subcommittee. I notice an increase of \$400,000 in the item for transportation and recruiting. Will the chairman of the subcommittee please explain the necessity for that rather large increase in this single item?

Mr. FRENCH. The increase in this item is merely a transfer from another item, "Pay, miscellaneous," where a reduction occurs. It can be cared for in a more orderly way in the paragraph where we now propose it.

Mr. KETCHAM. I notice that the naval official testifying before the committee on this subject referred to some extra costs due to the amendment that was passed last year requiring the consent of parents for the enlistment of those who are under 21 years of age. Is that involved in this to any extent?

Mr. FRENCH. Not to any extent in the amount of money to which the gentleman refers. All of that money represents an item that was carried under "Pay, miscellaneous," and for the sake of better handling the item is transferred to this particular paragraph.

The Clerk read as follows:

NAVAL RESERVE FORCE

For expenses of organizing, administering, and recruiting the Naval Reserve Force and Naval Militia; for the maintenance and rental of armories, including the pay of necessary janitors, and for wharfage, \$170,000; for pay and allowances of officers and enrolled men of the Naval Reserve Force, other than class 1, while on active duty for training; mileage for officers while traveling under orders to and from active duty for training; transportation of enrolled men to and from active duty for training, and subsistence and transfers en route or cash in lieu thereof; subsistence of enrolled men during the actual period of active duty for training; pay and allowances of officers of the Naval Reserve Force and pay, allowances, and subsistence of enrolled men of the Naval Reserve Force when ordered to active duty in connection with the instruction, training, and drilling of the Naval Reserve Force; and retainer pay of officers and enrolled men of the Naval Reserve Force, other than class 1, \$3,400,820; for aviation material, equipment, fuel, and rental of hangars, \$320,180; in all, \$3,900,000, not more than \$1,232,060 of which amount shall be available, in addition to other appropriations, for fuel and the transportation thereof and for all other expenses in connection with the maintenance, operation, repair, and upkeep of vessels and aircraft assigned for training the Naval Reserve Force: *Provided*, That no part of the money appropriated in this act shall be used for the training of any member of the Naval Reserve Force except with

his own consent: *Provided further*, That retainer pay provided by existing law shall not be paid to any member of the Naval Reserve Force who fails to train as provided by law during the year for which he fails to train.

Mr. DARROW. Mr. Chairman, at the request of the gentleman from Pennsylvania [Mr. BUTLER] I offer an amendment.

The CHAIRMAN. The gentleman from Pennsylvania offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment by Mr. BUTLER: Page 15, line 6, after the colon, insert the following: "*Provided further*, That until June 30, 1926, members of the Volunteer Naval Reserve may, in the discretion of the Secretary of the Navy, be issued such articles of uniform as may be required for their drills and training, the value thereof not to exceed that authorized to be issued to other classes of the Naval Reserve Force and to be charged against the clothing and small stores fund: *Provided further*, That until June 30, 1926, of the Organized Militia as provided by law, such part as may be duly prescribed in any State, Territory, or for the District of Columbia shall constitute a Naval Militia; and until June 30, 1926, such of the Naval Militia as now is in existence, and as now organized and prescribed by the Secretary of the Navy under authority of the act of Congress approved February 16, 1914, shall be a part of the Naval Reserve Force, and the Secretary of the Navy is authorized to maintain and provide for said Naval Militia as provided in said act: *Provided further*, That upon their enrollment in the Naval Reserve Force, and not otherwise until June 30, 1926, the members of said Naval Militia shall have all the benefits, gratuities, privileges, and emoluments provided by law for other members of the Naval Reserve Force; and that, with the approval of the Secretary of the Navy, duty performed in the Naval Militia may be counted as active service for the maintenance of efficiency required by law for members of the Naval Reserve Force."

Mr. BLANTON. Mr. Chairman, I make a point of order against the amendment on the ground that it is legislation on an appropriation bill unauthorized by law, and that it is a change of existing law.

Mr. FRENCH. Will not the gentleman withhold his point of order for a moment?

Mr. BLANTON. I was hopeful that the chairman was going to protect his own bill; if he is not, somebody else will have to do it.

Mr. FRENCH. Will not the gentleman withhold it for just a moment?

Mr. BLANTON. I regret that the time of the House is needed, and I make the point of order. However, it has been so long since we have heard from the farmers' friend, the gentleman from Pennsylvania [Mr. DARROW], that I withhold it and reserve it, so we may hear from him. [Laughter.]

Mr. DARROW. Mr. Chairman, I just want to say that this is a section from the bill that was unanimously reported by the Naval Affairs Committee and unanimously passed by the House a week ago last Wednesday. It provides that the Secretary of the Navy may issue the necessary uniforms and equipment to the Volunteer Naval Reserve and the Naval Militia up until 1926.

Mr. FRENCH. Will the gentleman yield just a moment?

Mr. DARROW. Certainly.

Mr. FRENCH. Does not this represent the situation? The members of the Naval Militia, under language carried in the bill heretofore, are now members of the Naval Reserve, and by being members of the Naval Militia of the State of New York, the Naval Reserve within that State receives certain appropriations and moneys that otherwise would need to be appropriated by the Federal Government. This language passed the House last week in the reserve bill, but for fear the bill that passed the House last week may not pass the Senate we are agreeable in the interest of economy to allow the same language to run in the pending bill.

Mr. BLANTON. If the gentleman will permit—

Mr. DARROW. Certainly.

Mr. BLANTON. Does not the gentleman know that that blanket bill which passed the House last week and which is now before the Senate has been buffeted between the House and the Senate, most of it, for three years?

Mr. FRENCH. That is just the point.

Mr. BLANTON. I do not believe it will ever pass. I hope it will not pass.

Mr. FRENCH. Then we need this language here because, unless this shall go through it will cost the Federal Government more to maintain the very institutions in New York that are already there and that will be maintained.

Mr. DARROW. I am sure the gentleman from Texas wants us to practice economy.

Mr. BLANTON. Will the gentleman yield further?

Mr. DARROW. Certainly.

Mr. BLANTON. That is just his opinion about economy. Somebody else might assert a different opinion, for I do not agree with him about it saving money, but the gentleman from Pennsylvania [Mr. DARROW] is a distinguished member of the Republican steering committee, and the gentleman therefore can get up here and put in legislation on the bills of this committee and the chairman will not make any point of order against it, but the gentleman from Texas must do it. I insist on the point of order, Mr. Chairman. It is legislation and it ought not to be put on an appropriation bill.

Mr. FRENCH. Mr. Chairman, I concede the point of order.

The CHAIRMAN. The Chair sustains the point of order. The Clerk read as follows:

NAVAL WAR COLLEGE, RHODE ISLAND

For maintenance of the Naval War College on Coasters Harbor Island, including the maintenance, repair, and operation of one horse-drawn passenger-carrying vehicle to be used only for official purposes; and care of ground for same, \$91,800; services of a professor of international law, \$2,000; services of civilian lecturers, rendered at the War College, \$1,200; care and preservation of the library, including the purchase, binding, and repair of books of reference and periodicals, \$5,000; in all, \$100,000: *Provided*, That the sum to be paid out of this appropriation under the direction of the Secretary of the Navy for clerical, inspection, drafting, and messenger service for the fiscal year ending June 30, 1926, shall not exceed \$62,500.

Mr. BLANTON. Mr. Chairman, I move to strike out the figures "\$62,500" as a pro forma motion.

I want to call attention to the civilian lecturers in the War College here. I do not know whether all of the Members are aware of it or not, but in this War College during the year from time to time some of the biggest men we have in the universities of the United States come and deliver lectures. If all the Members knew what splendid lectures are delivered there, I am sure more of them would avail themselves of the opportunity to hear some of them. It is an inspiration and great help educationally, not only to our officers but to the Members of Congress.

Mr. SEARS of Florida. Will the gentleman yield?

Mr. BLANTON. Yes.

Mr. SEARS of Florida. Where are these lectures delivered?

Mr. BLANTON. In the War College here.

Mr. SEARS of Florida. On what subjects?

Mr. BLANTON. On various subjects.

Mr. SEARS of Florida. On how to conduct a war?

Mr. BLANTON. No; but on various economic subjects.

Mr. SEARS of Florida. Is that why the bills are increased or decreased?

Mr. BLANTON. Let me call the gentleman's attention to one great leader in thought who has lectured there, Dr. William Starr Myers, of the University of Princeton, who in my judgment is one of the great leaders we have in the universities of the country. He has lectured there, I believe, more than once.

Mr. STENGLE. On what subjects?

Mr. BLANTON. He is the professor, I think, of politics in the University of Princeton.

I simply wanted to call attention to this because I did not think all the Members knew about it.

Mr. COLE of Iowa. Will the gentleman yield?

Mr. BLANTON. I yield.

Mr. COLE of Iowa. I simply wanted to call the attention of the gentleman from Texas to the fact that this War College is located on the coast of Rhode Island and is not located here in Washington.

Mr. BLANTON. I know that, but I took advantage of the words "War College" to call attention to this one in Washington.

Let me say that if the gentleman does not believe naval officers need to know something about politics the gentleman is mistaken. If any were not good politicians, they could not get a bill like this through the House.

Mr. KETCHAM. Mr. Chairman, I move to strike out the next to the last word.

I do this, Mr. Chairman, for the purpose of making just a very slight correction in the very interesting and illuminating address delivered a few moments ago by the chairman of the Committee on Rivers and Harbors.

All of us have a great deal of local and State pride and in connection with the presentation by the gentleman of the needs of a very great harbor of the United States, namely, that of Los Angeles, the gentleman made the statement that the growth of population around Los Angeles was the most note-

worthy increase of population in the world known in recent years.

Anyone who lives in Michigan, of course, could not let that statement pass without challenge, and simply for the purpose of correcting the Record I wish to advise the committee what the real facts are. I did not have the figures available at the moment, but I knew that the greatest growth in population had taken place in the city of Detroit, and so, for the sake of accuracy, and in order that the committee may know that Michigan's pride in Detroit is justified, I desire to state that both in numbers and in percentage the greatest growth of population in recent years has not taken place in Los Angeles, but has taken place in the city of Detroit. Here are the exact figures from the census reports:

In 1910 the city of Los Angeles had a population, in round numbers, of 319,000 and in 1920, 576,000. For the same period the city of Detroit had a population in 1910 of 465,000 and in 1920, 993,000, an increase in the case of Los Angeles of 77 per cent in the 10-year period and in the case of Detroit 113 per cent in the same period.

The Clerk read as follows:

SALARIES, NAVY DEPARTMENT

For personal services in the District of Columbia in accordance with the classification act of 1923, \$423,000.

Mr. STENGLE. Mr. Chairman, I move to strike out the last word for the purpose of asking the chairman of the committee a question. What do I understand that the salaries here referred to for personal services for the Navy Department have reference to?

Mr. FRENCH. The salaries pertaining to the Bureau of Navigation in the District of Columbia.

Mr. STENGLE. No reference is made to changes made in the classification.

Mr. FRENCH. That language to which the gentleman refers is general language and will apply to this section just as to the section to which it is attached.

Mr. STENGLE. We are to assume that what is laid down on the first page covers all other cases.

Mr. FRENCH. It runs right through the bill, applying to every case.

Mr. STENGLE. Mr. Chairman, I withdraw the pro forma amendment.

The Clerk read as follows:

MAINTENANCE

For fuel; the removal and transportation of ashes and garbage from ships of war; books, blanks, and stationery, including stationery for commanding and navigating officers of ships, chaplains on shore and afloat, and for the use of courts-martial on board ships; purchase, repair, and exchange of typewriters for ships; packing boxes and materials; interior fittings for general storehouses, pay offices, and accounting offices in navy yards; expenses of disbursing officers; coffee mills and repair thereto; expenses of naval clothing factory and machinery for the same; laboratory equipment; purchase of articles of equipment at home and abroad under the cognizance of the Bureau of Supplies and Accounts, and for the payment of labor in equipping vessels therewith, and the manufacture of such articles in the several navy yards; musical instruments and music; mess outfits; soap on board naval vessels; tools, ferrage, yeomen's stores, safes, and other incidental expenses; all freight and express charges pertaining to the Navy Department and its bureaus; labor in general storehouses, paymasters' offices, and accounting offices in navy yards and naval stations, including naval stations maintained in island possessions under the control of the United States, and expenses in handling stores purchased and manufactured under "the naval supply account fund"; in all, \$9,800,000: *Provided*, That the sum to be paid out of this appropriation, under the direction of the Secretary of the Navy, for chemists and for clerical, inspection, and messenger service in the supply and accounting departments of the navy yards and naval stations and disbursing offices for the fiscal year ending June 30, 1926, shall not exceed \$2,850,000.

Mr. TAYLOR of West Virginia. Mr. Chairman, I move to strike out the last word. I desire to ask the gentleman from Idaho a question in order to get it into the Record, and that is whether or not the necessary appropriation has been made for the upkeep of the South Charleston armor-plate plant, at South Charleston, W. Va., that is being now maintained as a closed shop.

Mr. FRENCH. That institution is on a closed-down basis. We carry in the Bureau of Ordnance the amount recommended by the Budget for the maintenance of the institution in that shape, and we have recognized the importance of maintaining it.

Mr. TAYLOR of West Virginia. I thank the gentleman.

Mr. FRENCH. We have given just what was asked for.

Mr. TAYLOR of West Virginia. And that was about \$107,000?

Mr. FRENCH. Yes; \$107,700.

Mr. TAYLOR of West Virginia. I thank the gentleman. The South Charleston armor plant is in my district. The people are very much interested in it; and, while it is a closed shop, the people there were so patriotic at the time the project was put forth that they contributed \$250,000 or \$270,000 to purchase the land on which this magnificent plant is situated. They are very much interested in it; and, while closed at the present time, they hope that sooner or later the requirements of the Navy will be such that the plant will be reopened. For this reason I wanted it to appear in the Record that a suitable appropriation was being made for the upkeep of the plant on the closed-shop basis.

Mr. Chairman, I withdraw the pro forma amendment.

The Clerk read as follows:

FUEL AND TRANSPORTATION

For coal and other fuel for steamers' and ships' use, including expenses of transportation, storage, and handling the same; maintenance and general operation of machinery of naval fuel depots and fuel plants; water for all purposes on board naval vessels, and ice for the cooling of water, including the expense of transportation and storage of both, \$15,460,000: *Provided*, That fuel acquired other than by purchase shall not be issued without charging the applicable appropriation with the cost of such fuel at the rate current at the time of issue for fuel purchased: *Provided further*, That the President may direct the use, wholly or in part, of fuel on hand, however acquired, to be charged at the last issue rate for fuel acquired by purchase when, in his judgment, prices quoted for supplying fuel are excessive.

Mr. NEWTON of Minnesota. Mr. Chairman, I move to strike out the last word, in order to ask the gentleman from Idaho a question. I notice the committee has allowed for fuel the amount recommended by the Budget, fifteen million and a fraction dollars. That contemplates the carrying out in its entirety the program of the Navy Department for maneuvers this coming fiscal year?

Mr. FRENCH. The members of the committee believe that it will be adequate, with this possibility: We can not forecast the cost of coal and oil. It has been represented to the committee that the price of coal may possibly be higher than when the estimates were made. Also, it is possible that some of the engineering items that it was thought could be taken care of between now and July 1, and that would reduce fuel costs, will not be able to be completed by that time. It was expected that certain work would be completed that would effect economies in fuel, and thus save a considerable amount. There is the possibility that the amount will not be quite enough to care for all the maneuvers that the plans of the department had in mind. But we thought that it would come so near to doing so and that through the economies that could be forced, or possibly could be effected if it appeared necessary for the department to effect them in order to accomplish the main purpose, we did not feel justified in disturbing the amount in the Budget.

Mr. NEWTON of Minnesota. The amount was fourteen and a half million dollars for the current year, was it not? Is that adequate for maneuvers this coming spring?

Mr. FRENCH. I believe it will be.

Mr. NEWTON of Minnesota. Does the gentleman recall where the maneuvers are planned to take place for the fiscal year 1926?

Mr. FRENCH. The maneuvers for the current year will be in the waters of Hawaii. These maneuvers will run up to nearly the end of the fiscal year, and then the plan is for certain of the ships to engage in a cruise that will include the Philippine waters and Australian waters. The maneuvers for the year 1926, however, should not be confused with the cruise to which I refer and would be off Panama.

Mr. BLANTON. Mr. Chairman, I move to strike out the last two words. A statement was made here this afternoon which was afterwards qualified, but which even then ought not to go into the Record unchallenged. I refer to what was said by our distinguished friend from Illinois [Mr. BRITTON]. He is a very important member of the Committee on Naval Affairs and, of course, he is very helpful to the Appropriations Committee in getting this naval bill passed through Congress. He said that the Secretary of the Navy and some of our high naval officers asserted that Japan was now engaged in military preparation. That far he did not qualify, but he did qualify what he went on further to say—

which may be directed against us.

He later said that these officers did not assert that such military preparations may be directed against us, but that

that was his own conclusion. As to the first part of the statement, which was left unqualified, that Japan is now engaged in making military preparations, I want to say that if such officers did say it they ought to be made to prove it or retract it. It was very unwise for them to say it. I know that such assertions are very helpful in getting a big naval bill passed through this House, but in that connection I want to show you something from Tokyo that is in the newspaper this afternoon. I want to quote now from what the Evening Star of this afternoon says. The Star is a reputable paper, and I believe more that I see in the Star than in almost any other paper. I have learned that it is more reliable than almost any other paper that we have. Notice what the Star says in headlines:

Japan will drop 1,400 officers from the army. Policy of retrenchment, approved by the Government, reduces military force.

This is correspondence of the Associated Press. It comes from Tokyo under date of November 26:

Approximately 1,400 army officers will be discharged from the service within the next year under the drastic retrenchment scheme approved by the Government.

Then, without reading the whole article, it goes on to say that the new military program abolishes four whole divisions.

Mr. MacLAFFERTY. Mr. Chairman, will the gentleman yield?

Mr. BLANTON. Yes.

Mr. MacLAFFERTY. I hope that that is true. I can readily believe that that is true, but the gentleman quotes the Star. Did he note that the Star two days ago stated definitely that the House of Representatives had passed the postal pay bill over the President's veto?

Mr. BLANTON. I do not remember any such item in the Star. Of course, mistakes will happen in the best-regulated families.

Mr. MacLAFFERTY. My recollection is that it was in the Star. Possibly it was not.

Mr. BLANTON. Mistakes will happen in newspapers as well as in families, but this is an Associated Press report coming from Tokyo direct.

Mr. MacLAFFERTY. I hope that it is true.

Mr. BLANTON. The reference about a protest being made to our maneuvers around some islands of ours did not come from the Government of Japan. Our distinguished friend from Illinois [Mr. BRITTEN], whom we all like, ought not to leave the inference that that comes from Japan. That came from the jingo press of Japan. There is a jingo press in Japan just as we have one here in the United States. There is always some press trying to get countries into war. There are always individuals who are trying to get other individuals into a scrap with each other. Lots of people like to see a fight. I do not believe in the Congress of the United States being pushed into a big naval program and a big Army program because a few naval officers want war to come, as many of them do. Do you know that many of the big naval officers want war to come?

Mr. MacLAFFERTY. I, for one, will answer no.

Mr. BLANTON. I did not ask the gentleman to answer.

Mr. MacLAFFERTY. I thought the gentleman was asking the question generally.

Mr. BLANTON. I know the gentleman feels that way, and I feel the other way; but if he had been here as long as I have been, and if he were going to continue to stay here as long as I have already been elected to stay, he would have a different idea about it.

Mr. MacLAFFERTY. Mr. Chairman, will the gentleman yield?

Mr. BLANTON. Yes.

Mr. MacLAFFERTY. We have just received word that the man most beloved in our delegation has passed away this afternoon, and we do not any of us know how long we are going to stay here.

Mr. BLANTON. That is so, and I regret to hear the sad news conveyed by the gentleman, although perhaps the announcement may be somewhat premature, as same are usually made in a more formal way.

Mr. MacLAFFERTY. The statement was made not so much to inform the House as it was to inform the gentleman.

Mr. BLANTON. The longer I live the more concerned I become about the uncertainty of life. Therefore I watch my action here on the floor very closely and I watch carefully my votes on bills. I am not ready to sit here and vote for everything that a little subcommittee of five puts under my nose and tells me to vote for, but I think about it myself in my office. I study this bill in comparison with the bill of

1915 and see the great increases that have been made. I see the great waste, the extravagance in these bills. I can not keep them from passing, but we must not mislead the American people through the jingo press of Japan and the jingo press of the United States. We should let the American people know that there is no probability whatever of war between Japan and America, separated 4,536 nautical miles apart. Secretary Hughes says so in this afternoon's paper in felicitating our new arrivals from Japan. And there is no excuse whatever for this \$370,000,000 naval expenditure.

The CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. FRENCH. Mr. Chairman, the two gentlemen who have just spoken have referred to the maneuvers in Hawaiian waters and to the possible attitude of Japan. The members of the subcommittee think they know fairly well touching the building program of Japan, and as chairman of the subcommittee I say that there is no feverish program of building in Japan touching her navy, and we are not in the slightest way disturbed about the attitude of the Japanese Government toward our country. There seem to be in Japan those who would like to foment trouble. There seem to be those in our own country who would like to foment trouble between our country and Japan for some reason that would not appeal to any lover of humanity anywhere. We have heard of reports in some papers in Japan touching the maneuvers of the fleet this year.

BUT WHAT ARE MANEUVERS, AND WHAT THE PURPOSE?

As the Members of Congress know, it is the policy of the Navy Department to hold annual fleet maneuvers for the purpose of developing efficiency upon the part of officers and men in navigation, and for the purpose of the educational value of such maneuvers, testing out of machinery, gunnery exercise, fire control, and the working out of problems that constantly, in theory, are brought to the direct notice of those whose lives are devoted to the naval service. Such maneuvers are not peculiar to the Navy of the United States. They are practiced by the navies of all the great countries.

In 1923 the United States held her annual maneuvers off the coast of Mexico, Central America, Panama, Colombia, and Ecuador. In 1924 the annual maneuvers were held largely in Caribbean waters. No nation, for a moment, supposed that the place of holding the maneuvers suggested a prospective enemy.

Japan, in 1924, held her maneuvers off the coast of Japan and divided her program two ways. First, she planned that her aviation establishment should semble an attacking air force and a defense air force, the attacking air force coming from the east, with the essential object of destroying important naval and industrial centers in Japan. Following the air maneuvers, her maneuvers included an attack by a naval fleet approaching from the east—the Blue Fleet—with Japan defended by the Red Fleet. The United States is the immediate country to the east of Japan, yet would anybody, for one moment, construe the act of Japan as unfriendly to the United States? No. Absolutely no. Japan, if her fleet is to be efficient and if her air service is to be what it ought to be, must provide maneuver programs. It would be quite impossible for Japan to work out sensible programs that did not vary in different years. The possible enemy is always hypothetical. At one time Japan may work out problems that would involve the potential enemy approaching from the east, at another time from the south, at another time from the mainland of Asia. No one is so foolish as to undertake to suggest to Japan that her maneuver programs are acts of hostility, nor can I conceive the possibility that any thoughtful person in Japan will make any such sinister deduction from any naval maneuver program upon the part of the United States.

Japan and the United States have no cause for antagonism. To the extent that they are rivals, they are friendly rivals, and the same is true of the United States and the other great nations of the world.

If the United States shall hold fleet maneuvers in the Atlantic, is it a threat of war against Great Britain or France? If we hold maneuvers in the Caribbean or off Panama, is it a threat against some South American country? And yet an affirmative answer would be no more fantastic than to say that because the United States in carrying out a maneuver program that has been well known for several years, and during one of such years contemplates problems in the waters of the Hawaiian Islands, is an act of hostility toward the friendly nation of Japan.

The United States has welcomed the representatives of naval establishments of foreign countries time and time again, and I believe that the people of Japan would extend welcome

to the United States were ships of our Navy to pay a visit to her shores. In fact, it would be a recognition by our country of the greatness of our neighbor—just as we would be proud of visits that might be paid to the United States by ships of the Japanese Navy bearing a message of good will that for so many years has been extended by the people generally of Japan to the Nation and the people of the United States.

I have in my hand an Associated Press dispatch carried in the newspapers on December 7 which quotes Admiral Okada, commander in chief of the Japanese Navy. Here is what he says:

TOKIO, December 6 (Associated Press).—I am going to take upon myself all responsibility for declaring that the Imperial Navy is feeling not the least concern about the Pacific maneuvers of the American Navy.

As a sailor I am little interested in international policies, but I am fully convinced that the maneuvers of the American Navy are nothing more nor less than maneuvers of the kind undertaken by navies of every other nation, although may be on a little larger scale and of greater duration. Such exercises carried out 3,000 miles off the shores of Japan signify very little in our eyes.

Were I a statesman I would feel far more deeply about the attitude of the press, which is ever intent upon making capital of matters of this kind, eventually creating an atmosphere inconsistent with international friendship and good understanding between nations.

Here they fret and fume about ulterior intentions of America, while there they write about Japan's suspicions. One is as groundless as the other. I do not deny that some suspicion is entertained by a limited section of our public, but I do assert that it is far from the sense of the entire Japanese nation or navy.

Gentlemen of the committee, this is the type of thought that ought to pervade the people of America. As a people we admire Japan, we admire her progress, her genius, her statesmen, her people. Japan is one of the truly great nations of the world. There is no thought in the minds of most of the people of our country hostile to Japan. We wish her the greatest progress than can come to a nation. Especially do we wish that every success and progress may come to a nation with which we are bound by ties that span the Pacific Ocean, ties of commerce, of fellowship, of association and good will, ties that bind us and will continue to bind us, we trust, in bonds of friendship for the centuries to come. [Applause.]

The CHAIRMAN. Without objection, the pro forma amendment is withdrawn, and the Clerk will read.

The Clerk read as follows:

SALARIES, NAVY DEPARTMENT

For personal services in the District of Columbia, in accordance with the classification act of 1923, \$830,000.

Mr. FRENCH. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. CHINDBLOM, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee, having had under consideration the bill H. R. 10724, had come to no resolution thereon.

SENATE BILLS REFERRED

Under clause 2 of Rule XXIV, Senate bills of the following titles were taken from the Speaker's table and referred to their appropriate committees, as indicated below:

S. 3576. An act for the relief of Margarethe Murphy; to the Committee on Claims.

S. J. Res. 155. Joint resolution providing for the filling of a proximate vacancy in the Board of Regents of the Smithsonian Institution of the class other than Members of Congress; to the Committee on the Library.

S. J. Res. 154. Joint resolution providing for the filling of a proximate vacancy in the Board of Regents of the Smithsonian Institution of the class other than Members of Congress; to the Committee on the Library.

S. J. Res. 152. Joint resolution to accept the gift of Elizabeth Sprague Coolidge for the construction of an auditorium in connection with the Library of Congress and to provide for the erection thereof; to the Committee on the Library.

ENROLLED HOUSE JOINT RESOLUTION PRESENTED TO THE PRESIDENT FOR HIS APPROVAL

Mr. ROSENBLUM, from the Committee on Enrolled Bills, reported that this day they had presented to the President of the United States for his approval the following joint resolution: H. J. Res. 310. Joint resolution authorizing payment of salaries of the officers and employees of Congress for December, 1924, on the 20th day of that month.

EXTENSION OF REMARKS

Mr. KINCHELOE. Mr. Speaker, I want to renew the request to extend the remarks that I made to-day by inserting a piece from a paper on the scrapping of the battleship *Washington* by Will Rogers. The gentleman who objected before has withdrawn his objection and therefore I prefer my request.

The SPEAKER. The gentleman from Kentucky asks unanimous consent to extend his remarks in the RECORD by inserting an article from a newspaper about the scrapping of the battleship *Washington*. Is there objection? [After a pause.] The Chair hears none.

Mr. KINCHELOE. Mr. Speaker, I objected this morning to the extension of remarks by the gentleman from Washington [Mr. JOHNSON]. I desire to withdraw that objection, and if necessary to prefer the request that he be permitted to extend his remarks made this morning.

The SPEAKER. Is there objection to the request? [After a pause.] The Chair hears none.

DEATH OF HON. JULIUS KAHN

Mr. CURRY. Mr. Speaker, it is with profound sorrow that it becomes my duty to announce to the House the death at his home in San Francisco this afternoon of that splendid citizen, patriotic American, and distinguished Member, the Hon. JULIUS KAHN, a Representative in the Congress from the fourth California district. Mr. KAHN's sickness and death was undoubtedly the result of his strenuous work on the Committee on Military Affairs as the ranking Republican member, and later, as the chairman of that committee during and after the World War.

At some future time, I shall ask that a day be set aside for services to be held and addresses made on the life and public services of our departed colleague.

At present I send to the Clerk's desk the following resolutions for which I ask immediate consideration:

The SPEAKER. The gentleman from California submits a resolution, which the Clerk will report.

The Clerk read as follows:

Resolution 385

Resolved, That the House has heard with profound sorrow of the death of Hon. JULIUS KAHN, a Representative from the State of California.

Resolved, That the Clerk communicate these resolutions to the Senate and transmit a copy thereof to the family of the deceased.

Resolved, That as a further mark of respect this House do now adjourn.

The SPEAKER. The question is on agreeing to the resolution.

The question was taken, and the resolution was agreed to.

ADJOURNMENT

The SPEAKER. In accordance with the resolution adopted, the House stands adjourned until 12 o'clock to-morrow.

Accordingly (at 4 o'clock and 28 minutes p. m.) the House adjourned until to-morrow, Friday, December 19, 1924, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

744. A letter from the Secretary of the Treasury, transmitting a detailed statement showing the number of claims filed under the act of Congress approved August 25, 1919, and the present status of the work involved in connection with their adjudication; to the Committee on Expenditures in Public Buildings.

745. A communication from the President of the United States, transmitting an estimate of appropriation for the Executive office for the fiscal year ending June 30, 1925, to remain available until June 30, 1926, for the expenses of an agricultural conference assembled in November, 1924, \$50,000 (H. Doc. No. 496); to the Committee on Appropriations and ordered to be printed.

746. A letter from the Secretary of the Interior, transmitting report of withdrawals and restorations under act of June 25, 1910 (36 Stat. 847), during period December 1, 1923, to November 30, 1924, inclusive; to the Committee on the Public Lands.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of Rule XIII,

Mr. GRAHAM: Committee on the Judiciary. H. R. 10624. A bill to enlarge the powers of the Washington Hospital for

Foundlings and to enable it to accept the devise and bequest contained in the will of Randolph T. Warwick; with an amendment (Rept. No. 1055). Referred to the House Calendar.

CHANGE OF REFERENCE

Under clause 2 of Rule XXII, committees were discharged from the consideration of the following bills, which were referred as follows:

A bill (H. R. 10417) granting an increase of pension to Ann M. Barker; Committee on Pensions discharged, and referred to the Committee on Invalid Pensions.

A bill (H. R. 10624) to enlarge the powers of the Washington Hospital for Foundlings and to enable it to accept the devise and bequest contained in the will of Randolph T. Warwick; Committee on the District of Columbia discharged, and referred to the Committee on the Judiciary.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. MAGEE of Pennsylvania: A bill (H. R. 10947) granting the consent of Congress to the county of Allegheny, Pa., to construct a bridge across the Monongahela River, in the city of Pittsburgh, Pa.; to the Committee on Interstate and Foreign Commerce.

By Mr. LEAVITT: A bill (H. R. 10948) to amend Public No. 292, Sixty-eighth Congress, to provide for the payment of water charges in connection with Indian irrigation projects; to the Committee on Indian Affairs.

By Mr. LAMPERT: A bill (H. R. 10949) to amend the act entitled "An act to provide revenue, to regulate commerce in foreign countries, and to encourage the industries in the United States, and for other purposes," approved September 21, 1922; to the Committee on Ways and Means.

By Mr. DOUGHTON: A bill (H. R. 10950) to provide for the securing of lands in the Southern Appalachians for the purpose of a national park; to the Committee on the Public Lands.

By Mr. WILLIAMS of Texas: A bill (H. R. 10951) to provide for the acquisition of a site and the erection of a public building thereon at Bowie, Tex.; to the Committee on Public Buildings and Grounds.

By Mr. OLDFIELD: A bill (H. R. 10952) to amend the World War adjusted compensation act; to the Committee on Ways and Means.

By Mr. BRITTEN: Joint resolution (H. Res. 384) authorizing the President to call a conference of the white nations bordering on the Pacific Ocean for the discussion of ways and means for promoting a better economic, commercial, and political understanding between said nations; to the Committee on Foreign Affairs.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ACKERMAN: A bill (H. R. 10953) to remit the duty on a carillon of bells imported for Grace Church, Plainfield, N. J.; to the Committee on Ways and Means.

By Mr. ANTHONY: A bill (H. R. 10954) granting an increase of pension to Charles F. Harms; to the Committee on Pensions.

By Mr. CABLE: A bill (H. R. 10955) granting a pension to Leota Dell Sharp; to the Committee on Invalid Pensions.

By Mr. CULLEN: A bill (H. R. 10956) for the relief of Mary Reithel; to the Committee on Claims.

By Mr. DICKINSON of Iowa: A bill (H. R. 10957) for the relief of J. H. Callahan; to the Committee on the Civil Service.

By Mr. FULLER: A bill (H. R. 10958) granting an increase of pension to Kate Payler; to the Committee on Invalid Pensions.

By Mr. GIBSON: A bill (H. R. 10959) granting an increase of pension to Charlotte M. Combs; to the Committee on Invalid Pensions.

By Mr. HADLEY: A bill (H. R. 10960) granting an increase of pension to Laura G. Weisenberger; to the Committee on Pensions.

By Mr. HARDY: A bill (H. R. 10961) granting an increase of pension to Mary A. Baldrige; to the Committee on Invalid Pensions.

By Mr. HAWLEY: A bill (H. R. 10962) granting an increase of pension to Madlum Milledge; to the Committee on Invalid Pensions.

By Mr. JOHNSON of Washington: A bill (H. R. 10963) to reimburse David J. Williams for cash shortage due to theft of public funds; to the Committee on Claims.

By Mr. KEARNS: A bill (H. R. 10964) granting an increase of pension to Rebecca A. Kidd; to the Committee on Invalid Pensions.

By Mr. KOPP: A bill (H. R. 10965) granting a pension to Eliza A. Corbett; to the Committee on Invalid Pensions.

By Mr. MOORE of Georgia: A bill (H. R. 10966) for the relief of Mrs. Walter L. Evans; to the Committee on Claims.

By Mr. MORRIS: A bill (H. R. 10967) granting a pension to William A. Rogers; to the Committee on Pensions.

By Mr. OLDFIELD: A bill (H. R. 10968) granting a pension to Mary E. Smith; to the Committee on Pensions.

By Mr. PATTERSON: A bill (H. R. 10969) to authorize the appointment of Miles Gilman as a chief pay clerk on the active list of the United States Navy; to the Committee on Naval Affairs.

By Mr. PURNELL: A bill (H. R. 10970) granting an increase of pension to Lucinda Brown; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10971) granting an increase of pension to Martha E. Griffith; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10972) granting an increase of pension to Louisa Lookabaugh; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10973) granting an increase of pension to Mary C. Spencer; to the Committee on Invalid Pensions.

By Mr. REID of Illinois: A bill (H. R. 10974) granting a pension to Mary E. Muzzy; to the Committee on Invalid Pensions.

By Mr. SHREVE: A bill (H. R. 10975) granting an increase of pension to Caroline I. Minneley; to the Committee on Invalid Pensions.

By Mr. SPROUL of Kansas: A bill (H. R. 10976) granting an increase of pension to William Cotter; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10977) granting a pension to Julia A. Dugan; to the Committee on Invalid Pensions.

By Mr. THOMPSON: A bill (H. R. 10978) granting an increase of pension to Henrietta Grubb; to the Committee on Invalid Pensions.

By Mr. UNDERWOOD: A bill (H. R. 10979) granting an increase of pension to Matilda Arnold; to the Committee on Invalid Pensions.

By Mr. WILLIAMS of Michigan: A bill (H. R. 10980) granting an increase of pension to Evaleen M. Davidson; to the Committee on Invalid Pensions.

By Mr. WOODRUFF: A bill (H. R. 10981) granting an increase of pension to Mary E. Martin; to the Committee on Invalid Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

3258. By Mr. DOYLE: Petition of the City Council of Chicago, Ill., requesting that the United States airplane flagship *Chicago* be placed in the custody of the city of Chicago; to the Committee on Military Affairs.

3259. By Mr. GALLIVAN: Petition of Judge David A. Lourie, superior court, Boston, Mass., recommending favorable consideration of joint resolution providing for admission of approximately 8,000 immigrants now stranded at various European ports holding passports duly viséed by United States consular officers before July 1, 1924; to the Committee on Immigration and Naturalization.

3260. By Mr. HAWLEY: Petition of citizens of McMinnville, Falls City, Newberg, Medford, Grande Ronde, Dundee, Cornelius, in the State of Oregon, asking the House of Representatives not to concur in the passage of the compulsory Sunday observance bill (S. 3218); to the Committee on the District of Columbia.

3261. By Mr. KING: Petition of Hon. R. D. Robinson, Galesburg, Ill., favoring the postal salary increase bill; to the Committee on the Post Office and Post Roads.

3262. By Mr. O'CONNOR of New York: Petition of the executive committee of the Democratic County Committee of the County of New York, in favor of the postal salary increase bill (S. 1898); to the Committee on the Post Office and Post Roads.

3263. By Mr. O'CONNELL of New York: Petition of the Medical Society of the County of Kings, 1313 Bedford Avenue, Brooklyn, N. Y., favoring the postal salary increase bill (S. 1898); to the Committee on the Post Office and Post Roads.

3264. Also, petition of the Homestead Civic Association, of Woodhaven, Long Island, N. Y., favoring the postal salary increase bill (S. 1898); to the Committee on the Post Office and Post Roads.

3265. By Mr. VINCENT of Michigan: Petition of citizens of Gratiot County and Montcalm County, Mich., protesting against the passage of Senate bill 3218, providing for Sunday observance; to the Committee on the District of Columbia.

SENATE

FRIDAY, December 19, 1924

(Legislative day of Tuesday, December 16, 1924)

The Senate met at 12 o'clock meridian, on the expiration of the recess.

The PRESIDENT pro tempore. The Senate will receive a message from the House of Representatives.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Hattigan, one of its clerks, announced that the House had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 6941) granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent children of soldiers and sailors of said war.

ENROLLED BILLS SIGNED

The message also announced that the Speaker of the House had affixed his signature to the following enrolled bills and they were thereupon signed by the President pro tempore:

H. R. 10650. An act to authorize the settlement of the indebtedness of the Republic of Lithuania to the United States of America; and

H. R. 10651. An act to authorize the settlement of the indebtedness of the Republic of Poland to the United States of America, and for other purposes.

DEBT SETTLEMENT WITH LITHUANIA—CORRECTION

Mr. SMOOT. Mr. President, I rise to make a correction in the report (No. 811) accompanying the bill (S. 3554) to authorize the settlement of the indebtedness of the Republic of Lithuania to the United States of America. In the report on page 3, where is set forth the agreement relative to the indebtedness, the Public Printer has made a mistake. It is there stated that the rate of interest is $4\frac{1}{2}$ per cent per annum. It should be $4\frac{1}{4}$ per cent. It is a mistake on the part of the Printing Office, and I desire that there shall be no question about it so far as the Record is concerned, so I make this statement, that the correction may appear.

Mr. ROBINSON. I am interested to know if the Senator has examined the manuscript upon which the report was based.

Mr. SMOOT. I have, and it is $4\frac{1}{4}$ per cent there. It is purely a mistake on the part of the printer.

CLAIMS OF CONTRACTORS FOR POST OFFICE AND OTHER BUILDINGS

The PRESIDENT pro tempore laid before the Senate a communication from the Secretary of the Treasury, transmitting, pursuant to law, a detailed statement showing the number of claims, at the close of business on November 30, 1924, under the act of Congress approved August 5, 1919, and amendments thereto, filed by contractors and subcontractors for post office and other building work under the supervision of the Treasury Department, which was referred to the Committee on Public Buildings and Grounds.

PETITIONS AND MEMORIALS

The PRESIDENT pro tempore laid before the Senate a petition of the Council of the City of Chicago, Ill., praying that the U. S. airplane flagship *Chicago* be placed in the custody of the city of Chicago, which was referred to the Committee on Military Affairs.

Mr. PEPPER presented the memorial of the Philadelphia (Pa.) Board of Trade, relative to House bill 8887, the so-called McFadden bill, amending the national banking laws and the Federal reserve act, which was referred to the Committee on Banking and Currency.

Mr. MAYFIELD presented a memorial numerously signed by sundry citizens of San Antonio, in the State of Texas, remonstrating against the passage of legislation providing for compulsory Sunday observance in the District of Columbia, which was referred to the Committee on the District of Columbia.

Mr. BROUSSARD presented memorials numerously signed by sundry citizens of New Orleans and Louisiana, all in the State of Louisiana, remonstrating against the passage of

legislation providing for compulsory Sunday observance in the District of Columbia, which were referred to the Committee on the District of Columbia.

ARLINGTON MEMORIAL BRIDGE

Mr. FERNALD. Mr. President, I am receiving a great many letters from governors of States, particularly in the South and West urging the passage of the Arlington Memorial Bridge bill. I do not ask that they all be printed in the Record, but I received this morning a letter from Governor Trinkle of Virginia, that is so concise, terse, and eminently fair, that I ask that it may be printed in the Record, and referred to the Committee on Public Buildings and Grounds.

The PRESIDENT pro tempore. Is there objection? The Chair hears none, and it is so ordered.

The letter is as follows:

COMMONWEALTH OF VIRGINIA,
GOVERNOR'S OFFICE,
Richmond, December 18, 1924.

Senator BERT M. FERNALD,
Washington, D. C.

MY DEAR SENATOR FERNALD: I do hope that you can give your active and energetic support to the Arlington Memorial Bridge out of Washington, leading into Virginia and across to Arlington. All of the people of Virginia and of the entire South would appreciate this. We do hope that the bill may pass.

Very truly yours,

E. LEE TRINKLE,
Governor of Virginia.

REPORTS OF COMMITTEES

Mr. WALSH of Montana, from the Committee on Public Lands and Surveys, to which were referred the following bills, reported them each without amendment and submitted reports thereon:

A bill (S. 3548) for the relief of the heirs of Karl T. Larson, deceased (Rept. No. 819); and

A bill (H. R. 7522) to authorize and direct issuance of patents to purchasers of lots in the town site of Bowdoin, Mont. (Rept. No. 820).

Mr. ERNST, from the Committee on Finance, to which was referred the bill (S. 3505) for the relief of Canadian Car & Foundry Co. (Ltd.), reported it without amendment and submitted a report (No. 821) thereon.

Mr. SHIPSTEAD, from the Committee on Public Buildings and Grounds, submitted a report (No. 822) to accompany the bill (S. 1181) naming the seat of Government of the United States, heretofore reported by him from that committee.

COLUMBIA BASIN PROJECT

Mr. JONES of Washington. Mr. President, at the last session of Congress we provided for an investigation of what is known as the Columbia Basin project. The appropriation under the terms of the law, however, could not be used after December 31, 1924. The investigating committee will have its report ready by the middle of January or not later than the 1st of February. There is some eight or ten thousand dollars still unexpended that it may be necessary to use for this purpose. The Committee on Appropriations have authorized me to report back the joint resolution, S. J. Res. 157, continuing available the unexpended balance until the report is made. I ask unanimous consent for its immediate consideration.

There being no objection, the joint resolution (S. J. Res. 157) extending appropriation in connection with Columbia Basin investigation, was considered as in Committee of the Whole, and it was read, as follows:

Resolved, etc., That the unexpended balance of the appropriation contained in the act of March 4, 1923 (42 Stat. L. p. 1540), making appropriations for investigation of the feasibility of irrigation by gravity or pumping, water sources, water storage, and related problems in connection with Columbia Basin project, is hereby reappropriated and made available immediately and to continue available until the investigation is completed.

Mr. McNARY. Mr. President, I wish to offer an amendment to the joint resolution.

When the law was passed it contained an appropriation of \$50,000 for an examination and survey of the water power at Umatilla Rapids in the Columbia River. There is a small portion of that money yet unexpended and a little more work to do. I am in accord with the proposal of the Senator from Washington, but I want to amend it by including the Umatilla Rapids project.

Mr. SMOOT. May I say to the Senator that if his amendment is accepted there will not be sufficient money in the fund remaining to finish the examination.

Mr. McNARY. Oh, yes; the examination has been finished. There is \$6,000 yet unexpended and a little more work to undertake in the way of a survey of certain irrigable land in connection with the project.

Mr. SMOOT. The Senator is not asking for an increase of the appropriation?

Mr. McNARY. I am not asking for anything like that. I merely want to have the money already appropriated made available for another year.

Mr. JONES of Washington. When does the Senator from Oregon expect the report to be ready to submit to the Senate under his survey? From the last remark the Senator made I think the conditions are a little different in the two cases. The report that the joint resolution provides for will be made by the middle of January or at latest by the 1st day of February, and that is the only reason why I ask that the money may be made available, but if the Senator's report will not be ready for a year it could very well be taken care of in the regular appropriation bill. I shall not object to the amendment, but it does seem to me that it complicates my proposition very materially, and I hope the Senator will not urge it.

Mr. McNARY. We have for consideration at this time before the committee having in charge the supply bill for the Department of the Interior an amendment making the money available for one year from next July. I am sure that the Senator from Utah [Mr. Smoot] will accept that amendment. It may not be proper to offer it at this time. I do not want to embarrass the joint resolution of the Senator from Washington. If there is any danger to it involved, I withdraw my amendment.

Mr. JONES of Washington. I appreciate that action on the part of the Senator from Oregon.

The joint resolution was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. McNARY:

A bill (S. 3725) to amend the military record of Charles G. Bluff; to the Committee on Military Affairs.

By Mr. HALE:

A bill (S. 3726) for the relief of Walter Dickey (with accompanying papers); to the Committee on Naval Affairs.

By Mr. RANDELL:

A bill (S. 3727) granting the consent of Congress to the police jury of Morehouse Parish, La., or the Louisiana Highway Commission to construct, maintain, and operate a bridge across the Bayou Bartholomew at each of the following-named points in Morehouse Parish, La.: Vester Ferry, Ward Ferry, and Zachery Ferry; to the Committee on Commerce.

By Mr. BROOKHART:

A bill (S. 3728) to amend section 24 of the act entitled "An act for making further and more effectual provision for the national defense, and for other purposes," approved June 3, 1916, as amended; to the Committee on Military Affairs.

By Mr. SHORTRIDGE:

A bill (S. 3729) to provide for the protection of certain navigable waters in the State of California; to the Committee on Commerce.

By Mr. SHEPPARD:

A bill (S. 3730) authorizing the Secretary of Agriculture to formulate and recommend standard weights and standard methods of wrapping, packing, and tying cotton bales, and for other purposes; to the Committee on Agriculture and Forestry.

By Mr. BALL:

A bill (S. 3731) to permit meetings of societies—benevolent, educational, etc.—organized under the laws of the District of Columbia to be held outside of said District; to the Committee on the District of Columbia.

By Mr. BURSUM:

A bill (S. 3732) granting an increase of pension to Robert G. Marmon; to the Committee on Pensions.

ADMISSION OF CERTAIN IMMIGRANTS

Mr. COPELAND. I introduce a joint resolution, which I ask to have read and lie over under the rule.

The joint resolution (S. J. Res. 160) relative to the immigration of certain aliens was read the first time by its title and the second time at length and ordered to lie on the table, as follows:

Resolved, etc., That such persons intending to become immigrants to the United States to whom prior to July 1, 1924, passports had been issued bearing the genuine visés of consuls and consular officers of the

United States executed pursuant to the provisions of the act entitled "An act to limit the immigration of aliens into the United States," approved May 19, 1921, as amended and extended, who are now detained at various European ports in consequence of the exhaustion of the quotas allocated under said act to the respective lands of their nativity or by reason of the provisions of the act entitled "An act to limit the immigration of aliens into the United States, and for other purposes," approved May 26, 1924, may, if otherwise admissible, be permitted severally to enter and remain in the United States without regard to the provisions of the aforesaid acts: Be it further

Resolved, That section 4, subdivision (d), of the aforesaid act, approved May 26, 1924, shall be applicable to the wife and unmarried children under 18 years of age following to join any immigrant referred to in said provision who entered the United States prior to July 1, 1924.

AMENDMENTS TO MUSCLE SHOALS BILL

Mr. COPELAND submitted an amendment and Mr. BROOKHART submitted two amendments intended to be proposed by them to House bill 518, the so-called Muscle Shoals bill, which were severally ordered to lie on the table and to be printed.

AMENDMENT TO AGRICULTURAL APPROPRIATION BILL

Mr. CURTIS submitted an amendment proposing to appropriate \$10,000 for the establishment and maintenance of a market news service at Wichita, Kans., including personal services and other incidental expenses, intended to be proposed by him to House bill 10404, the Agricultural Department appropriation bill, which was referred to the Committee on Appropriations and ordered to be printed.

COMMITTEE SERVICE

On motion of Mr. ROBINSON, and by unanimous consent, the following order was agreed to:

Ordered, That the Senator from Arkansas, Mr. CARAWAY, be assigned to service on the Committee on Public Lands and Surveys.

MUSCLE SHOALS

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 518) to authorize and direct the Secretary of War, for national defense in time of war and for the production of fertilizers and other useful products in time of peace, to sell to Henry Ford, or a corporation to be incorporated by him, nitrate plant No. 1, at Sheffield, Ala.; nitrate plant No. 2, at Muscle Shoals, Ala.; Waco Quarry, near Russellville, Ala.; steam power plant to be located and constructed at or near Lock and Dam No. 17 on the Black Warrior River, Ala., with right of way and transmission line to nitrate plant No. 2, Muscle Shoals, Ala.; and to lease to Henry Ford, or a corporation to be incorporated by him, Dam No. 2 and Dam No. 3 (as designated in H. Doc. 1262, 64th Cong., 1st sess.), including power stations when constructed as provided herein, and for other purposes.

Mr. NORRIS. Mr. President, day before yesterday I offered some evidence showing that three of the directors of the Alabama Power Co. were likewise directors in various subsidiary companies of the General Electric Co. There are two well-known ways of controlling these various things. One is by stock ownership, either in whole or in part, and the other is by interlocking directorates. It already appears that the interlocking directorate exists as between the General Electric Co. and the Alabama Power Co., its subsidiary. I now want to offer to the Senate the facts in relation to another means of control of this same Alabama Power Co. through stock ownership.

The common stock of the Alabama Power Co., 187,510 shares of no par value, is all owned by the Southeastern Power & Light Co., of Maine. A few years ago all of the stock of the Alabama Power Co. was owned by the Alabama Traction, Light & Power Co. (Ltd.), of Canada. It became necessary for some reason that this stock be owned by an American company, and so the Southeastern Power & Light Co. was organized and took over all of the stock of the Alabama Power Co. Whether this transfer was only on paper or a genuine transfer I am not able to say, but at least that is how it is owned. Between 18 and 20 per cent of the common stock of the Southeastern Power & Light Co. is owned by the Electric Bond & Share Co., which, in turn, is entirely owned by the General Electric Co. So that there are two connections between the Alabama Power Co. and the General Electric Co., one by stock ownership and the other by interlocking directorates.

I told the Senate day before yesterday that I was having gathered some information about the stock ownership of various subsidiary companies of the General Electric Co. I have a large part of that information, so far as stock owner-

ship is concerned. I do not yet have the interlocking directors, which Senators will readily see is a very difficult thing to work out, because there are thousands of names and many hundreds of corporations that must be looked into in order to get a correct analysis of the interlocking directorates.

The General Electric Co. owns 100 per cent of the Cooper Hewitt Electric Co., manufacturers of electric lights used by industrial manufacturers, motion-picture studios, photographers, and in photographic laboratories. It also owns 100 per cent of the common stock and 95 per cent of the preferred stock of the International General Electric Co., an export corporation, which handles the engineering, manufacturing, and selling activities and investments in utility enterprises, and so forth, for the General Electric Co. in foreign countries. It also owns 76 per cent of the stock of the Edison Electric Appliance Co. (Inc.). This company is the largest manufacturer of household electrical-heated appliances. I said it owned 76 per cent of the stock. It owns 62 per cent of the common stock and 76 per cent of the preferred stock.

The General Electric Co. also owns two-thirds of the voting stock of the Victor X-Ray Corporation. The General Electric Co. also owns all of the common stock of the Electric Securities Corporation, which is the owner of mortgage bonds of certain electric railway, electric light and power companies, and by its charter has the power to acquire other bonds of similar companies and to pledge any such bonds owned by it to secure its successive series of collateral trust bonds. So there are subsidiary companies, very many of them, of the General Electric Securities Corporation, the names of which I do not have.

The General Electric Co. also owns 50 per cent of the common stock of the Locke Insulator Corporation, which produces all types of insulators for power transmission and special designs of high-voltage porcelains, bus-bar supports, disconnecting switches, and lightning arrestors.

The General Electric Co. also owns a substantial interest in the Electric Vacuum Cleaner Co. (Inc.), which controls the Premier Service Co., with 38 branches in the principal cities of the United States, and the Premier Vacuum Co. (Ltd.), with branches in Toronto and Winnipeg. So there are 40 subsidiary companies of this subsidiary company whose names I do not as yet have.

The General Electric Co. also owns a substantial interest in the Trumbull Electric Manufacturing Co., manufacturers of electric switches and supplies.

The General Electric Co. also has a substantial interest in the Hurley Motor Co.

The General Electric Co. also has a substantial interest in the Radio Corporation of America. The outstanding capital stock of the Radio Corporation of America in 1922 was over \$5,000,000 of common stock and nearly \$4,000,000 of preferred stock. Of this the General Electric Co. owned \$1,876,000 of the common stock and \$620,800 of the preferred stock. On January 28, 1924, the Federal Trade Commission issued a complaint against the Radio Corporation of America, the General Electric Co., and five other companies, alleging a monopoly in radio apparatus and communication, both domestic and transoceanic.

The General Electric Co. also owns the Canadian General Electric Co. (Ltd.), incorporated July 15, 1892, in Canada. This company in 1910 purchased the lands and plant of the Canadian Shipbuilding Co. in Ontario. In 1911 the property and assets of the Sunbeam Incandescent Lamp Co., of Toronto, were acquired. In 1913 the company acquired the property and assets of Allis-Chalmers-Bullock (Ltd.), of Montreal, and the Stratford Mill Building Co., of Stratford, Ontario, and has concluded an agreement with the Allis-Chalmers Manufacturing Co., of Milwaukee, which gives the Canadian General Electric Co. the exclusive right to manufacture and sell in Canada apparatus manufactured by the Allis-Chalmers Manufacturing Co. The business acquired from Allis-Chalmers-Bullock (Ltd.), of Montreal, is being conducted under the name of the Canadian Allis-Chalmers (Ltd.).

In 1919 this company bought the factory formerly occupied by the Mooney Biscuit & Candy Co. (Ltd.), of Stratford, Ontario.

The Canadian Sunbeam Lamp Co. (Ltd.) is the name of the other subsidiary of this company. This subsidiary company operates the largest engineering works in Canada.

An agreement with the General Electric Co., of Schenectady, gives to this company the perpetual and exclusive right to manufacture and sell General Electric apparatus in Canada and Newfoundland. The company has acquired from time to time the rights and business for Canada of various companies owning patents on electrical machines and specialties, including the Edison General Electric Co., the Edison Electric

Light Co., the Thomson-Houston International Electric Co., and so forth.

The General Electric Co. owns a controlling interest in the Canadian General Electric Co. (Ltd.), which has all these subsidiaries which I have enumerated.

The General Electric Co. owns the entire common stock of the Electric Bond & Share Co., which, in turn, has a large number of subsidiary companies, and which acts as fiscal agent or supervises the operations of 11 associated companies, which, in turn, control numerous other utilities. The Electric Bond & Share Co. owns the American Gas & Electric Co., which, in turn, controls the Atlantic City Electric Co., the Benton Harbor-St. Joe Railway & Light Co., the Indiana & Michigan Electric Co., the Kentucky & West Virginia Power Co. (Inc.), the Northwestern Ohio Light Co., the Ohio Power Co., the Ohio Service Co., the Rockford Electric Co., the Scranton Electric Co., the West Virginia Water & Electric Co., the Wheeling Electric Co., the Albany Water & Light Co., the Jonesboro Water Co., and the Montpelier Utilities Co.

This Electric Bond & Share Co., which, as I have stated, is entirely owned by the General Electric Co., also owns the American Power & Light Co., which, in turn, controls the Kansas Gas & Electric Co., the Pacific Power & Light Co., the Portland Gas & Coke Co., the Nebraska Power Co., and the Minnesota Power & Light Co. This last-named company, in turn, owns all of the capital stock of the Great Northern Power Co. and operates its properties under lease.

The American Power Electric Bond & Share Co. also owns the Southwestern Power & Light Co.

The Electric Bond & Share Co., this subsidiary, which is entirely owned by the General Electric Co., also owns the Lehigh Power Securities Corporation, which controls the Pennsylvania Power & Light Co., which was organized in 1920 by a merger of the Pennsylvania Lighting Co., and of the following companies, which had been controlled by the Lehigh Power Securities Corporation: The Lehigh Valley Light & Power Co., the Northern Central Gas Co., the Columbia & Montour Electric Co., the Northumberland County Gas & Electric Co., the Harwood Electric Co., and the Schuylkill Gas & Electric Co. This company, that is, the Lehigh Power Securities Corporation, this subsidiary, in 1923, acquired the properties of the Wilkes-Barre Co., the Lycoming Edison Co., the Lock Haven Electric Light & Power Co., and Jersey Shore Electric Co., and, among other companies, controls the Hagerstown Light & Heat Co., of Washington County, Md.

This same company, the Lehigh Power Securities Corporation, controls the Lehigh Valley Transit Co., which controls, among other companies, the Easton Consolidated Electric Co. The latter company controls the Edison Illuminating Co. of Easton, the Pennsylvania Motor Co., and Easton Transit Co., which, in turn, controls the Easton Transit Co., which controls the Easton Amusement Co. and the Phillipsburg Transit Co.

The Lehigh Power Securities Corporation also controls East End Passenger Railway, the Jersey Shore Electric Street Railway, the South Side Passenger Railway, the Vallamont Traction Co., and the Williamsport Passenger Railway Co.

This subsidiary, the Electric Bond & Share Co., also owns the National Power & Light Co., which, in turn, controls the Houston Lighting & Power Co., the Knoxville Power & Light Co., the Arkansas Central Power Co., the Birmingham Electric Co., and the Memphis Power & Light Co., which has acquired substantially all of the capital stock of the Memphis Street Railway Co.

The same subsidiary owns the New Orleans Public Service (Inc.), which controls the New Orleans City Railroad Co., the St. Charles Street Railroad Co., the Jefferson & Lake Pontchartrain Railway Co., the Railways Realty Co., and the New Orleans Gas Light Co.

It also owns the Carolina Power & Light Co., which controls the Yadkin River Power Co. and the Asheville Power & Light Co.

The same subsidiary also owns the Power Securities Corporation, the principal assets of which consist of all the common stock, except directors' shares, of the Idaho Power Co., and the Idaho Power Co. owns all the issued stock of the Boise Valley Traction Co. and the Nevada Power Co.

The same subsidiary owns the Utah Securities Corporation, which is an investment company that does not operate any properties, but controls the Utah Power & Light Co., which in turn controls the Western Colorado Power Co. and the Utah Light & Traction Co.

The same subsidiary of which I have been speaking also owns the Dallas Power & Light Co. and the Dallas Railway Co. It also owns the American & Foreign Power Co. (Inc.), which was formed to acquire and operate, directly or through

subsidiaries, public utility properties in the United States and foreign countries. The American & Foreign Power Co. has acquired the following companies in South and Central America: Compania de Electricidad de Cardenas, South America; Compania Electrica de Cienfuegos, South America; Compania de Servicios Publicos "Madrado," South America; Compania Electrica de Alumbrado y Traccion de Santiago; Oriente Interurban Electric Co. (Inc.); Compania Cubana de Electricidad, South America; Compania Cubana de Hielo, South America; Camaguey Electric Co., South America; American Foreign Power & Light Co.; Empresa Electrica de Guatemala; Empresa Electrica de Escuintla; Empresa del Alumbrado Electrico del Norte; and the Panama Power & Light Corporation.

Mr. President, at a future date, as soon as I am able, if I succeed in securing data as to the interlocking directorates of these companies, I will submit them to the Senate.

Mr. DILL. Mr. President, will the Senator yield?

The PRESIDENT pro tempore. Does the Senator from Nebraska yield to the Senator from Washington?

Mr. NORRIS. I yield to the Senator.

Mr. DILL. Is the Senator's investigation complete as to the properties owned by the General Electric Co.?

Mr. NORRIS. No. It is a very difficult thing to get them all. Mr. President, I wish the Senator from Idaho [Mr. BORAH] were present, as he is chairman of the committee which has been holding sessions during the late campaign to investigate the campaign expenditures, for I should like to have a statement from him or some one who knows whether that investigation disclosed that any of these companies or their stockholders or their directors or their owners contributed, and to what extent, if at all, they contributed to the campaign that has just ended.

Mr. DILL. The reason I asked the Senator the question is that I did not hear the Senator mention certain power companies in the Northwest that I think have a connection, and, perhaps, a very close connection, with the General Electric Co., although the connection may be through directors. I wondered as to that.

Mr. NORRIS. Of course, the facts I have given do not touch the question of interlocking directorates, but that is another way of controlling.

Mr. SHIPSTEAD. Mr. President—

Mr. NORRIS. I yield to the Senator from Minnesota.

Mr. SHIPSTEAD. From the list the Senator has read one is inclined to inquire if the Senator knows of any concern manufacturing electric supplies or manufacturing electricity which is not owned by the General Electric Co.

Mr. NORRIS. I have not found any, although there may be some. I wish to state further in connection with the Electric Bond & Share Co. that, considering all its subsidiaries, I take it any independent company which might undertake now, for instance, to lease the Muscle Shoals or to develop any other property would find itself unable to float securities unless it came to the General Electric Co. and utilized their machinery.

Mr. DILL. Does the Senator think that it is possible that any company now in existence could take over this lease without the General Electric Co. having an interest in it?

Mr. NORRIS. I do not know of any.

Mr. SHIPSTEAD. I should like to ask the Senator another question.

The PRESIDENT pro tempore. Does the Senator from Nebraska yield to the Senator from Minnesota?

Mr. NORRIS. I yield.

Mr. SHIPSTEAD. It would be interesting, in the light of the information the Senator has given us, if we could find out who owns the General Electric Co. I have for years heard it stated that that company is what is known as a Morgan concern.

Mr. NORRIS. I understand that it is. I have not offered any evidence of that, because, except as it might be interesting to trace through the Morgan concern other connections, I am not particularly interested. What I want the Senate to understand and the country to know is that no matter where we jump, if we are going to turn over this property or any other property, we are going to jump into the lap of the electric water-power trust.

Mr. JOHNSON of California. Mr. President, to one who holds the views that I hold—the views of a lifetime that have been confirmed with the passing of the years—the discussion that has been indulged here has been singularly interesting and illuminating.

The very distinguished Senator from Alabama [Mr. UNDERWOOD], with his usual clarity and with great emphasis, has presented one side. The earnest Senator from Nebraska [Mr.

NORRIS], with all of his enthusiasm, has presented another. I think fundamentally, Mr. President, this is a question of two warring philosophies of government, not wholly so, perhaps, but as the Senator from Alabama said the other day, two conflicting ideas of what might be done under circumstances such as are presented by the Muscle Shoals proposition; and it is on the fundamental idea thus presented that I reach the conclusion that I have reached in this matter.

It seems to me, sir, without discussing in detail what may be sought in the one case or the other, this is plainly a proposition of whether or not, when the United States Government has expended \$150,000,000 in a project it shall continue with that project for the benefit of the people of the United States.

I do not quarrel with the view that is presented by the Senator from Alabama or the view that is presented by those who advocate his course. I recognize that they are just as earnest and just as honest in the view they present for the turning over of this particular project in the manner that they suggest as we who believe that when the Government itself has expended the people's money it should have been expended for all the people, and that the Government should carry on the enterprise whenever necessary for the benefit of all the people.

I heard the Senator from Alabama say the other day that the Senator from Nebraska was dreaming dreams. Maybe he is right. Perhaps the Senator from Nebraska, in what he asks, is dreaming dreams; but since man emancipated himself, Mr. President, men have been dreaming dreams for man and mankind, and it is the dreaming of these dreams that has marked the mileposts in human progress during all the centuries past.

I can recall historically that Galileo dreamed dreams. He dreamed his dreams, and, though compelled to recant under the threat of torture, his frightened lips yet told the immutable and the unchangeable truth.

Newton dreamed a dream as he lay upon the ground and saw an apple fall. He dreamed a dream that now we all understand.

Columbus dreamed a dream of another world far beyond the oceans that then were known—a dream at which every court scoffed and every courtier laughed. We are here to-day because Columbus dreamed that dream.

The men who landed at Plymouth Rock and those who came to Jamestown dreamed a dream of a new empire and a great, new nation. That dream we of this generation realize in part.

Garrison and Wendell Phillips dreamed a dream—a dream that resulted in one of them being mobbed in New York and another chased by a populace in Boston. Just think of it! But Lincoln brought the realization of that dream.

Roosevelt dreamed a dream of the Panama Canal. To-day it is the greatest engineering feat in all the world.

The Senator from Michigan [Mr. COZZENS] dreamed a dream in the city of Detroit—of Detroit public ownership there. To-day that public ownership exists profitably for the city of Detroit.

Down in the city of Los Angeles a self-educated engineer named Mulholland dreamed a dream that water might be brought for domestic purposes 250 miles, over gorges and canyons and impassable mountains. First he was laughed at. That dream to-day is a realization, and Los Angeles draws its great water supply from the Owens Valley, 250 miles distant.

Some men in the city of San Francisco years ago dreamed a dream when the city was in the grip of a street railroad that wrought its own will as it pleased. They dreamed a dream that San Francisco might operate a municipal road. To-day San Francisco operates that road, operates it on a 5-cent fare, and the municipal road there, in opposition to that privately owned, is operated successfully, prosperously, advantageously.

So it has been, Mr. President, with dreams of real men during all the years. Dream on, you Senator from Nebraska, for your dreams mean but one thing. Your dreams, sir, mean that humanity may benefit, people may prosper, and human beings may be a bit happier.

So the dream of the Senator from Nebraska I can appreciate. I trust he will continue iterating and reiterating. I regret the note of discouragement that I observed the other day in his remarks. Oh, be not discouraged, sir! Never mind the temporary defeat or the temporary disaster. Never mind what ephemeral catastrophe there may seem to be, for dreams such as are yours ultimately will prevail, for the truth prevails. Sometimes it is as dangerous to preach the truth as to enter a

powder magazine with a lighted torch, but, nevertheless, truth yet exists; and all history has taught us, all people's governments have taught us, that whatever may be the check, whatever may be the defeat, whatever the haltings, the heartburnings, and the disappointments, they are but ephemeral, and ultimately, finally, the truth will prevail.

As I listened to some of these gentlemen in the debate I thought that possibly for the first time in our history it was suggested that the Government continue with a project that the Government had begun and upon which it had expended the enormous sum of \$150,000,000. I thought, as I listened to some things that were said here, that the Senator from Nebraska was asking an adventure in a field which never before had been touched governmentally in this land. Then I recalled project after project where we had gone on governmentally in exactly the way that the Senator from Nebraska asks in his substitute that we proceed in the Muscle Shoals matter. We have now under operation, maintained by the Government of the United States, many reclamation projects, many reclamation projects in which we develop power, the United States of America develops power, and the United States Government, through its Reclamation Service, sells that power. We have to-day many such projects, I assert; and in the last bulletin published by the Reclamation Service, the little paper called the New Reclamation Era, is a description of cheap electricity served in the Minidoka reclamation project, which I think is sufficiently interesting to call to the attention of this body.

The Minidoka irrigation project in southern Idaho is known as the "electric project." With power houses on Snake River and a network of transmission lines covering the irrigable area, electric service is available to well-nigh every citizen in town or country.

Available from whom? Why, it would seem from the remarks that have been made upon this floor that it would be an impossibility that it should be available from operation by the United States Government; but here, in a small project in Idaho, sparsely settled, the Government of the United States itself furnishes the electricity, with what result, Mr. President?

I proceed, in order to demonstrate that result, with an article to which I have adverted:

The system now supplies energy to nearly 1,100 farms, or approximately half of all farms on the project, in addition to service furnished to the towns and villages.

Somebody asked, "Are you going to aid the farmer by this measure of yours or are you now seeking to deter or retard him?" In the mere matter of power alone the farmer would be aided immeasurably by what is suggested by the Senator from Nebraska; no less so, indeed, as I read his measure, in the matter of fertilizer, too; but to assert that the farmer, under the power provisions that he seeks to put in force and operation, would receive no benefit simply denies the experience of the Government itself in its own reclamation service.

The story of electricity on the project is told in the following by E. B. Darlington, the project superintendent:

On the Minidoka project electricity has become the servant of the farmer and the rural housewife. Through its help a great deal of the drudgery and fatigue of farm life are eliminated and the farm home becomes a place of comfort, convenience, and good cheer comparable to the city residence. The gloom of the long winter evenings is dispelled by the glow of incandescent lamps with which all the farm buildings may be equipped; and it is no longer necessary to carry a lantern from house to barn to light a precarious path, for a powerful yard light mounted centrally on a pole illuminates the farmstead area.

It is a remarkable sight which is presented at night to the traveler coming down the hills lying to the south of the Minidoka project. The farm lights are so numerous and bright that the entire project area has the appearance of an enormous city, and it is sometimes difficult to pick out the location of even such sizable towns as Burley and Rupert.

The Bureau of Reclamation operates a power house at Minidoka Dam having a present maximum capacity of 7,800 kilowatts, and two small plants at American Falls having a total output of about 1,800 kilowatts. These central stations are connected by transmission lines and current is transmitted at a pressure of 30,000 volts. In summer the greater part of the energy is used in pumping water for irrigation, but the project commercial and domestic load is also handled. In the off-peak season a large block of surplus power is used for heating.

Rural service is furnished mainly by small stock companies, organized and incorporated as mutual power companies, 68 per cent of the connected farms being supplied in this way. Current is taken from

the Government high-potential lines through substations, at which it is transformed to 2,200 volts. A very low rate can be made to the rural organizations because of their assumption of the details of distribution. There are 20 of these mutual power companies, operating over 200 miles of line. Other farms are supplied by lines connected to the system serving the several towns on the project.

Mr. FLETCHER. Mr. President, the Senator is making a very interesting statement, but I wonder if he could tell us about what that power is costing.

Mr. JOHNSON of California. Yes; I am coming to that. I continue the reading:

From October 1, 1923, to October 1, 1924, the rural power companies used 554,888 kilowatt hours of energy at a cost to them of \$11,902.86, or an average of a little over 2 cents per kilowatt hour. The maximum demand was 270 kilowatts, culminating in the month of December. The Unity Light & Power Co.—

Which I understand is a cooperative project of the farmers there—

is the largest rural electric organization on the project, operating 45 miles of line and supplying energy to 174 farms. The maximum use during December, 1923, was 15,600 kilowatt hours. The Rural Electric Co., operating near Rupert, has about 75 farms connected.

The uses of electricity on the farm are many and various. The most general use is for lighting, energy for that purpose being universally demanded wherever service has been obtained. The majority of housewives on connected farms use electric flatirons and washing machines. Many customers also use hot plates, grills, toasters, small motors for pumping stock water and grinding feed, vacuum cleaners, cooking ranges, water heaters, and air or space heaters. Farmers are adding more appliances and taking advantage of the conveniences that electricity affords as fast as they are financially able to buy the equipment.

Several farmers on the project have every modern convenience that the city affords, in addition to the satisfaction of rural life. A typical home of this kind is that of Carl Lipps, living about a half mile west of Rupert. He is a stockholder in the Rural Electric Co.

Mr. Lipps operates a dairy farm of 25 acres, upon which he keeps 32 head of stock. He is now milking 24 cows, most of which are Jerseys. The product of the dairy is sold in Rupert, where Mr. Lipps owns a milk route. His land, stock, and improvements represent an investment of about \$11,000.

The Lipps family lives in a handsome, modern home, conveniently arranged and outfitted with many labor-saving devices. So complete is the electrical equipment that Mr. Lipps says he never has to strike a match. The house, as well as the other farm buildings, is cheerfully lighted by electricity. In winter the rooms are made comfortable by electric heat. Mrs. Lipps cooks on a Westinghouse three-plate electric range, uses an electric washing machine, electric hot point and flatirons, electric sweeper, and makes the morning waffles by electricity.

Water pressure for bathroom and kitchen is obtained through the Dayton system. A small motor operates a pump which raises water from a well in the cellar to an air cylinder. When the rising water develops sufficient pressure by compression of the air in the cylinder a switch opens and the motor stops. If the pressure drops the switch closes and starts the motor. This automatic control is very satisfactory, according to Mrs. Lipps. A water heater attached to a large boiler makes hot water available when desired.

In the yard a 500-watt arc lamp illuminates the area surrounding the buildings. At the cattle corrals water is raised directly into the drinking troughs by means of a Meyers pump jack, operated by a small motor. This provides comparatively warm water during the coldest weather, and even in summer time the cattle prefer it to the ditch water in the pastures.

The rural power system also serves a number of electrically operated beet dumps at stations along the railroad lines, where sugar beets are loaded for shipment to the Burley and Paul factories of the Amalgamated Sugar Co. A large alfalfa meal mill also takes power from one of the rural lines. The grinding of hay and grain for stock feed at this mill is of great advantage to stock growers and feeders in the neighborhood. Many thousand sheep and cattle are fed on adjoining farms during the winter.

Poultrymen find electric service of benefit in their business. Many of them have become convinced that by making the short winter day longer for the hen, egg production is considerably increased; and it is a very common sight to see electric lights in the chicken houses. Many farmers are also using electric incubators and brooders.

Many other uses for power are found about the farms. Electric motors are used for feed grinding, ensilage cutting, churning, turning the grindstone and the circular saw, operation of grain fans and blacksmith blowers, running cream separators, sewing machines, and

house fans. All these processes can be and are cheaply and efficiently carried out by Minidoka project water users with the help of electricity.

In addition to this project, there are many others. The Senator from Nebraska may be familiar with what is known as the Guernsey project. I am this morning informed by the gentleman in charge of the Reclamation Service that on the Guernsey project power is sold to municipalities within the project, and a few municipalities that are not within the project,

and to others as well, and that it is utilized for commercial and domestic purposes.

On some eight of the irrigation projects power is developed by the project and sold to farmers or to adjoining municipalities. A list of them I have here in the report of the Reclamation Service, and I ask permission to insert that as a part of my remarks.

The PRESIDENT pro tempore. Is there objection?

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

Power and pumping—Power plants operated on Bureau of Reclamation projects during the fiscal year 1923-24

Project	Name of plant	Type of plant	Station capacity	Number of units	Head	First cost of plant	Cost of operation	Estimated depreciation
			<i>Kw-a</i>		<i>Feet</i>			
Boise	Boise River ¹	Hydroelectric	1,875	3	30	\$167,905.37	\$12,183.61	\$5,540.00
Minidoka	Minidoka	do.	7,000	5	48.21	455,317.40	22,771.25	15,012.00
Do ²	American Falls (2 plants)	do.	1,540	3	36 and 45	75,000.00	3,535.95	14,450.00

¹ Under a contract between the United States and the Idaho Power Co., dated Apr. 1, 1923, the output of this plant is delivered to the company on an exchange basis.

² Plant acquired but not operated during fiscal year 1923-24. Operation and maintenance shown is for repair to plant.

³ Not operated during fiscal year 1923-24.

⁴ Book value at present \$1,889.65.

⁵ This amount includes cost of transmission lines and transformers to value of \$9,000.

⁶ Estimated \$124,300. Not completed.

Mr. JOHNSON of California. I omit the Salt River project, because I am told there has been some recent disposition of it. One other thing, Mr. President. The idea that it is an impossibility for a political subdivision or a municipality to do that which constitutes a monopoly in the public service as well as it can be done by an individual or a specific private corporation is an idea to which I will not for one instant subscribe. It is true that at times in municipal operations there are errors that are grave. It is true, Mr. President, that at times in municipal operation political considerations may control. It is true that there are other mistakes, many and manifold, in municipal operation; nevertheless, wherever it has been honestly administered, municipal operation has no reason to feel that it has not equaled private operation, and certainly where the opportunity exists for comparison it has been of infinitely greater benefit to the people served.

Just adjoining us is Ontario. There the great Province itself has undertaken to do for itself, by public enterprise, that which the Senator from Nebraska would have done under his measure concerning Muscle Shoals. I read just a paragraph from an article recently appearing in the Toronto Globe, one of Canada's chief newspapers, concerning the Ontario Power Commission, which there manufactures, sells, and administers power for the Province of Ontario. The article is as follows:

In benefit to the people, hydroelectric enterprise stands out among the first, and perhaps as the very first, of the achievements recorded in Ontario since confederation. It has immensely increased the comfort of Ontario homes, lessened the drudgery of Ontario housewives, improved and cheapened transportation and the lighting of the streets, and given a tremendous impulse to Ontario industry.

For all this the credit must be given to Sir Adam Beck more than to any other man. He has made enemies, and the people of Ontario can fairly say that they love him for the enemies he has made.

We refer especially to the enemies of public ownership, not only in Ontario but all over Canada and the United States.

They hate the hydroelectric, not for its faults but for its merits. They hate it because it has rescued the people of Ontario from the greed of gain which has laid heavy burdens upon many of the communities in the United States.

They would be pleased to see the hydroelectric destroyed, weakened, or discredited, so that they might share in the plunder and prevent the example of public ownership from spreading.

Is it asserted that what the Province of Ontario can do the Government of the United States can not do? I have not so poor an opinion of my Government or its administration as for an instant to concede that they can not accomplish what the Province immediately adjoining us has accomplished.

After all, Mr. President, this is not in its initial presentation a matter of governmental ownership or governmental control at all. Here in the first instance is the expenditure of a tremendous, an enormous sum, by the Government, and the question thus becomes not one first of Government ownership.

The question is, after the United States Government has expended \$150,000,000, must the United States Government, upon the plea that has been made, turn over the possibilities which lie in the power that may be developed there, and also in the matter of fertilizer, to a private corporation or a private individual, because it is too weak or too dishonest to proceed with what it has thus inaugurated. That, after all, is the

question presented, rather than one of Government ownership, or Government maintenance, or Government control.

I submit, Mr. President, under the peculiar circumstances, there should be little difficulty in the solution of the problem, for, as was well said by the Senator from Missouri [Mr. REED] yesterday, these gentlemen who inveigh most strongly against Government control or Government operation provide for it as the alternative in the very measure which they present. So, after all, it comes back to whether the Government shall proceed with what the Government has inaugurated.

The possibilities of electrical power no man can foresee at this time. The possibilities in dealing with the everyday, hum-drum life of the ordinary citizen none can foretell. What it may do for the farm, what it may do for the housewife, is eloquently depicted in this statement about the Idaho project from which I have read. What it may do for these States where this power is generated requires no fervid imagination to conjure up.

So, with the expenditure of the money by the Government, \$150,000,000 or thereabouts, with a desire to preserve that which belongs to them for all the people, aye, with a desire to see the realization of the dream of the Senator from Nebraska concerning future generations, I trust that the project he presents may be adopted by the Senate.

Mr. NORRIS. Mr. President, I am reminded by the Senator from California to give notice that some time to-morrow, when I can obtain the floor, I expect to explain to the Senate, in a rather brief way, the system of the electrical development which has taken place in Ontario, to which the Senator from California has so well referred.

Mr. HEFLIN. Mr. President, it is evident to my mind that there is an organized filibuster against final action on the Muscle Shoals proposition. Some Senators who supported the Ford offer, which provided for a hundred-year lease, are shying off from the Underwood bill, which is a better bill with regard to the fertilizer provision. It provides for a lease of 50 years, and the Government will get about thirty or forty million dollars more out of it than it would have gotten out of the Ford offer.

I imagine that some of those Senators will have an interesting time explaining to their people just why they supported the Ford offer, which provided for a hundred-year lease and which would have paid the Government less, and why they refuse to support the Underwood substitute, providing for a 50-year lease, and which will pay the Government thirty or forty million dollars more.

I was interested in that part of the speech of the Senator from California in which he spoke about dreaming dreams. If the dream of the Senator from Nebraska shall come true, this country will be cursed with the most gigantic power trust that ever afflicted a free people.

The Senator from Nebraska is in favor of a gigantic power scheme. He frequently refers to it as such, a gigantic power scheme. The Senator from Nebraska does not want to manufacture fertilizer at Muscle Shoals. He comes into the Senate and quotes the testimony of Major Burns, who said it can not be produced at a profit at Muscle Shoals. The Senator from Nebraska is not taking a course that will benefit the farmers of the country. His course will benefit the Power Trust which is rapidly being formed in the United States.

Mr. President, I think we ought to keep faith with the American farmer. When this country was involved in war and we were hard pressed for nitrates, the Government went to Muscle Shoals and built this project with the understanding that part of the power was to be used to make fertilizer in time of peace and nitrates in time of war. I am going to refer to the State of Nebraska and I hope the Senator from Nebraska will be here when I do.

Mr. NORRIS. I am not leaving the Chamber.

Mr. HEFLIN. That idea has been with us all the time until now some Senators seem to be getting cold feet upon the proposition. They are shying off and following the Senator from Nebraska, which means a power scheme and a power scheme only. We may just as well make up our minds to that fact. The Senator from Nebraska has been candid. He does not want fertilizer manufactured there. He wants to supply power, that is all. The farmer has more friends upon the hustings and fewer friends afterwards when it comes to action in his behalf than any class of people in the country. There are many men who, in noisy fashion, proclaim their friendship for the farmers when they are running for office, and some of them put them out of their memories just as soon as they get into this Chamber. Some of these days the intelligent farmers are going to trace the record of Senators and

keep tab upon them and know exactly what they are doing regarding matters that vitally affect agriculture.

There is more misinformation injected into this debate than any debate I think I have ever listened to. Yesterday my good friend from Tennessee [Mr. McKellar] in the course of an interruption of the Senator from New York [Mr. CORELAND], solemnly got up and read from a speech of my colleague [Mr. UNDERWOOD], which he made when a member of the House, as follows:

Mr. McKellar. In 1912, when the Coosa power act was being debated in the House—and, by the way, that was a bill by which the Alabama Power Co. was given the right to dam the Coosa River in Alabama at the Coosa Shoals—the Senator from Alabama [Mr. UNDERWOOD] and I were both in the House, and here is what was said by the Senator from Alabama on that subject:

"Now, what they propose to do—"

That is, the Alabama Power Co.—

"is to spend \$1,600,000 to help make this river navigable and allow the Government to use all the water it needs for navigable purposes and then take the balance of the power created, not for the purpose of selling electricity for light or heat, but for the purpose of manufacturing cyanamide, or lime nitrogen, and fertilizer for the benefit of the farmers of Alabama and of the South."

That ends the quotation from the speech of my colleague which he made in the House, and then the Senator from Tennessee proceeded:

In 1912 the Alabama Power Co. was given the Coosa power site by the Congress on the argument that that company was going to manufacture nitrates for the use of the farmers of Alabama and the South. I have never heard of that company manufacturing a pound of fertilizer. It is selling the power, just as it said it would not do in that case. So I want to say to the Senator that sections 3 and 4, which require probably this very company to make nitrates for farmers, do not appeal to me very much. The same argument was used 12 or nearly 13 years ago—that the Alabama Power Co., if given this great grant of power on the Coosa River in Alabama, by which 60,000 horsepower was generated, were going to make fertilizers for the farmers of the South. It has not been done.

Mr. President, my good friend from Tennessee got himself all mixed up. The Alabama Power Co. was not in the transaction at all. I engineered the passage of the bill through the House that granted the right to build a dam at Lock 18 on the Coosa River, and that bill was vetoed by President Taft.

In 1907 the right was granted as to Lock 12, to which the Senator from Tennessee referred, and the dam was completed about 1912. That was entirely a power proposition. It never was suggested that fertilizer would be manufactured there. The Senator from Tennessee is entirely mistaken in his premises. Lock 18 was the dam to which the Senator from Alabama [Mr. UNDERWOOD] referred in his speech in the House, and the American Cyanamid Co., and not the Alabama Power Co., was the one that was going to make fertilizer at that dam. My good friend from Tennessee is wrong upon this question. But it is like a great many other arguments that have been made in this Chamber by Senators since this debate was begun.

As the Senator from California [Mr. JOHNSON] talked about the Senator from Nebraska [Mr. NORRIS] dreaming dreams I thought of a dream that the Senator from Nebraska had on another occasion regarding the Platte River. When I was campaigning in Wyoming recently in the presidential campaign I crossed the Platte River. I saw little spots of fertile soil producing as fine alfalfa as ever grew out of the ground. I said, "Why do you not grow more alfalfa here? The soil is rich; all you need is water. Why do you not irrigate this land with water from the Platte River?" What do you suppose was the sad and dumb-founding reply? "They will not let us use water out of the river to irrigate these lands through which it flows. Nebraska has the irrigation rights. They irrigate lands in Nebraska with water out of the Platte River, but they will not permit the farmers of Wyoming to irrigate land in Wyoming." So, while the Senator from Nebraska is dreaming dreams here he is following his old trade. He was dreaming dreams back there when they took the water rights away from the people of Wyoming, a sovereign State, and citizens along its shores are not now allowed to dip out a gallon of water from that river for irrigation purposes, although it flows through the State of Wyoming.

The Senator from Nebraska [Mr. NORRIS] must restore to Wyoming that which he has wrongfully taken from her and make amends for the outrage perpetrated upon the citizens of that State before he can in good grace stand here and accuse

other Senators of trying to put something over on somebody else.

So, as my friends the two Senators from Nebraska are day by day trying to tell us how to conduct ourselves and handle this matter so as to be absolutely fair and just to all concerned, I suggest to them that they undream that dreadful dream that they dreamed on the Platte River in Wyoming. Mr. President, I am told that the enterprising women in Wyoming who live along this river sometimes dare to dip a little water out of it for use "upon the washing day," and immediately complaint is made and a howl of protest goes up in Nebraska. Oh, this Nebraska crowd wants everything! If they could they would cut a mighty ditch across the country and turn the Tennessee River into Nebraska and move Muscle Shoals along with it. Mr. President, those of us on the Committee on Agriculture and Forestry who attended the hearings day after day know that the big power companies who had bids pending were friendly to the bill of the Senator from Nebraska and opposed to the Ford offer. I made several of them say they favored his bill rather than the Ford proposition. I asked, "Do you not think this could be done under the Ford proposition?" They would say, "No, sir." "Had you rather have the Norris bill?" "Yes, sir." They were just as friendly as they could be. They felt perfectly at home in the Senator's office. They spent a great deal of time in there and when the committee met we found them in there and frequently they were in friendly conversation with the Senator. They were billing and cooing together, and now the Senator stands up here and talks about some big power concern backing our bill, the Underwood bill, and opposing his bill. They are for his bill. We can see their influence felt around the Chamber every day. They are for his bill; of course they are.

Let me read a little from the testimony. He talks about the Alabama Power Co. here when the fact is that company was not in sympathy with the bill of the Senator from Nebraska. He asked Mr. Yates a question and Mr. Yates answered in friendly fashion, and Mr. Yates said this about himself:

I am vice president and general manager of the Alabama Power Co., living in Birmingham, Ala. I represent the associated power companies of the Southeast with respect to the proposals that they have made on Muscle Shoals for the use of the power and the manufacture of fertilizer.

Then the chairman of the committee, the Senator from Nebraska, said to him:

Some of us think that here at Muscle Shoals is one way and we think a very effective way would be for the Government to retain title down there with some board or official that may be provided by law, who will, in addition to the power to regulate provided by law in the various States, make the Government, so to speak, a sort of partner. The Government will own the business. • • •

Mr. YATES. I would say that we do not see where we could have any objection to that.

Things like that happened all the way through the hearings. They were comforting the Senator from Nebraska. They were going right along with him. They were aiding him, it seemed to me, in every way they could, and they were all fighting the Ford offer. Why? Because the Ford offer provided for the making of fertilizer.

Senators, let us not deceive ourselves. We may deceive some of the people. The whole bone of contention in this fight is making fertilizer at Muscle Shoals. The Fertilizer Trust is encamped at this Capitol. It has already issued a bulletin calling on its forces to fight the Underwood bill and they are saying that it is as objectionable to them as was the Ford offer. That is what I said in the outset. I said the Ford bill was fought by them because they wanted to prevent the making of fertilizer there. I hold in my hand a letter from the American Farm Bureau Federation of Washington which indorses the principle of the Underwood bill and warns us against those who are trying to use the Muscle Shoals Dam purely for power purposes.

We heard the Senator from Missouri [Mr. REED] on yesterday. He does not know exactly whether we can make fertilizer down there or not. It is the most inviting situation for the making of fertilizer I think in the world. With this water power nearly ready to be used; plant No. 2 has already shown that it can make the stuff, and the Cyanamid Co. of Canada is making money in the manufacture of the very same fertilizer material and selling it at a profit in the United States.

I want to read to Senators what an expert in Germany, Doctor Caro, said about this Muscle Shoals proposition. He said:

Far more dangerous [than the competition of Chilean nitrate] appears to be the possibility of competition with artificially fixed nitrogenous fertilizers produced in foreign countries. The largest of these [cyanamide] plants is located in the United States, in Alabama. Its situation is most excellent, and it is connected with the ocean by means of the [Tennessee] river which has been made navigable. It is situated at a source of almost constant water power amounting to 400,000 horsepower, and is right in the midst of a locality where all the raw materials for the lime nitrogen cyanamide process are present at the highest purity and at the lowest prices. Near by are the inexhaustible deposits of high per cent phosphate rock. The possibility, therefore, exists of • • • producing cheaply • • • an ammonium phosphate containing roughly 45 per cent of water-soluble phosphoric acid and 20 per cent nitrogen.

Mr. President, this German expert does not consider that Chilean nitrates are as much to be dreaded as a competitor as the fertilizer plant at Muscle Shoals, making nitrates for the Government in time of war and fertilizer for the farmers in time of peace.

I hear Senators now and then ask, "Are we just going to give that thing down there away?" Is that the way Senators refer to a plant that is about to be dedicated to the use of the oppressed farmers of America? Do Senators call it giving it away, when we are going to use it in benefiting the farmers of the country?

The farmers of America greatly need this 40,000 tons of fixed nitrogen annually? That would amount to 250,000 tons of the kind of fertilizer which we get from Chile; it would amount to exactly the quantity that comes from Chile; I mean that which is actually used upon the farm. So, as I stated the other day, in 11 years we should save to the people of this country from the amount which would otherwise be paid to Chile the whole cost of building at Muscle Shoals the dam, power plants, nitrate plants, and everything else; and in the 50 years we would save about four times the amount of the whole cost of the dam and all the other improvements at Muscle Shoals. That does not look like giving it away, does it?

The Senator from Missouri [Mr. REED] said that the Underwood substitute contains a Government-operation provision, and that is true. He also undertook to show that we were as much committed to the doctrine of Government ownership and operation as is the Senator from Nebraska [Mr. NORRIS]. That can not be true, because at the very outset we are trying to avoid that. We are seeking to lease the plant to a private concern; we are seeking to have it operated by private individuals for the benefit of American farmers in time of peace and for the benefit of the Government in time of war.

However, the substitute provides that if we can not get somebody to bid for the plant, then, of course, rather than let it stand idle we would have the Government operate it. That is all right and proper; but, Mr. President, that is the alternative, or last resort, with us. If we can have somebody bid for Muscle Shoals we want to have the plant operated in that way, and that is what we have provided for in the Underwood substitute; but if nobody will bid, as I said a moment ago, rather than have this great property stand unused and idle, we shall have the Government operate it.

The Senator from Nebraska, however, takes the step in the outset to put the Government into socialism. His proposition would be another step along that line. Whenever the Government commits itself to operate a great project like this, members of the Socialist Party clap their hands for joy and say, "They are coming our way." Mr. President, I am opposed to that.

Individual enterprise and effort and individual initiative and individual ownership of some tangible thing constitute in part the proud birthright of the real American. The incentive to achieve something in your own name and to have and exercise ownership over some kind of property is an inspiring influence in the life of everyone worth while. I am opposed to putting the Government into competition with its citizens. It is the socialistic doctrine that some Senators are encouraging. I imagine that some of them do not fully realize just what they are doing with regard to that; nevertheless, they are encouraging the socialistic idea in our country.

It will be recalled by Senators that this whole project at Muscle Shoals was recommended to be junked after there had been a great deal of work done on the dam. The cofferdams were neglected and were washing away when the Government was finally induced to take up the project again. If Henry Ford never does anything else of value for Muscle Shoals and for the country with regard to this project, he did a great service when he submitted a bid for Muscle Shoals, for that

action on his part caused the Government to go on with that work.

Mr. President, I called attention yesterday to the price at which electric power is sold in Toledo, Ohio. I wish Senators who are informed on the subject of rates would refer to some of the cities where the price charged is higher than it is in cities which have been frequently mentioned during the debate.

I was told by a lady who formerly lived in Toledo that 8 cents per kilowatt-hour is charged in that city, which for 40 kilowatts would be \$3.20 a month. That is about as high a rate as I know anything about, and yet the community of Toledo, she told me, owned the plant, that it belongs to the citizens there. I take it that it costs more to produce the power at some points than at others; it costs more to transmit it to some points far off than to other points near by; I am not informed in detail as to that; but I suggest Toledo to those who frequently refer to Cleveland and Omaha and other places where the community owns the plant.

Mr. HOWELL. Mr. President—

The PRESIDING OFFICER (Mr. JONES of Washington in the chair). Does the Senator from Alabama yield to the Senator from Nebraska?

Mr. HEFLIN. I yield.

Mr. HOWELL. I wish to say that there is no municipal plant operating in Toledo, Ohio.

Mr. HEFLIN. I will ask the Senator who owns the plant there?

Mr. HOWELL. It is owned by the Toledo Edison Co., and a straight line meter rate of 8 cents a kilowatt-hour is charged, as stated by the Senator.

Mr. HEFLIN. I thank the Senator for the information. The lady who spoke to me said that the community owned the plant.

Mr. HOWELL. I have here the National Electric Light Association Rate Book, which states whether the plants are publicly owned or privately owned, and the names of the companies which are operating the privately owned plants. According to this volume, there is no publicly owned plant at Toledo, Ohio.

Mr. HEFLIN. I will inquire if the rate book to which the Senator refers is a recent work on the subject?

Mr. HOWELL. Yes; it is the rate book for 1924.

Mr. HEFLIN. Is there more than one plant at Toledo?

Mr. HOWELL. There is just one plant at Toledo.

Mr. HEFLIN. Well, my informant was mistaken about that; but the rate charged is, as I have stated, 8 cents per kilowatt hour.

Now, Mr. President, I wish to read from a letter addressed to me by Mr. Reid, of the American Farm Bureau Federation. He says:

MY DEAR SENATOR HEFLIN: The American Farm Bureau Federation is not, and never has been, interested in Muscle Shoals as a water-power development solely for the production of electric power for public utilities distribution to a favored locality. The primary interest of the American farmers in Muscle Shoals is cheaper fertilizer materials, a result that will benefit the entire Nation. At last the group who have advocated Government operation of the Muscle Shoals development have been forced to show their hand and admit that their main purpose is to operate Muscle Shoals for power production and that they are not deeply interested in the production of fertilizer.

This attitude taken by those advocating Government operation confirms and strengthens the position the American Farm Bureau has taken in advocating the private operation of Muscle Shoals under certain restrictions that protect the public interest.

These restrictions are: The manufacture of a minimum of 40,000 tons of nitrogen annually; the limitation of profit of fertilizer manufacture to a maximum of 8 per cent; the complete development of the entire Muscle Shoals project at this time; the use of Federal money at 4 per cent interest in constructing the development; the adoption of the amortization plan for returning capital investment.

To secure the economic production of fertilizer materials at Muscle Shoals has been the main purpose of the American Farm Bureau Federation in advocating the Muscle Shoals development. This can be best accomplished by private operation under suitable regulation, and is not guaranteed to us by those advocating Government operation of the Muscle Shoals development.

Because of the turn that the Muscle Shoals controversy has taken in the last few days it becomes necessary for us to again call upon the friends of the fertilizer-using farmers in the United States Senate to give to us the last chance we may have to secure cheap fertilizer materials from Muscle Shoals by voting to give the authority to have this plant leased for private operation in the manufacture of fertilizer materials, and if no such offer is forthcoming that the same restric-

tions and regulations shall apply to Government operation of Muscle Shoals as we are insisting shall apply to any lease for private operation.

Very truly yours,

AMERICAN FARM BUREAU FEDERATION,
By E. B. REID,
Acting Washington Representative.

Mr. President, there is no doubt in my mind that most of the farmers of the South generally are in favor of the Underwood amendment, and practically all of them will be in favor of it when they understand it, because it carries a strict guaranty of 40,000 tons of fixed nitrogen a year, which is the equivalent of the nitrogen coming from Chile which is used on the farms of the country.

Let me say in conclusion that the Underwood substitute as amended is an improvement on the Ford bill in this particular, because it requires the fixed nitrogen to be made. It does not say "if practicable" or "upon demand." It compels the production of 40,000 tons a year; it compels the company to make that much, and it may make more, but it can not sell it for more than 8 per cent profit on the cost of production. Senators, it seems to me that the farmers' interests are well safeguarded.

It looks to me like the best opportunity he has ever had to obtain fertilizer at a low price. It looks to me like the greatest instrumentality ever offered to beat down the price of fertilizer in the United States and free our farmers from the clutches of the fertilizer trust. It does away with the objection of the 100-year lease, because it cuts that half in two. It pays the Government, as I said, between thirty and forty million dollars more than the Ford offer would have paid and makes it a certainty that fertilizer will be manufactured in time of peace and nitrates made in time of war.

Some of those who advocate the bill of the Senator from Nebraska are paying but little attention even to nitrates for war purposes and no attention at all to nitrates for farm purposes in time of peace.

I want to say this to the Senate before I sit down:

Our farmers have passed through the worst deflation panic ever foisted upon a free people. They were robbed, literally robbed, by that panic. They have not yet recovered from its heinous effect. I talked to farmers in the West in October last who had everything they had mortgaged—not only their real estate but their personal effects. They are hard pressed now. I made a speech at Cheyenne, Wyo., and I talked about how the cattlemen were robbed during that deflation panic. After my speech a gentleman came up and asked me if I saw a bunch of cattle just out of the city as I came into Cheyenne from Lusk, Wyo. I told him I did. He said: "I own them. I can not borrow a dollar on them to-day, and I can not sell them at a profit." So, Mr. President, our farmers are still hampered and hurt by disturbing conditions, and here is an opportunity to do something for the American farmer—something worth while. Will you do it?

I do not want these big power concerns to get Muscle Shoals. I know what they are doing. They are back of this Norris scheme as surely as you live and God reigns. They do not think it is going to be adopted finally, but they will hold it and fight behind it in order to keep disposition from being made of this great power site in the interest of the American farmer. If the Underwood bill is passed we will make fertilizer at Muscle Shoals, and they know it; and all of those who say it can not be made there, if they thought that was true would not oppose this bill. They know it can be made, however; and they know that when the Government announces the cost of production of fertilizer, or the private individual making it there, and that price is put before the American farmer, he will then see what an exorbitant price he has been paying all along, and he will at last realize how he has been robbed of millions on fertilizer, and then fertilizer prices the country over will have to come down.

Why, Mr. President, the cutting in half of the price of fertilizer would benefit my State at least \$10,000,000 a year. It would benefit the State of North Carolina \$20,000,000 a year. It would benefit South Carolina \$25,000,000 a year; Georgia, \$15,000,000; and Texas, about \$20,000,000 a year if you cut the price in half. Here is an opportunity to take a step in the right direction; and I trust that the Senate will permit this bill for the benefit of the farmer to go through, and let us show them by our votes that we are going to use this Muscle Shoals project in part in serving the farmers of America. Let us resist the influence of the big power companies and show the farmer that he has enough friends in the United States to do something of value for him. And yet Senators who oppose using this power in part for the benefit of the American

farmer talk for hours about the "tremendous power possibilities of the Tennessee Valley."

Why, Mr. President [Mr. Jones of Washington in the chair], I dare say there are more power possibilities in your State of Washington than there are in the five or six Southern States nearest Muscle Shoals. There are at least 9,000,000 horsepower possibilities in the State of Washington alone. You would judge from hearing some of these Senators speak that we were now about to dispose of the last bit of horsepower there is in the world, and they moan when they say, "You are not going to give it away, are you?" Give it away! Why, Mr. President, we can not dedicate it to a better cause than to the service of the distressed farmers of America. And deep down in their hearts they would rejoice to find that there were enough Senators here who had their interest in mind to pass this bill. It will free us from dependence upon Chile for nitrates in time of war and free our farmers from dependence upon Chile for nitrates in time of peace.

You who talk about building up American industry and enterprise, here is an opportunity to show that friendship. Here is an opportunity to break the chain that binds us in bondage to Chile for our nitrate supply in time of war and our nitrates for fertilizer in time of peace. These are the noble purposes for which we seek to use a part of the power at Muscle Shoals under the Underwood bill. Senators, could we put it to a nobler purpose? I do not think we could.

The PRESIDING OFFICER. The question is on the amendment proposed by the Senator from Montana [Mr. WALSH] to the substitute of the Senator from Alabama [Mr. UNDERWOOD]. Upon that question the yeas and nays have been ordered.

Mr. HOWELL. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Secretary will call the roll.

The roll was called, and the following Senators answered to their names:

Ashurst	Fletcher	McKellar	Sheppard
Bayard	Frazier	McKinley	Shipstead
Borah	George	McNary	Smoot
Brookhart	Gerry	Mayfield	Spencer
Broussard	Glass	Means	Stanfield
Bruce	Gooding	Metcalf	Stanley
Bursum	Greene	Moses	Sterling
Butler	Hale	Neely	Swanson
Capper	Harris	Norbeck	Trammell
Caraway	Harrison	Norris	Underwood
Copeland	Heflin	Oddie	Wadsworth
Cummins	Howell	Overman	Walsh, Mass.
Curtis	Johnson, Calif.	Pepper	Walsh, Mont.
Dial	Jones, N. Mex.	Pittman	Warren
Dill	Jones, Wash.	Ralston	Watson
Ernst	Kendrick	Ransdell	Weller
Fernald	Ladd	Reed, Mo.	Wheeler
Ferris	La Follette	Reed, Pa.	Willis

Mr. WILLIS. I desire to announce that my colleague [Mr. Fess] is unavoidably detained from the Senate at this time by important business.

The PRESIDING OFFICER. Seventy-two Senators have answered to their names. A quorum is present.

Mr. BORAH. Mr. President, there is such a contrariety of opinion about what the real effect of the pending amendment would be that, without going into another extended debate on it, I would like to ask the Senator from Montana just what he intends to accomplish by it. Is he endeavoring to shear the State public utilities commissions of any of their powers?

Mr. WALSH of Montana. No. The amendment provides, in substance, exactly what is provided by section 10 of the Underwood amendment. It reposes in the local authorities the power to regulate the rates, but it then provides that in case there is no local power regulating rates or service, or if the powers granted are not as comprehensive as are those provided in the amendment, then the commission created by the water power act shall act and regulate the rates.

In this particular instance we are told that Alabama has a regulatory statute and a proper commission, but, of course, the Legislature of Alabama may repeal that statute at any time. That is covered in section 10 of the amendment. Section 11 of the amendment deals with the subject of the passage of power in interstate commerce, and in that case, in the same way, the rates are to be regulated by the local authorities. The necessity of having the rates uniform is obvious to everyone, because it would be next to an impossibility to operate under a system under which one rate would be charged in the State of Tennessee, for instance, and another in the State of Kentucky. In a case of that character the Federal authority would operate.

In addition to that, the amendment provides for the supervision of the issuance of securities by the companies handling the power. There is no provision of that character in the Underwood amendment.

Mr. BORAH. If at the time of the passage of the bill, if it should become a law, the State authorities had not provided for a public utilities commission, and they should provide for one afterward, it would be permitted to exercise the power of regulation?

Mr. WALSH of Montana. The amendment provides that whenever such a commission shall be provided, then the jurisdiction of the water-power commission shall cease.

Mr. UNDERWOOD. Mr. President, the difference between the Senator from Montana and myself in regard to his amendment is that he does not make it applicable to the corporation. If the President should fail to obtain a lessee, it is provided that a public corporation shall be created, and the Senator's amendment would leave that corporation without the regulatory powers of the commission. There would have been no dispute between the Senator and myself if he had extended his amendment far enough to cover the corporation, but without covering the governmental corporation I am not in favor of it.

Mr. WALSH of Montana. Mr. President, I want to supplement what the Senator from Alabama has said. The provisions of section 10 of the Underwood amendment appear to subject the corporation, the creation of which is provided for in the bill, to the same regulatory authority; that is, the local authorities.

It is my view that if the plant should be operated by the corporation the creation of which is provided for in the bill, that Federal corporation, whose affairs are to be conducted by a board of trustees of which the Secretary of War would be the chairman, and the other four members of which are to be appointed by the President of the United States, should not be subject to the control of the local authorities. That board itself would be a regulatory authority, and the Federal corporation, having no purpose whatever to make money out of the operation, should not be made subject to regulation the same as a private corporation, which exists solely for the purpose of gain.

The PRESIDING OFFICER. The question is on agreeing to the amendment proposed by the Senator from Montana [Mr. WALSH] to the substitute offered by the Senator from Alabama [Mr. UNDERWOOD]. The Secretary will read the amendment to the amendment.

The READING CLERK. The Senator from Montana proposes to strike out section 10 of the substitute submitted by the Senator from Alabama and in lieu thereof to insert:

SEC. 10. That as a condition of any lease entered into under the provisions of this act every lessee hereunder which is a public-service corporation, or a person, association, or corporation developing, transmitting, or distributing power under the lessee, either immediately or otherwise, for sale or use in public service, shall abide by such reasonable regulation of the services to be rendered to customers or consumers of power, and of rates and charges of payment therefor, as may from time to time be prescribed by any duly constituted agency of the State in which the service is rendered or the rate charged. That in case of the development, transmission, or distribution, or use in public service of power by any lessee hereunder or by its customer engaged in public service within a State which has not authorized and empowered a commission or other agency or agencies within said State to regulate and control the services to be rendered by such lessee or by its customer engaged in public service, or the rates and charges of payment therefor, or the amount or character of securities to be issued by any of said parties, it is agreed as a condition of such lease that jurisdiction is hereby conferred upon the commission created by the act of Congress approved June 10, 1920, upon complaint of any person aggrieved or upon its own initiative, to exercise such regulation and control until such time as the State shall have provided a commission or other authority for such regulation and control: *Provided*, That the jurisdiction of the commission shall cease and determine as to each specific matter of regulation and control prescribed in this section as soon as the State shall have provided a commission or other authority for the regulation and control of that specific matter.

SEC. 11. That when said power or any part thereof shall enter into interstate or foreign commerce the rates charged and the service rendered by any such lessee, or by any subsidiary corporation the stock of which is owned or controlled directly or indirectly by such lessee, or by any person, corporation, or association purchasing power from such lessee for sale and distribution or use in public service shall be reasonable, nondiscriminatory, and just to the customer, and all unreasonable, discriminatory, and unjust rates or services are hereby prohibited and declared to be unlawful; and whenever any of the States directly concerned has not provided a commission or other authority to enforce the requirements of this section within such State or to regulate and control the amount and character of securities to be issued by any of such parties, or such States are unable to agree through their properly constituted authorities on the services to be

rendered or on the rates or charges of payment therefor, or on the amount or character of securities to be issued by any of said parties, jurisdiction is hereby conferred upon the said commission, upon complaint of any person aggrieved, upon the request of any State concerned, or upon its own initiative, to enforce the provisions of this section to regulate and control so much of the services rendered and of the rates and charges of payment therefor as constitute interstate or foreign commerce, and to regulate the issuance of securities by the parties included within this section; and securities issued by the lessee subject to such regulations shall be allowed only for the bona fide purpose of financing and conducting the business of such lessee.

The administration of the provisions of this section, so far as applicable, shall be according to the procedure and practice in fixing and regulating the rates, charges, and practices of railroad companies as provided for in the act to regulate commerce approved February 4, 1887, as amended, and that the parties subject to such regulation shall have the same rights of hearing, defense, and review as said companies in such cases.

In any valuation hereunder for purposes of rate making no value shall be claimed or allowed for the rights granted by this act or under any lease executed thereunder.

The PRESIDING OFFICER. The yeas and nays have been ordered on agreeing to the amendment to the amendment, and the Secretary will call the roll.

The reading clerk proceeded to call the roll.

Mr. DIAL (when his name was called). I am paired with the senior Senator from Colorado [Mr. PHIPPS]. I understand that if present he would vote on this amendment as I shall vote, and I therefore vote. I vote "nay."

Mr. GLASS (when his name was called). I have a general pair with the Senator from Connecticut [Mr. McLEAN], which I transfer to the Senator from Nevada [Mr. PITTMAN] and vote "yea."

Mr. SHIPSTEAD (when the name of Mr. JOHNSON of Minnesota was called). My colleague [Mr. JOHNSON] is detained from the city on account of sickness in his family. He is paired with the junior Senator from Mississippi [Mr. STREPHENS]. If my colleague were here and voting, he would vote "yea."

Mr. RALSTON (when his name was called). On this question I am paired with the junior Senator from Utah [Mr. KING]. If he were present, he would vote "nay" and I would vote "yea." Under the circumstances, I withhold my vote.

Mr. STERLING (when his name was called). I have a general pair with the senior Senator from South Carolina [Mr. SMITH]. I understand that Senator if present would vote the same way I am about to vote, and I therefore vote. I vote "yea."

The roll call was concluded.

Mr. JONES of Washington. I desire to announce that the senior Senator from West Virginia [Mr. ELKINS] is paired with the senior Senator from Oklahoma [Mr. OWEN].

Mr. OVERMAN. I wish to announce that my colleague [Mr. SIMMONS] if present would vote "yea." He is unavoidably detained, and is paired with the junior Senator from Oklahoma [Mr. HARRELD].

Mr. WILLIS. My colleague [Mr. FESS] is unavoidably detained from the Senate. I am advised that if present and permitted to vote he would vote "nay" upon this question.

Mr. GLASS (after having voted in the affirmative). The Senator to whom I transferred my pair with the Senator from Connecticut [Mr. McLEAN] having appeared in the Chamber and voted, I am compelled to withdraw my vote.

The result was announced—yeas 41, nays 29, as follows:

YEAS—41

Ashurst	George	La Follette	Shipstead
Borah	Gerry	McKellar	Standfield
Brookhart	Gooding	McNary	Sterling
Capper	Harris	Mayfield	Swanson
Caraway	Harrison	Neely	Tamm

So the amendment of Mr. WALSH of Montana to Mr. UNDERWOOD's amendment was agreed to.

Mr. GEORGE. Mr. President, some days ago I submitted an amendment to the Underwood substitute and I now call up that amendment and formally offer it.

The PRESIDING OFFICER. The amendment offered by the Senator from Georgia to the amendment of the Senator from Alabama will be read.

The reading clerk read as follows:

On page 16, line 8, strike out the comma and the words "when sold or used shall be" and insert the words "shall be sold for distribution."

Mr. GEORGE. Mr. President, under the Underwood substitute the power plants at Muscle Shoals are dedicated in time of war to national defense and in time of peace to the manufacture of commercial fertilizer. Under the substitute the surplus electric power not necessary for the primary purpose in the bill is authorized to be sold or distributed; that is to say, the bill merely grants a permissive power to the lessee if there should be a lessee found to take over the property under the terms of the measure.

The amendment which I offer has to do entirely with the surplus electric power. It does not interfere with the use of the power for primary purposes provided in the act. It does not interfere with the use of electric power for the purpose of the manufacture of nitrates for war purposes, for national defense purposes, or for the purpose of manufacturing commercial fertilizer, but it merely provides for the disposition of the surplus power. In place of leaving that surplus power in the hands of the lessee to be used as he sees fit, it requires the sale of the surplus power for distribution.

Mr. WADSWORTH. Mr. President, will the Senator yield for a question?

Mr. GEORGE. Certainly.

Mr. WADSWORTH. Is it not a fact that the amendment offered by the Senator from Georgia applies to section 10 of the Underwood substitute as printed and that the section was stricken out by the adoption of the amendment of the Senator from Montana [Mr. WALSH]?

Mr. GEORGE. That is true and I was about to call attention to that fact. I was about to offer my amendment as a separate section to be numbered section 9, because section 9 has also been withdrawn and there is now no section 9 of the bill. The amendment I offer now and ask to have read is offered in lieu of the amendment formerly offered by me. It simply provides that—

The surplus power not required under the terms of this act for the manufacture of nitrogen or fertilizer shall be sold for distribution.

The PRESIDING OFFICER. The Senator from Georgia withdraws his former amendment and proposes an amendment to the amendment, which the Clerk will report.

The READING CLERK. Add a new section, section 9, to read as follows:

SEC. 9. The surplus power not required under the terms of this act for the manufacture of nitrogen or fertilizer shall be sold for distribution.

Mr. UNDERWOOD. I think the terms of the bill as it stands are broad enough to cover surplus power and the sale of it. That certainly was my intention because, although I want as much power as can be used dedicated to the manufacture of fertilizer and nitrogen, whatever is left should be sold and distributed. I think the Senator's amendment only makes more certain what is already in the bill, and I thought I would interrupt the Senator to say that I have no objection to it.

Mr. McKELLAR. Before the amendment to the amendment is adopted I offer the following proviso to the amendment offered by the Senator from Georgia and accepted by the Senator from Alabama.

The PRESIDING OFFICER. The Senator from Tennessee offers the following amendment to the amendment, which will be read.

The READING CLERK. Add at the end of the amendment proposed by the Senator from Georgia the following proviso:

Provided, That all surplus power shall be sold by the lessee without discrimination as to rates or other discriminations to industries, municipal corporations, other corporations, or individuals, within or without

the State of Alabama. If power is sold to distributing companies, such distributing companies shall distribute it for resale to municipalities or to others without discrimination.

The PRESIDING OFFICER. The Chair desires to call the attention of the Senator from Tennessee to the fact that his amendment is an amendment in the third degree.

Mr. McKELLAR. How is it an amendment in the third degree?

The PRESIDING OFFICER. It is an amendment to the amendment of the Senator from Georgia, and his amendment is an amendment proposed to the amendment of the Senator from Alabama. If the Senator from Georgia desires, he can accept the language offered by the Senator from Tennessee.

Mr. GEORGE. I merely wish to say on that point that in view of the adoption of the amendment offered by the Senator from Montana [Mr. WALSH], which really makes the provisions of the water power act applicable to the sale of the surplus electric energy, it seems to me that the amendment offered by the Senator from Tennessee is wholly unnecessary and would merely be a repetition of what is provided and is required in the amendment offered by the Senator from Montana and just agreed to by the Senate.

Mr. McKELLAR. The only trouble about the amendment of the Senator from Georgia, as I see it, is that it is not specific enough and in my judgment it will not produce the result that the distinguished Senator from Georgia has in mind. Just what effect the amendment of the Senator from Montana is going to have on it I can not say—

Mr. WALSH of Montana. Mr. President—

The PRESIDING OFFICER. Does the Senator from Tennessee yield to the Senator from Montana?

Mr. McKELLAR. I yield.

Mr. WALSH of Montana. I would like to call the attention of the Senator from Tennessee to the second part of the amendment offered by myself and agreed to by the Senate, section 11, which in part, reads as follows:

SEC. 11. That when said power or any part thereof shall enter into interstate or foreign commerce the rates charged and the service rendered by any such lessee, or by any subsidiary corporation, the stock of which is owned or controlled directly or indirectly by such lessee, or by any person, corporation, or association purchasing power from such lessee for sale and distribution or use in public service shall be reasonable, nondiscriminatory, and just to the customer; and all unreasonable, discriminatory, and unjust rates or services are hereby prohibited and declared to be unlawful.

Mr. McKELLAR. I am inclined to believe that the amendment covers the proposal submitted by me and I withdraw my proposition.

The PRESIDING OFFICER. The Senator from Tennessee withdraws his offer and the question now is on the amendment offered by the Senator from Georgia [Mr. GEORGE] to the amendment of the Senator from Alabama.

The amendment to the amendment was agreed to.

Mr. HARRIS. Mr. President, I offer an amendment to be known as section 13 to which I hope the Senator from Alabama will not object.

The PRESIDING OFFICER. The Senator from Georgia offers an amendment to the amendment of the Senator from Alabama, which will be reported.

The READING CLERK. Add a new section, to be known as section 13, as follows:

No lease made under the terms of this act shall be transferred without the approval of the President of the United States.

The amendment to the amendment was agreed to.

Mr. HARRIS. I now offer the amendment which I send to the desk.

The PRESIDING OFFICER. The Senator from Georgia offers an amendment to the amendment which will be reported.

The READING CLERK. Add at the end of section 4 the following words:

Farmers shall be given preference in the sale of fertilizer manufactured.

Mr. UNDERWOOD. Mr. President, undoubtedly that will be done and I believe it should be done. I do not think the words hurt the bill any, so I have no objection to the amendment to the amendment.

Mr. WADSWORTH. Will the Senator state what interest will purchase fertilizer other than the farmers?

Mr. UNDERWOOD. I do not know, but I do not care to discuss that point. I do not think the amendment hurts the bill.

Mr. HARRIS. The bill states "farmers and users." Under the terms of the bill all the nitrogen manufactured has to be sold to the users, which would be fertilizer manufacturers. They are now getting nitrates from Chile, and manufacturing this product would not increase the amount of fertilizer and would not bring any competition whatever. It would rather tend to create a monopoly in fertilizer, if they should join together to meet this situation, and I think the farmers ought to have the first preference. That is the idea of the legislation and has been from the very beginning, and that is the reason why I offer the amendment to the amendment.

Mr. WADSWORTH. I think from the explanation just made by the Senator from Georgia that this language may have ramifications far more extended than we imagine. If the amendment to the amendment is to be interpreted in accordance with the explanation he has just made, I imagine the corporation or lessee would be compelled to deliver fertilizer at retail to the farmers.

Mr. HARRIS. They would give preference to the farmers in the sale. That is the way it is worded, that the farmers shall be given preference in the sale of fertilizer.

Mr. WADSWORTH. But the Senator in explaining it stated that the corporation should not be permitted to sell fertilizer to anybody but the farmer. If that is the case they could not sell to anyone else.

Mr. HARRIS. The Senator from New York does not mean to do an injustice in that statement, I am sure. The amendment provides that the farmers shall be given preference and then if they do not buy all the fertilizer manufactured there, the other users would get it.

Mr. UNDERWOOD. I will state to the Senator from New York what I think the only effect of the amendment will be; and I have no objection to it on that ground. Cyanamide itself is a fertilizer if it be properly used. It is used in Germany as a fertilizer direct without any other process. It is rather a dangerous fertilizer if it is not carefully used, because if too much of it be placed on a plant it burns it up; but the well-informed farmer can use cyanamide as a fertilizer. Cyanamide may also be used to make sulphate of ammonia and a number of other advanced products. I take it if the Senator's amendment should be adopted, and there were a demand for cyanamide for fertilizer use, farmers would have the first call in its purchase, and it would go directly to the farmer. I see no objection to the amendment, but I do not think what I have suggested is likely to happen.

Mr. WADSWORTH. I have no objection to the spirit of the amendment, but it was merely the explanation of its purpose that aroused my curiosity. I think the amendment will apply not only to cyanamide but to any other chemical product which may be made at plant No. 2.

Mr. UNDERWOOD. That may be.

Mr. WADSWORTH. We are now expressing the intent of Congress or at least its very urgent desire, and this proposal may have more ramifications than we know of just now. If we shall provide in the law that the farmers shall have preference in the sale of all the products of plant No. 2, we may thereby be getting into trouble.

Mr. BRUCE. Mr. President, to begin with, I should like to know just what the Senator from Georgia means by "fertilizers." Again and again in the course of this discussion the word "fertilizers" has been used as if it were synonymous with nitrogen or nitrates. Does the Senator from Georgia mean full commercial fertilizers?

Mr. HARRIS. The last clause of section 4 of the substitute of the Senator from Alabama provides:

In order that the farmers and other users may be supplied with fertilizers at fair prices.

It is to that language my amendment relates.

Mr. President, if I may, I desire to state that other bills which have heretofore passed the Senate have included the provision that the farmer should be given preference.

Mr. BRUCE. Mr. President, I take it for granted, then, that the word "fertilizers" in the amendment of the Senator from Georgia signifies full commercial fertilizers; that is to say, fertilizers into which not only has nitrogen entered as an ingredient but also potash and phosphoric acid.

I merely desire at this time again to call the attention of the Senate to the fact that I have offered a series of amendments to the Underwood substitute which have not as yet come up for final action by it, but which provide for the elimination from the Underwood substitute of all provisions that contemplate the manufacture by the Government at Muscle Shoals through the agency of a governmental corporation or of a lessee of full commercial fertilizers. If those amendments shall receive the approval of the Senate, and the Senator from

Georgia in his amendment means by the word "fertilizers" full commercial fertilizers, it follows, as a matter of course, that the amendment of the Senator from Georgia would be wholly repugnant to my amendatory propositions.

This is a proper stage of the discussion for once more calling the attention of the Senate to the gross, the outrageous injustice of permitting the Government, directly or through the agency of its subsidiary corporation, or any lessee who may secure the lease under the Underwood substitute, to enter into crushing competition with its own citizens; in other words, of enabling the Government, utterly without regard to any pecuniary deficit of any sort, in the plenitude of its reckless and irresponsible power to trample under foot one of the most important private industrial interests in the United States.

As I have already said, in the city of Baltimore there is no less than \$75,000,000 invested in the manufacture of commercial fertilizer. If the Government or its lessee shall undertake to turn out full commercial fertilizers at Muscle Shoals, the business concerns in Baltimore which are producing thousands of dollars' worth of fertilizers would in all likelihood be unable to compete with the Government or its lessee. Just think of the mockery—the cruel mockery—of this situation, as it has been supplemented by the adoption of the amendment of the Senator from Georgia. Under the provisions of that amendment neither the Government nor its lessee would have the power to use one iota of the surplus electrical energy produced at Muscle Shoals in the manufacture of any commodity of any description whatsoever except commercial fertilizers alone.

Just think of such an anomaly, such a solecism! Neither the Government itself nor its lessee could use any part of this surplus energy save for the purpose of ruthlessly ruining the private manufacturers of commercial fertilizers in the United States. That is the pass to which this debate has come. The great private enterprise of manufacturing full commercial fertilizers has been singled out for destruction exactly as a single deer in a herd might be singled out by a hunter for death. Such monstrous discrimination has never been brought to my attention before in the whole course of my legislative experience.

Much is said from time to time about class injustice. How could there be a more flagrant illustration of class injustice than this? I am the son of a farmer; I have owned farm lands and worked them, and I have as full a measure of sympathy as has any man in this body with the farmer; I know his needs and his requirements as well as does any Member of this body; but what right have we, I ask, consistently with any constitutional or legal principle, to select the farmer as the peculiar child of our legislative favoritism, even to the extent of wiping out perhaps another great business interest in the United States, which, upon every principle of justice and equality, is entitled to quite as great a measure of consideration as is the farmer himself? If the business men of this country who are engaged in the manufacture of commercial fertilizers were as numerous as are the farmers, and if they had as much voting power as have the farmers, neither the Senator from Georgia nor any other Senator in this body, I dare to assert, would venture to bring forward such a program.

Oh, yes; such is your tenderness about competition on the part of the Government with its own citizens that you provide unanimously that not a single particle of the surplus electrical energy at Muscle Shoals shall be used by the Government or its lessee in any sort of industrial enterprise whatsoever except that of making commercial fertilizers, but that it shall all be sold. The Government or its lessee is to be unreservedly at liberty to establish not one commercial fertilizer factory but a thousand if it or he chooses to do so at Muscle Shoals, and to completely confiscate the property of the great private enterprises in this country that are engaged in the composition of commercial fertilizers.

Mr. PITTMAN. Mr. President—

The PRESIDING OFFICER. Does the Senator from Maryland yield to the Senator from Nevada?

Mr. PITTMAN. If I understand the policy of this bill, it is for the very purpose of decreasing the cost of fertilizer to the farmers. Is not that its policy?

Mr. BRUCE. No, sir; not necessarily. That can be accomplished in another way. Let the Government produce nitrogen for war explosives at Muscle Shoals; that is all right; that is an object of supreme, transcendent importance, and let the Government or its lessee also produce nitrogen at Muscle Shoals to be used by the private manufacturers of full commercial fertilizers in this country in the preparation of such

fertilizers. That would probably considerably cheapen the cost of such fertilizers to the farmers.

Mr. PITTMAN. If all of the ingredients of the fertilizer manufactured at this great plant were turned over to those who now manufacture it from importations, we will say, from Chile, or partly from Chile, I can not see where there would be much incentive to reduce the price to the purchaser of the manufactured article.

Mr. BRUCE. Why, if it is true that the Government or its lessee can turn out nitrogen at Muscle Shoals more cheaply than it can be obtained from Chile or anywhere else, of course that fact would inure to the benefit of the farmer when the farmer came to buy full commercial fertilizers from ordinary dealers who had used such nitrogen in the manufacture of fertilizers.

Mr. PITTMAN. Then if the bill, as operating, would reduce the price of fertilizers more than under the method in mind by the Senator from Maryland, he would still be in favor of the method he has in mind, would he?

Mr. BRUCE. I do not know that it would do so. It seems to me that the result would be that the production of nitrogen on a great scale at Muscle Shoals would enable private makers of fertilizers to compound them more cheaply than they are now doing, and therefore to sell them more cheaply than they are now doing to the farmer; but that result marks the extreme limit, as I look at it, to which the Government or its lessee should go. The Government now proposes to turn out a vast amount of electrical energy at Muscle Shoals, and, so far as there is any surplus of that energy, it proposes to sell and distribute it all through the region adjacent to Muscle Shoals. Some of it will be bought by concerns that are engaged in manufacturing one commodity, some of it will be bought by concerns that are engaged in manufacturing another commodity, and so on. In the same way, I say, let the Government limit its operations so far as commercial fertilizers are concerned to the production of nitrogen, and its sale to private makers of fertilizers.

Mr. PITTMAN. I understand the Senator to believe that if the Underwood amendment becomes a law the Government lessee will be able to put the private fertilizer distributors out of business.

Mr. BRUCE. I think it not unlikely that that result would follow. Of course, as I have contended throughout this debate, whenever the Government enters upon an industrial enterprise it enters upon it practically without reference to any pecuniary deficits that may arise from its operations. It has the General Treasury of the United States to rely upon; it has the general resources of Federal taxation to fall back upon; and if it were to undertake to produce commercial fertilizers at Muscle Shoals, my own opinion is that the undertaking might well eventuate in the ruin of every private industrial plant in the United States engaged in the manufacture of commercial fertilizers.

Mr. PITTMAN. Because the Government would be able to make commercial fertilizer cheaper than the private industrial plant?

Mr. BRUCE. No, no! Governmental operation is always marked, if I am right, by a much higher degree of wastefulness and inefficiency than the operation of private industrial enterprises; but when any industrial business in which the Government is engaged results in a loss, the Government simply calls into play all the resources of Federal taxation to make good its losses. When, however, the operation of a private manufacturing enterprise of any sort in the United States ends in grave deficits there is nothing for it to do but to pass into the hands of a receiver.

Mr. PITTMAN. How does the Senator's argument apply to the lessee under the act?

Mr. BRUCE. The lessee, in the first place, with the vast primal agencies that the Government would place in his hands for the production of nitrogen, and the low rental of 4 per cent which he would have to pay, would be in almost as good a position for all practical purposes to bring the irresistible force of public competition to bear on private industrial concerns as the Government itself would be.

Mr. PITTMAN. Then I take it that the Senator's opinion is that the Government is not charging the reasonable value of this property to the lessee under the bill?

Mr. BRUCE. Of course that is to be fixed by the terms of the lease. I think it probable, as has been contended here, that the rental will not be in excess of 4 per cent. When you are dealing with a man who wants to buy your property, and you give him an intimation that your price will be at least so much, you are not likely to obtain any higher price than your minimum; but I am not going into the general

merits of the Underwood substitute. As I have said, I intend to vote for it whether my amendments are defeated or not, because I think that the matter of national defense, to begin with, is one of paramount, supreme, overshadowing importance; and because, therefore, even if I knew that the Government was going to produce nitrogen for war purposes at Muscle Shoals at a loss, I should be prepared to submit to that loss exactly as I am prepared to submit to the deficits that are incurred by the Postal Department of the United States.

I have now answered pretty fully the questions that my friend the Senator from Nevada has asked me, and I do not desire to continue the discussion too long.

Mr. PITTMAN. I will not ask any more questions. I will not take up the time. I was just going to say that it has occurred to me from the Senator's statement that if the Government charged the lessee under this bill the reasonable value of the property, that lessee would be on an equality with the private manufacturers in every particular.

Mr. BRUCE. I do not think that he would be on an equality. I think that he would occupy a position of very superior advantage, because he would have this tremendous plant with which to produce nitrogen, and he would get it at a low rental, in all probability. As I have said, the impact of the competition that he would bring down on the hapless private manufacturer of fertilizers would be about as severe as any that the Government itself could bring down upon him.

The PRESIDING OFFICER (Mr. LADD in the chair). The question is on agreeing to the amendment of the Senator from Georgia [Mr. HARRIS] to the amendment in the nature of a substitute proposed by the Senator from Alabama [Mr. UNDERWOOD].

The amendment to the amendment was agreed to.

CONTROL AND ERADICATION OF EUROPEAN FOWL PEST

Mr. McNARY. From the Committee on Agriculture and Forestry I report a joint resolution, which I ask to have read.

The PRESIDING OFFICER (Mr. JONES of Washington in the chair). Is there objection to the report of the joint resolution? The Chair hears none. The Secretary will read the joint resolution.

The joint resolution (S. J. Res. 159) providing for the control and eradication of the European fowl pest and similar diseases in poultry was read the first time by title and the second time at length, as follows:

Resolved, etc., That to enable the Secretary of Agriculture to meet the emergency caused by the existence of European fowl pest in the United States, and to provide means for the control and eradication of this and similar diseases in poultry, the sum of \$100,000 is hereby appropriated, to be immediately available, out of any money in the Treasury not otherwise appropriated, to be expended in the control and eradication of contagious diseases of poultry, and the acts of February 2, 1903 (32 Stat. L. 791), and March 3, 1905 (33 Stat. L. 1264), are hereby amended so as to include therein poultry and contagious diseases thereof.

Mr. McNARY. I ask unanimous consent for the immediate consideration of the joint resolution.

The PRESIDING OFFICER. Is there objection?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the joint resolution.

The joint resolution was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

OHIO RIVER BRIDGE

Mr. NEELY. Mr. President, in order that a public improvement may proceed during the Christmas vacation, I ask unanimous consent for the immediate consideration of Senate bill 3545, Order of Business 885.

Mr. CURTIS. Mr. President, as I understand, that is just an ordinary bridge bill in the regular form.

Mr. NEELY. It is.

The PRESIDING OFFICER (Mr. LADD in the chair). The Senator from West Virginia asks unanimous consent for the immediate consideration of Senate bill 3545. Is there objection?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill (S. 3545) granting the consent of Congress to the Huntington & Ohio Bridge Co. to construct, maintain, and operate a highway and street-railway toll bridge across the Ohio River between the city of Huntington, W. Va., and a point opposite in the State of Ohio.

The bill had been reported from the Committee on Commerce, with amendments, on page 1, line 3, after the words "That the," to strike out "consent of Congress is hereby granted to

the" and insert "act approved August 18, 1921, granting the consent of Congress to the"; in line 5, after the word "Company," to strike out "its successors and assigns"; in line 7, after the words "street railway," to strike out "toll"; in the same line, after the word "bridge," to strike out "and approaches thereto"; in line 8, after the word "River," to strike out "at a point suitable to the interest of navigation, one end of said bridge being in," and insert "between"; on page 2, line 2, after the word "and," to strike out "the other end at"; in line 3, after the word "opposite," to strike out "said city of Huntington"; in the same line, after the word "Ohio," to strike out "in accordance with the provisions of the act entitled 'An act to regulate the construction of bridges over navigable waters,' approved March 23, 1906," and to insert "be, and the same is hereby, revived and reenacted: *Provided*, That this act shall be null and void unless the actual construction of the bridge hereby authorized be commenced within one year and completed within three years from the date of approval hereof," so as to make the bill read:

Be it enacted, etc., That the act approved August 18, 1921, granting the consent of Congress to the Huntington & Ohio Bridge Co. to construct, maintain, and operate a highway and street railway bridge across the Ohio River between the city of Huntington, W. Va., and a point opposite, in the State of Ohio, be, and the same is hereby, revived and reenacted: *Provided*, That this act shall be null and void unless the actual construction of the bridge hereby authorized be commenced within one year and completed within three years from the date of approval hereof.

SEC. 2. That the right to alter, amend, or repeal this act is hereby expressly reserved.

The amendments were agreed to.

The bill was reported to the Senate as amended, and the amendments were concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

The title was amended so as to read: "A bill to revive and reenact the act entitled 'An act granting the consent of Congress to the Huntington & Ohio Bridge Co. to construct, maintain, and operate a highway and street railway bridge across the Ohio River between the city of Huntington, W. Va., and a point opposite, in the State of Ohio,' approved August 18, 1921."

ADMISSION OF CERTAIN IMMIGRANTS

Mr. COPELAND. Mr. President, a little while ago I sent to the desk a joint resolution asking for the admission to this country of certain persons now in various ports of Europe. These persons have passports and visés, but for one reason or another have not been permitted to come here, particularly on account of the restrictions of the present immigration law. They number altogether five or six thousand, perhaps 8,000. These persons have left their homes, and because they had these properly prepared governmental papers they thought they were to be permitted to come to the United States. They now discover they can not come; and so we find in the ports in England and in France and in Germany and other parts of the world these unfortunate people.

I should in all fairness say that this matter was considered this morning by the Immigration Committee, and the majority of the committee felt that for one reason or another this joint resolution should not prevail. But I appeal to Senators. I feel that there is involved here an ethical question, and certainly on the high ground of humanity we should give consideration to the plight of these unfortunates.

Two or three years ago I had occasion to go up to the Russian border in Poland. You will recall, Mr. President, that during the Great War several hostile armies crossed Poland, and after the war was over the Poles had a three-year war with the Russian Bolsheviks. When the Russians were finally driven out of Poland they destroyed every building—and I mean that literally. They took away the flocks and herds and carried two or three million citizens into captivity. Under the treaty of Riga, the treaty of peace between Russia and Poland, those refugees have been returned to Poland.

I was at Baranowice, on the border between Poland and Russia, and in the first train load I saw come in the morning I arrived there were 1,200 people, 500 of them children. Those persons had been brought from eastern Siberia, over the Ural Mountains and across the plains of Russia, not in Pullman cars but locked in cattle cars. They had been in those cars for eight months. All the food they had to eat during that time was a half a loaf of bread per day per person, and that bread was made of black earth, the seeds of weeds, and the excreta of animals.

I have heard discussed the question, why should not these people go back to their homes, if they are not permitted to sail to the United States? Because, Mr. President, many of them have no homes. Their homes were destroyed. I saw them living in dugouts, and in covered-in portions of the trenches.

Here are these people in the various ports of Europe, with passports visaced by our consuls, and it seems to me we are under a peculiar moral obligation to see that they are permitted to enter our country under the restrictions and conditions which very properly prevail with reference to the admission of immigrants.

I think we may well make an exception to the restrictions fixed by the present immigration law, and permit the admission of these persons. So the appeal I make is that Senators will read this joint resolution and give it serious thought. I hope they may be moved by the spirit of the season to grant permission to these unfortunates to pursue their way to the United States.

MUSCLE SHOALS

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 518) to authorize and direct the Secretary of War, for national defense in time of war and for the production of fertilizers and other useful products in time of peace, to sell to Henry Ford, or a corporation to be incorporated by him, nitrate plant No. 1, at Sheffield, Ala.; nitrate plant No. 2, at Muscle Shoals, Ala.; Waco Quarry, near Russellville, Ala.; steam-power plant to be located and constructed at or near Lock and Dam No. 17, on the Black Warrior River, Ala., with right of way and transmission line to nitrate plant No. 2, Muscle Shoals, Ala.; and to lease to Henry Ford, or a corporation to be incorporated by him, Dam No. 2 and Dam No. 3 (as designated in H. Doc. 1202, 64th Cong., 1st sess.), including power stations when constructed as provided herein, and for other purposes.

Mr. DIAL. Mr. President, I send an amendment to the desk which I desire to offer to the pending substitute.

The PRESIDING OFFICER. The Secretary will state the amendment to the amendment.

The READING CLERK. On page 4, line 17, after the word "properties," insert "either separately or as a whole."

Mr. CURTIS. How would that make it read?

The READING CLERK. So as to read:

That the Secretary of War, with the approval of the President, is hereby authorized and empowered to lease the properties, either separately or as a whole, enumerated under section 1 of this act, etc.

Mr. DIAL. Mr. President, I am in favor of the bill, and possibly this amendment would somewhat aid it. Some lessee might be willing to lease one part and another lessee another part. I would like very much to see the property leased if it can be done. Not only that, but one lessee might want to make one kind of fertilizer and another another kind, and therefore this amendment might aid the Secretary of War in making a lease. I submit it to the consideration of the Senate.

Mr. UNDERWOOD. Mr. President, I think the only way this property can be properly leased is to lease it to one lessee, but the lease will be entirely in the discretion of the Secretary of War and the President. I have no objection to their discretion being carried that much further, and I do not resist the amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from South Carolina to the substitute offered by the Senator from Alabama.

The amendment to the amendment was agreed to.

Mr. COPELAND. Mr. President, I desire to offer an amendment to the committee bill, which I send to the desk.

The PRESIDING OFFICER. The Secretary will state the amendment to the amendment.

The READING CLERK. On page 28 of the committee substitute, line 10, after the word "available," strike out the words: and he shall not demand of the Federal Power Corporation for such purpose more than 100,000 horsepower, of which not more than 25,000 shall be primary power.

Mr. COPELAND. Mr. President, it has seemed to me that one of the defects of the Norris bill, if I can say that so good a bill has a defect—

Mr. NORRIS. Will the Senator permit an interruption?

Mr. COPELAND. I yield.

Mr. NORRIS. As I have said several times, I have no objection to that amendment, and while I can not act for the committee, all the members of the committee with whom I have been able to talk are agreeable to the amendment. Personally, I shall vote for it.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from New York to the committee substitute.

The amendment to the amendment was agreed to.

Mr. COPELAND. I have one other amendment to offer, which I send to the desk.

The PRESIDING OFFICER. The Secretary will state the amendment to the amendment.

The READING CLERK. On page 29, line 13, after the word "advisable," strike out the words:

and he is hereby authorized, if in his judgment better results can be obtained, to enter into a contract or contracts with private persons or corporations for the operation, either in whole or in part, of said nitrate plants, or other property or parts thereof.

Mr. NORRIS. If the Senator will permit me, I think that would logically follow the adoption of the amendment the Senate has just agreed to, and that language ought to go out.

The PRESIDING OFFICER. The question is on agreeing to the amendment to the amendment.

The amendment to the amendment was agreed to.

Mr. NORRIS. The Senator from New York offered still another perfecting amendment, which would also follow, just to perfect the text. It would come on page 28, line 1, after the word "Agriculture," to strike out down to and including the word "herein" in line 3, the same page. We have just stricken out the authority of the Secretary of Agriculture to lease, and this language has reference to the leasing provision.

Mr. COPELAND. That is true, Mr. President.

Mr. NORRIS. That amendment ought to be made.

Mr. COPELAND. I offer that amendment to the amendment.

The PRESIDING OFFICER. The Secretary will state the amendment.

The READING CLERK. On page 28, line 1, after the word "Agriculture," strike out the comma and the words "or any other agency having in charge the operation of said nitrate plants, except as provided herein."

The amendment to the amendment was agreed to.

Mr. COPELAND. My records do not seem to be very complete, and I would like to ask the Senator from Nebraska if we have now covered all the points we discussed?

Mr. NORRIS. I think so. I think that perfects it.

The PRESIDING OFFICER. The question now is on agreeing to the substitute offered by the Senator from Alabama [Mr. UNDERWOOD] as amended.

Mr. HOWELL. I wish to offer an amendment to the amendment.

The PRESIDING OFFICER. The Secretary will state the amendment to the amendment.

The READING CLERK. On page 5, line 6, of the Underwood substitute, following the word "power," insert the following proviso:

Provided, That in addition to the annual rental herein stipulated, the lessee shall set up and maintain an adequate reserve for depreciation, upon which the United States shall have a prior lien, in connection with the following properties, to wit: (1) Dam No. 2 and power equipment; (2) the steam electric plants at nitrate plants No. 1 and No. 2; and (3) nitrate plant No. 2. Such reserve for depreciation shall at all times be of such an amount that when added to the physical value of such property at any time shall at least equal the appraised value thereof when turned over to the lessee: *Provided further*, That in case of nitrate plant No. 1, excluding power plant, the value thereof shall be appraised at the time said property is turned over to the lessee and provision made in lease for the lessee's accounting for the value of such property at the termination of lease.

Mr. UNDERWOOD. Mr. President, I assume that a provision of that kind could be made in the contract, when the Secretary of War and the President make a contract under this measure, if they do make one, and I have left the language giving the President power to make the contract as broad as I could. I do not see any very serious objection to the proposed amendment, and I am willing to have it adopted, reserving the right, if I see some real objection to it, to still object when the bill is in conference. I do not see any serious objection now, so I will not raise a point against it.

Mr. NORRIS. I would like to call my colleague's attention to the fact that he should not, on account of the statement made by the Senator from Alabama, fail to put in the Record any argument he wants to make, because all the conferees will have before them if there is any question about it, will be what is said in the Senate.

Mr. UNDERWOOD. I did not mean to cut the Senator off and prevent him from making a speech, but this is a mere detail that would go into any contract. I think the Secretary of War and the President would put it in, and I do not believe it is of sufficient moment to fight over now. When the matter goes to conference, something might develop so that I might change my mind, and I wanted to give the Senator notice of that.

Mr. HOWELL. There are two classes of property that will be turned over to the lessee. One class of property consists of Dam No. 2, the steam plant at nitrate plant No. 2, nitrate plant No. 2 itself, and, in addition, the steam plant at nitrate plant No. 1. Those properties should not merely be maintained, but there should be set up by the lessee a reserve for depreciation such as will replace the properties at any time. For instance, it may be that nitrate plant No. 2 will be operated constantly. We know that when a machine is operated constantly and all repairs are made that are possible, even then at the end of some period of time it becomes junk. It must be replaced. We have all had this experience with automobiles. We may repair constantly such a machine, look after it with attention, and yet after a period of six or seven years the automobile becomes practically worthless. Therefore, if we do not set aside annually a sum of money sufficient, together with interest, to the end of the period of usefulness of the machine, such as to equal a sum that will buy a new machine we are simply using up our capital in operation without making provision for its replacement.

In my opinion, it is just as important to make provision in the substitute of the Senator from Alabama for maintaining a reserve for depreciation as it is to indicate the minimum that shall be charged in the way of interest. Any lessee or prospective lessee reading this bill, if it shall become a law, might properly assume that it was the intention of Congress that if the President and Secretary of War could do no better, they were expected to lease the property on a basis of 4 per cent per annum without requiring a reserve for depreciation. Therefore, in my opinion, the substitute should be so framed that there can be no mistake as to what is expected from the President and Secretary of War so that a prospective lessee may understand that he must take into consideration in making his bid that he will have to maintain a reserve for depreciation.

Mr. McKELLAR. Mr. President, will the Senator yield?

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Tennessee?

Mr. HOWELL. I yield.

Mr. McKELLAR. In reference to replacement I want to call the attention of the Senator from Nebraska to the proposition of the Tennessee Electric Power Co., the Memphis Power & Light Co., and the Alabama Power Co., in which those three companies thought the matter about which the Senator is talking to be quite important, because their proposal included these words—and some of them may be expected to bid under this bill:

3. The power company will, at its own expense, throughout the lease period, operate and make all necessary renewals and repairs incident to efficient maintenance of the spillway gates, the power house, and substructures, superstructures, machinery, and appliances appurtenant to the power house, and will maintain the same in efficient operating condition, all in accordance with the Federal water power act, it being understood that all necessary repairs and maintenances of Dam No. 2 and the locks shall be under the direction, care, and responsibility of the United States and at its expense during the said 50-year lease period.

It seems to me some such provision as that ought to be in the bill, otherwise it will not be included and it will probably take all of the rentals the Government gets under the terms of the bill to provide for renewals of the various parts of the plant.

Mr. HOWELL. It is my understanding that the substitute does provide for maintenance, but it does not provide for setting up a reserve for depreciation—

Mr. McKELLAR. That is entirely right.

Mr. HOWELL. That at any time, when added to the physical value of a particular piece of property, will equal its appraised value at the time it was turned over to the lessee. This is very important in connection with nitrate plant No. 2. That plant ought to be maintained in 100 per cent condition all the time, or funds provided for in a depreciation reserve to put it in 100 per cent condition, because we are relying upon that plant for fixed nitrogen to use in the manufacture of ammunition in case of war.

I think this is of great importance and reasonable, as reserves for depreciation are looked upon by every public-utility

corporation and by every public-service commission as something that the public must provide in connection with its public utilities, and hence the public is assessed additional increments to rates charged sufficient to provide reserves for depreciation.

Now, there is another class of property quite different from the first class I have described. I refer to nitrate plant No. 2. That property has been in a way an experimental plant. It includes a fine building, with a modern power plant attached, but is equipped with certain machinery that may have to be changed. Therefore I believe that this property ought to be treated differently than the items listed in the first class of properties I have mentioned. This property ought to be appraised and the lessee should be required at the end of his lease to make good its value at the time of original appraisal. That would enable him to do what he pleases with nitrate plant No. 1—to remodel it or change it. But so far as nitrate plant No. 2 is concerned it ought to be kept in condition to produce fixed nitrogen at any time. The steam plants, of course, will deteriorate with use, and unless there is a provision made for depreciation, a reserve accumulated that the United States has a prior lien on, we will have little or no protection respecting replacements. Or if the lessee, at some time during the period of the lease, should fail, we might have turned over to us nothing but a shell. Therefore it seems to me that the substitute should ultimately carry a provision for reserves for depreciation.

Mr. BRUCE. May I ask the Senator a question so as to be clear in my own mind when I come to vote on his amendment?

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Maryland?

Mr. HOWELL. I yield.

Mr. BRUCE. Do the provisions of the Senator's amendment providing for depreciation relate to the dams too?

Mr. HOWELL. They relate to the dam, the power units in connection with the dam, the 80,000 horsepower steam plant in connection with nitrate plant No. 2, and to nitrate plant No. 2.

Mr. BRUCE. Does the Senator think that a prudent lessee would be willing to meet the risks of the dam being swept away by a great flood in the Tennessee River? I recall the fact that in my youth I had a friend who had inherited about \$100,000 and engaged in routine business in Baltimore and thought he would better his condition by entering into partnership with a contractor who was engaged in the construction, to a very considerable degree, of large public works. He and his partner undertook to build a dam in one of the rivers in Georgia. I have forgotten which river it was. Just about the time the dam was completed and was to be turned over to the contractee a great flood rose in the river and swept the dam entirely away and the \$100,000 of my friend with it.

It seems to me the depreciation reserve that is accumulated from year to year—if this dam were swept away, we will say, in six months after the depreciation reserve was begun to be established or in a year or two or three years afterwards or at any period of time short of the 50 years duration of the lease—might not amount to much. What I am afraid of is that the Government would experience considerable difficulty in obtaining a lessee if that lessee assumed such tremendous risk as it seems to me the amendment of the Senator from Nebraska involves.

Mr. HOWELL. An adequate reserve for depreciation would not include an increment sufficient for insurance. I think that the provision for maintenance would come nearer providing that the lessee would be liable for the replacement of the dam if it was swept away. I have provided in the amendment for an adequate reserve for depreciation, and they would not take into consideration in determining that replacement of the dam in case of a casualty of the kind suggested by the Senator from Maryland.

The PRESIDING OFFICER. The question is on agreeing to the amendment proposed by the junior Senator from Nebraska [Mr. HOWELL] to the substitute of the Senator from Alabama [Mr. UNDERWOOD].

Mr. WALSH of Montana. Mr. President, the Senator from Nebraska may have covered the matter fully, but if he did so it was during my absence from the Chamber. The amendment provides:

That in addition to the annual rental herein stipulated the lessee shall set up and maintain an adequate reserve for depreciation.

That language is rather general in its terms. Who will determine just exactly what kind of reserve is to be set up and whether or not it is adequate?

Mr. HOWELL. I think it would be well, probably, to insert at that point the words "as fixed in the lease," because at the time the lease is made what is an adequate reserve for depre-

ciation ought to be determined. Possibly the Senator from Montana might offer an amendment to my amendment to that effect.

Mr. UNDERWOOD. Mr. President, I will say to the Senator that after having read his amendment carefully I think the effect of it is specially to call to the attention of the President and Secretary of War in making the lease that reasonable terms should be included. I think in all human probability that they would take such action anyway in writing the lease; but the amendment would call their attention to the terms. Of course, it is not practicable for Congress, with the information we have before us, to determine what is an adequate replacement charge.

Mr. HOWELL. I agree that we have not such information before us.

The PRESIDING OFFICER. The question is on the amendment proposed by the junior Senator from Nebraska, as modified, to the substitute of the Senator from Alabama. Is there objection? The Chair hears none, and the amendment is agreed to. The question now is upon the Underwood amendment as amended.

Mr. HOWELL. Just a moment, Mr. President. I wish to offer another amendment.

The PRESIDING OFFICER. The amendment now proposed by the junior Senator from Nebraska to the substitute of the Senator from Alabama will be stated.

The READING CLERK. On page 5, line 19, after the word "contract," it is proposed to insert the following:

Time shall be made of the essence of the contract herein provided for, and failure on the part of the lessee to comply with the terms of said contract shall render the same terminable at the option of the United States: *Provided*, That written notice of the exercise of such option shall be served upon the lessee at any time within one year following any breach of said contract. Whereupon the property covered by said lease shall be turned over without expense to the United States upon demand, and said lessee shall be liable for any damage sustained by the United States as a consequence of said lease and the acts of said lessee.

Mr. UNDERWOOD. Mr. President, I think the substitute already provides for that contingency; I think that it already contains the provision that in the event the lessee shall not comply with the terms of the contract the contract ceases to be effective and is void.

Mr. HOWELL. I have not found such a provision. The only provision that I have found is on page 4 of the Senator's substitute, beginning in section 5, where the language is:

That the Secretary of War, with the approval of the President, is hereby authorized and empowered to lease the properties enumerated under section 1 of this act, with proper guaranties for the performance of the terms of the lease.

That is all I find in the Senator's substitute with reference to what might be construed to be a provision for the termination of the contract in case of failure on the part of the lessee to comply with its terms.

Mr. UNDERWOOD. Mr. President, I am pretty sure such a provision is in the substitute, although I can not put my finger on it right now. However, I have no objection to the Senator's amendment; it can not seriously affect the substitute; and if later, before we dispose of the matter, I find the place in my substitute where the provision is contained, I shall show it to the Senator from Nebraska.

The PRESIDING OFFICER. The question is on agreeing to the amendment proposed by the junior Senator from Nebraska to the substitute of the Senator from Alabama.

Mr. HOWELL. Just one moment, Mr. President. I desire to say that in offering my amendment to the substitute I wish to obviate such a situation as this which might otherwise arise: A lessee might fail to comply with the terms of the contract, and with no provision for cancellation the Government would simply have the right to bring a suit for damages; I believe that would be the remedy. I feel that the contract should clearly stipulate that if the lessee fails to comply with the terms of the contract, to wit, the manufacture of 40,000 tons of fixed nitrogen per annum and the manufacture and mixing of some 2,000,000 or 3,000,000 tons of fertilizer, the United States would be in a position to say, "You are through," and not have merely to rely upon an action for damages. It is for that reason I have offered this amendment to the substitute.

The PRESIDING OFFICER. The question is on agreeing to the amendment proposed by the junior Senator from Nebraska to the substitute of the Senator from Alabama. Is there objection? The Chair hears none, and the amendment to the amendment is agreed to.

Mr. COPELAND. Mr. President, I send to the desk an amendment which I desire to propose to the substitute of the Senator from Alabama [Mr. UNDERWOOD], and I ask that it may be read.

The PRESIDING OFFICER. The amendment to the substitute will be stated.

The PRINCIPAL CLERK. In the amendment of the Senator from Alabama [Mr. UNDERWOOD] it is proposed to strike out all of section 10 and to insert in lieu thereof a new section 10, as follows:

The surplus power not required under the terms of this act for the manufacture of nitrogen for fertilizer shall be sold to users at rates to return a maximum net profit of not to exceed 8 per cent of the fair annual cost of production and distribution thereof: *Provided*, That if such surplus power is sold to others than users thereof, the corporation shall require as a condition of such sale the consent of the purchaser to the regulation by the corporation of rates to be charged users that will return to the said purchaser maximum profit of not more than 8 per cent of his costs.

Mr. UNDERWOOD. Mr. President, I think section 10 has been stricken from the bill by an amendment offered by the Senator from Montana [Mr. WALSH], and there is also an amendment to section 9 with reference to the distribution of power. I am, therefore, rather inclined to think that the amendment of the Senator from New York is in conflict with the terms of those two amendments.

Mr. COPELAND. Mr. President, is it in conflict in any other respect than as to the number of the section?

Mr. UNDERWOOD. The amendment of the Senator from Georgia [Mr. GEORGE] provides for the distribution, and the amendment of the Senator from Montana [Mr. WALSH] provides for the terms of sale, while the amendment of the Senator from New York specifies the terms of sale; and, of course, if it should be incorporated in the law it would wipe out any regulation of those terms.

Mr. COPELAND. If the Senator from Alabama will yield, let me say that on page 4 of his substitute there is fixed the maximum profit which may be made on the sale of fertilizer by a provision that the maximum net profit which may be made shall not exceed "8 per cent of the fair annual cost of the production thereof."

I have in mind exactly the same thing with reference to the sale of power; that the surplus power shall be sold in such a way that the users of that power shall not pay more than 8 per cent on the investment of the lessee.

Mr. UNDERWOOD. I have no objection to limiting the profit from the sale of power to 8 per cent, because if the power shall be sold that would probably be a reasonable return; but I do not know how we are going to get at that or whether the Senator's amendment is sufficiently adjusted to the question of a contract to determine on what the 8 per cent shall be based.

Mr. COPELAND. Mr. President, if the Senator will yield, I acknowledge at once the fairness of his statement, and I was about to suggest that the language of the amendment be changed, so that the section will read as follows:

That the lessee shall either itself transmit and deliver to consumers, or sell to others for such transmission and delivery, all surplus electric energy produced and not used in the production of nitrates or other fertilizer ingredients or in fertilizers, mixed or unmixed; and the rates at which such surplus so transmitted and delivered shall be sold shall not exceed the amount necessary to pay such proportion of operating costs as may properly be allocated to the production, transmission, and delivery of such surplus, plus a return of 8 per cent upon the investment of the lessee in properties used or useful in such production, transmission, or delivery.

I think that will cover the criticism of the Senator from Alabama.

Mr. UNDERWOOD. Mr. President, I am not sure about the amendment. I have no objection to a limitation, but I am not sufficiently advised as to the terms. However, I do not care to resist it now, because I think the question can be taken up in conference, if the bill shall go to conference, and adjustment can be made by the conferees.

Mr. WALSH of Montana. Mr. President, I wish to suggest to both Senators that a considerable portion of the amendment now tendered by the Senator from New York is covered by the amendment offered by the Senator from Georgia [Mr. GEORGE], who in the same manner provided in his amendment that the surplus power should be sold. The only difference is that there is no limitation—

Mr. COPELAND. As to profits?

Mr. WALSH of Montana. As to profits. And I suggest that if a simple provision in relation to a limitation to 8 per

cent were added to the amendment offered by the Senator from Georgia there would be a want of repetition which would occur under the amendment as proposed by the Senator from New York.

Mr. UNDERWOOD. I called the attention of the Senator from New York to that fact. Of course, the amendment of the Senator from Georgia is not amendable right now, but it will be amendable in the Senate, and I ask the Senator from New York to let his amendment go over, for when the bill shall be reported to the Senate he will have an opportunity to offer the amendment, and in the meantime it may be considered in connection with the amendment offered by the Senator from Georgia.

Mr. HOWELL. Mr. President, I should like to ask the Senator from New York if such a provision as this would cover what is in his mind:

The United States, its agents, lessees, or assigns, shall be limited to a maximum net profit which may be made, including the profit from any power sold, not to exceed 8 per cent of the fair annual cost of the production of such fertilizers.

Mr. COPELAND. Yes, Mr. President, that would satisfy me. I suggest, however, that both of the amendments be printed, so that we may reconcile them with the amendment already adopted, which was presented by the Senator from Georgia, because otherwise we are going to spoil the bill by overlapping and by possible conflict. I will say, however, in answer to the Senator from Nebraska, that I have in mind that just exactly as the profit upon fertilizer is limited to 8 per cent I want the profit upon power limited to that amount; and I am satisfied with any amendment to the bill which makes it clear that there is such a limitation.

Mr. HOWELL. The amendment which I have read would provide that all the profit from power would be pooled with the income from fertilizer, and then the profit that would be enjoyed by the lessee would be 8 per cent upon the amount of fertilizer that he made. Therefore there would be an object for him to make as much fertilizer as possible if his power profits were large.

Mr. COPELAND. I am very much interested in the suggestion of the Senator, but I will pass forward to the clerk this amendment to be printed.

Mr. UNDERWOOD. Mr. President, I will say to the Senator from New York that I think the proposal of the Senator from Nebraska more nearly covers the case he has in mind, and I have no objection to it.

Mr. COPELAND. Mr. President, will the Senator yield?

Mr. UNDERWOOD. Yes, sir.

Mr. COPELAND. Would the Senator accept the amendment offered by the Senator from Nebraska?

Mr. UNDERWOOD. If it satisfies the Senator from New York, I do not care.

Mr. COPELAND. It is entirely satisfactory to me, if it is to the Senator from Alabama, to accept the amendment offered by the Senator from Nebraska.

Mr. UNDERWOOD. The amendment of the Senator from Nebraska comes in on page 4, does it not?

Mr. HOWELL. Yes; my amendment comes in on page 4, line 13.

Mr. UNDERWOOD. Supplementing what is in the bill already with reference to fertilizer?

Mr. HOWELL. Yes, sir.

Mr. UNDERWOOD. I have no objection to that, Mr. President.

Mr. NORRIS. Mr. President, I should like to hear the amendment read.

Mr. UNDERWOOD. That is, the amendment of the Senator from Nebraska [Mr. HOWELL]?

Mr. NORRIS. Yes.

The PRESIDING OFFICER. The Secretary will state the amendment to the amendment.

The READING CLERK. On page 4, in line 13, after the word "made," it is proposed to insert the words "including the profit from any power sold"; also, in line 14, it is proposed to strike out the word "thereof" and to insert in lieu thereof the words "of such fertilizers," thus causing the last paragraph of section 4 to read as follows:

In order that the farmers and other users may be supplied with fertilizers at fair prices and without excess profits, the United States, its agents, lessees or assigns, shall be limited to a maximum net profit which may be made, including the profit from any power sold, not to exceed 8 per cent of the fair annual cost of the production of such fertilizers.

Mr. NORRIS. Mr. President, I want to get an understanding of that. My mind is just a little bit confused. I could not

hear in its entirety the colloquy that has been going on between my colleague and the Senator from New York and the Senator from Alabama.

As the amendment now stands, does it provide that the profits on fertilizer and the profits on power are all to be put into one hopper and the 8 per cent is to be on the two?

Mr. UNDERWOOD. That is my understanding of it.

Mr. NORRIS. If there was a loss, for instance, on the fertilizer and a profit on the water power, then they would have to make enough on the water power to make up the losses on the other, in the aggregate. Is that my colleague's understanding of the amendment?

Mr. HOWELL. It is—that the profit would be based upon fertilizer, and the profit from water power would be pooled with the income from fertilizer.

Mr. NORRIS. I can not understand how you can base the profit on fertilizer when you pool the two. As I understand from the Senator from Alabama, the profit of 8 per cent is on the combined operations of both power and fertilizer, and the provision is that out of the whole transaction no more than 8 per cent can be made. That is not basing the profit upon fertilizer any more than it is basing the profit upon water power.

Mr. UNDERWOOD. In the bill as I originally prepared it I included a limitation on the profit which fertilizer could be sold for of 8 per cent.

Mr. NORRIS. Yes; I understand that.

Mr. UNDERWOOD. Subsequently, it was called to my attention that that did not include the profit on the water power, to which, as I said at the time, I had no objection. As I understand the Senator's amendment—and, of course, if my understanding is incorrect I have no doubt the matter will be corrected in conference—if there are profits made on the sale of power, and a loss on the fertilizer, the lessee will get 8 per cent on the net results. On the other hand, if he makes profits on both power and fertilizer, he has to be limited to 8 per cent.

Mr. NORRIS. Mr. President, I am not going to criticize the amendment. Of course, I should hesitate to do it anyway, because I do not expect to support the Senator's substitute. At the same time, I should like to call the attention of the Senator from Alabama and the Senator from New York and my colleague to what seems to me to be important here, not so much with reference to what happens in this particular matter, but in a much broader sense.

We ought to be able after a while to know just how much we lose or how much we make, absolutely what it costs, particularly in the fertilizer end. We are all anxious to cheapen the production of fertilizer; and I do not want any bill to pass, no matter whether I favor the bill in general or not, that will not make it absolutely necessary and really essential that the actual cost of producing fertilizer under the ordinary conditions that confront the ordinary business man who wants to go into the business should be absolutely known. Otherwise, we are not doing any good to anybody in the end, as far as fertilizer is concerned. As the amendment now stands, I should like to ask my colleague whether he thinks that would be definitely known.

Mr. HOWELL. Mr. President, I will say that I have another amendment that I am about to offer that would afford the Government full knowledge of the results.

Mr. NORRIS. Well, Mr. President, I shall not offer any further objection to it; but when my colleague offers his next amendment—

Mr. UNDERWOOD. Mr. President, I will say to the Senator from Nebraska that there is a clause in the bill which requires the books of this corporation or of the lessee to be audited.

Mr. NORRIS. Yes; I understand that there is such a provision; but there is not any provision in the bill, at least as I remember it, that explicitly states that the books shall be so kept that such an audit would show just what the cost was. If you put the two together, I am afraid that the book-keeper will jumble them in such shape that it will not appear definitely; and that ought to be one of the objects of the Senator—the Senator must agree with me on that—in his own bill or in anybody's bill.

Mr. UNDERWOOD. My sole purpose in this bill, on the fertilizer end of it—and that is the main purpose of my bill, national defense and fertilizer—is to try to produce a reasonable result, cheaper fertilizer. I have no objection to that being made definite. Therefore I am not resisting the amendment offered by the junior Senator from Nebraska [Mr. HOWELL]. I think that under any audit it would be demonstrable as to whether or not the terms of the bill are carried out, and this bill provides for an audit.

Mr. COPELAND. Mr. President, the Senator from Alabama is apparently willing to accept the spirit of the various amendments which have been presented. I suggest, in view of the conflict in language and the overlapping which might occur, that we let this amendment go over to-night. I have sent my own amendment forward to be printed; and I suggest to the junior Senator from Nebraska that he take the various amendments which relate to the same subject, as well as that already adopted, presented by the Senator from Georgia, and reconcile them so that they may be acted upon intelligently by the Senate.

Mr. UNDERWOOD. I have no objection to that, except that I do not want to get myself involved in any agreement that will delay the passage of the bill. I think it is self-evident that we shall shortly take a recess; but I have no objection, except that I do not want an agreement of mine to delay the passage of the bill if it is moving along.

Mr. COPELAND. I do not think the Senator from Alabama need worry about that, because my judgment is that he will get no immediate vote on his bill.

Mr. UNDERWOOD. I think so, too.

Mr. COPELAND. So I think there will be ample time for consideration.

Mr. UNDERWOOD. I think the Senator is right; but I did not want to be personally committed about the matter.

Mr. NORRIS obtained the floor.

Mr. SPENCER. Mr. President—

Mr. NORRIS. I yield to the Senator from Missouri.

Mr. SPENCER. If the Senator from Nebraska will be good enough to permit me to do so, I should like to present to the Senate a report from the Committee on the Judiciary on the article in the Washington Herald relating to the senior Senator from Alabama [Mr. Underwood]. The report of the subcommittee and of the Judiciary Committee was unanimous. It is not long, and it ought to be considered and disposed of at once.

Mr. NORRIS. Mr. President, I do not know how much time will be required for this matter.

Mr. SPENCER. If there is any discussion I will withdraw it.

Mr. NORRIS. I wish the Senator would wait until I get through. I have no objection to his submitting the report, however.

Mr. SPENCER. I would rather not submit the report until it can be considered and acted upon.

Mr. NORRIS. Just let me finish first.

Mr. President, considerable has been said pro and con in this debate on public ownership of public utilities. A good many examples have been given and discussed by various Senators. I think there is one illustration bearing directly on this proposition that ought to be laid before the Senate in this connection.

The man who can do that better than any other man in the world is my colleague [Mr. Howell], but on account of his modesty he has not even referred to it. I have given it some attention, and I want to give to the Senate just a little history of the waterworks, electric light, gas, and ice plants in the city of Omaha, the home city of my colleague.

Several years ago all of these particular activities were supplied to the citizens of Omaha by private corporations; and although I did not live in the city then, and do not yet, I remember that particularly the water under private operation, privately supplied by a private corporation, was the comment of the entire State. A person in Omaha could hardly take a bath and be improved after the bath was taken if he used Omaha water to do it. An ordinary glass of water in the hotels, where I used to go at least, if it rested a few minutes, had a heavy sediment of mud or sand at the bottom of it; and when the glass was first filled you could not see through it.

They had a tremendous fight. The fight went to the Supreme Court of the United States, and was finally disposed of there. My colleague to a very great extent led that fight and was the active participant in it. He was a member of the legislature which passed the bill which gave authority to the people of Omaha to take over the waterworks. They took it over, I think for much more than it was worth, under a bill that was introduced by my colleague when he was in the legislature; and he afterward became the manager, and managed that activity and the other activities that I shall mention until he was elected to the Senate.

In the midst of the great business depression of 1896 the Omaha Water Co. attempted to acquire what would have amounted to practically a perpetual franchise to supply the city with water, although the privileges it was enjoying at that time had several years to run. The city council granted

the new franchise, as requested, but Mayor Broach vetoed the ordinance, and then and there the fight for public ownership of Omaha's water plant began.

The first result of this fight was a change in the city charter that prohibited the council from granting a franchise to any public utility without first submitting the question to a vote of the people. In 1900 a proposition to buy the Omaha water plant was almost unanimously adopted at the city election held that year, but notwithstanding that the city council, under the domination of the water company, refused to act. Elected to the State Senate in 1902, R. B. Howell secured the enactment of a statute compelling the council to obey the mandate of the people and acquire the water plant. This law also provided for an unusual form of organization for the control and operation of any public utilities that might be acquired or constructed by the city of Omaha thereafter.

You will notice that the law was not confined solely to the water proposition. This organization is now in the form of and is known as the Metropolitan Utilities District. This district bears the same relation to the city of Omaha as does the school district of Omaha, except that it has to do with public utilities only, instead of schools only. However, the district has no power to tax, but is authorized to extend its limits by mere proclamation. It is, in fact, a public corporation identical with a private corporation, except that instead of merely part of the people being stockholders all are stockholders. The corporation has a board of six directors, two of whom are elected every two years for a term of six years, thus affording the possibility of a continuity of policy. The board of directors of the Metropolitan Utilities District enjoys all the powers and freedom of activity usually exercised by such officers of a private corporation—and I might pause here to say that that is just what the committee bill does with this larger activity at Muscle Shoals—including the sole control of its finances and the determination of the rates to be charged for public service rendered by the utilities operated by the district. The board also chooses its chairman and appoints and fixes the salary of a general manager, who serves at the will of the board, and in turn the general manager appoints, discharges, and fixes the compensation of all other employees, subject only to the general control of the board of directors. That likewise is practically provided for on the larger scale in the committee bill in this case. The board may also borrow money to meet temporary requirements, up to an amount not exceeding \$200,000, and may submit to the voters of the district bond propositions for construction and improvements in connection with the utilities under its control.

The unique features of this plan are apparent, and may be shortly enumerated as follows: The city council has nothing to do whatever with Omaha's publicly owned utilities; all authority respecting same is vested in the Metropolitan Utilities District; the district is without authority to tax, and hence must depend wholly for its income upon the charges it prescribes and collects for utility service; out of its income the district must pay all costs of operation, maintenance, depreciation, interest on any outstanding bonds issued for the acquisition or construction of utilities, and in addition, provide a sinking fund for the payment of such bonds as they mature. This sinking fund for each utility has always equaled or exceeded the taxes that would have been paid were the utility privately owned. In short, the Metropolitan Utilities District is practically identical with a private corporation, its officials being intrusted with going concerns, the necessary assets in connection therewith in the way of working capital, and the unavoidable responsibility of making good. As a result, the accounts of the utilities are kept separately, and each is operated for a small surplus, after providing for all expenses, maintenance, fixed charges, and reserves. If such surplus persists or increases, a dividend is ultimately declared to the stockholders in the form of a rate reduction.

UTILITIES ACQUIRED

In 1912, after a contest covering 16 years, Omaha's water plant was taken over at a cost of about \$6,500,000, or about a million and a quarter in excess of its value.

We must bear in mind that for 16 years this question was in litigation, and it was finally determined by the Supreme Court of the United States, sitting in this Capitol Building.

In 1917 authority was granted by the legislature to go into the ice business, and two plants, with a combined capacity of 200 tons per day, have been constructed, together with long storages, for 29,000 tons of ice, at a total cost of about \$700,000.

In 1920 the gas plant of the Omaha Gas Co. was acquired at a cost of about \$5,000,000, or about a million and a half in excess of its value.

RESULTS OF OPERATION—WATER PLANT

In 1913, or within a year of the acquisition of the water plant, the first water-rate reduction was afforded the people of Omaha. Since then seven more reductions have been made, and the total reduction from the maximum rate now amounts to 52½ per cent. Lest the people forget, water bills are rendered at the rate formerly charged by the Omaha Water Co., then in large red letters there is stamped on each bill "Public ownership reduction 52½ per cent," and the discount is figured out and deducted so that each consumer may know what his saving amounts to when he pays his bill.

Financial statement, year ending August 31, 1921

Income	\$1,286,000
Expenses and interest	\$855,000
Reserves for depreciation, sinking fund, etc.	372,000
	1,228,000
Surplus	58,000

BALANCE SHEET, AUGUST 31, 1924

Assets:	
Cost of water plant, including materials and supplies	10,275,000
Accounts receivable	754,000
Investments, bonds, etc.	494,000
Cash	291,000
Total	11,914,000
Liabilities:	
Water bonds outstanding	6,892,000
Accounts payable	142,000
Reserves and surplus	4,880,000
Total	11,914,000

These "reserves and surplus" of \$4,880,000 have been accumulated in 12 years and 1 month. The approximate total savings in reduced water rates for the same period amount to \$3,440,000. Add this to the "reserves and surplus" and we have \$8,320,000, or about \$1,820,000 more than the water plant cost in 1912.

ICE PLANT

The first ice plant of 100 tons capacity and 9,000 tons storage was completed in January, 1919. A second 100-ton plant with a 20,000-ton storage was constructed some two years later. As a result, in the heated season the plants can afford 1,000 tons per day. Ice is sold at wholesale in ton lots, delivered. Retail ice is sold from 45 neighborhood ice stores in 5-cent chunks or larger at 30 cents per 100 pounds. Ten thousand patronize these magnified ice boxes, on vacant lots, daily in the summer time. They come in automobiles, with wheelbarrows, women with dish pans, with baby carriages, and boys with toy wagons. In fact, little wagons are also kept on sale for the boys, so they may do a delivery business.

Financial statement, year ending August 31, 1921

Income	\$235,000
Expenses, including interest	\$164,000
Reserves for depreciation, sinking fund, etc.	44,000
	208,000
Surplus	27,000

BALANCE SHEET YEAR ENDING AUGUST 31, 1924

Assets:	
Cost of plants, including materials and supplies	692,000
Accounts receivable	25,000
Cash on hand	52,000
Total	766,000
Liabilities:	
Money borrowed and not repaid	200,000
Accounts payable	12,000
Surplus	554,000
Total	766,000

From the above balance sheet it is evident that in the little more than five years of operation the public ice plants, which have cost \$692,000, have paid for themselves all but \$138,000 from the sale of 30-cent ice. When the first plant was constructed the cost of delivered retail ice in Omaha was from 70 cents to 80 cents per 100 pounds. Now delivered ice is 50 cents per 100 pounds from the private plants, which also sell "cash and carry" ice at the municipal price of 30 cents. Yet the public plant only supplies about a third of the ice used in Omaha, so that the four private plants are all still in business, doing well, but not profiteering. It might be stated here that it costs more to make ice in Omaha to-day than when the ice companies were charging 70 and 80 cents per 100 pounds.

GAS PLANT

Omaha purchased its gas plant in 1920, taking possession July 1 of that year. The cost thereof, including supplies, and so forth, was about \$5,000,000, or in the neighborhood of

\$1,500,000 in excess of what the city should have paid therefor. A commission of three eminent engineers was called in to determine the gas rate that should be charged the citizens as the result of the purchase at the price paid; but since then three reductions have been made in the gas rate, and a fourth reduction is announced for the first of the year, although the present rate is 75 cents for the first 500 cubic feet or less and \$1.10 per 1,000 cubic feet, varying down to 90 cents for all additional used. The results from the operation of this gas plant have been quite remarkable and develop the fact that the efficiency is quite equal to, if not superior to, that of many of the gas plants throughout the country, as indicated by the following statement:

Financial statement, year ending August 31, 1921

Income	\$2,093,000
Expenses, discounts, and bond interest	\$1,407,000
Reserves for depreciation, sinking fund, etc.	389,000
	1,796,000
Surplus	297,000

BALANCE SHEET, YEAR ENDING AUGUST 13, 1924

Assets:	
Cost of gas plant, including materials and supplies	6,164,000
Accounts receivable	349,000
Investments, bonds purchased	912,000
Cash on hand	174,800
Total	7,599,000
Liabilities:	
Bonds outstanding	5,000,000
Accounts payable	231,000
Reserves and surplus	2,378,000
Total	7,599,000

It will be noted from the above balance sheet that as the result of the operation of the gas plant for three years and one month there has been accumulated as reserves and surplus \$2,378,000, while the people of the city are enjoying, as before stated, gas rates for an excellent quality of gas as low as any enjoyed in a country under similar conditions. If the present policy is continued, it is evident that it will not be long before Omaha's gas plant is paid for, just as in the case of the ice plant.

The above examples indicate what can be accomplished when people do for themselves, utilizing the advantage of securing through public credit 4½ per cent money for the establishment and operation of public utilities. The difference between 4½ per cent money and 6 per cent money means the wiping out of the cost of the plant in 31 years. The difference between 4½ per cent money and 8 per cent money means the wiping out of the cost of the plant in a very much shorter period.

Not only have the above results been accomplished by the people of Omaha, but as a by-product they have secured a reduction of lighting rates from 14 cents in 1912, when under the leadership of my colleague [Mr. HOWELL] Omaha took its first step in public ownership by acquiring its water plant, to 6 cents gross or 5½ cents net in 1924.

Although they have not constructed an electric-light plant, as I think my colleague stated the other day, the very threat of public ownership of that kind has had the effect of reducing the rates of the private company from 14 cents, originally, down to a net of 5½ cents now.

It seemed to me, Mr. President, perhaps I was not the one who could best tell the story, but that it ought to be told here since the question has been raised as to whether public utilities can be operated by public utility boards and by communities and cities owning their own public utilities.

Mr. BROOKHART. I offer two amendments to the Underwood substitute, which I ask may be printed and lie on the table.

The PRESIDENT pro tempore. The amendments will be received, printed, and lie on the table.

INVESTIGATION OF WASHINGTON HERALD EDITORIAL

Mr. SPENCER. Mr. President, I ask unanimous consent to submit from the Committee on the Judiciary a report on the matter of the editorial in the Washington Herald concerning the senior Senator from Alabama [Mr. UNDERWOOD], and I ask for its immediate consideration.

The PRESIDENT pro tempore. Is there objection to the request of the Senator from Missouri?

Mr. NORRIS. I prefer to have the report read before we decide whether there is any objection to its consideration.

The PRESIDENT pro tempore. The report will be read. The reading clerk read the report (No. 823), as follows:

EDITORIAL IN WASHINGTON HERALD DECEMBER 13, 1924, CONCERNING THE SENIOR SENATOR FROM ALABAMA, MR. UNDERWOOD

Mr. SPENCER, from the Senate Committee on the Judiciary, submitted the following report:

On Saturday, December 13, the Senate by unanimous consent, at the request of the senior Senator from Alabama [Mr. UNDERWOOD] referred to the Judiciary Committee of the Senate an editorial printed in the Washington Herald on that morning with instructions "to report concerning the facts involved, to call this editor before them, to ascertain the truth or falsity of the charges against me, and as to whether any man in all this broad land can be found to substantiate a single one of the charges that have been uttered in this newspaper."

The editorial referred to reads as follows:

"[Editorial in the Washington Herald December 13, 1924]

"ANOTHER TEAPOT DOME IS THRUST UPON MR. COOLIDGE

"President Coolidge is a wise, courageous, and patriotic leader. Once he has gone to the bottom of a subject he is likely to decide rightly about it. Therefore, the country can have confidence that President Coolidge will disregard those advisers who seek his support of the Underwood bill, now in the Senate, authorizing the Secretary of War to 'lease' Muscle Shoals for 50 years to the Alabama Power Co.

"President Coolidge can not afford and does not want a Teapot Dome scandal in his administration. He is being offered a greater scandal in this proposal of Senator OSCAR UNDERWOOD.

"Who is OSCAR UNDERWOOD? He is an able man, capable of high statesmanship, but since his entrance into Congress his ability and his statesmanship have often been at the service of the railroads and the other great corporations seeking public privileges without paying for them. Just now his talents and ability are working in the interest of the central figure in the Electric Power Trust—the General Electric Co. It owns the Electric Bond & Share Co., which has stock ownership and its own directors in Mr. UNDERWOOD's Alabama Power Co., to which the Senate of the United States is asked to give away the second most valuable property of the Nation, second only to the Panama Canal.

"The Government of the United States has spent \$135,000,000 at Muscle Shoals, beginning the project in war time. This \$135,000,000 of property constitutes perhaps the most valuable manufacturing property in the world. It includes two entire towns, scores of miles of railroad, two huge steam-power plants, and two great nitrate factories, one of them the largest of its kind in the world. Finally—and this is what the Power Trust is after—Muscle Shoals has the huge Wilson Dam and power house, which converts the rushing river into 100,000 horsepower of electric energy. When the Government has completed the additional dams and storage reservoirs in the Tennessee River it will be providing 500,000 horsepower—a second Niagara.

"The Power Trust, always wise and always awake, is terrified at the prospect of Senator NORRIS's bill. Senator NORRIS wants a Federal power corporation to distribute that electricity to southeastern consumers at cost.

"If the United States Government is allowed to use its own electricity at Muscle Shoals to demonstrate how cheaply electricity can be sold, it would destroy the richest source of private monopoly profits in the Nation.

"Within a year every section of the country would be proceeding with a similar public-owned hydroelectric development. Or, in anticipation of such development, the private electric-light companies would be scaling their rates down to a decent level.

"The interests behind the Underwood bill are perfectly obvious. It would be wrong to give the Muscle Shoals power away to a private power corporation under any conditions. It is a crime to give it away for such a miserable pittance as a 4 per cent rental—not 4 per cent on the entire \$135,000,000, but 4 per cent only on the \$45,000,000 that the Wilson Dam cost.

"The Power Trust is to be given \$90,000,000 outright in return for doing us the service of blocking an immediate opportunity to operate a magnificent public-owned power plant, eventually big enough to serve the entire South.

"Muscle Shoals is purely a power proposition. All talk of making cheap fertilizer for the farmers there is pure buncombe and the Underwood bill advocates know it.

"Secretary Weeks, said to be desirous of retiring on March 4, will be the man to give away Muscle Shoals, if it is given away. Secretary Fall, a member of President Harding's Cabinet, thus alienated the Navy's oil reserves, incomparably less valuable than 50 years' ownership of half a million electric horsepower.

"President Coolidge is too wise to want another Teapot Dome in the Cabinet at Washington."

It appeared not only in the Washington Herald on the morning of December 13 but as well in all the morning so-called Hearst papers throughout the United States. It was written by Mr. Edwin J. Clapp, who is the editor of the New York American and is connected with the "Hearst papers in general," and who came to Washington "just as the Muscle Shoals was opening up, and I came for that particular purpose."

Mr. Clapp very frankly and fully explained to the committee what he had in mind in writing the editorial and had prepared and read to the committee a comprehensive statement of the matters out of which the editorial arose. He disclaimed any intention of making an attack upon Senator UNDERWOOD personally. He characterized the editorial as "an attack on a policy and not on a person." No evidence was submitted, nor was it claimed that any evidence existed that in any way reflected upon the integrity or honor or character of Senator UNDERWOOD. The personal vindication of Senator UNDERWOOD was full and complete, and it was repeatedly denied that in the editorial there was any intent to make any personal reflection upon Senator UNDERWOOD. The language of the editorial was explained in detail.

The statement of the editorial that "the Underwood bill now in the Senate authorizing the Secretary of War to 'lease' Muscle Shoals for 50 years to the Alabama Power Co." was declared by Mr. Clapp not at all to intimate that the bill was intended "to lease Muscle Shoals for 50 years to the Alabama Power Co." for it was frankly admitted that the Alabama Power Co. was not mentioned in the bill, but it was claimed that inasmuch as the bill provided for a general lease of Muscle Shoals without designating any lessee, and because the writer believed the Alabama Power Co. the most likely lessee, the language used in the editorial was written by him.

The comparison to the so-called "Teapot Dome scandal" and the statement in the editorial that there was now "being offered a greater scandal in this proposal of Senator OSCAR UNDERWOOD" did not, in the opinion of Mr. Clapp, indicate anything corrupt or dishonest, but merely indicated that in his judgment the minimum price required by the bill for the rental of Muscle Shoals, together with the possibility that the lease might be made without full and fair competition, and the judgment of the writer that there should be "specific hearings upon this bill" were the sole bases for the use of the word "scandal."

The question was asked of the witness directly: "Q. You had no idea in this of charging anything sinister or dishonest?—A. No; not at all against Senator UNDERWOOD; nothing at all against Senator UNDERWOOD." The witness also expressed the opinion that in the Teapot Dome matter, to which he had referred, there was nothing corrupt. "I do not know of any corruption in the Teapot Dome."

"Q. Do you then mean to say there was nothing corrupt about it?—A. No, sir; there was nothing corrupt in the Teapot Dome. I think it was a very injudiciously and carelessly made lease. That is all."

The statement in the editorial referring to Senator UNDERWOOD, that "his ability and his statesmanship have often been at the service of railroads and the other great corporations seeking public privileges without paying for them," referred merely to his general legislative experience, with some of which the writer did not agree and with some of which he did agree, but in all of which he admitted Senator UNDERWOOD's conduct was characterized by sincerity and carried out in honor, and yet, in the opinion of the writer, some of the legislative acts of Mr. UNDERWOOD were approved by or favorable to railroads or other corporations, and this was the sum and substance of the reason for writing as he did.

He especially stated that "we neither assert or imply that Senator UNDERWOOD has been corruptly or wrongfully influenced by any private interest."

"Q. Do you mean to say that Senator UNDERWOOD was governed or influenced by any improper motive?—A. Not the slightest."

The reference in the editorial to "Mr. UNDERWOOD's Alabama Power Co." was not, according to the witness, to indicate any idea of possession on the part of Mr. UNDERWOOD or of identification with the Alabama Power Co., either by way of employment or interest, or any other direct or indirect connection with the company itself.

"Q. You do not intend to allege that Senator UNDERWOOD was at any time in the pay of the Alabama Power Co., or any way directly interested in it or indirectly interested in it?—A. No. I am a gentleman and man of honor, and I assume Senator UNDERWOOD is, too. And that he can construe my words to mean anything of that kind is beyond me. It is his conception and not a fair construction.

"Q. Do you wish to say that he [Senator UNDERWOOD] is a man of honor?—A. Not only want to say it, but I do not think anything else."

The language used in the editorial about giving away "the second most valuable property of the Nation, second only to the Panama Canal," referred merely, according to the witness, that in his judgment the compensation provided in the bill for the leasing of the Muscle Shoals was so inadequate as to be "practically a gift."

The witness answered the statement made in the editorial, which statement is as follows:

"Muscle Shoals is purely a power proposition. All talk of making cheap fertilizer for the farmers there is pure buncombe, and the Underwood bill advocates know it"—

by replying as follows:—
 "Q. I presume that we agree that Senator UNDERWOOD was the chief advocate of that bill. Does he know it is buncombe?—A. If I argue with you and I think you have a very vulnerable proposition, I say that you are wrong and you know it. That does not mean you are saying something that is a lie, but if you will use your intelligence you will come to a different conclusion than what you have."

The committee are of the opinion that the editorial as published created an entirely false and unfounded impression in the minds of the average reader. No other conclusion is reasonable than that in the mind of the average reader there would have been aroused a clear impression that there was something sinister, corrupt, or dishonest in the conduct and relation of Senator UNDERWOOD to the Muscle Shoals proposition. There is not the slightest basis of fact for any such impression. The editorial was neither fair nor honest. The frank statement of Mr. Clapp, who wrote the editorial, as to what was in his mind and what he intended is not the impression which the editorial created; and your committee therefore presents to the Senate its condemnation of the editorial and the complete exoneration of Senator UNDERWOOD in the matter, which can perhaps best be stated in the language of the witness:

"Senator OVERMAN. You never intended to reflect on Senator UNDERWOOD as being corrupt in any respect?"

"Mr. CLAPP. Not the slightest."

"Senator OVERMAN. And you have here no proof to show that he was corrupt in anything regarding his individual acts?"

"Mr. CLAPP. I have not tried to bring any proof."

"Senator OVERMAN. And you can not?"

"Mr. CLAPP. I have not attempted to."

"The CHAIRMAN (Senator SPENCER). So far as you know, you do not know of any?"

"Mr. CLAPP. No, sir."

"Counsel for Mr. Clapp (Mr. STEINER). And you never thought of that?"

"Mr. CLAPP. I never thought of such a thing."

Mr. SPENCER. I move that the report be adopted.

The PRESIDENT pro tempore. The Senator from Missouri asks unanimous consent for the consideration of the report. Is there objection? The Chair hears none, and the report is before the Senate. The Senator from Missouri moves the adoption of the report. The question is on the motion of the Senator from Missouri. [Putting the question.] It is unanimously agreed to.

MISSOURI RIVER BRIDGES

Mr. SHEPPARD. I am directed by the Committee on Commerce, to which was referred the bill (S. 3610) authorizing the construction of a bridge across the Missouri River near Arrow Rock, Mo., to report it favorably with amendments, and I submit a report (No. 824) thereon. I ask for the immediate consideration of the bill.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill.

The amendments were, on page 1, line 7, after the word "at," to strike out "or near" and to insert "a point suitable to the interests of navigation at or near," and on page 2, to strike out lines 1 to 4, inclusive, and to renumber section 3, so as to make the bill read:

Be it enacted, etc., That the consent of Congress is hereby granted to the St. Louis-Kansas City Short Line Railroad Co., a corporation of the State of Missouri, and their successors and assigns, to construct, maintain, and operate a bridge and approaches thereto across the Missouri River at a point suitable to the interests of navigation at or near the town of Arrow Rock, in the State of Missouri, in accordance with the provisions of the act entitled "An act to regulate the construction of bridges over navigable waters," approved March 23, 1906.

SEC. 2. That the right to alter, amend, or repeal this act is hereby expressly reserved.

The amendments were agreed to.

The bill was reported to the Senate as amended, and the amendments were concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

Mr. SHEPPARD. I am directed by the Committee on Commerce, to which was referred the bill (S. 3611) authorizing the construction of a bridge across the Missouri River near St. Charles, Mo., to report it favorably with amendments and I submit a report (No. 825) thereon. I ask for the immediate consideration of the bill.

There being no objection, the Senate, as in Committee of the Whole, proceed to consider the bill.

The amendments were, on page 1, line 7, after the word "point" to insert "suitable to the interests of navigation"; and on page 2 to strike out lines 3 to 6, inclusive, and to renumber section 3 so as to make the bill read:

Be it enacted, etc., That the consent of Congress is hereby granted to the St. Louis-Kansas City Short Line Railroad Co., a corporation of the State of Missouri, and their successors and assigns to construct, maintain, and operate a bridge and approaches thereto across the Missouri River at a point suitable to the interests of navigation about 4 miles south of west of the city of St. Charles, in the county of St. Charles, Mo., to a point in St. Louis County in said State, in accordance with the provisions of the act entitled "An act to regulate the construction of bridges over navigable waters," approved March 23, 1906.

SEC. 2. That the right to alter, amend, or repeal this act is hereby expressly reserved.

The amendments were agreed to.

The bill was reported to the Senate as amended, and the amendments were concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Farrell, one of its clerks, communicated to the Senate the intelligence of the death of Hon. JULIUS KAHN, late a Representative from the State of California, and transmitted the resolutions of the House thereon.

EXECUTIVE SESSION

Mr. CURTIS. Mr. President, I have advised a number of Senators that because of the death of Representative KAHN, of California, whose untimely end we all sincerely mourn, the Senate would adjourn early this afternoon and that there would be no yea-and-nay vote after 4 o'clock. I move that the Senate proceed to the consideration of executive business, with the view of returning to legislative session to enable the Senator from California [Mr. JOHNSON] to offer the usual resolution.

The PRESIDENT pro tempore. The Senator from Kansas moves that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After five minutes spent in executive session the doors were reopened.

DEATH OF REPRESENTATIVE JULIUS KAHN

The PRESIDENT pro tempore. The Chair lays before the Senate a resolution from the House of Representatives, which will be read.

The reading clerk read the resolution (H. Res. 385), as follows:

Resolved, That the House has heard with profound sorrow of the death of Hon. JULIUS KAHN, a Representative from the State of California.

Resolved, That the Clerk communicate these resolutions to the Senate and transmit a copy thereof to the family of the deceased.

Resolved, That as a further mark of respect this House do now adjourn.

Mr. JOHNSON of California. Mr. President, it is with the utmost sorrow, which is shared by all of the Members of the House and Senate from California, that I announce the death of the dean of the California delegation, JULIUS KAHN. His great and enduring services to the Republic will hereafter be recounted. At this time I offer the resolution which I send to the desk and ask for its adoption.

The resolution (S. Res. 285) was read, considered by unanimous consent, and unanimously agreed to, as follows:

Resolved, That the Senate has heard with profound sorrow the announcement of the death of Hon. JULIUS KAHN, late a Representative from the State of California.

Resolved, That the Secretary communicate these resolutions to the House of Representatives and transmit a copy thereof to the family of the deceased.

Mr. JOHNSON of California. Mr. President, as a further mark of respect to the memory of the deceased Representative, I move that the Senate do now adjourn.

The motion was unanimously agreed to; and (at 4 o'clock and 20 minutes p. m.) the Senate adjourned until to-morrow, Saturday, December 20, 1924, at 12 o'clock meridian.

NOMINATIONS

Executive nominations received by the Senate December 19 (legislative day of December 16), 1924

MEMBER OF THE CALIFORNIA DÉBRIS COMMISSION

Maj. Henry A. Finch, Corps of Engineers, United States Army, for appointment as a member of the California Débris Commission, provided for by the act of Congress approved March 1, 1893, entitled "An act to create the California Débris Commission and regulate hydraulic mining in the State of California."

TO BE MAJOR GENERAL

Anton Stephan, major general, District of Columbia National Guard.

TO BE BRIGADIER GENERAL

Thomas Francis Foley, brigadier general, Massachusetts National Guard.

POSTMASTERS

COLORADO

James S. Bradbury to be postmaster at Silt, Colo., in place of L. A. Barnes, deceased.

GEORGIA

Camillus L. Roberds to be postmaster at Villa Rica, Ga., in place of H. G. Roberds, resigned.

William C. Griffin to be postmaster at Tunnel Hill, Ga., in place of S. F. Baldwin. Office became third class January 1, 1923.

J. Percy Freeman to be postmaster at Stone Mountain, Ga., in place of R. L. Ehman, resigned.

Sam N. Thompson to be postmaster at East Point, Ga., in place of J. L. Heard, resigned.

Albert Luncford to be postmaster at Union Point, Ga., in place of J. H. Luncford. Incumbent's commission expired July 28, 1923.

William H. Blitch to be postmaster at Statesboro, Ga., in place of F. R. Hardisty. Incumbent's commission expired July 28, 1923.

Emory Davis to be postmaster at Rutledge, Ga., in place of E. B. Oxford. Incumbent's commission expired June 4, 1924.

James M. Guy to be postmaster at Manchester, Ga., in place of G. C. Thompson. Incumbent's commission expired July 28, 1923.

James A. Allen to be postmaster at La Fayette, Ga., in place of A. S. Sparks, sr. Incumbent's commission expired September 26, 1922.

Uno L. Carmical to be postmaster at College Park, Ga., in place of L. H. Williams. Incumbent's commission expired June 4, 1924.

Harry P. Womelsdorf to be postmaster at Cartersville, Ga., in place of W. W. Daves. Incumbent's commission expired September 5, 1923.

IDAHO

Homar W. Woodall to be postmaster at Soda Springs, Idaho, in place of H. W. Woodall. Incumbent's commission expired February 4, 1924.

George O. Tolman to be postmaster at Albion, Idaho, in place of W. M. Sears. Incumbent's commission expired June 5, 1924.

KANSAS

Robert H. Montgomery to be postmaster at Oswego, Kans., in place of W. A. Blair, removed.

Robert F. Tyler to be postmaster at Moline, Kans., in place of Christina Walker. Incumbent's commission expired June 4, 1924.

Harry W. Bouck to be postmaster at Girard, Kans., in place of W. L. Ringo. Incumbent's commission expired June 4, 1924.

Fred J. Smith to be postmaster at Galena, Kans., in place of G. W. Long. Incumbent's commission expired June 4, 1924.

Verney C. Wallar to be postmaster at Caney, Kans., in place of T. A. Stevens. Incumbent's commission expired June 4, 1924.

Fred H. Bartlett to be postmaster at Baxter Springs, Kans., in place of C. L. Smith. Incumbent's commission expired June 4, 1924.

MARYLAND

F. Earle Dowling to be postmaster at Western Port, Md., in place of C. F. Peters, resigned.

Victor R. Mumma to be postmaster at Sharpsburg, Md., in place of W. H. Snyder, resigned.

William B. Cutshall to be postmaster at Woodshoro, Md., in place of O. S. Barrick. Incumbent's commission expired June 4, 1924.

Luther B. Miller to be postmaster at Williamsport, Md., in place of B. C. Lefever. Incumbent's commission expired September 30, 1923.

Grace Rowe to be postmaster at Emmitsburg, Md., in place of R. C. Foreman. Incumbent's commission expired June 4, 1924.

MINNESOTA

William E. Paulson to be postmaster at Benson, Minn., in place of W. E. Lawson. Incumbent's commission expired June 5, 1924.

NEW JERSEY

Stephen T. Garrison to be postmaster at Port Norris, N. J., in place of Harrison Hollinger. Incumbent's commission expired June 5, 1924.

NORTH DAKOTA

Erick Myhre to be postmaster at Hampden, N. Dak., in place of J. R. Williams, resigned.

PENNSYLVANIA

Viola M. Truax to be postmaster at Robertsdale, Pa., in place of D. L. Barnett, deceased.

Ursula Shelley to be postmaster at Richfield, Pa., in place of J. G. Shelley, deceased.

Lillian K. Strong to be postmaster at Columbia Cross Roads, Pa., in place of J. E. Cunningham. Office became third class April 1, 1924.

WISCONSIN

Martin F. Walter to be postmaster at West Bend, Wis., in place of J. F. Huber, deceased.

CONFIRMATIONS

Executive nominations confirmed by the Senate December 19 (legislative day of December 16), 1924

POSTMASTERS

KANSAS

Clitus B. Hosford, Lawrence.

MINNESOTA

Svend Petersen, Askov.

Nels E. Berg, Cokato.

John R. Norgren, Foreston.

Percy Cole, Isle.

Everett R. Vitilas, Shafer.

MISSOURI

Harry G. Pippenger, Fairmount.

MONTANA

Richard Brimacombe, Butte.

Alice L. Cory, East Helena.

Mary A. Dolin, Medicine Lake.

 William E. Schaeffer, Manorsville.
 Albert B. Morgan, Nemacolin.
 Samuel S. Ulerich, New Florence.
 Walter D. Gibson, Renton.
 Herbert O. Hornbake, South Brownsville.
 Emma E. Forster, Wall.
 Jenny Paterson, Yukon.

HOUSE OF REPRESENTATIVES

FRIDAY, December 19, 1924

The House met at 12 o'clock noon, and was called to order by the Speaker.

The Chaplain, Rev. James Shera Montgomery, D. D., offered the following prayer:

Almighty and eternal God, our faith looks up to Thee. Again the silver cord has been loosed and the golden bowl broken. One whose mind was alert, whose spirit was aggressive, whose energy was untiring, whose genial presence and wholesome manner we loved, such a one has passed this way for the last time. He was a wise councillor and servant of the public. Comfort the bereaved loved ones with hopes and promises of the infinite beyond, where earth's music shall be gathered into one undying song and the bonds of eternal love never broken. Thank God for the realm beyond the shadows where the sun never sets and the stars never fade and the rainbow never dies out of the everlasting skies. Amen.

The Journal of the proceedings of yesterday was read and approved.

TREASURY AND POST OFFICE APPROPRIATION BILL

Mr. MADDEN, by direction of the Committee on Appropriations, reported the bill (H. R. 10982) making appropriations for the Treasury and Post Office Departments for the fiscal year ending June 30, 1926, and for other purposes, which was read a first and second time, and, with the accompanying report (No. 1056), was referred to the Union Calendar and ordered printed.

Mr. BYRNS of Tennessee. Mr. Speaker, I reserve all points of order on the bill.

The SPEAKER. The gentleman from Tennessee reserves all points of order on the bill.

SENATE BILL REFERRED

Under clause 2, Rule XXIV, Senate bill of the following title was taken from the Speaker's table and referred to its appropriate committee, as indicated below:

S. 3509. An act to change the time for the holding of terms of court in the eastern district of South Carolina; to the Committee on the Judiciary.

ENROLLED BILLS SIGNED

Mr. ROSENBLOOM, from the Committee on Enrolled Bills, reported that they had examined and found truly enrolled bills of the following titles, when the Speaker signed the same:

H. R. 10650. An act to authorize the settlement of the indebtedness of the Republic of Lithuania to the United States of America;

H. R. 10651. An act to authorize the settlement of the indebtedness of the Republic of Poland to the United States of America, and for other purposes;

H. R. 6941. An act granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent children of soldiers and sailors of said war; and

H. R. 8657. An act to amend section 98 of the Judicial Code, providing for the holding of the United States district court at Shelby, N. C.

RESIGNATIONS FROM COMMITTEES

The SPEAKER. The Chair lays before the House the following communications, which the Clerk will report.

The Clerk read as follows:

CONGRESS OF THE UNITED STATES,
 HOUSE OF REPRESENTATIVES,
 Washington, D. C., December 17, 1924.

HON. FREDERICK H. GILLET,

Speaker of the House of Representatives, Washington, D. C.

MR. SPEAKER: I hereby resign from membership on the Committee on Coinage, Weights, and Measures.

Respectfully yours,

CHARLES L. GIFFORD.

CONGRESS OF THE UNITED STATES,
 HOUSE OF REPRESENTATIVES,
 Washington, D. C., December 18, 1924.

HON. FREDERICK H. GILLET,

Speaker of the House of Representatives, Washington, D. C.

DEAR MR. SPEAKER: I hereby tender my resignation as a member of the Committee on the Merchant Marine and Fisheries.

Yours very truly,

ROBERT M. LEACH.

ELECTION OF MEMBERS TO VACANCIES ON COMMITTEES

Mr. LONGWORTH. Mr. Speaker, I ask unanimous consent that the vacancy caused by the resignation, just read, of Mr. LEACH from the Committee on the Merchant Marine and Fisheries shall be filled by the appointment of Mr. GIFFORD, and that the vacancy caused by the resignation of Mr. GIFFORD from the Committee on Coinage, Weights, and Measures be given to Mr. LEACH.

The SPEAKER. Without objection, it will be so ordered. There was no objection.

JOINT INAUGURATION COMMITTEE

Mr. LONGWORTH. Mr. Speaker, I ask unanimous consent to take from the Speaker's table Senate Concurrent Resolution No. 23, relating to the appointment of a joint committee of the two Houses to make arrangements for the inauguration of the President elect on the 4th of March next.

The SPEAKER. The gentleman from Ohio asks unanimous consent for the present consideration of Senate Concurrent Resolution No. 23, which the Clerk will report.

The Clerk read as follows:

Senate Concurrent Resolution 23

Resolved by the Senate (the House of Representatives concurring), That a joint committee consisting of three Senators and three Representatives, to be appointed by the President of the Senate and the Speaker of the House of Representatives, respectively, is authorized to make the necessary arrangements for the inauguration of the President elect of the United States on the 4th of March next.

The SPEAKER. Is there objection to the present consideration of the resolution?

There was no objection.

The SPEAKER. The question is on agreeing to the resolution.

The resolution was agreed to.

The SPEAKER. The Chair appoints as members of the joint committee on the part of the House Mr. GRIEST, Mr. HADLEY, and Mr. ROUSE.

NAVY DEPARTMENT APPROPRIATION BILL

Mr. FRENCH. Mr. Speaker, I move that the House resolve itself into Committee of the Whole House on the state of the Union for the further consideration of the bill (H. R. 10724) making appropriations for the Navy Department and the naval service for the fiscal year ending June 30, 1926, and for other purposes.

The motion was agreed to.

The SPEAKER. The gentleman from Illinois [Mr. CHINDBLOM] will resume the chair.

Thereupon the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill (H. R. 10724) making appropriations for the Navy Department and the naval service for the fiscal year ending June 30, 1926, and for other purposes, with Mr. CHINDBLOM in the chair.

The CHAIRMAN. The House is in Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 10724, which the Clerk will report by title.

The Clerk read as follows:

A bill (H. R. 10724) making appropriations for the Navy Department and the naval service for the fiscal year ending June 30, 1926, and for other purposes.

The CHAIRMAN. The Clerk will continue the reading of the bill for amendment.

The Clerk read as follows:

CONTINGENT, BUREAU OF MEDICINE AND SURGERY

For tolls and ferriages; purchase of books and stationery; hygienic and sanitary investigation and illustration; sanitary, hygienic, and special instruction, including the issuing of naval medical bulletins and supplements; purchase and repairs of nonpassenger-carrying wagons, automobile ambulances, and harness; purchase of and feed for horses and cows; maintenance, repair, and operation of three passenger-carrying motor vehicles for naval dispensary, Washington, D. C., and of one motor-propelled vehicle for official use only for the medical officer on out-patient medical service at the Naval Academy; trees, plants, care of grounds, garden tools, and seeds; incidental articles for the Naval Medical School and naval dispensary, Washington, naval medical supply depots, sick quarters at Naval Academy and marine barracks; washing for medical department and Naval Medical School and naval dispensary, Washington, naval medical supply depots, sick quarters at Naval Academy and marine barracks, dispensaries at navy yards and naval stations and ships; and for minor repairs on buildings and grounds of the United States Naval Medical School and naval medical supply depots; rent of rooms for naval dispensary, Washington, D. C., not to exceed \$1,200; for the care, maintenance, and treatment of the insane of the Navy and Marine Corps on the Pacific coast, including supernumeraries held for transfer to the Government Hospital for the Insane; for dental outfits and dental material; and all other necessary contingent expenses; in all, \$375,000.

Mr. BUTLER. Mr. Chairman, I have an amendment which I wish to offer to the bill.

The CHAIRMAN. The gentleman from Pennsylvania offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. BUTLER: Page 34, line 11, after the amount insert "Provided, That the Secretary of the Navy be, and he is hereby, authorized to construct necessary additional buildings at the naval hospitals at Chelsea, Mass.; Newport, R. I.; New York, N. Y.; League Island, Pa.; Norfolk, Va.; Great Lakes, Ill.; Puget Sound, Wash.; Guam, and Canacao, P. I., at a total cost not to exceed \$790,500, which total expenditure for the purposes aforesaid shall be made from the naval hospital fund."

Mr. BLANTON. Mr. Chairman, I make a point of order against that on the ground that it is legislation on an appropriation bill, unauthorized by law, and that it is for new construction and a change of existing law unauthorized. I will reserve it if the gentleman from Pennsylvania desires to be heard.

The CHAIRMAN. The gentleman from Texas reserves a point of order on the amendment.

Mr. BUTLER. Mr. Chairman, the gentleman is entirely right on the point of order.

We ask only what is absolutely necessary for the men to have, to take care of the sick in the Navy.

This money does not come from the Treasury of the United States. It is a contribution made by the boys themselves, of 20 cents a month and fines and forfeitures imposed upon them. The fund has now grown until it is between \$4,000,000 and \$5,000,000. It is necessary to fix up some of those institutions. The estimate was not handed to us in time, otherwise we would have introduced a bill and asked the House to pass it unanimously. This money belongs to the boys themselves, to provide better shelter and nurses to attend the sick. They own it all themselves.

Mr. BLANTON. Mr. Chairman, will the gentleman yield?

Mr. BUTLER. Yes.

Mr. BLANTON. If the gentleman could see some of the statistics that I have in my office, showing right now the number of vacancies in Government-operated hospitals from one end of the United States to the other, he would not want to embark on this enlarged building program for hospitals.

Mr. BUTLER. I know my friend is not for extravagance, and I want him to accord me the same disposition.

Mr. BLANTON. We have no opportunity now to discuss and debate a building program such as the gentleman is offering here.

Mr. BUTLER. This is only an addition and not new places. I want to say this to my friend: That the Veterans' Bureau is sending many of its sick people to these hospitals, and we must provide for them.

Mr. BLANTON. The Veterans' Bureau now has a surplus of beds all over the United States within its own hospitals.

Mr. BUTLER. I have said all I can say. This is asked by the department through the Surgeon General of the Navy, a very careful, economical man, Admiral Stitt, and whatever

Admiral Stitt recommends to us impresses us as being necessary.

Mr. BLANTON. Will the gentleman yield further?

Mr. BUTLER. Yes.

Mr. BLANTON. The gentleman is always able to get the ear of the House for his legislative committee whenever he wants it. Why not take this up in the regular way and thrash it out?

Mr. BUTLER. I will be as candid in answering the gentleman, and say I am afraid we will not have an opportunity to pass such a bill through both bodies in this short session, and these accommodations ought to be given to these sick people.

Mr. BLANTON. I regret exceedingly, Mr. Chairman, but I insist on my point of order.

Mr. FRENCH. Will the gentleman from Texas withhold it for a moment?

Mr. BLANTON. Certainly; I will withhold it.

Mr. FRENCH. Does the amendment offered by the gentleman from Pennsylvania include only the items that came to the Appropriations Committee from the Budget?

Mr. BUTLER. None other. They are items passed upon by the Budget, recommended by the department, and first submitted to the Appropriations Committee, which could not include them in the appropriation bill because they include a piece of legislation. The Appropriations Committee asked the Naval Affairs Committee to hold a hearing on these items, which we did, and that committee very cheerfully and immediately unanimously recommended them.

Mr. FRENCH. I believe I voice the sentiment of the committee when I say that the members of the committee were attracted by the necessity for these several additions, but we had no authority and for that reason did not include the items in the bill.

Mr. BLANTON. And did not put them in the bill because they are legislation.

Mr. FRENCH. We had no authority.

Mr. BLANTON. But the gentleman did include some legislative items in the bill which likewise he had no authority to put in. There are several pieces of legislation in the bill to which I could call the gentleman's attention.

Mr. FRENCH. If the gentleman will call attention to them when the time comes I shall be glad to have him do so.

Mr. BLANTON. The gentleman knows some of the items to which I refer. I have not made points of order against them but I have let them go by.

Mr. BUTLER. If the gentleman from Texas will withhold his point of order a little longer—

Mr. BLANTON. Mr. Chairman, I think we should get along with the bill. We all understand the situation, and I insist on my point of order against the amendment.

The CHAIRMAN. The gentleman from Texas makes the point of order that the proposed amendment contains legislation.

Mr. BUTLER. I concede it is subject to a point of order.

The CHAIRMAN. Does the gentleman from Pennsylvania or the gentleman from Idaho care to discuss the point of order?

Mr. FRENCH. I concede the point of order, but I was hoping it would not be made.

The CHAIRMAN. Does the gentleman from Pennsylvania desire to be heard on the point of order?

Mr. BUTLER. I do not desire to be heard on anything at this time, although I am obliged to the Chair. I would like my friend from Texas to hear me, and I am going to reason with him, because he is a reasonable man, and after I have talked with him I do not think he will turn his back on such a worthy undertaking as this.

The CHAIRMAN. All of the decisions on amendments of this character within recent years have sustained the point of order made by the gentleman from Texas, and the Chair is constrained to sustain the point of order.

The Clerk read as follows:

BUREAU OF YARDS AND DOCKS

MAINTENANCE

For the labor, materials, and supplies necessary, as determined by the Secretary of the Navy, for the general maintenance of the activities and properties now or hereafter under the cognizance of the Bureau of Yards and Docks, including the purchase, maintenance, repair, and operation of passenger-carrying vehicles for the Naval Establishment not otherwise provided for, and including not to exceed \$950,000 for clerical, inspection, drafting, messenger, and other classified work in the field, \$6,750,000: *Provided*, That during the fiscal year 1926 the Secretary of the Navy is authorized to purchase not more than 2

passenger-carrying motor-propelled vehicles, to cost not to exceed \$2,500 each, 15 passenger-carrying motor-propelled vehicles, to cost not to exceed \$1,500 each, and 30 passenger-carrying motor-propelled vehicles, to cost not to exceed \$500 each, and the Secretary of the Navy shall sell or exchange in part payment for such new vehicles not less than a corresponding number of motor-propelled passenger-carrying vehicles in use and of makes which now cost in excess of \$2,000 per vehicle to replace for each new car purchased costing \$1,500 or more: *Provided further*, That expenditures from appropriations contained in this act for the maintenance, operation, and repair of motor-propelled passenger-carrying vehicles, including the compensation of operators, shall not exceed in the aggregate \$100,000, exclusive of such vehicles owned and operated by the Marine Corps in connection with expeditionary duty without the continental limits of the United States, and on any one vehicle shall not exceed for maintenance, upkeep, and repair, exclusive of garage rent, pay of operator, fuel, and lubricants, one-third of the market price of a new vehicle of the same make or class, and in any case more than \$500.

Mr. BLANTON. Mr. Chairman, I move, on page 35, line 19, after the sum of \$6,750,000, to strike out the balance of the paragraph.

The CHAIRMAN. The gentleman from Texas offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. BLANTON: Page 35, beginning with line 20, strike out the remainder of the paragraph.

Mr. BLANTON. Mr. Chairman, this proposed appropriation for additional automobiles is extravagance gone to seed. If it had not been for some late decisions holding that a department has the right to buy passenger-carrying automobiles without special authority from Congress, when they are given money for it, I would have made a point of order against this part of the paragraph, but, of course, it having been held it is not subject to a point of order, I did not make it. But here is what our committee is asking the Congress to do, to grant authority to the department to buy all of these new passenger-carrying automobiles when the Navy Department now has so many of them it does not know what to do with them.

Let me show what we are authorizing. We are authorizing the Secretary of the Navy to purchase not more than two passenger-carrying automobiles at a cost of \$2,500 each. That is up in the Cadillac class. [Cries of "No!" "No!"] Yes; they are in the Cadillac class, because Cadillacs will be selling at that time for \$2,500 to the Government. You mark my prediction. They are in the Cadillac class, at the special price always made to the Government. What else do we authorize them to do? We authorize them to purchase 15 passenger-carrying motor vehicles to cost not to exceed \$1,500 each. They are in the Studebaker class. Two new Cadillacs and 15 new Studebakers! And then this bill authorizes them to buy 30 passenger-carrying motor-propelled vehicles to cost not exceeding \$500 each. That is up in the Chevrolet class. Here are 2 new Cadillacs, 15 new Studebakers, and 30 new Chevrolet passenger-carrying vehicles given to this department by this paragraph. We have already furnished the Secretary of the Navy with a fine limousine for himself, a \$5,000 limousine possibly, because most of our Cabinet officers have that class of limousines. We have not only furnished most of the admirals with good, fine limousines but now we are preparing to give their bureau chiefs and subchiefs throughout the department passenger-carrying automobiles for their own use.

I am not going to vote for it. You can pass it, I guess, but it is not in accord with the program of economy as set by your President. It is not in accord with the program of economy that caused the people to reelect your President. It is not in accord with the program of economy of your party or of mine, and it ought to stop.

Mr. TABER. Will the gentleman yield?

Mr. BLANTON. Certainly.

Mr. TABER. Has the gentleman read the hearings on this particular subject?

Mr. BLANTON. I think I have devoted more time and attention to it, possibly, than the gentleman has himself.

Mr. TABER. Perhaps; does the gentleman realize that last year and for several years past \$175,000 was allowed for the operation of these vehicles and that this year we have cut it to \$100,000?

Mr. BLANTON. To \$100,000, yes. Why should you allow them \$100,000 for gasoline and operation?

Mr. TABER. Because it is necessary.

Mr. BLANTON. Yes; and I can take the gentleman down here right now to the department stores during the next four hours and I can show the gentleman Navy automobiles stand-

ing in front of them and I can show you Navy automobiles coming up in front of the theaters here and discharging passengers, and that ought to stop. Oh, I know that they are our friends. These officers and these bureau chiefs are close personal friends. We sit at the festive banquet table with them. We rub elbows with them. When we have state banquets we join them in marching up the palatial stairs and along the receiving line.

The CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. FRENCH. Mr. Chairman, before attempting to reply to the argument touching the motion, let me suggest in the matter of the last statement made by my colleague that I would be glad to have him bring to the attention of our subcommittee any instances where automobiles are used for purposes other than official. The members of the committee would like to know about them.

Mr. BLANTON. Will the gentleman yield?

Mr. FRENCH. Let me finish this statement first. There are strict orders against it. We try to observe the conditions that exist along that line. I think some years ago there were very serious abuses, and it resulted in strict orders on this subject; and if any abuses exist now, I would like to have the matter brought to the attention of our subcommittee.

Mr. BLANTON. Will the gentleman yield?

Mr. FRENCH. Briefly.

Mr. BLANTON. I might expect a statement like that from our blind colleague, who is soon to go to the Senate, deservedly, but from the alert gentleman from Idaho I would not expect it. The gentleman surely has not kept his eyes closed here in Washington. If these admirals and these bureau chiefs would drive their own wives to these theaters and department stores I would not care so much, but when they detail fine, splendid young men from the gentleman's district in Idaho and from mine in Texas, who are serving in the Navy, to drive their cars for them as ordinary, menial chauffeurs, I must protest. I do not like it. There is lots of it going on, if the gentleman would investigate.

Mr. FRENCH. If the gentleman will bring to the attention of the committee any cases of the kind to which he refers, the members of the committee will be under obligation to the gentleman. As I said, I personally—

Mr. HUDDLESTON. Will the gentleman yield?

Mr. FRENCH. Let me finish this statement first. I do not believe any such condition as that exists, and I take a great deal of my exercise by walking the streets of Washington to and from my work.

Mr. HUDDLESTON. I would like to ask the gentleman for some information.

Mr. FRENCH. I wish first to answer the gentleman from Texas and then I shall be glad to yield.

The Naval Establishment is a great institution. Our Bureau of Yards and Docks alone has to do with valuations that aggregate approximately \$300,000,000. Other activities on the shore aggregate in value another \$300,000,000 in plants. You can not run an institution of that kind, whether it is Government business or business of a private character, unless you have certain tools with which to do the work. One of the tools of an efficient business establishment is the automobile. In a great building plant where you are fabricating ships, materials, and ordnance, where you are going from one part of a station to another, you must have conveyances of this kind if you are going to have anything like efficient work.

What did we find? When we went into the hearings we found the department asking for 10 passenger-carrying, motor-propelled vehicles to cost \$1,500 each and 20 to cost not to exceed \$500 each and 2 to cost not to exceed \$2,500. We raised two of the figures, and why did we raise them? We provide for 15 automobiles instead of 10, to cost not more than \$1,500 each, and 30 instead of 20, to cost not more than \$500 each. Why? We did so because of the expensive way in which the matter is being cared for by the Navy to-day.

We have at this time approximately 160 automobiles of different types in use. A large number of these machines we have inherited from war times. We have, for instance, something like 44 Cadillacs. We have 25 Packards. They were not purchased during recent years. For the most part they were not purchased by the Navy Department at all. Practically all of them were purchased by the War Department during the war and at the end of the war they were transferred to the Navy. They have been in use in the Navy for all these years. It has gotten to a point now where the upkeep on them is enormous. It has gotten to a point now where the upkeep on some of them exceeds \$1,000 a year, and that is not good business. What we have provided in this

bill is in line with the argument of the gentleman touching economy, but we have come to an opposite conclusion from that which he himself has attained. I know the gentleman could not approve of his own conclusion if he had had the opportunity of going into the subject as the members of the committee had in reaching the conclusion that they were compelled to reach from the standpoint of efficiency and economy in the Naval Establishment.

I yield now to my friend from Alabama.

Mr. HUDDLESTON. Is there any statute which forbids the use of public vehicles for private purposes?

Mr. BUTLER. There is a law that requires them to be branded.

Mr. HUDDLESTON. That is not the point.

Mr. FRENCH. The law requires that the vehicles shall be labeled with letters plainly identifying them as Government owned. The orders are strict touching the use of public vehicles for private purposes. It is easy to make a general statement that they are used by the hundreds unofficially, when as a matter of fact, maybe, not one is so used. Any information would be welcomed by the committee indicating that there are violations of the rule.

Mr. HUDDLESTON. I will say to the gentleman that I have seen public vehicles frequently used for private purposes. I was wondering whether there was or ought not to be some criminal statute punishing such misuse. The gentleman says that the orders are strict. Who is to give orders to the head of a department or the head of a bureau, and who is going to enforce them? Such orders are a waste of time unless there is some law back of them. Despite the gentleman's obliviousness to the fact, it is quite certain that these public vehicles are frequently used for private purposes.

Mr. FRENCH. That is a general statement without any regard to particular instances. The gentleman seems not to care to point out specific instances.

Mr. HUDDLESTON. What does the gentleman expect?

Mr. FRENCH. The committee would welcome any instances where violation has occurred in the Naval Establishment.

Mr. HUDDLESTON. Does the gentleman expect a Member of Congress to take the numbers of these cars and then go and find some committee to report it to? If the committee had the authority to correct it, there would be some sense in such a course.

Mr. FRENCH. I should expect when a gentleman makes a statement of that kind that he would be prepared to back it up.

The CHAIRMAN. The time of the gentleman from Idaho has expired.

Mr. HUDDLESTON. I ask unanimous consent that the gentleman from Idaho have one minute more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. HUDDLESTON. If I should bring the gentleman a list of half a dozen public automobiles that I have seen in private use, what would he do about it?

Mr. FRENCH. What would I do about it?

Mr. HUDDLESTON. Yes.

Mr. FRENCH. I think the members of the committee would take such action as would be reflected in the appropriations brought before this Congress.

Mr. HUDDLESTON. You would merely reduce the appropriation?

Mr. FRENCH. We would discipline the department, if we had any influence with the Congress.

Mr. HUDDLESTON. How would you do it? The gentleman asks me for specific information, and I ask him what would you do about it if you had the information?

Mr. FRENCH. There are a good many ways to do it. One would be to withhold appropriations for automobiles.

Mr. HUDDLESTON. The gentleman knows he would not do that.

The CHAIRMAN. The time of the gentleman from Idaho has again expired.

Mr. BLANTON. Mr. Chairman, I ask unanimous consent that the gentleman from Idaho have two minutes more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. FRENCH. Does that mean for me to proceed or for the gentleman from Texas to proceed for his courtesy?

Mr. BLANTON. I should be glad to have the gentleman yield.

Mr. FRENCH. I yield.

Mr. BLANTON. Has the gentleman any more authority to discipline the department than the gentleman from Alabama?

Mr. FRENCH. I did not say "the gentleman from Idaho" would undertake it, if the gentleman will recall my words; I said if this committee had any influence with Congress it would endeavor to do so.

Mr. BLANTON. Has the gentleman's committee of five any more authority to discipline a department than has the gentleman from Alabama or his great Interstate and Foreign Commerce Committee, which stands on an equality with almost any committee of the House?

Mr. FRENCH. Again the gentleman backs a little away from his position, but not all the way. I did not say the committee would do it; I said we would discipline the department if we had any influence with the Congress.

Mr. BLANTON. Here is the place to do it—in the forum of this House, where the Members are assembled. This is the duty of the membership, not for the gentleman from Idaho, nor the gentleman from Alabama or the gentleman from Texas, but the Congress ought to administer a rebuke and stop it if it is necessary.

Mr. FRENCH. If the gentleman will cite any cases of that kind the committee and Congress would welcome it. Now, Mr. Chairman, I should be glad to have my colleague, the gentleman from New York [Mr. TABER], make a statement to the House. He has made a special study of this matter.

Mr. TABER. Mr. Chairman, I ask unanimous consent to proceed for five minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. TABER. Mr. Chairman, this provision for maintenance and operation of automobiles has been carried at \$175,000 for a great many years last past, with certain limits and restrictions, as it came to our committee. When we came to the hearings we found that a sum was being asked for upkeep and maintenance of cars altogether out of proportion to the mileage covered and the services they performed. I went over the different cars that were there and those that have served so long and run so far that they were unserviceable, and the only way we could find to cut the item down where it ought to be was to require the Navy to get rid of this old junk in the line of automobiles and get new, serviceable machinery.

In order to do that we laid out a program for an increase over what the Budget allowed of 5 cars of the \$1,500 class, 10 at \$500, and to do this we provided for an additional expenditure of \$12,500. As the result of that we are going to be able to reduce the maintenance and operating charges \$75,000.

I believe that this Congress wants to do things right, and wants to put the tools of the Navy Department in condition to use, so that they can use them efficiently and get results and save money for the Government. That is what we have been trying to do. That is what we ask the Congress to help us do.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Texas.

The amendment was rejected.

The Clerk read as follows:

Submarine base, Coco Solo, Canal Zone: For improvements to refrigeration plant, \$36,000; dredging, to continue, \$60,000; in all, \$126,000.

Mr. SEARS of Florida. Mr. Chairman, I offer the following amendment, which I send to the desk.

The Clerk read as follows:

Amendment offered by Mr. SEARS of Florida: Page 39, line 5, insert: "Submarine base extension, \$100,000."

Mr. BLANTON. Mr. Chairman, I reserve the point of order on the amendment.

Mr. SEARS of Florida. Mr. Chairman, if the gentleman is going to make the point of order, I wish he would do it. I do not think it is subject to the point of order. I hardly think it is necessary for me to speak upon this question after listening to the able argument of the chairman of the subcommittee in which he just stated we had \$600,000 invested in our Navy stations and submarine bases, and unless we had the tools to work with these were useless. The tools in that case were automobiles. The tools in the amendment which I have just offered is the approach to the submarine base at Key West, Fla. Therefore I believe and I sincerely trust the distinguished gentleman from Idaho [Mr. FRENCH] will not, as able lawyers do, reverse his argument—not reflecting upon him, but hoping that he would still argue for the amendment which I have introduced.

I notice in the report of the committee, Mr. Chairman, that many times appropriations have been placed in the bill by the

committee which have not been estimated for by the Director of the Budget. For instance, there is the naval training station at Hampton Roads, \$260,000. There was no estimate for that made by Director General Lord. I am not complaining because they included the Hampton Roads station in this bill. I have supported every bill I thought was meritorious. The other day I listened to the distinguished gentleman from Oregon [Mr. SINNOTT], and he convinced me public land offices in certain States should be retained, regardless of the failure of the Bureau of the Budget to estimate for those land offices, and while none in my State was at stake, I voted with those gentlemen, they having convinced me that these land offices should be retained.

The fact of the business is we have spent hundreds of thousands of dollars on the submarine base at Key West, Fla., but it is practically useless unless this \$100,000 is appropriated. There is no way to get out to the submarine station. There is no approach to it. I have before me a letter from the Secretary of the Navy, Mr. Wilbur, dated May 22, 1924, in which he says in the last paragraph:

The department desires very much to have this facility provided at Key West, and it will be submitted to the Bureau of the Budget for the consideration of the Congress in the next Budget.

I have before me a letter from General Lord dated May 27, 1924, in which he says:

MY DEAR MR. SEARS: It gives me pleasure to acknowledge the receipt of your letter of the 24th instant concerning the item of \$100,000 for submarine base extension at the naval station, Key West, Fla., which was included in the Budget for the fiscal year 1925. It is my understanding that the Navy Department contemplates again recommending this item in its estimates for the fiscal year 1926 if it falls of favorable consideration in the appropriation act for the fiscal year 1925, and if this be done I can assure you that I will be very glad, indeed, to give it my consideration at that time.

Mr. BLANTON. I withdraw the reservation of the point of order.

The CHAIRMAN. The Chair will state—

Mr. SEARS of Florida. Then I shall get recognition in my own right.

The CHAIRMAN. The gentleman has that; but an attempt was made to withdraw the reservation of the point of order without obtaining recognition.

Mr. BLANTON. It was openly done from the floor.

The CHAIRMAN. The gentleman will have to secure recognition to do that from the Chair.

Mr. BLANTON. Mr. Chairman, I withdraw the reservation of the point of order.

The CHAIRMAN. The Chair does this so that if any other member of the committee should desire to renew the reservation of the point of order the opportunity is afforded. It could not be done in the way the dialogue occurred.

Mr. BLANTON. It has been done now, has it?

The CHAIRMAN. The gentleman from Texas withdraws the reservation of the point of order. The gentleman from Florida will proceed.

Mr. SEARS of Florida. Mr. Chairman, I thank the gentleman for withdrawing the reservation, although, as I stated, I think it is not subject to the point of order. In the hearings, on page 756, for the extension of storage facilities at San Diego, Calif., \$70,000, there was only about one-fourth of page relative to this item, and yet the committee allowed same. I had a talk the other day with General Lord, and I want to be fair with my colleagues, as I have always attempted to be. General Lord this year has not recommended the item for Key West. During the conversation with him he stated he did not recommend it this year because the department failed to convince him that it was meritorious.

I asked General Lord why he recommended it in 1925, when the Secretary of the Navy indorsed it, as did also those who appeared before him, that it was important, and then he did not include it this year. He said it was simply because in 30 or 60 or 90 days the proposition could be completed, and therefore he would put it off to some future date. So it seems that when we get a recommendation from the Bureau of the Budget, as we did in 1925, the Committee on Appropriations leaves it out, and I fear to-day, not having a recommendation from the Bureau of the Budget, that the subcommittee will oppose it.

The CHAIRMAN. The time of the gentleman from Florida has expired.

Mr. SEARS of Florida. Mr. Chairman, I ask unanimous consent to proceed for five minutes more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. SEARS of Florida. My colleagues will recall that in the Sixty-fourth Congress I explained the importance of Key West, Fla., from a strategic standpoint. On page 2720, Sixty-fourth Congress, second session, you will find these remarks, and in these remarks you will find I stated that Admiral Benson, who is now retired, said that Key West from a strategic standpoint was the most vital and important point in the whole country. Admiral Benson has indorsed it, and my recollection is former Assistant Secretary of the Navy Roosevelt also indorsed Key West as a submarine base.

I also called attention to the importance of Key West as a submarine base on June 25, 1917, pages 4228, 4229, 4230, and 4231, CONGRESSIONAL RECORD, Sixty-fifth Congress, first session; and again on April 10, 1918, pages 4933, 4934, and 4935, CONGRESSIONAL RECORD, Sixty-fifth Congress, second session; and on April 16, 1918, page 5180, CONGRESSIONAL RECORD, Sixty-fifth Congress, second session. In the limited time I have to-day I can not read these remarks in full, but I sincerely trust and ask that each and every one of my colleagues read my remarks in order that they may be fully acquainted with the facts and conditions at Key West and the importance of making this appropriation.

We find ourselves in this position: With a base at Key West completed, or practically completed, but, as stated to me the other day over the phone by one of the leading admirals of the Navy Department, almost useless and practically non-accessible because Congress would not appropriate this \$100,000. So I say it is false economy. Let me call your attention in the few minutes remaining to just the exact conditions, especially those Members who have not heard me discuss this before. Here is Key West, Fla. [demonstrating on map], a submarine base protecting Florida Strait, Yucatan Channel, from which airplanes can be sent up, and if an enemy fleet should be discovered submarines can be sent down to Panama. From Key West, Fla., to Charleston, S. C., a distance of nearly 1,500 miles, is the nearest naval station of all this Atlantic Ocean coast and this part of the Gulf, and in talking with this admiral he told me, as a matter of fact, only minor repairs to submarines could be completed at the naval station at Charleston and that real and complete repairs would have to be made at Hampton Roads, nearly 2,000 miles from Key West, Fla., an exceedingly long distance.

In the Sixty-fifth Congress those of you who served with me will recall I cited an instance in regard to the destruction of a submarine that would have more than paid for this \$100,000. Now, my colleagues, let me say again I want you to read the remarks referred to, because I may make a motion to recommit if the committee should not sustain my motion.

I have told you what admirals thought of it. I told you that Secretary Wilbur indorsed and approved it. I told you that Assistant Secretary of the Navy Roosevelt indorsed it. And another distinguished admiral, whose name I do not desire to give publicly, but I will give it to anyone who asks me, said the other day that the Navy Department must have this \$100,000. Last year, as I stated, General Lord estimated but Congress would not give the appropriation. I have a letter from Senator FLETCHER in which he says, writing to a constituent at Key West, that the Senate committee would not put it in. And so it looks like when we do get the indorsement we lose, and, gentlemen, I am simply appealing to my fair-minded friends on both sides of the House that they vote for this proposition and not defeat it on the grounds of economy.

Mr. BLANTON. Will the gentleman yield?

Mr. SEARS of Florida. I will.

Mr. BLANTON. During most of the year is it not a fact there are more prominent sojourners from all over the United States, the East especially, in the gentleman's district than he has constituents? The gentleman represents the silk-stocking district of Florida.

Mr. SEARS of Florida. I represent the best people in the world. I represent former constituents of yours from practically every district in the United States. I represent people from 16 foreign countries who have come here and become American citizens, but that should not enter into the consideration of this amendment.

The CHAIRMAN. The time of the gentleman has expired.

Mr. SEARS of Florida. I ask for two minutes additional.

The CHAIRMAN. The gentleman from Florida asks unanimous consent to proceed for two minutes. Is there objection? [After a pause.] The Chair hears none.

Mr. SEARS of Florida. I regret to ask for this extra extension, but I have not taken up much of your time. I have voted for every proposition since I have been in Congress whether it affected my district or not, which I believed was meritorious, and my colleagues will bear out that assertion. It did not mat-

ter to me whether it was in New York or California. Therefore, even if you do not adopt the Key West, Fla., amendment, I will still defend San Diego, Calif. I have no complaint because it is meritorious. So I ask you, my good friends, those of you who know the situation, to take into consideration the distances I have shown you from Key West, Fla., to Charleston, and from Charleston to Hampton Roads, really from Key West to Hampton Roads, where all repairs to a submarine can be made.

Let me say to you with all sincerity that while this submarine base means much to Florida, it means much more to the entire country, for if another war should come, which I trust will never be the case, this base will not only prevent the landing of an enemy army on the shores of Florida but also is of vital importance in protecting Texas, Louisiana, Mississippi, and Alabama; therefore, indirectly every State in the Union, as it controls the key to the Gulf of Mexico and would prevent the enemy from landing his forces on our southern shores and marching into the interior of our country.

In view of the above, I shall conclude my remarks by stating with a submarine base almost completed at Key West, Fla., lacking only about \$100,000, I sincerely trust the amendment will be adopted, and with that I am willing to leave the proposition with you and let you vote on it.

I regret that the chairman of this committee feels that it is his duty to oppose this proposition, notwithstanding all the recommendations I have called to his attention, and I hope he will not any too vigorously do so, because the support of a submarine base is just as much a tool to protect these wonderful properties of ours as are automobiles. [Applause.]

Mr. FRENCH. Mr. Chairman, the gentleman's hopes that I will not oppose the amendment are as illy founded as any hope that I might entertain that after my statement the gentleman would vote against his own amendment. I did not make the point of order. I reserved it, because I recognize that the amendment is not subject to a point of order.

A year ago the Budget Bureau recommended the continuation of the work at Key West, and it is a work that at some time in the future ought to be cared for. The one thing that appealed to the committee a year ago was that it is a work of a kind that may be cared for in a comparatively short period of time. The work proposed connects the piers in a better way with the shores so as to make the piers more useful.

Now, when it comes to different establishments of this kind it goes without saying that the people of the different communities wish to see them kept in the best possible condition. The commandants of stations are very partial toward the establishments of which they have charge. I remember a year ago when the Navy Department sent out its requests to the different commandants for estimates of the necessary improvements touching the different naval bases and establishments throughout the United States the estimates came back totaling \$63,000,000. These were fairly necessary improvements in the minds of the commandants. The department reduced the estimate to \$4,000,000, thus lopping off \$59,000,000. The Budget reduced the amount to between three and four million dollars.

Now, here is a proposition that came to the committee a year ago. We considered it and concluded that, under the circumstances, we were not justified in carrying out the recommendations that came to us. The Senate committee considered it and refused, as the gentleman says, to act favorably upon the item.

Again the matter comes before Congress, not upon the recommendation of the Budget but upon the motion of the gentleman from Florida [Mr. SEARS]. The members of the committee and the Bureau of the Budget have considered this question, as they have the question of further funds for other establishments, and it is our judgment that it is not an improvement of such character that it ought to receive appropriations for continuation now. I hope the amendment offered may be defeated.

Mr. SEARS of Florida. Mr. Chairman, will the gentleman yield?

Mr. FRENCH. I shall be glad to yield.

Mr. SEARS of Florida. The gentleman said that Members of Congress were anxious to get these appropriations, and therefore to appeal for them. Does the gentleman believe that Secretary Wilbur and Admiral Benson and the former Assistant Secretary of the Navy, Mr. Roosevelt, and the former Secretary of the Navy, Mr. Daniels, and other officials of the Navy Department, and General Lord last year recommended it because they were urged by my constituents?

Mr. FRENCH. They realize doubtless that the project has merit. I say it has merit, but I say it does not have such merit as to justify the Congress in making the appropriation at this time.

The CHAIRMAN. The Chair desires to call the attention of the gentleman from Florida to the fact that the item to which the amendment is offered relates to the submarine base, Coco Solo, Canal Zone. Is that the intention of the amendment?

Mr. SEARS of Florida. The amendment should say, "After line 5, insert a new paragraph."

The CHAIRMAN. The Chair will say that the amendment offered by the gentleman from Florida gives no location whatever. Therefore it would relate to the paragraph beginning with line 3.

Mr. SEARS of Florida. I ask that the words "Key West, Fla.," be placed in there.

The CHAIRMAN. The gentleman from Florida asks unanimous consent to modify his amendment as indicated. Is there objection?

There was no objection.

The CHAIRMAN. The Clerk will report the amendment as modified.

The Clerk read as follows:

Amendment offered by Mr. SEARS of Florida: Page 39, insert after line 5 the following new paragraph:

"Submarine base extension, Key West, Fla., \$100,000."

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Florida.

The question was taken, and the Chairman announced that the ayes appeared to have it.

Mr. FRENCH. Mr. Chairman, I ask for a division.

The CHAIRMAN. A division is asked for. As many as favor the amendment will rise and stand until they are counted.

The committee divided; and there were—ayes 37, noes 45.

Mr. SEARS of Florida. Mr. Chairman, I ask for tellers.

The CHAIRMAN. The gentleman from Florida asks for tellers.

Tellers were ordered, and the Chairman appointed Mr. FRENCH and Mr. SEARS of Florida to act as tellers.

The committee again divided; and the tellers reported—ayes 62, noes 51.

So the amendment was agreed to.

Mr. HUDDLESTON. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Alabama moves to strike out the last word.

Mr. HUDDLESTON. Mr. Chairman, I think it must be clear to students of international relations that our present relations with Japan are not fully satisfactory. Great feeling was excited in Japan by the adoption of our immigration law. That feeling has been played upon and fomented by certain Japanese politicians for partisan purposes until public opinion in Japan has been inflamed to a very considerable extent. Japanese public opinion as a whole is highly irritated, and in a time like this it is of the greatest importance that those who assume to speak for America and who desire that our country's peace should be preserved should be circumspect in their actions and in their words. [Applause.] Thoughtful citizens must deplore any attempt upon the part of American public men to play the part in this country which has been played by the Japanese politicians in seeking to obtain political advantage by fomenting this agitated state of Japanese opinion.

In such a situation as the present the decision to hold our naval maneuvers off Hawaii is characterized by the strangest ineptitude and tactlessness. It seems strange indeed that anyone of influence enough to have brought about a decision to hold maneuvers there did not know enough of international affairs to recognize the impropriety of it.

Our purposes toward Japan are friendly and pacific. Nobody in the United States wants war with Japan. All are anxious to remain on the terms of friendliness, confidence, and good will which have characterized our relations with Japan from the very beginning of modern Japanese development. We ought not to be guilty of anything which would give the Japanese just ground to suspect our pacific purposes. Yet in face of that situation we have transferred the major part of our fleet to the Pacific. It has as its base such points as would have been chosen had it been felt that a war with Japan was possible.

The Japanese know what we have done. They are an intelligent people. It is their duty to their own country to know that we have transferred a good part of our fleet to the Pacific side. They are fully advised of the situation. They also know we have no possible antagonist on the Pacific unless it should be themselves—that there is no Pacific power, outside of themselves, that America would give a snap of her finger for. They naturally consider why we have transferred our fleet to the Pacific, and naturally draw the deduction that

we suspect them and their intentions and are preparing against them.

Now, with that situation already in unsatisfactory shape, comes our naval maneuvers to be held off of Hawaii. A play warfare is to be conducted to improve the efficiency of our fleet, a play warfare which will have for its scheme the arrangement of our fleet to defend Hawaii against an imaginary attack.

The CHAIRMAN. The time of the gentleman from Alabama has expired.

Mr. HUDDLESTON. Mr. Chairman, I ask for five minutes more time.

The CHAIRMAN. The gentleman from Alabama asks unanimous consent to proceed for five additional minutes. Is there objection?

There was no objection.

Mr. HUDDLESTON. The Japanese know that these maneuvers are planned and what they will consist of. It is always safe to assume that others have as much sense as we have and that other peoples have as much acumen as our people and as much love for their own institutions as we and as much jealousy of their national rights and as much of a desire to protect them as our Nation has. And the Japanese know that the only imaginary enemy we could possibly have is the Japanese Fleet and that Japan is the imaginary adversary against whom we are defending Hawaii.

Taking into account the agitated condition of public opinion in Japan and the fact that the Japanese Government, no matter how moderate, thoughtful, and pacific its purposes may be, must have a due regard for Japanese public opinion—given that situation, which undoubtedly exists, then we have this Nation, against whom the feelings of Japan have been excited and whom she is being taught to suspect, arranging a mimic warfare with Japan as the imaginary enemy. I ask any man who understands anything whatever of international affairs if that does not consist in itself of an exceedingly tactless maneuver? [Applause.]

Mr. RATHBONE. Will the gentleman yield?

Mr. HUDDLESTON. Not at this time.

Why should we further excite Japanese suspicion and hostility? What is there to be gained by it? There is no good reason. You would think that no sensible man who has at heart the best interests of our country would do such a thing. Yet the Navy Department convicts itself of the stupidity of doing the very thing most calculated to excite suspicion and hostility. I ask gentlemen who are students of history to point to a similar incident in international relations within the last 100 years which is so provocative.

Mr. RATHBONE. Will the gentleman yield now?

Mr. HUDDLESTON. I will yield to the gentleman before I get through.

A Member of Congress said here on yesterday that the United States will not recognize the right of any nation to say where we shall hold our naval maneuvers. It is just exactly that jingoistic and bombastic spirit that brings war. [Applause.] It is just that kind of arrogance which causes men to meet upon the battle field in the shedding of men's blood.

Why should we have war with Japan? There is no reason whatever. There is no conflict of interest—neither has anything to gain—both have everything to lose. Are we so stupid that we will go on and on with tactless blundering and further aggravate Japanese opinion until a mine is laid and all it will take is merely a spark thrown by accident into the powder to cause an explosion?

Suppose we sent one of our vessels into Japanese waters, as we did the Maine into Habauna Harbor, and it should be blown up. Suppose a tragedy should be caused by mob action or by some fanatic crazed by chauvinism. What would be the result? What would be the result on Japanese public opinion already highly inflamed? I would not like to prophesy.

I realize that our purposes are pacific, as well becomes the dignity and majesty of our country. Our country is too great to be afraid.

Mr. McKEOWN. Will the gentleman yield?

Mr. HUDDLESTON. Not now.

Our country is too great to fear that it will compromise its dignity by withdrawing from provocative steps which might inflame public opinion in another country. If we were a weak, contemptible nation it might be required that we should take every measure to save our face, but all the nations and peoples of the world know that we are able to take care of ourselves. I say that the proposed Hawaiian maneuvers ought to be called off. If I could control the matter I would call them off.

Mr. WAINWRIGHT. Will the gentleman yield?

Mr. HUDDLESTON. Excuse me one moment.

The Pacific is wide and there are many places where these maneuvers might be held. There are seven seas to which we can send our Navy for maneuvers, and we can send it wherever we will. That being so, why shall we exhibit the stupidity of sending it to the one particular place that is most dangerous to peace and most tactless just at the present time?

The CHAIRMAN. The time of the gentleman from Alabama has again expired.

Mr. HUDDLESTON. Mr. Chairman, I ask for two minutes more in order that I may yield to these gentlemen who are so anxious to interrupt me.

The CHAIRMAN. The gentleman from Alabama asks unanimous consent to proceed for two additional minutes. Is there objection?

There was no objection.

Mr. HUDDLESTON. I will take the gentlemen in their turns. First, the gentleman from Illinois [Mr. RATHBONE].

Mr. RATHBONE. I will ask the gentleman, first of all, if Japan has not recently held naval maneuvers at outposts of their country and if that has been interpreted in this country as any sign of war or a desire for war?

Mr. HUDDLESTON. I am not advised that the Japanese fleet has held maneuvers which were in any way objectionable to us.

Mr. RATHBONE. I understand that is the fact.

Mr. HUDDLESTON. But if the Japanese have been guilty of tactlessness that does not warrant us in matching folly with folly. [Applause.] If they have done a wrong thing I would imagine something would have been said about it in this country, but nothing has been said that has come to my knowledge. If they have been guilty of provocation, will we go on and draw a mark and say "Cross that line if you dare." Are we so stupid as that? Surely not. And now I yield to the gentleman from New York [Mr. WAINWRIGHT].

Mr. RATHBONE. Will the gentleman yield to me for just one more question in order that my attitude may be understood?

Mr. HUDDLESTON. I ask, Mr. Chairman, unanimous consent that I may proceed for two additional minutes.

The CHAIRMAN. The gentleman from Alabama asks unanimous consent to proceed for two additional minutes. Is there objection? [After a pause.] The Chair hears none.

Mr. RATHBONE. If the gentleman will yield, I will state that my attitude is not one of criticism of the Japanese, but merely that we have the right to do the same thing, and I will ask the gentleman one more question.

Mr. HUDDLESTON. Just a moment. In reply to that I say that we have the legal, technical right to go just outside of Japanese waters, 3 miles from the shore, and carry on a mimic warfare by which we pretend to bombard Yokohama, but I hope we will not be fools enough to assert all of our legal rights. Now for your other question.

Mr. RATHBONE. Hawaii is the outpost of America, and I will ask the gentleman if it is not a fact that when under Theodore Roosevelt the American fleet was sent to Pacific waters and the battleships made their tour and visited Japan, instead of stirring up international hostility did it not have an excellent effect, and was not their reception of the finest character everywhere, and were not the relations between the two peoples better afterwards than ever before?

Mr. HUDDLESTON. The gentleman is a well-informed man, and he knows perfectly well that the situation at present is wholly unlike what it was at the Roosevelt time.

I now yield to the gentleman from New York [Mr. WAINWRIGHT].

Mr. WAINWRIGHT. I would like to ask the gentleman if it is not possible that some of the legislation which Congress has recently adopted under the inspiration of some of our friends from the Pacific coast has constituted possibly a greater incitement of Japanese resentment against the United States than the holding of any maneuvers on the Pacific coast?

Mr. HUDDLESTON. Early in my remarks I explained to the House that the inflamed state of Japanese opinion originated in the passage of our immigration law. I think it was an exceedingly foolish thing, if you will pardon me, gentlemen, for Congress not to have acted on the President's advice. [Applause.] But that is passed.

I now yield to the gentleman from Oklahoma.

Mr. WAINWRIGHT. I will say to the gentleman that that is exactly what I wished to bring out.

The CHAIRMAN. The time of the gentleman from Alabama has again expired.

Mr. HUDDLESTON. I will ask unanimous consent to proceed for one minute more, Mr. Chairman.

Mr. BANKHEAD. Mr. Chairman, out of an abundance of caution I ask that the gentleman may have two minutes, because it may be a long question.

The CHAIRMAN. The gentleman from Alabama asks unanimous consent to proceed for one additional minute. Is there objection? [After a pause.] The Chair hears none.

Mr. McKEOWN. I want to ask the gentleman if he has any information as to whether the State Department was consulted by the Navy Department as to the feasibility of holding these maneuvers and sending the fleet to Australia.

Mr. HUDDLESTON. Of course, I could have no information on that subject. Respecting Mr. Hughes as I do, I must assume, however, that had he been called upon he certainly would have given better advice than that which was followed in deciding to hold the maneuvers.

The CHAIRMAN. The time of the gentleman from Alabama has again expired.

Mr. ROMJUE. I ask that the gentleman be granted one minute. I would like to ask the gentleman a question.

The CHAIRMAN. The gentleman from Missouri asks unanimous consent that the gentleman from Alabama may proceed for one more minute. Is there objection? [After a pause.] The Chair hears none.

Mr. ROMJUE. Did I understand the gentleman to say or did the gentleman intend to create the impression that the mere fact that the American Navy may maneuver on the Pacific coast justifies Japan in being suspicious that we might want to go into war with Japan?

Mr. HUDDLESTON. It depends entirely on the circumstances and the situation. If, for illustration, in the strained condition which existed between Germany and France immediately before the breaking out of the World War the Germans had mobilized their forces, as they had a perfect right to do, and deployed them on the French frontier, I take it that the gentleman would at once have recognized the impropriety of such action; yet if there had been a state of profound peace and friendship and mutual confidence and good will nothing that either of those nations might have done would have affected international relations. [Applause.]

Mr. WINGO. Mr. Chairman, I rise in opposition to the pro forma amendment.

Mr. Chairman, I do not wholly agree either with the gentleman from Illinois [Mr. BRITTEN] or the gentleman from Alabama [Mr. HUDDLESTON]; but the gentleman from Alabama is right in his discussion of the psychology of peoples and how jingoism can irritate and precipitate a condition that leads to war.

We may not agree with the man in the White House or with the Secretary of State, but I think every man who has a boy and does not want to see him used as cannon fodder, and every man who has due regard for the dignity of nations and the necessity to act with a proper appreciation of the sensibilities of people hopes that all of these gentlemen and all of these newspapers will keep their mouths shut about the Japanese question. [Applause.]

You may not, I say, agree with the man in the White House upon his political theories or with the Secretary of State, but, gentlemen, they are responsible for our foreign affairs. They are men of caution. There is no jingoism about them, and I believe that there is a sincere recognition by the Government of Japan and by the thoughtful people of Japan, just as there is sincere recognition by all thoughtful people in America, that President Coolidge and Secretary Hughes are genuinely friendly to Japan, respect its rights and its sensibilities, and that our foreign affairs can be conducted and will be conducted by them with due regard for all of these psychological factors, and the best thing we Members of Congress can do is to keep our mouths shut about this thing and leave it to the President, who is Commander in Chief of the Navy, and to the Secretary of State, who is the head of our foreign affairs and who has demonstrated his wisdom on this question.

I have always insisted that politics ought to cease at the water's edge. I am with Calvin Coolidge and with Charles E. Hughes in the handling of our foreign affairs, and I have confidence they will uphold not only the rights and the dignity of the people of the United States and of this powerful Nation but they will show the greatest statesmanship of all by recognizing the other man's viewpoint and having due regard for the sensibilities of people and not permit the jingoism of this Nation to drag us into an intolerable position. [Applause.]

There is room on this earth for the development of our great people as there is room on this earth for the development of the Japanese nation. The rights of each can be respected. We can assert our rights as we have done; they can assert theirs. But for God's sake let us leave the handling of our foreign

affairs to men who under the Constitution are charged with that duty until they have shown some disposition to either handle them inefficiently or unwisely. At the present time I think they are handling a delicate situation very diplomatically, and as a Democrat I am proud of the caution and the courtesy, yet firm dignity, and distinctive ability of our great Secretary of State. [Applause.]

Mr. WATKINS. Mr. Chairman, I offer the following amendment.

The Clerk read as follows:

Page 39, line 5, after the figures \$126,000, insert a new paragraph, as follows:

"For continuance of the development of a submarine and destroyer base, Columbia River, Oreg., \$350,000."

Mr. FRENCH. Mr. Chairman, I make a point of order against the amendment. If the gentleman desires, I will reserve it.

Mr. WATKINS. I wish the gentleman would make it.

Mr. FRENCH. I make the point of order, Mr. Chairman.

Mr. WATKINS. Is the gentleman making the point of order because of the adoption of the Sears amendment?

Mr. FRENCH. No.

Mr. WATKINS. Mr. Chairman, I want it to follow the Sears amendment.

The CHAIRMAN. Without objection, the amendment will be so modified. The Clerk will report the modified amendment.

The Clerk read as follows:

Page 39, line 5, following the amendment offered by Mr. SEARS of Florida, insert a new paragraph, as follows:

"For continuance of the development of a submarine and destroyer base, Columbia River, Oreg., \$350,000."

Mr. FRENCH. Mr. Chairman, I think that is not subject to a point of order, and I withdraw it.

Mr. WATKINS. Mr. Chairman, the Congress, on June 4, 1920, appropriated \$250,000 toward the development of a submarine and destroyer base at Astoria, Oreg., near the mouth of the Columbia River. The Columbia River, you will remember, is the second largest river in the United States. It penetrates the great Northwest, and on its banks one-third of the standing timber of this Government grows. That initial appropriation was authorized probably because of several reports by several experts on the matter. I want to read them for the benefit of the House. Admiral Coontz, in his report, No. 1946, part 4, Navy Yards and Naval Stations Commission, fourth report, page 76, Appendix E, Sixty-fourth Congress, has the following to say on this matter:

At Astoria should be placed the best temporary base on the Washington and Oregon coasts.

There was a report made by a committee headed by Rear Admiral Parks. I take the liberty of reading two paragraphs of that report, as follows:

1. The board is in full agreement with the report of the Helm Commission as to necessity for the location of a submarine, destroyer, and aviation base between Puget Sound and San Francisco, and is in further agreement with the commission in its selection of the Tongue Point site at Astoria, Oreg., and the best site both strategically and tactically. The board recommends the site in the locality chosen, but that a larger area, including all the shore front between the railroad and the pierhead line extending from the western point where Tongue Point Peninsula joins the mainland around and including Tongue Point and along the shore line to the mouth of John Day River, is essential.

Acting on that recommendation, the city of Astoria bonded itself, bought the land, and donated over 1,300 acres to the Government for this specific purpose. The board goes on to say:

4. It is recommended that an appropriation of a million and a half be obtained from the present Congress, with authorization for the completion of project not to exceed \$5,000,000, to be completed within three years.

In addition to the foregoing, let me read to you what Brig. Gen. Henry D. Todd, jr., commanding the Ninth Coast Artillery District, which comprises all coast defenses on the Pacific coast, in submitting his report of January, 1924, stated. Among other things, he said:

The coast defenses of the Northwest part of the country would be utterly unable to protect units of the American battle fleet while leaving the harbor and before they could take up battle formation.

Conditions are worse in the coast defenses of the Columbia. There the garrison is so small, 2 Coast Artillery officers and 20 enlisted men for the three forts at the mouth of the Columbia and for the bat-

teries at Grays Harbor and Willapa Bay, that all that can be done is to keep the material in good condition.

Of course, if an enemy determined to make a base near the mouth of the Columbia, he could outrange and overpower the batteries there just as he could at Puget Sound.

Mr. Chairman, for nearly 1,000 miles along the Pacific coast this Government has nothing whatever to defend this Nation from a hostile attack, and the Columbia River is the only point on the Pacific coast where an enemy could penetrate this country for 200 miles on a grade of less than 5 per cent. The enemy could station its men, move its army by water, by rail, or by automobile into the interior for over 200 miles. It could plant its army there, and with the food, such as wheat, vegetables, fruit, dairy products, stock, and everything it needed, could maintain its army with our food and move it to the south by rail or by automobile, and could likewise move it to the north in the same way.

Not only that. If ships from San Francisco or Puget Sound were to encounter an enemy on the Pacific Ocean, became crippled in any way, shape, or form, they would have no refuge of safety nearer than 150 miles one way or 700 miles the other unless we maintain and keep up this base at Astoria.

Now, this base is peculiarly fitted for this service, because it is without the range of the enemy guns. It so happens that it is placed right behind a big mountain of rock that no gun or number of guns from any enemy could ever penetrate.

The CHAIRMAN. The time of the gentleman from Oregon has expired.

Mr. WATKINS. I ask unanimous consent for two minutes additional.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. WATKINS. Think of that mountain overlooking and protecting that wonderful bay! The Navy of the United States could and would be protected while it repaired its boats and received fuel and the like. Not only that, but it would prevent the enemy from invading this country up the Columbia River for more than 200 miles. Since this Government has seen fit to accept the recommendation of every Army officer and Navy officer who examined it, and has gone so far as to take 1,300 acres of land from the city of Astoria for this purpose; since it has seen fit to appropriate \$250,000 several Congresses ago, which amount is about expended, then beyond the peradventure of a doubt this House will be justified in continuing this appropriation in the sum of \$350,000. [Applause.]

Mr. FRENCH. Mr. Chairman, this amendment proposes to add \$350,000 to the bill in providing for the continuation of work on a submarine base at Tongue Point. This item was proposed by the gentleman a year ago. As a matter of fact, a year ago the Navy Department did not recommend the item to the Bureau of the Budget, nor did the Bureau of the Budget recommend the item to the Congress. The matter was pressed upon the committee at that time, and our conclusion was in line with the thought of the Navy Department and the Bureau of the Budget. Again we find the same situation this year. Neither the Navy Department nor the Bureau of the Budget made any recommendation touching the item to which the gentleman refers. I venture to say that if the Navy Department could have \$350,000 to expend in a permanent establishment for the national defense, it would not be spent at Tongue Point. There would be a good many other places where the money would be expended before the department would undertake the expenditure of money at that place.

Mr. WATKINS. Mr. Chairman, will the gentleman yield?

Mr. FRENCH. Yes.

Mr. WATKINS. The Government has already expended \$250,000, and where else on the Pacific coast could it establish a submarine base than at the mouth of the Columbia River and let it be out of the range of the enemy's guns?

Mr. FRENCH. I venture to say that if those who have studied this question closely could allocate the money it would be expended probably in Pearl Harbor first, and probably in Puget Sound, before it would be spent at Tongue Point.

There is no urgent demand for further expansion at this time of the submarine base at Tongue Point.

I appeal to the Members of the Congress not to place an item of this magnitude on the bill without any more consideration than can be given to it when a Member offers it from the floor of the House. If that shall be the way in which we legislate, then with just as sound reason we could add millions of dollars to the bill.

The CHAIRMAN. The time of the gentleman from Idaho has expired.

Mr. WATKINS. Mr. Chairman, I ask unanimous consent to proceed for one minute.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. WATKINS. Mr. Chairman, the fact that the Budget Committee and the committee of which the gentleman is chairman and the Navy Department have not seen fit to go into and consider this item is a matter for you to take into consideration to this effect: They know nothing about it. I submitted to you the opinion of the experts of the Navy who recommended \$5,000,000. They have gone there and have seen this situation. Let me ask the gentleman this question, and I give him my time in which to reply: What is he going to do with the submarine base already there, established with the \$250,000 which will be expended this year? Is he going to allow it to go to ruin?

Mr. FRENCH. Mr. Chairman, I would say to the gentleman that that institution will be maintained just as other institutions that are not any more active or that are active are maintained at this time. We do not need to maintain all of the naval establishments as though we were in war. We must close down some of them, and that is one I hope that will be closed down this year.

Mr. WATKINS. In other words, you are going to close it down?

Mr. FRENCH. Not necessarily; there will be some money expended for maintenance there.

Mr. WATKINS. Where will they get the money with which to maintain it?

Mr. FRENCH. Out of maintenance funds.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Oregon.

The question was taken; and on a division (demanded by Mr. WATKINS) there were—ayes 8, noes 47.

So the amendment was rejected.

The Clerk read as follows:

Naval station, San Diego, Calif.: For extension of shop and storage facilities, \$70,000.

Mr. BUTLER. Mr. Chairman, I offer the following amendment which I send to the desk.

The Clerk read as follows:

Amendment offered by Mr. BUTLER: Page 39, after line 7, insert a new paragraph as follows:

"Naval aeronautic station, Pensacola, Fla.: For fuel oil storage, \$35,000."

Mr. FRENCH. Mr. Chairman, I reserve the point of order.

Mr. BUTLER. Why, the gentleman's committee asked me to offer this. If you are going to make the point of order, do so, but I am not going to be made a dunce of.

Mr. FRENCH. Mr. Chairman, will the gentleman yield?

Mr. BUTLER. Yes.

Mr. FRENCH. I reserve the point of order for the purpose of asking whether or not this is an item which came to the committee with the recommendation of the Bureau of the Budget and Navy Department?

Mr. BUTLER. I do not care how the report got to the committee, but if the amendment is adopted it is going to save the Government \$32,000 a year, and when the gentleman reserved the point of order I did not know the mysterious purpose he had, and I apologize to the gentleman.

Mr. FRENCH. The gentleman need not apologize, the committee—

Mr. BUTLER. I am obliged to the gentleman for having made the explanation, and if I may be permitted to say just one word before the committee votes on it. This amendment is for the purpose of putting up an oil tank at Pensacola. Several destroyers are stationed at this point, and there is no opportunity to get oil for the destroyers except from one company known as the Texas Oil Co. That company is charging \$2.10 a barrel. It can be purchased for \$1.38 to \$1.40 a barrel. The authorities say that if they bought the oil from other companies they could save \$32,000 a year, if they have the storage facilities. I do not care to trespass upon our friend in offering legislation, notwithstanding it was submitted to our committee, but in the hearings before our committee in answer to my question the answer was made plain that if we allowed them to put up this tank they can compete and can buy from other companies at \$1.38 to \$1.40 a barrel of oil, and we can save in one year \$32,000, so our committee reported this bill favorably, and I think this is a good opportunity to have it passed if the committee sees fit to pass it.

Mr. FRENCH. I withdraw the reservation of the point of order.

Mr. BLANTON. I reserve the point of order just for a moment.

The CHAIRMAN. Does the gentleman from Idaho withdraw the reservation of the point of order?

Mr. FRENCH. I withdraw the reservation of the point of order.

Mr. BLANTON. I reserve it for just a moment. If the committee had asked anybody but our friend from Pennsylvania to put this legislation on their bill, I would have made a point of order, but I do not believe in the committee using him and then trying to subject him to this kind of treatment, and therefore I will not make it. [Laughter.]

The CHAIRMAN. Does the gentleman withdraw the reservation of the point of order?

Mr. BLANTON. I withdraw it.

Mr. FRENCH. Mr. Chairman, in view of my friend from Pennsylvania misunderstanding my purpose in reserving the point of order, probably I ought to make a short statement. There were several items in the bill which the committee investigated carefully. They came to us in orderly manner from the Bureau of the Budget, but upon further inquiry we recognized we had no jurisdiction and we turned them over to the legislative committee. This was one of them, and I reserved the point of order in order to make inquiry as to whether it belonged to that group. Let me say here I quite concur in the statement of the gentleman from Pennsylvania [Mr. BUTLER]. Providing for oil storage at Pensacola will mean economy to the Government and save a considerable amount annually in the administration of the fuel situation in that part of our country.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Pennsylvania.

The question was taken, and the amendment was agreed to.

The Clerk read as follows:

The unobligated balance of the appropriation of \$500,000 contained in the naval appropriation act for the fiscal year 1925 on account of the construction of an extensible building for the supply depot, Marine Corps, San Francisco, Calif., is made available for adding two additional floors to said building, such addition to be of permanent construction and made ready for occupancy in all respects within the amount hereby made available.

Mr. HASTINGS. Mr. Chairman, I move to strike out the last word for the purpose of again inviting attention to the inadvisability of using the kind of language that is used in this paragraph. I am opposed to reappropriating the unobligated balance of the appropriation of \$500,000. I think it is much better to allow the money to be covered back into the Treasury, and I think it is much safer to have an estimate of the amount of money that is going to be required for any item than to have that amount of money itself reappropriated rather than to have the unexpended balance reappropriated. It may be explained as to this particular item that you could not say how much the unappropriated balance was as the fiscal year has not yet ended. But while I am discussing this situation generally, permit me to invite your attention to page 48, beginning with line 15, where this language is used:

The Secretary of the Navy may use the unexpended balances on the date of the approval of this act under appropriations heretofore made on account of "increase to the Navy."

Now, I have not critically examined this bill, and I do not know how many times similar language occurs, but I heard the very able and very exhaustive speech by the chairman of the subcommittee who has charge of this bill the other day, and he explained to the Members of the House that this bill carried approximately \$290,000,000. Now, if there are many large unexpended balances carried in the bill, of course, his figures would not be accurate. At the close of the session of Congress the chairman of the Committee on Appropriations, or the leader on that side, will get up and make a statement as to the appropriations which have been made. The ranking minority member of the Committee on Appropriations, or the minority leader, will make a similar statement. Their figures will disagree. The people throughout the country or the Members of Congress will be confused over those figures, and it is largely due to the fact that unexpended balances are carried in these appropriation bills. Now, I can readily see, as explained by the chairman of the subcommittee, who has this bill in charge, where material that has been purchased for one year by the Navy Department should be carried over and used for the purpose for which it was purchased, but I believe it is much safer to have all moneys appropriated and unexpended and unobligated covered into the Treasury at the end of each fiscal year and the money reappropriated outright for each item which is carried in any of these appropriation bills.

Mr. FRENCH. Mr. Chairman, broadly speaking, I concur in the observations made by the gentleman who has just taken his seat. The general law provides that building items such as this, or appropriations under building items, shall be continuing appropriations. In this case the money could be expended without further congressional action. The language put in here is for the purpose of limiting the department to that amount on a completed building rather than permitting the amount to be expended on a building which, at the end of the construction, might have but a temporary roof, and the department thus be required to come before Congress for additional money.

A year ago estimates were made for the storage building or depot for the Marine Corps at this point at a cost not to exceed \$500,000. Congress gave the amount, and bids were called for on the basis of a three-story building; the roof, however, to be of temporary construction, with the thought that another couple of stories would be added to the building at a later date. Bids were called for, and it appeared that we could erect the building for \$340,000, considerably below the amount included in the law.

We now find that if we go ahead and use the balance of the money to erect two additional stories and put a permanent roof on the building we can provide accommodations for activities of the Government that are now paying rent in San Francisco amounting nearly to \$20,000 a year. Of that amount, \$7,700 a year is being paid by the Navy, and \$12,000 a year is being paid by other bureaus or branches of the Government. These latter can be housed in the customs office building, where rooms will be vacated by the Naval Establishment if this work can be done. We thought that if with an investment, not to exceed \$160,000, we could save the Government nearly \$20,000 annually in rent, it would be a good business proposition. The proviso in the bill is to limit the department, not to increase its powers, and to prevent a situation from arising requiring more money at a later date.

Mr. BUTLER. Mr. Chairman, will the gentleman yield?

Mr. FRENCH. Yes.

Mr. BUTLER. I think that the committee I sit on authorized the appropriation of this money for one purpose only, and that was to supply a depot for the Marine Corps. Does my friend understand the game that is being played? Does the gentleman know that we always try it on the dog, and the dog is the Marine Corps? Does the gentleman understand that it is proposed to take this building away from the Marine Corps after the Marine Corps obtained this building as a place to deposit its supplies? The Navy being an organization larger than the Marine Corps, it seems the Marine Corps will lose out. Why should not this be placed directly under the Marine Corps?

Mr. FRENCH. We recognize the situation to which the gentleman refers, and we have tried to protect the Marine Corps against it in the report that we made touching the item, where we say:

It is to be understood that the accommodations proposed for the Navy shall not operate to remove the control of the building from the Marine Corps, for which the building was originally authorized and intended.

Mr. BUTLER. That is good and sounds well; but the gentleman knows as well as I know that that has not a particle of restraining influence over the Navy.

Mr. FRENCH. The statute itself provides that it shall be a supply depot of the Marine Corps.

Mr. BUTLER. I know; but I am only echoing the consternation that is in the minds of those people. We supposed it was to be a building where these people can store their supplies. If I had known that it was to be a mixed building, I would not have recommended or favored it. The Navy is asking for a storage place at Alameda for several million dollars. I do not see why we should marry in this building with the Navy.

Mr. FRENCH. The committee that shaped the bill will endeavor in every way possible to cooperate with the chairman of the Committee on Naval Affairs in protecting the Marine Corps in the management of this building.

The CHAIRMAN. The time of the gentleman from Idaho has expired. Without objection, the pro forma amendment will be withdrawn.

Mr. McCLINTIC. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Oklahoma moves to strike out the last word.

Mr. McCLINTIC. I do so, Mr. Chairman, for the purpose of asking the gentleman from Idaho a question. What was

the total amount of the appropriation that was passed for the purpose of constructing this Marine Corps warehouse?

Mr. FRENCH. Five hundred thousand dollars a year ago. This provides that the balance in excess of \$340,000 already obligated may be expended in erecting two additional stories and putting a permanent roof on the building.

Mr. McCLINTIC. Was that \$500,000 expended for the construction of the building that is there now?

Mr. FRENCH. The building is in process of construction, on the basis of three stories and a temporary roof. We will save the cost of the temporary roof and make use of the walls that are being erected, and make use of the contractor's plant that he has put there for use in the construction of the building if we add the other two stories now. Generally speaking, it will be the economical thing to do to go ahead and carry the building up to five stories with a permanent roof, instead of only three stories with a temporary roof, expecting additional stories later on.

Mr. McCLINTIC. My recollection is that this was to take care of the needs of the marines.

Mr. FRENCH. That is right.

Mr. McCLINTIC. Now you ask for an additional \$500,000 to be added, making this building cost, as I understand, when erected, \$1,000,000?

Mr. FRENCH. Oh, no. The two additional stories may now be added within the total appropriation of a year ago if they are added before the temporary roof is put on.

Mr. BUTLER. Three hundred and forty thousand dollars?

Mr. FRENCH. A total of \$500,000, of which \$340,000 has been obligated, leaving a balance of \$160,000.

Mr. McCLINTIC. Is this an extension of the appropriation in the last bill?

Mr. FRENCH. It is a continuing appropriation on which we are proposing the restriction indicated.

The CHAIRMAN. Without objection, the pro forma amendment will be withdrawn and the Clerk will read.

The Clerk read as follows:

BUREAU OF AERONAUTICS
AVIATION, NAVY

For aviation, as follows: For navigational, photographic, aerological, radio, and miscellaneous equipment, including repairs thereto, for use with aircraft built or building on June 30, 1925, \$375,000; for maintenance, repair, and operation of aircraft factory, helium plant, air stations, fleet activities, testing laboratories, and for overhauling of planes, \$6,921,625, including \$300,000 for the equipment of vessels with catapults; for continuing experiments and development work on all types of aircraft, \$1,550,000; for drafting, clerical, inspection, and messenger service, \$700,000; for new construction and procurement of aircraft and equipment, \$5,243,375; in all, \$14,790,000; and the money herein specifically appropriated for "Aviation" shall be disbursed and accounted for in accordance with existing laws as "Aviation" and for that purpose shall constitute one fund: *Provided*, That in addition to the amount herein appropriated and specified for expenditure for new construction and procurement of aircraft and equipment the Secretary of the Navy may enter into contracts for the production and purchase of new airplanes and their equipment, spare parts, and accessories, to an amount not in excess of \$4,100,000: *Provided further*, That no part of this appropriation shall be expended for maintenance of more than six heavier-than-air stations on the coasts of the continental United States: *Provided further*, That no part of this appropriation shall be used for the construction of a factory for the manufacture of airplanes: *Provided further*, That the Secretary of the Navy is hereby authorized to consider, ascertain, adjust, determine, and pay out of this appropriation the amounts due on claims for damages which have occurred or may occur to private property growing out of the operations of naval aircraft, where such claim does not exceed the sum of \$250: *Provided further*, That all claims adjusted under this authority during the fiscal year shall be reported in detail to the Congress by the Secretary of the Navy.

Mr. CONNALLY of Texas. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Texas moves to strike out the last word.

Mr. CONNALLY of Texas. I want to ask the gentleman from Idaho a question as to the item on page 40. I would like to know the significance of this clause—

Provided further, That no part of this appropriation shall be used for the construction of a factory for the manufacture of airplanes.

Was it proposed by the department to establish a factory?

Mr. FRENCH. The factory for the manufacture of airplanes at Philadelphia was built several years ago without the specific authority, as I understand it, of the Congress. It was resented by the Congress at the time, and this language has been carried here for several years.

Mr. CONNALLY of Texas. Does it mean that the committee is opposed to the Government building its plants?

Mr. FRENCH. If we were to build a plant it would require, as we see it, general legislation.

Mr. CONNALLY of Texas. The department has no authority to build a plant unless it is authorized to do so by some legislation?

Mr. FRENCH. No.

Mr. CONNALLY of Texas. Then why put that language in the bill? It is not necessary, is it? It looks to me as though it were an attempt on the part of somebody to tie up the Government to the policy of being required to buy these airplanes from private concerns.

Mr. FRENCH. Oh, no. I think the gentleman is right in saying that the department would not have authority to go ahead and erect an airplane factory without authorization. This apparently was written into the law as an additional precaution, and it has been carried for several years. I do not believe the language is needed. The gentleman himself does not want the department to go ahead and erect an aircraft manufacturing plant without authority from Congress?

Mr. CONNALLY of Texas. No; but I would not want to commit the Government irrevocably to this kind of a policy.

Mr. DOWELL. Mr. Chairman, I move to strike out the last word for the purpose of asking the chairman of the committee a question. Has there been any effort on the part of the committee to coordinate this department with the air service of other departments of the Government?

Mr. FRENCH. In just what way does the gentleman use the word "coordinate"? Does the gentleman mean to amalgamate them as one service?

Mr. DOWELL. Yes.

Mr. FRENCH. The members of the committee, of course, would not have authority to do that, but I beg to say that we have gone into the question of the extent to which they are coordinating, each within the services or duties imposed upon the respective units; that is, the Army air unit and the Navy air unit. As much as possible we are trying to be helpful in seeing that they coordinate so there will not be an overlapping of activities. For instance, not long ago planes acquired by the Navy Department for the use of the Navy of one type were of a type so similar or identical to the type of the Army that it was arranged that the requirements of each should be contracted for simultaneously, in that way saving the Government many thousands of dollars. So wherever we can bring about coordination we are doing so.

The Navy Department wishes to do so and the War Department wishes to do so. On the other hand, my personal opinion is, regardless of the fact that we do not have authority to bring in any program of amalgamation, so as to constitute a separate air service for the United States, as they now have in Great Britain, France, and Italy, that it would be an unwise thing to do. I am more and more led to that conclusion as I study the benefits of the competitive system which exists here. More than that, I am led to that conclusion from studying the effect of the separate competitive system we have here, and measuring the results for the Navy and comparing those results with the results obtained in Great Britain, France, and elsewhere. I believe that from the standpoint of design, effectiveness and the science of aviation the United States leads them all. We do not lead in numbers, but from the standpoint of the Navy I think the art within our country has attained a greater height than it has in other countries, and I think the main reason is because we have a separate institution that realizes the importance of the air service to the Navy as a part of the Naval Establishment, and because of that it has been able to bring about results that are desirable. May I say further that Great Britain at this time, in my judgment, is on the point of establishing a separate naval air service. I understand this to be part of the program of Premier Baldwin, who has recently become the head of the British Government.

Mr. MILLER of Washington. I wish to say to the gentleman from Iowa [Mr. DOWELL]—as the gentleman from Idaho well knows—that there is a strong coordinating arrangement between the Army and Navy air forces.

Mr. FRENCH. Undoubtedly.

Mr. MOORE of Virginia. May I ask the gentleman from Idaho a question?

Mr. DOWELL. Mr. Chairman, I desire to retain the floor.

The CHAIRMAN. The gentleman from Iowa asks unanimous consent to proceed for two minutes longer. Is there objection?

There was no objection.

Mr. DOWELL. The reason I am making the inquiry is because of a controversy over this question which I heard a

short time ago in which it was charged, with a good deal of force, that a great many millions of dollars was being spent by the Government annually in duplications of this work in the various departments, and that if the departments could be placed under one organization many millions of dollars could be saved, and, perhaps, greater results obtained. What does the gentleman say with reference to that in the way of an economical conduct of the department?

Mr. FRENCH. Well, I do not think you could obtain the results we are now obtaining by any such program. I do not think there is duplication to a great extent. We have a joint board that has to do with aeronautics, representing the War Department and the Navy Department. That board endeavors to work out a program so that there will be as little as possible of overlapping of activities. But the gentleman must realize this:

Suppose that you would draw a hard and fast line to separate the Army and Navy activities, say, along the coast. That would, of course, have to be an exact line where the land and ocean meet or else a few miles out at sea or a few miles inland. Where would you draw the line? Would it be up to an Army officer in the event of crisis when he reached the line to turn back from an enemy plane and let a naval officer take charge? Such supposition is absurd. The best we can do, as I see it, is to define the Army and Navy work along broad lines and then mix with administration a good deal of sound sense and respect for the other service.

Mr. DOWELL. That is the identical question I was trying to bring out.

MESSAGE FROM THE SENATE

The committee informally rose; and the Speaker having taken the chair, a message from the Senate by Mr. Craven, one of its clerks, announced that the Senate had passed the following resolutions and bill:

S. J. Res. 157. Joint resolution extending appropriation in connection with Columbia Basin investigation;

S. J. Res. 159. Joint resolution providing for the control and eradication of the European fowl pest and similar diseases in poultry; and

S. 3545. An act to revise and reenact the act entitled "An act granting consent of Congress to the Huntington & Ohio Bridge Co. to construct, maintain, and operate a highway and street-railway bridge across the Ohio River between the city of Huntington, W. Va., and a point opposite in the State of Ohio," approved August 18, 1923.

NAVAL APPROPRIATION BILL

The committee resumed its session.

Mr. JONES. Mr. Chairman, I have an amendment at the desk which I desire to offer.

The CHAIRMAN. The gentleman from Texas offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. JONES: Page 40, line 2, after the word "planes," strike out the figures "\$6,921,025" and insert in lieu thereof the following: "\$11,921,625: *Provided*, That not to exceed \$5,000,000 may be used for the acquisition of land or interest in land by purchase, lease, or condemnation, where necessary, to explore for, procure, or reserve helium gas, and also for the purchase, manufacture, construction, maintenance, and operation of plants for the production thereof and experimentation therewith."

Mr. FRENCH. Mr. Chairman, I make a point of order upon the amendment.

Mr. JONES. Will the gentleman reserve the point of order?

Mr. FRENCH. I will be pleased to reserve the point of order.

Mr. JONES. Mr. Chairman, I desire to state that this is the identical language that was carried in last year's military appropriation bill except as to the amount.

This is to cover a matter recommended by the helium board, composed of representatives of the Bureau of Mines, and recommended also by those in the Army and those in the Navy who have advocated the conservation of helium.

About three years ago extensive hearings were had before the Committee on Public Lands looking to the development and conservation of helium. After rather extensive hearings that committee decided it did not have jurisdiction. All of those who appeared and all of those who were interested in helium, including Doctor Moore, who has spent years in this work, were very earnest in their desire that this matter be taken care of. The matter then went to the Committee on Military Affairs, and after some considerable hearings at the last session they reported a bill covering the project. There does not seem to be any opposition to it on the part of those who have investigated

it. This bill is pending before the House, but of course, even if it passed at this session, it would be impossible to take care of it in the way of an appropriation unless some appropriation of this character had been made.

Mr. McKEOWN. Will the gentleman yield for a question?

Mr. JONES. I will yield to the gentleman for a question.

Mr. McKEOWN. I simply wanted to ask the gentleman if the adoption of his amendment would not tend to decrease the production of helium rather than increase it, because you take it away from private individuals.

Mr. JONES. I do not think so at all. As a matter of fact, this is an appropriation that would care for a product that is in this country and is in no other country in appreciable quantities. A number of other countries have spent more than is proposed to be spent here in an effort to discover helium or to discover a process of making helium, realizing its great value. Here we have the natural product on which we have a monopoly and which we are allowing to go to waste in the gradual use of the natural gas of this country.

I assume a good many of you heard the speech made by my colleague the gentleman from Texas [Mr. LANHAM] on yesterday. The gentleman from Texas [Mr. LANHAM] is the helium expert of the House and appeared before both of these committees and urged the adoption of this bill.

Now, listen. Everyone who has studied the efforts of the last war realizes that the next war is going to be fought in the air and under the sea, probably, if we are ever so unfortunate as to get into another war. In accordance with the disarmament conference we have sunk battleships worth a great deal more than is suggested here. So far as the House is concerned, we authorized at the close of the last Congress the building of cruisers to the extent of more than \$100,000,000 and certain other ships for war purposes. There are large appropriations in this bill for the same purpose. If my amendment is adopted, I will move to reduce the appropriation for ships, so that it will not increase the appropriation as carried in the bill. I believe that this is more important probably, in so far as any prospective war is concerned, than the building of all those ships. It is something that this country has a natural monopoly of. Would it not be wise to transfer a portion of the funds herein appropriated to this new and valuable use?

In the last war we had captive balloons at various places on the front. We used various methods of getting views of the opposition's positions by means of hydrogen-filled balloons. A single incendiary bullet would destroy the whole thing, and yet we found it advisable to use them. Helium will not explode. It will not burn. You can shoot an incendiary bullet through a balloon filled with helium and it will not explode. This has been thoroughly tested. By means of a process now used a small opening in the balloon will heal itself, so that a bullet might pass through a helium filled balloon without doing material damage.

Here is an element on which the United States Government has a natural monopoly. It is found in commercial quantities in no other country on the globe. They have tried to buy some from this country. They have tried to discover it, but they have been unable to do so.

You know it is strangely true that a great deal of the development of the natural resources of a community or of a town or of a national government even is made by people from the outside. We frequently do not appreciate what is nearest us. There are a great many little cities that are developed in that way. A Columbus has to come along sometimes and discover the fine things. It is usually in the form of some one from the outside who sees the possibilities.

The CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. JONES. Mr. Chairman, I ask for three minutes more.

The CHAIRMAN. The gentleman from Texas asks unanimous consent to proceed for three additional minutes. Is there objection? [After a pause.] The Chair hears none.

Mr. JONES. Other countries realize the importance of this product, and I believe this country ought to do so. Doctor Moore and the entire helium board for three years have urged this measure and have advocated it in every possible way. Those in the Navy who have had charge of this proposition have appeared before both the Naval Affairs Committee and the Military Affairs Committee and have secured appropriations from year to year barely sufficient to run the little plant located in one part of the United States, and yet we have helium in a number of places strung out from Texas all the way up to Pennsylvania, and it is in commercial quantities at a number of those places.

It is a new project. We spend a great deal more than this in the development of things not half so important. I hope

the chairman of the committee will not urge his point of order. It is in the exact language of the last military appropriation bill. The matter has been thoroughly considered by the Public Lands Committee and they were all favorable, but held that they did not have jurisdiction. It went before the Committee on Military Affairs and they reported the bill.

During the World War a great many shots were wasted, because it was impossible to tell the exact location of the mark at which the same were leveled. Perhaps a very small percentage of the shots that were actually fired reached the ultimate mark at which they were aimed. In an effort to aid in finding the exact location of the enemy and the point sought to be reached, captive balloons were used for observation. These captive balloons were filled with hydrogen. They would remain up for hours with observers surveying the enemy's camps, fortifications, and locations. A single shot would destroy them and endanger the lives of the observers, yet it was necessary to use them. If they had been filled with helium, they would have been very much safer.

Most of the raids over London were conducted by the Germans in dirigibles, because they could carry immense supplies of bombs. These dirigibles were filled with hydrogen, which is very combustible. Had they been filled with helium they would have been much safer, longer trips could have been made, and the damage very greatly increased.

Helium is being wasted in this country whenever a cubic foot of gas is used that contains helium, and when gone it is gone forever. There is no assurance that the supply is unlimited. Nothing has been found to take its place. It would seem, therefore, that the wise policy would dictate its conservation, and I hope the amendment will be agreed to. It would simply mean a transfer of a portion of the funds carried in this bill from the building of cruisers and battleships to the conservation of helium. The battleship is becoming of less and less importance in war time. The overhead warfare and undersea warfare is becoming more important. The adoption of this amendment under the circumstances would mean no greater expenditure, and yet I think a much wiser one.

Mr. McCLINTIC. Mr. Chairman, I move to strike out the last word. I do this for the purpose of making a statement with reference to helium. I am a member of the Naval Affairs Committee, and as a member I have taken a good deal of interest in the development of aircraft. I hold somewhat different views from a majority of the members of the committee in that I believe with my colleague from Texas that in the future a majority of our conflicts will be decided in the air or under the water.

Not long ago there was given publicity in this country to a statement which was to the effect that in a short time it was proposed to build a large dirigible which would be twice as large as the *Shenandoah*, and if there is to be development of this kind, then it is going to be necessary, if we are to proceed along those lines to make proper investigation for the purpose of finding out whether we have a sufficient amount of the kind of gas that will make navigation safe in the air.

In the State of Oklahoma we have extensive gas fields, and in nearly all of the gas fields that I have been informed about there is to be found a large amount of helium. Most of the helium at the present time is going to waste. If we are to develop our aircraft in the future in either branch of the Army or the Navy, surely it would be economy in the end to appropriate a little money to be used for this purpose.

When it is taken into consideration that this amendment only increases the appropriation \$2,000,000, and when we compare it with appropriations for other branches of the Navy, it seems to me it would be wise to favor this amendment so that we can make proper investigation along the lines that will give us the information necessary to make navigation of the air more safe. Inasmuch as other countries do not have the advantage of helium, and helium is to be found in Kansas, Oklahoma, and Texas, surely it would be economy in the end to allow an amendment of this kind to be considered in order that we may progress in the future along the line of absolute necessity. Therefore, I hope the chairman of the subcommittee will see the necessity of aiding in this movement rather than throwing something in the way by making a point of order against the amendment.

Mr. FRENCH. Mr. Chairman, I wish to make a short statement on this subject. If there is a Member of Congress that did not hear the speech of the gentleman from Texas [Mr. LANHAM] on helium yesterday, he ought to read it. It is illuminating; it is a splendid discussion of the development of helium and the importance of helium to our country.

We are making tremendous progress. For instance, from the standpoint of production and the cost of production, a year ago

when a representative of the department came before our committee it was the understanding that at that time, or at least immediately before that time, it cost as high as from \$100 to \$135 a thousand cubic feet to extract helium. At that time we were advised of a process by which it was hoped the cost could be brought down; it was hoped that it could be reduced as low as \$15 a thousand cubic feet. This year when the officers came before our committee we were told that already through a new process they have reduced the cost of recovering helium from natural gas to about \$55 per thousand cubic feet, practically cutting it in two.

We are developing along other lines. For instance, the question of storage has been a difficult proposition. How are you going to care for helium and store it after it is extracted from the natural gas? There are different methods of storing helium, but all are expensive, and I believe the cheapest method adds about 30 per cent to the cost of the helium. In other words, it costs that much to store it, in addition to the cost of recovering the helium.

We are developing a means by which it can be stored underground. We need to develop and explore along that line. In other words, if we are going to use the gas that contains helium, we have to prepare some sort of storage capacity until it may be used.

On the other hand, the members of this committee realize that it is the sense of the House of Representatives that the Appropriations Committee shall not permit to go upon their bills large programs that are legislative programs rather than appropriation programs. Here you are asking an appropriation of \$5,000,000. I do not doubt that it is for a good purpose. I wish there were some way now by which we could conserve the helium. It may be even that this would be in line of economy in the long run, but there is something more important than permitting an item to go into this bill now, and that is the integrity of the rules of the House touching great policies that ought to be cared for by the legislative committees. For that reason I am constrained to make the point of order against the amendment.

Mr. TILSON. Will the gentleman yield?

Mr. FRENCH. Yes.

Mr. TILSON. Is there a way of keeping the gas after it is put in the envelope? Does it escape from the envelope readily?

Mr. FRENCH. We have gone into that. There is some loss, but not nearly so much as with hydrogen. Even so when the gas is in the bags used in our ships there is a certain loss.

Mr. TILSON. Is there any deterioration in quality when it is stored even under ground?

Mr. FRENCH. Practically none, and I would say that even if there were deterioration, we have developed processes of purifying the helium so that it can be restored to its original purity, either from storage or gas bags.

Mr. TILSON. Did I understand the gentleman from Texas [Mr. LANHAM] correctly the other day in saying that this method of using water ballast had succeeded to such an extent that it is not necessary to valve out any helium in order to prevent rising?

Mr. FRENCH. That is correct. The gases that escape from the exhaust of the motors will, when combined with other elements of the air be converted into water that will weigh even more than the weight of fuel oil originally. In other words, it will amount practically to 110 per cent of the weight of the original fuel oil, so that there even would be water to throw away.

Mr. TILSON. So that there is no loss of gas practically by valving?

Mr. FRENCH. No; providing we have this device attached to the ship.

Mr. JONES. Mr. Chairman, will the gentleman yield?

Mr. FRENCH. Yes.

Mr. JONES. The gentleman realizes that the helium that is in the gas when the gas is used up is wasted?

Mr. FRENCH. Absolutely.

Mr. JONES. And there is no assurance of our permanent supply of helium?

Mr. FRENCH. That is correct.

Mr. JONES. And this is about the only way for doing this at this short session.

Mr. FRENCH. I am sorry to be compelled to make the point of order.

The CHAIRMAN. The Chair finds that this language was used in the Army appropriation bill a year ago, but no point of order was raised against the language at that time.

Mr. JONES. Mr. Chairman, I concede that it is subject to the point of order.

The CHAIRMAN. The gentleman from Texas concedes the amendment to be subject to the point of order. The Chair is distinctly of the opinion that it is subject to the point of order and sustains the point of order.

Mr. MOORE of Virginia. Mr. Chairman, I move to strike out the last line for the purpose of asking the gentleman from Idaho [Mr. FRENCH] a question. It is easy enough to theorize about grouping or coordinating Government activities, but it is very difficult sometimes to do anything of that sort, even though the theory itself may seem to be perfect. The joint committee on the reorganization of the Government departments did not consider it wise or expedient to report any proposition of that sort to the House with reference to the various air services. This is the question I desire to put to the gentleman from Idaho: Whether from his very intimate knowledge of the work of the Committee on Appropriations he can give us any idea of what the total expenditures are for the air service in its various aspects during the present fiscal year?

Mr. FRENCH. Approximately \$65,000,000, if you include the pay and subsistence of the men. If the gentleman refers merely to the appropriations carried for the air establishments, not including the men and their subsistence, he would have about half that amount, or somewhere near \$30,000,000.

Mr. MOORE of Virginia. Is the gentleman taking into consideration all of the air services?

Mr. FRENCH. Yes.

Mr. MOORE of Virginia. In the different departments of the Government? The gentleman is not confining his statement simply to the Army and the Navy?

Mr. FRENCH. Oh, no. I am including the different aviation activities of the Government.

Mr. DOWELL. Mr. Chairman, will the gentleman from Virginia yield?

Mr. MOORE of Virginia. Yes.

Mr. DOWELL. The gentleman stated that his committee did not find that these departments of the air should be united. Upon what theory did the committee arrive at that conclusion?

Mr. MOORE of Virginia. It was upon representations similar to those that have been stated by the gentleman from Idaho [Mr. FRENCH] that the activities are so diverse that they can not well be grouped so as to maintain the efficiency that we all desire. I will say this to the gentleman, that perhaps he and I might agree that it would be well to have a standing committee which could take into view all of the needs of the Government in respect to air service, a committee on which members of the Committee on Naval Affairs and members of the Committee on Military Affairs might serve.

Mr. DOWELL. We have that system somewhat followed in the fact that all members of the Committee on Appropriations are members of subcommittees.

Mr. MOORE of Virginia. That is true as to appropriations, but I am talking about the legislative features that have to be dealt with.

Mr. DOWELL. As I understand, the gentleman's committee has as its purpose the coordinating of the various departments of the Government for the purpose of economy and efficiency. Does the gentleman believe that our system of each department now having an entirely separate department of the air will do the work with the same economy and the same efficiency as if all of the appropriations for the air were put into the hands of one single department, with such branches as might seem advisable after the work has progressed to a certain point? Would not better results follow from such an organization?

Mr. MOORE of Virginia. I would have been prepared two years ago to answer that question in the affirmative, but after hearing the evidence presented to our committee I was obliged to come to a different conclusion.

Mr. DOWELL. Then, in other words, the gentleman believes there is more efficiency in the present departments than there would be if they were united into one division?

Mr. MOORE of Virginia. If I had not thought so, I would, as one member of the committee on reorganization, have advocated a grouping of the various services. The committee, however, is of opinion, as unanimously expressed in its report, which excludes any suggestion of the coordination of these various services, that it can not wisely be done at this time.

Mr. HULL of Iowa. Mr. Chairman, I rise in opposition to the pro forma amendment. Does the chairman of the committee think that lighter-than-air machines have any practical use in actual war; and if so, what would that use be?

Mr. FRENCH. Well, the members of the committee asked that very question of those representing the aviation service, and it is the belief of officers that the lighter-than-air craft does have a military value. Were an inflammable gas used, the value of the lighter-than-air craft would not commend itself. Even so, it was used considerably during the World War. The fact that we have helium gives advantage in that regard to the United States. Of course, I do not believe its value equals the heavier-than-air craft as part of our defense.

Mr. HULL of Iowa. As a matter of fact if we had a fleet of the lighter than air such as the one that was christened here the other day, the *Los Angeles*, filled with helium and war should be declared we would spend a little money, would we not, finding a cave to hide it in where they could not find it with an airplane?

Mr. FRENCH. I recognize there is force in the suggestion the gentleman makes, that as a fighting weapon it does not have in my judgment the value of the heavier-than-air craft.

Mr. FROTHINGHAM. But the objection in the last war to these machines was that we did not have helium gas and an inflammable bullet would set one on fire by combustion or breaking. Now the advantage of these machines we have here is they not only have helium, but it is kept in separate bags so that in case one or a dozen go the machine can still fight effectively. The whole condition has changed since the last war.

Mr. HULL of Iowa. I ask the gentleman, who has studied the proposition, what was he going to do with it in case of a war.

Mr. FROTHINGHAM. I am not going to do anything with it. I trust that matter to the Secretary of War and to the Secretary of the Navy.

Mr. HULL of Iowa. I have asked that same question of the War Department and the Navy Department, and no one has ever been able to answer the question. Now, Mr. Chairman, I am not opposed, I want to say, to the development of the art if we want to spend a lot of money on it, but I am opposed to the idea of holding it up as a fighting asset. It has no value. If anyone had been down to the christening of the *Los Angeles*, he would have observed that it took them nearly three hours and 500 men finally to bring that machine to the ground. One airplane could have destroyed a hundred of them. They have no defense. I just wanted to call the attention of the House to that fact.

Mr. JONES. Will the gentleman yield?

Mr. HULL of Iowa. I am perfectly willing, as far as I am concerned, to develop helium gas. It may have some commercial purpose; I do not know but what it has, but it is not proper when you are appropriating for the Army and Navy, and it is very questionable whether you have the right to appropriate to develop an industry for commercial purposes, and that is what you are doing so far as lighter-than-air machines go to-day.

Mr. JONES. Will the gentleman yield?

Mr. HULL of Iowa. Certainly.

Mr. JONES. Of course, probably the reason they took so much time to come down was their desire not to waste any of the helium, but on the question of use in war the gentleman realizes that we used captive balloons in great quantities during the war which were filled with hydrogen—

Mr. HULL of Iowa. And all of questionable value.

Mr. JONES. They used them all through the war, even up to the close of the war. Of course, the gentleman might want us to take his word and judgment against the word and judgment of those who were in control of the military and naval forces during the war. The Germans made a number of raids of a wide radius with lighter-than-air craft which were combustible.

Mr. HULL of Iowa. But the development of the airplane to the present high state of the art makes the lighter-than-air machines absolutely obsolete.

Mr. JONES. We had airplanes during the war, and these machines can go a much greater distance.

The CHAIRMAN. The time of the gentleman has expired, and the pro forma amendment will be withdrawn.

The Clerk read as follows:

NAVAL ACADEMY

Pay, Naval Academy: Pay of professors and others, Naval Academy: Pay of professors and instructors, including one professor as librarian, \$236,900: *Provided*, That not more than \$36,500 shall be paid for masters and instructors in swordsmanship and physical training.

Mr. DENISON. Mr. Chairman, I move to strike out the last word. I want to call attention during these five minutes to

the subject of the Naval Academy. This week the newspapers carried a report that a new superintendent had been selected or appointed for the Naval Academy. I have called up the Bureau of Navigation and find that report is true, and Admiral Wilson is to be retired some time during February and is to be succeeded at the academy by Admiral Nulton, I believe. Admiral Wilson has been in charge of the academy some three or four years, and his superintendency of the institution has certainly been most unfortunate for the academy. All those who are interested in the academy, I feel sure, will welcome the news that he is to be retired as superintendent and a new man placed at the head of that institution. In the first year of his superintendency of the academy he came before the committee and recommended in just a few words the dismissal of 79 civilian professors and their replacement by naval officers, all of whom, of course, are inexperienced as educators or instructors. The committee, of course, did not accept that recommendation, but we had to put in the bill a limitation or provision which would prevent the superintendent from removing the civilian professors and substituting naval officers in their place. Now we have put that limitation or provision in each appropriation bill that has been passed since Admiral Wilson was assigned to that institution.

Now, I have observed that the committee has not seen fit to put that provision in the pending bill. I have not read the hearings, and I do not know what it is that justifies the committee in the view they are now taking. I hope they have a sufficient reason for not carrying that provision in the bill. I am not going to make any effort this year, as I have done each year for several years past, with the assistance of many other Members, to put that provision back in the bill, because my observation has been that it makes no difference if we do put it in; it will be disregarded.

We have put that provision in each year in the last four years, I believe, to prevent the superintendent from discharging the civilian professors. He has taken advantage of technicalities and evaded the express direction of Congress concerning civilian professors, and the morale of the institution and the standards of teaching have deteriorated as the result of this course of action.

I hope the Naval Affairs Committee will take under consideration legislation governing the Naval Academy. There ought to be legislation on this subject of the management of that institution if we are to preserve it as a great educational institution, such as it was intended to be. As it is now, there is practically no law governing it, and each superintendent when appointed can generally do about as he pleases, because the Secretary of the Navy generally follows the recommendations of the superintendent.

There is a provision of law for the appointment of a Board of Visitors at the academy once each year. The Board of Visitors is composed of a certain number of Senators appointed by the President of the Senate and a certain number of Members of the House appointed by the Speaker and certain others appointed by the President.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. DENISON. Mr. Chairman, may I have five minutes additional?

The CHAIRMAN. Is there objection to the gentleman's request?

There was no objection.

Mr. BLANTON. Mr. Chairman, will the gentleman yield for a question?

Mr. DENISON. In a moment.

The Board of Visitors go to the academy once a year and make some observations and study of how it is being conducted, and make a report. Now, these Boards of Visitors for a number of years have been composed of very able men, including prominent educators of the country, and they have repeatedly made specific recommendations as to what should be done to secure able men in the faculty, able civilian professors in the faculty, and as to how the institution should be run along that line; the Secretary of the Navy has attempted to put the recommendations of the board into effect with reference, for instance, to the pay of civilian professors and as to promotions and other regulations of that kind. But Admiral Wilson swept that all aside and has been running the institution in a very arbitrary and unsatisfactory manner.

Now I yield to the gentleman from Texas.

Mr. BLANTON. This academy has the standing of a first-class university. With respect to all other universities, no president of a university can discharge any member of the faculty until he has submitted his recommendation to a board of regents to pass upon the matter. What kind of a board

of regents have we for the Naval Academy to pass upon recommendations made by Admiral Wilson, the presiding superintendent?

Mr. DENISON. Well, they have had an academic board composed of the heads of each of the departments. There are various departments, you know—English, history, and so on—and the heads of these departments comprise the academic board that is supposed to advise with the superintendent as to the policy of the institution. The superintendent is supposed to consult this board with reference to the management of the institution. Admiral Wilson has not consulted them with reference to the civilian instructors and professors. He has shown a contempt for their views, and he has run that institution, as I have taken occasion heretofore to say, as he would run a battleship.

Mr. BLANTON. Can he dismiss faculty members without the consent of this board?

Mr. DENISON. He has been doing it. I have called the attention of the House to the matter year after year, and we have been trying to cure that situation and prevent its continuance. But, in spite of all that Congress could do by these limitations on appropriation bills, the superintendent has dismissed some of the best men they had on the civilian faculty, arbitrarily and contrary to expressed wishes of Congress.

Mr. DOWELL. Mr. Chairman, will the gentleman yield?

Mr. DENISON. Yes.

Mr. DOWELL. Does the gentleman realize that Congress can not specify who is to be employed and who shall not be employed in that institution and that we must depend upon the head of the institution? If we can not, we should have some one in whom we would have confidence to run the institution properly. In other words, the Congress can not take up the question of each individual professor in the institution to determine what status he should have in the institution.

Mr. DENISON. Of course the gentleman is correct, and Congress has never attempted to do so, and I have never advanced the theory that we ought to do so. But I do not think the superintendent should have the power to run the institution just as he wishes, because that is not in harmony with the plan under which it is supposed the institution is to be conducted.

The CHAIRMAN. The time of the gentleman from Illinois has again expired.

Mr. DENISON. May I have two minutes more?

The CHAIRMAN. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. BRIGGS. Mr. Chairman, will the gentleman yield?

Mr. DENISON. Yes.

Mr. BRIGGS. Can the gentleman tell us what proportion of the professors are civilians?

Mr. DENISON. I do not know now.

Mr. BRIGGS. What has it been heretofore?

Mr. DENISON. It has varied from year to year. About four years ago it was in the proportion of 50-50.

Mr. FRENCH. There were 69 civilian instructors this year and 143 naval instructors. The estimate this year for next year is 66 civilians and 128 naval instructors.

Mr. BRIGGS. What relationship obtains at West Point as between civilian instructors and Army instructors?

Mr. FRENCH. At West Point there are very few civilian instructors.

Mr. BRIGGS. How does it happen that so many civilian instructors have been employed heretofore at the Naval Academy in preference to naval instructors or officers of the Navy?

Mr. FRENCH. I do not like to intrude on the gentleman from Illinois, but I would say that the great increase occurred during the war, when officers were needed in the service.

Mr. DENISON. I hope the chairman of the subcommittee can in a moment give the House some good and sufficient reason for leaving out of the pending bill the limitations the House has put in the bills for the last four years in order to protect the institution; and I also hope the chairman of the subcommittee can give a satisfactory and sufficient explanation of the reason for the large decrease in the appropriation. The bill last year carried \$275,000 and the amount has been reduced to \$236,900 in this bill; the year before it was \$325,000, and the year before that it was \$421,000. So there has been a substantial annual decrease in the appropriations for the academy during these last four years, and there is a very substantial decrease in the appropriation for this year. Unless the plan is to further reduce the number of civilian professors, I can not understand why there is this great reduction in the appropriation.

The CHAIRMAN. The time of the gentleman from Illinois has again expired.

Mr. FRENCH. Mr. Chairman, with regard to numbers of civilian members of the faculty at Annapolis, I beg to say that the first great reduction was made from 1922 to 1923, when we reduced from 135 to 97. That was occasioned by the plan of administration of the academy to get back to what was regarded as a better division of civilian and official faculty members of the faculty. For 1924 we appropriated for 92 civilians. I think the reduction of 5 that year was administrative. The next year, 1925, when we provided for 69 civilian members of the faculty, the reduction was congressional. In other words, we ourselves gave an appropriation that required a reduction. The other reason—in addition to the first reduction looking to getting back to what the Navy Department regarded as a better balance of civilian and officer members of the faculty—was because of the decrease in the number of midshipmen at the academy. In 1923 we had 2,395, and in 1924, 2,499 midshipmen. Then, as the gentleman will recall, the policy of permitting Members of Congress to name five midshipmen each entered into the situation and a reduction was made in the number of midshipmen that could be named, so that from that time on the Members of Congress could name three. Naturally, the falling off in enrollment at the academy would not take effect completely the first year. The entering class would be only three-fifths of the graduating class, assuming that all graduated, but the three higher classes would still be the same. In other words, it would take four years for those who had been appointed when Members of Congress could appoint five midshipmen to pass out of the institution.

Now, that is responsible for the reduction in the number of faculty members for the current year. We have now 1,976 midshipmen as against nearly 2,500 in 1924, and for the coming year we estimate the number to be 1,600.

Mr. BLANTON. Will the gentleman yield?

Mr. FRENCH. I shall be glad to yield.

Mr. BLANTON. I wish the gentleman's committee had taken off these other 66 civilian professors and put officers in their stead, because we are getting so many naval officers that we might just as well make some use of them. We have not any other use for a lot of them unless we put them to teaching. We have trained them and we might as well get the benefit of their knowledge.

Mr. FRENCH. The Navy Department believes that for certain branches civilian members of the faculty can more advantageously be employed. That is not to say that an officer member of the faculty, if he were to make for his life career a specialty of teaching some subject, like English or possibly history or some other subject, would not succeed as well as though he were a civilian. On the other hand, the department believes there are certain branches that can be better taught by civilians, who will continue on from year to year. Personally I think so.

Mr. BRIGGS. Will the gentleman yield?

Mr. FRENCH. Yes.

Mr. BRIGGS. What amount of this appropriation is utilized for the payment of the salaries of civilian instructors?

Mr. FRENCH. Oh, all of this item is used for that purpose. The officers' salaries are borne out of pay of the Navy.

Mr. BRIGGS. In that connection I would like to ask the chairman of the subcommittee another question. I saw in the papers recently a statement to the effect that there was a shortage of naval officers. Has the committee made any investigation of that subject?

Mr. FRENCH. A shortage of naval officers?

Mr. BRIGGS. Yes; for sea duty and manning ships. Is that true? I saw that in a newspaper report recently.

Mr. FRENCH. Here is the situation: The general law provides—

The CHAIRMAN. The time of the gentleman from Idaho has expired.

Mr. FRENCH. Mr. Chairman, I ask unanimous consent to proceed for five additional minutes.

The CHAIRMAN. The gentleman from Idaho asks unanimous consent to proceed for five additional minutes. Is there objection?

There was no objection.

Mr. BUTLER. Before the gentleman from Idaho begins let me say this to the gentleman from Texas: That those of us who have been here for 25 years or more know that there is always a shortage of officers, especially at this season of the year.

Mr. BRIGGS. I thank the chairman of the Naval Affairs Committee for that information.

Mr. FRENCH. Under the general law we may have an enlisted personnel of 137,485, and under the law 4 per cent

would be the officer complement; in other words, we would be entitled to 5,499 line officers on the basis of 137,485 enlisted men. As a matter of fact, we have 86,000 enlisted men now, and 4 per cent of 86,000 would be somewhere under 3,600. Instead of having 3,600 officers of the line we have 4,732 officers, as of September 30, 1924.

Mr. BLANTON. Then we have a surplus of 1,100?

Mr. FRENCH. Just a moment, and I think the gentleman will feel the situation is probably being maintained correctly. In other words, if you measure the officer strength by the possible officer strength on authorized enlisted personnel, we have an under number. If you measure it by the actual enlisted personnel, we have an excess of 1,100, as the gentleman from Texas suggests.

We realize it takes years to train an officer. It takes as many years to train an officer as it takes months to train an enlisted man to perform efficient duty. We believe it is the part of wisdom, and I think the House believes it is the part of wisdom, to maintain rather a larger officer personnel, taking it for granted that in the event of an emergency we can train the enlisted personnel to make good in large degree, as they have done in the past. So the gentleman who received his advice may have been rightly advised from one point of view but wrongly advised from another.

Mr. LOWREY. Will the gentleman yield?

Mr. FRENCH. May I first finish the question that the gentleman from Illinois asked before we get too far away from his question? The gentleman wants to know why we left out the language in the bill which we reported touching a sort of protection to civilian members of the faculty at Annapolis. In the first place, when the reduction came to be made at the academy of civilian teachers some three years ago there were two thoughts in view. I think that the administration of the academy, and probably the department, felt we ought to maintain more officers than we were maintaining at that time. Again, from the standpoint of economy, economies that could have been effected if we had dismissed a lot of civilian professors and in their places put officers it was urged we should reduce. But these men had entered the academy as teachers under contracts, some of them extending for five years. They had been drawn from the different colleges and universities of the country. The members of the committee did not feel it was fair to them to have such a termination made of their services.

We did not feel that the department itself ought to be asked to bear the burden of criticism on account of expense of maintaining those teachers when they could substitute officers. For that reason we said we will shoulder up as a Congress, and we will provide that they shall maintain faculty members who are civilians under certain conditions. One condition was that a contract should not be broken. Another was that a man should receive six months' notice before dismissal, and, accordingly, largely with that thought in view, the language was put in.

Since then we have carried somewhat similar language and the Congress has assumed the responsibility of providing more money for the institution than the administrative head of the institution thought desirable from either the standpoint of economy or from the standpoint of most effective teaching of the branches that are taught in the academy.

Let me make one further statement. We have not carried the language this year because we feel now we have gotten down to a basis where the department would not want to reduce the civilian personnel further.

I do not know as to the charges made touching individual civilian professors who may have been dismissed. Maybe some abuses occurred. Abuses occur under any management of any institution, not willfully but through judgment that would not perhaps be your judgment or my judgment, but the language of the law is that no civilian professor, associate, or assistant professor or instructor shall be dismissed "except for sufficient cause" without six months' notice. Who is going to decide the question of sufficient cause? Shall we bring that question here, put it on the table in front of us, and all 435 Members of this House debate whether there was sufficient cause for dismissing Jones or Smith or Brown, a civilian instructor or professor at the academy? I do not think we want to do that. I wish to protect Smith or Jones or Brown at the academy, but we must maintain a principle, and that is that this legislative body is not created for the purpose of going into detail in the administration of an educational institution of this kind. We must place responsibility somewhere, we must place authority somewhere, and that authority has been placed in this instance with the department that has charge of the training of men to be officers of the Naval Establishment.

The gentleman has referred to Admiral Wilson. I can not undertake to analyze the action of Admiral Wilson touching any particular case, nor the final action of the department. Admiral Wilson is the administrative officer and is charged with responsibility that must be placed somewhere. If in the course of the matters that came under his administration a mistake could be pointed out here or there, it would not alter my respect for him, because I believe in his integrity. Admiral Wilson is a great man. As an officer he has a most distinguished record, and many are the young men who will be inspired through their careers as officers of the Navy because of their association with Admiral Wilson.

Mr. LOWREY. Mr. Chairman, I ask that the gentleman may hold the floor about two minutes longer. I want to ask him a question.

The CHAIRMAN. Does anybody prefer a request for an extension of time?

Mr. FRENCH. I understood the gentleman to prefer a request for two minutes.

The CHAIRMAN. The gentleman from Mississippi asks unanimous consent that the gentleman from Idaho may proceed for two additional minutes. Is there objection?

There was no objection.

Mr. LOWREY. Did the committee consider the policy of giving commissions only to such graduates of Annapolis as are really needed, leaving the others for reserve naval officers in the future in case they should be needed?

Mr. FRENCH. We did consider that, and under the policy of permitting the Members of Congress to name three midshipmen, unless the department shall tighten up on resignations of officers, we are going to be hard pressed to find enough graduates to make up for the depletion of the service; but with tightening up on resignations we can have a sufficient number.

Mr. LOWREY. Is it not possible it would be a wise policy to continue to keep the institution filled in order to have reserve officers for the future, commissioning only those needed, and using the institution for the actual purpose of keeping a corps of reserve officers and not commissioning all of them?

Mr. FRENCH. Possibly that is so. I understand the legislative committee is considering the matter of modifying the policy touching number of officers of the various grades. Other factors enter into the question of number of officers we shall need, and the number which will prefer to stay in the Navy after graduation. We felt we had better await the action of the legislative committee before disturbing the present situation for this coming year.

Mr. BUTLER. Mr. Chairman, I want to ask the gentleman a question. When the Committee on Appropriations reduced the number to be appointed to the academy from five to three, did my friend then think of waiting for congressional action through the legislative committee? They certainly gave it a rude disturbance then, and the whole House and I, too, joined with the gentleman in voting for the appropriation recommended, and I think I did what was wrong; but the gentleman came in here and reported an appropriation that starved out two of them.

Mr. FRENCH. The gentleman will remember that we reduced the number of midshipmen because we were reducing the enlisted personnel, and we felt that three could take care of the situation.

Mr. BUTLER. But the gentleman did not reduce the number of officers.

Mr. FRENCH. No; because we believed in a fairly large officer personnel.

Mr. BUTLER. I believe in the same thing.

Mr. BYRNES of South Carolina. Mr. Chairman, I move to strike out the last three words. I have not addressed the committee since we started reading the bill and I do not intend to take but a few minutes. A few years ago, in 1921 and 1922, we had about 2,500 students and we had a large number of civilian professors who were introduced into the service during the war. I never knew a man to become associated with the pay roll of Uncle Sam who did not desire a continuation of the association. When the student body was reduced it was necessary that some of the civilian professors should be dismissed. Now we have but 1,800 students, and it follows that the commandant of the academy should reduce the number of civilian professors. At West Point we have six or seven civilian professors. Next year we will have at the Naval Academy 66. Can it be said that that discriminates against the civilian professors? The only objection I can make is that the commandant has not dispensed with the services of a sufficient number of civilians.

The two classes which are affected by the reduction in the number of midshipmen are the fourth class and the third class. And those are the classes where civilian professors are needed, the second and first classes teaching navigation and other subjects which should be taught by officers. The fact is that the commandant of the academy should make a greater reduction because of the reduced student body in the third and fourth classes, but he is going to reduce 10 officers and only 2 civilians. I do not think there is anything to show that Admiral Wilson has not lived up to the spirit as well as the letter of the law. The committee has followed this matter closely for the last two or three years and is convinced Admiral Wilson has lived up to the spirit of the law laid down by Congress for the protection of the civilian professors.

I take issue with the statement that Admiral Wilson has been any more arbitrary in the conduct of the academy than it is necessary for every executive to be in enforcing discipline and dispatching business. Responsibility must be lodged somewhere, and it would be unfortunate for the Naval Academy at Annapolis or for the academy at West Point to create the impression that every dissatisfied employee could appeal to Congress, there to have his complaint debated with no witnesses or information upon which we could form a correct conclusion.

So far as I am concerned I want to say that it is a matter of sincere regret to me that next February Admiral Wilson retires and will no longer head the Naval Academy at Annapolis. Instead of destroying the morale, from my knowledge of the Naval Academy, and I claim to know something of the conditions existing there, while the morale of two civilian professors may be injuriously affected, so far as the student body is concerned the morale was never better than it is to-day, and the splendid spirit of the academy is due in great measure to Admiral Wilson, as efficient a commandant as the academy has had. I believe the country owes a debt of gratitude to Admiral Wilson for the faithful and intelligent discharge of a very important and difficult task. [Applause.] He has conducted the affairs of the Naval Academy so as to give to the service splendid officers in the future, and at the same time has had an eye to the Treasury of the United States and some regard for the taxpayers of the United States. It would be easy for him to come here and ask for larger appropriations, but he has been honest with the committee. Instead of being arbitrary he has reported conditions to us, stating if we insisted that all these civilians be kept he would keep them, but that all of them were not necessary in view of the reduced number of students. For next year he proposes a reduction of only two. I think the committee will agree that he has rendered a service to the Congress and to the country.

Mr. SANDERS of Indiana. Mr. Chairman, I am quite in accord with the statement made by the gentleman from South Carolina [Mr. BYRNES]. This question about the civilian professors at Annapolis has arisen a number of times. I do not pretend to know the details about it and I would not undertake to form an independent opinion from my own personal knowledge. But judging from the conditions at West Point, and comparing the number of civilian professors there with the number of civilian professors at Annapolis, it is perfectly apparent that the Government is not being hurt by reducing the number of civilian professors. Generally speaking, naval instructors are better suited to train our boys for naval service.

But entirely aside from that question, Mr. Chairman, I want to say that I have the very highest respect for the opinion of Admiral Wilson in respect to matters connected with the Navy and, of course, with the matters connected with the Naval Academy.

Admiral Wilson has had a distinguished and honorable career, and the people of the country, as suggested by the gentleman from South Carolina [Mr. BYRNES] will owe him a great debt of gratitude for his service to the country when, in February, next year, he retires. In 1916 he became captain in command of the battleship *Pennsylvania*, the largest battleship afloat. In March, 1917, he had charge of the patrol force of the cruisers of the Atlantic coast.

In November, 1917, he had charge of the naval base on the coast of France. He became vice admiral in September, 1918, while serving in France. He became the commander of Squadron No. 4, of the Atlantic Fleet, in July, 1919, and was made commander in chief of the Atlantic Fleet at that time. When the Navy had the combined fleet maneuvers at Panama, the great Atlantic Fleet and the great Pacific Fleet, I happened to be there. I stood upon a fortified island near the Pacific entrance with the Governor of Panama, and I watched the maneuvers of the great battleships and other fighting ma-

chinery of the American Navy, and it thrilled my heart with pride to see that fine Navy in those maneuvers. The officer who had entire command of the combined Fleet was Admiral Wilson.

He graduated from the academy in 1881, a year before I was born. Commencing away back there, covering a period of 45 years, he has given all of the best years of his life to his country, and he retires in February. I do not know how others feel about it, but I do not propose to disregard the views about naval affairs of a man who has given so many years to the service, whose career is without a blemish, and accept instead thereof the views of some one else who happens to think that there ought to be more civilian professors. [Applause.]

The Clerk read as follows:

For pay of employees at rates to be fixed by the Secretary of the Navy, as follows: Administration, \$154,800; department of ordnance and gunnery, \$10,952; departments of electrical engineering and physics, \$17,727; department of seamanship, \$8,880; department of marine engineering and naval construction, \$47,922; commissary department, \$188,993; department of buildings and grounds, \$131,794; in all, \$567,068.

Mr. DENISON. Mr. Chairman, I move to strike out the last figures. I do this for the purpose of calling attention to the difference between the way in which the Military Academy and the Naval Academy are managed. We have never attempted to have a civilian faculty at West Point, with the exception of four or five professors. At the Military Academy the instructors are not changed every two years as they are at the Naval Academy, under the rule which provides that the naval officers assigned to the academy to teach have to go back to sea at the end of the second or third year at the most. In that way they can not remain a part of the permanent teaching staff at the institution. There is a continual change in the academy at Annapolis, and anyone who is familiar with educational institutions knows that that is a bad thing. That is not true at West Point. They have a permanent teaching force there, including the military officers. If we had a permanent force among the naval officers who teach at the Naval Academy, there would be no objection to them, because they could prepare themselves for that kind of work and stay with it. The objection is that they are changing all of the time. Several gentlemen who have spoken on this subject, particularly the gentleman from South Carolina [Mr. BYRNES], spoke about reducing the number of civilian professors. No one has attempted to stop that. Congress has not attempted to prevent the reduction in the number of professors when they are not needed. The only thing that we have been attempting to do in the last three or four years is to prevent the removal of civilian professors and the substitution in their place of naval officers, so that the boys who are at the Naval Academy will have the benefit of trained instructors and trained educators in their efforts to get an education. The young men who go to the academy have no opportunity to go to any other educational institution, of course. It is their only opportunity to get an education, and some of us have been trying to make it a real educational institution rather than a mere naval training station.

Of course the remarks of the gentleman from Indiana [Mr. SANDERS] with reference to Admiral Wilson and his naval career are interesting. I have not at any time criticized him as a naval officer. I have always spoken of him in high terms. There is no conflict upon that question; but the issue raised heretofore and still raised is that by temperament and for other reasons he is not particularly qualified to run an educational institution. I do not care how well qualified a man may be to command a battleship or a battle squadron, that does not prove that he is capable of properly conducting and managing an educational institution, and that is all there is to this controversy.

I wish the chairman of the committee would answer the further question that I asked a while ago: If they do not intend to further reduce the civilian faculty, why was the appropriation reduced so substantially in this bill?

Mr. FRENCH. Mr. Chairman, the amount that is carried in the bill is slightly less than the amount that will be used actually this year. In other words, we appropriated last year more than they will be able to use on the basis of the number of the faculty members they will need to have.

The Clerk read as follows:

Current and miscellaneous expenses, Naval Academy: For text and reference books for use of instructors; stationery, blank books and forms, models, maps, and periodicals; apparatus and materials for instruction in physical training and athletics; expenses of lectures

and entertainments, not exceeding \$1,000, including pay and expenses of lecturer; chemicals, philosophical apparatus, and instruments, stores, machinery, tools, fittings, apparatus, and materials for instruction purposes, \$77,800.

Mr. KETCHAM. Mr. Chairman, I move to strike out the last word. Referring again to this matter of instructors, what is the reason for the policy that is followed in the designation of naval officers as instructors at the academy for periods of only two years and then require that they shall be assigned to sea duty?

Mr. FRENCH. Whether or not a two-year period or a three-year period would be the right amount of time I would prefer to leave to be met by the officers of our Navy Department. The general thought is that an officer who comes from a battleship, a submarine, a destroyer, or some other great institution or an activity of the Navy Department to the academy as a teacher will be able to bring something new. In addition to scholarship he brings practical experience. In other words, he comes as a man to meet young men who are looking forward to a life in the very service in which he has been engaged and of which they dream. It is for the purpose not only of imparting information and giving instruction in academic studies but for the purpose of instilling into the midshipmen at the academy the spirit of the Navy. The midshipmen must go out commissioned officers with a broad view of the Naval Establishment upon their graduation from the academy, and they must be fired with the spirit of service if they would succeed.

Mr. KETCHAM. Mr. Chairman, the distinction which the gentleman makes would apply very well to subjects that have to do with the technical work of the Navy.

Mr. FRENCH. And that is the place where it is stressed.

Mr. KETCHAM. Does the gentleman believe that instructors in mathematics or in history, or in any of the subjects not necessarily technical, would be so well equipped for their work by that continuous change? Does he not believe that frequently there are assigned to the Naval Academy men who from a pedagogical standpoint are not particularly well qualified for the work; proficient, no doubt, as naval officers, but without training, experience, or knowledge in relation to teaching? Does he believe that a system of selection of instructors that must frequently result in such assignments is for the best?

Mr. FRENCH. Of course, wherever you place administrative authority, there is danger of mistake, and I am afraid it will long be so in this world of ours. But let me say in response to the gentleman's suggestion that the branches that to a layman could most advantageously be handled by civilians are the ones that the administrative officers of the Navy say shall be handled by civilians. Thus, for the most part, the subjects the gentleman has mentioned are not taught by officers.

Mr. KETCHAM. If the gentleman will yield further, I do not want it to be understood that I am arguing for an increase of civilian instructors. If the teaching ability of naval officers assigned to the academy as instructors could be considered, I think I would favor an increase of such assignments. I am wondering whether there is any arbitrary plan by which these naval instructors are selected? Can the gentleman advise us on that point?

Mr. FRENCH. I would say this: In the first place the names of available officers are submitted to the head of the academy. He goes over them. He tries to ascertain from his own personal knowledge or through men who are in touch with the prospective members of the faculty whether or not they would be suitable for the work at hand. In other words, a selective process is followed.

The CHAIRMAN. The time of the gentleman has expired.

Mr. KETCHAM. I ask for three additional minutes.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. KETCHAM. Mr. Chairman, in order to make my point clear may I call the attention of the committee to the fact that three of the limited number of Rhodes scholarships for next year have been bestowed on cadets at West Point.

To me that is an indication that the policy that has been adopted there of continuing Army men who have proven their ability as instructors is sound. A Rhodes scholarship is a splendid prize and does great honor to the person receiving it and to the college or university where he receives his training. Three such scholarships in one year from West Point puts the stamp of approval on their system of selecting instructors. I was wondering if something of the kind ought not to be worked out for our Naval Academy.

Mr. FRENCH. What is scholarship and why maintain an institution like the Naval Academy? The purpose of the

academy is to train young men to become officers in the Navy. Were that not the purpose we could depend upon our colleges and universities to turn out an adequate number of young men every year who would possess scholarship befitting an officer of the Navy. But that is not enough. A naval officer requires special and technical training. In the small compass of a submarine are technical mechanisms that should be placed in charge of only a specially trained man. And so of a battleship or a destroyer. And no less skill is required in ordnance or in aviation. Academic scholarship and technical training must go side by side.

I do not pretend to say what is the best plan for the Army, but we all know that the officer personnel of the Army is fed in large part from our colleges and universities. Not so with the Navy. For each branch of the service must be worked out the plan of training that is best. At Annapolis we concentrate more in engineering, in applied science, in curricula that deal more with technical branches. West Point is a great institution. Its purpose is to train for the Army, and I have no doubt the plan of training for Army service is adequate. The gentleman speaks of several West Point cadets attaining Rhodes scholarships and he regards this record as having special significance.

Surely it is a proud record, but may I remind the House that to West Point we send young men who are older by two years than the boys we send to Annapolis. Many of the young men who enter West Point are college graduates before they cross the threshold of that institution.

That an older type of young men should enter West Point than enter Annapolis is apparent. A West Point graduate goes out of the institution to take charge of men; a graduate of Annapolis goes out to take charge first of all of devices, of machinery, of problems, and finally of men. In other words, he must be a technically trained man, and to attain the best we have provided an entrance age younger by two years than that required for West Point.

On the whole, in answer to the gentleman, I believe in the judgment of the officers of the Navy as they have worked out a program of training of the young men who will assume with passing years the responsibility of officers of our Naval Establishment.

Mr. HILL of Maryland. Will the gentleman yield?

Mr. FRENCH. I will.

Mr. HILL of Maryland. A year ago last spring the Board of Visitors on behalf of Congress went over that matter very carefully at the Naval Academy. The question, as the chairman will recollect, was very thoroughly debated here a year ago on this appropriation bill. They reported they had gone over that matter not only with the authorities of the Naval Academy, but the gentlemen also stated they had gone over it very carefully with the authorities of the Navy Department, and they were making a selection of professors from the service for the Naval Academy with a very special view of their qualifications of the subjects that they were to teach as well as their teaching inspiration as service men. That policy still exists, does it not?

Mr. FRENCH. I believe so.

The Clerk read as follows:

Maintenance and repairs, Naval Academy: For necessary repairs of public buildings, wharves, and walls inclosing the grounds of the Naval Academy, improvements, repairs, and fixtures; for books, periodicals, maps, models, and drawings; purchase and repair of fire engines; fire apparatus and plants, machinery; purchase and maintenance of all horses and horse-drawn vehicles for use at the academy, including the maintenance, operation, and repair of three horse-drawn passenger-carrying vehicles to be used only for official purposes; seeds and plants; tools and repairs of the same; stationery; furniture for Government buildings and offices at the academy, including furniture for midshipmen's rooms; coal and other fuels; candles, oil, and gas; attendance on light and power plants; cleaning and clearing up station and care of buildings; attendance on fires, lights, fire engines, fire apparatus, and plants, and telephone, telegraph, and clock systems; incidental labor; advertising, water tax, postage, telephones, telegrams, tolls, and ferrage; flags and awnings; packing boxes, fuel for heating and lighting bandsmen's quarters; pay of inspectors and draftsmen; music and astronomical instruments; and for pay of employees on leave, \$1,000,000.

Mr. BLANTON. Mr. Chairman, on page 43, line 8, I move to strike out the word "postage." It is a pro forma amendment.

The CHAIRMAN. The gentleman from Texas offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. BLANTON: Page 43, line 8, strike out the word "postage."

Mr. BLANTON. Mr. Chairman, there is a movement right now on foot in this Capitol to use the report of an alleged bribery by some officer in the Capitol as an excuse for turning down the postal pay bill. They ought to get some better excuse than that. Why, among all the thousands of postal employees as a class maybe you will find some dishonest one as in every other class or organization, some one who might attempt to bribe, but as a class these postal employees are honest. Are you going to visit a wholesale punishment upon the whole class because one individual may be dishonest? Are you going to deny every one of those men this deserved increase pay because some one in their fold may have done wrong? I say that is an excuse that is ridiculous, and I hope that the movement on foot right now to use this incident as an excuse to uphold the veto of the President will be abandoned.

Mr. BEGG. Will the gentleman yield?

Mr. BLANTON. I did not want to take up but a minute, but I will yield.

Mr. BEGG. I do not know to whom the gentleman had reference, but certainly the gentleman knows there is no opportunity for us on this side to vote on the veto.

Mr. BLANTON. That is true, because the bill is not before us. I am talking about an excuse for sustaining the President's veto, to kill this bill that is pending in another body.

Mr. BEGG. The gentleman ought to make his speech in the other body.

Mr. BLANTON. I would if I were there; but, unfortunately for the country, I am not there. [Laughter.]

Mr. BEGG. I would suggest to the gentleman to try to get there.

Mr. BLANTON. I would prefer just now to stay here with the gentleman from Ohio.

Mr. BEGG. I will tender my services to assist you.

Mr. BLANTON. Coming over to the Capitol this morning I heard a very distinguished gentleman say, "There is no chance in the world for the postal salary bill to be passed now, since this bribery question has come up." I immediately protested against such statement. Such a punishment to be visited upon a whole organization of honorable Government employees simply because one has side-stepped and gone wrong would be unjust and inexcusable. The gentleman from Ohio knows that is no excuse whatever and ought not to be considered by anybody.

The CHAIRMAN. Without objection, the pro forma amendment will be withdrawn. The Clerk will read.

The Clerk read as follows:

INCREASE OF THE NAVY

The Secretary of the Navy may use the unexpended balances on the date of the approval of this act under appropriations heretofore made on account of "Increase of the Navy," together with the sum of \$6,944,000, which is hereby appropriated for the prosecution of work on vessels under construction on such date, the construction of which may be proceeded with under the terms of the treaty providing for the limitation of naval armament; for continuing the conversion of two battle cruisers into aircraft carriers including their complete equipment of aircraft and aircraft accessories, in accordance with the terms of such treaty; toward the construction of two fleet submarines heretofore authorized, to have the highest practicable speed and greatest desirable radius of action and to cost not to exceed \$5,300,000 each for construction and machinery and \$850,000 each for armor, armament, and ammunition; for the settlement of contracts on account of vessels already delivered to the Navy Department; for the procurement of gyro compass equipments, and for the installation of fire-control instruments on destroyers not already supplied; for the installation of fire-control apparatus on the *Colorado* and *West Virginia*; and for the completion of armor, armament, ammunition, and torpedoes for the supply and complement of vessels which may be proceeded with as heretofore mentioned.

Mr. MORTON D. HULL. The purpose is to inquire of the chairman of the subcommittee as to the amount of the unexpended balances provided on page 48 that are authorized to be used.

Mr. FRENCH. The amount that will be available by July 1, of course, is somewhat problematical, but I should say that it would be approximately \$10,000,000. Sometimes there are factors that enter into the situation that we can not anticipate; for instance, whether or not a certain material can be obtained. It may delay the use of moneys that otherwise could be used, just as it did touching engineering, as I explained in my general statement. But it will be approximately \$10,000,000.

Mr. RATHBONE. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Illinois offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. RATHBONE: After line 13, page 49, amend by inserting a new paragraph in lieu thereof, as follows:

"The President is requested to enter into negotiations with the Governments of Great Britain, France, Italy, and Japan with a view to reaching an understanding or agreement relative to limiting the construction of all types and sizes of subsurface and surface craft of 10,000 tons standard displacement or less and of aircraft whenever there appears to be a reasonable prospect of agreement in a further limitation of competitive armaments."

Mr. BEGG. Mr. Chairman, I make a point of order on that.

Mr. TABER. I make a point of order against the amendment, that it is legislation on an appropriation bill.

The CHAIRMAN. The gentleman from New York makes the point of order that the amendment is legislation upon an appropriation bill. Does the gentleman from Illinois [Mr. RATHBONE] care to be heard on the point of order?

Mr. RATHBONE. I will ask the gentleman from New York to reserve his point of order for a moment.

Mr. TABER. I do not think it should be reserved, in view of the recent statement by the President on the subject. The statement of the President is well understood, and it expresses the sentiment of the country absolutely, and it places the Government in a position that is foursquare.

Mr. WINGO. The gentleman from New York, as I understand it, says this is legislation. What legislation does it propose? It is simply a warrant to the Executive to authorize his power in a line where Congress had no authority to compel him to do anything in the exercise of his power. It is simply a polite suggestion; that is all.

Mr. RATHBONE. Mr. Chairman, I would like to be heard upon the point of order.

I will say that the position that I have taken is this: This is in identical language, I believe, with the so-called Byrnes amendment which was offered by the gentleman from South Carolina at the last session on the occasion when the naval bill was under consideration.

Mr. BLANTON. Mr. Chairman, will the gentleman yield for a question?

Mr. RATHBONE. I yield.

Mr. BLANTON. Did the gentleman first get the permission of the committee before he offered this amendment?

Mr. RATHBONE. I will ask the gentleman from Texas if he is asking that as a serious question?

Mr. BLANTON. Unless he did, he will have no chance to get this carried on the bill.

Mr. WINGO. Has this passed the Budget?

Mr. RATHBONE. I will state to the gentleman in reply that this is offered on my own motion solely. I will endeavor to explain my position to the Chair and to the House.

Mr. WINGO. The gentleman by his own statement admits that he is out of order. The gentleman's last statement puts him out of order. Under the new Budget no Member has the right to offer an amendment on his own responsibility to the House.

Mr. RATHBONE. I am grateful to the gentleman for his statement, but I shall endeavor to proceed in my own way.

Mr. Chairman, as I was stating, this is the identical resolution that was adopted by this House at the last session when the naval bill was pending.

Mr. BEGG. Mr. Chairman, will the gentleman yield at that point?

Mr. RATHBONE. I yield.

Mr. BEGG. Did anybody make a point of order against the amendment of the gentleman from South Carolina?

Mr. RATHBONE. I believe not.

Mr. BEGG. What force, then, is there in that argument?

Mr. RATHBONE. The force is that if it was good then, it is good now.

Mr. BEGG. If nobody challenged it, how does he know whether it was good or bad?

Mr. RATHBONE. So far as this point is concerned, the point that has been raised, that it is legislation, does not offer any ground of objection at all.

The CHAIRMAN. For the information of the gentleman, the Chair will say that if the amendment is agreed to it becomes a part of the bill and becomes a part of the law. Is not that legislation?

Mr. RATHBONE. No, sir. It is not legislation in any sense of the word.

Mr. STENGLE. Is it germane?

Mr. RATHBONE. The point as to its germaneness has not been raised.

The CHAIRMAN. The Chair will hear the gentleman from Ohio on the point of order.

Mr. BEGG. Mr. Chairman, it is clearly legislation on an appropriation bill.

Mr. WINGO. Is not this the amendment that was offered to the appropriation bill last year?

Mr. BEGG. That makes no difference. The gentleman knows that that does not amount to anything.

Mr. WINGO. Yes; it does make a difference, because I want to get some information from my friend. If it is the same as the one that was put on the appropriation bill last session, that was a request upon the President, and I want to ask my friend from Illinois [Mr. RATHBONE] whether he thinks the President has forgotten about it and whether the gentleman from Illinois wants to renew the invitation or request?

Mr. RATHBONE. I have no idea the President has forgotten about it. I am offering this amendment at the present time in order that it may be known to all the world that the Congress of the United States stands now where it stood at the last session. This is offered in good faith.

Mr. WINGO. I challenge that statement. The Republican papers, especially the chief organ of this administration, announced the day this Congress convened that the Congress which was repudiated in November reconvenes in December, so we evidently do not stand where we did at the last session.

Mr. RATHBONE. I am going to state my position.

Mr. WINGO. Of course, George Harvey should certainly be an authority for my Republican friend.

Mr. RATHBONE. Mr. Chairman, I decline to yield any further until I have had a reasonable opportunity to state my position before this House.

Mr. STENGLE. Mr. Chairman, a point of order. Is the gentleman discussing the point of order or the issue before the House?

The CHAIRMAN. The Chair did not hear the point of order made by the gentleman from New York.

Mr. STENGLE. I say, the gentleman from Illinois is not discussing the point of order at all, but, rather, the subject which is contained in his amendment.

Mr. WINGO. Mr. Chairman, I make a point of order against the point of order, that it is a point in the third degree.

Mr. RATHBONE. Mr. Chairman, I am ready to have the Chair rule on the amendment.

The CHAIRMAN. It seems clear to the Chair that the amendment is legislation. It is in no sense a proper part of an appropriation bill; it in no way limits any appropriation that has been proposed or retrenches expenditures, and it can not be anything but substantive law. So far as the effect of the language may be concerned, whether it is in the nature of a direction to or a request of the Chief Executive, those are issues with which the Chair is not concerned in the determination of the point of order.

Mr. RATHBONE. If the Chair pleases, so far as it being a matter of substantive law is concerned, I submit that can not be the case. Law has been well defined to be a rule of action. This does not require any action whatever; it is a mere invitation or request. [Laughter.] I repeat it. It does not require any action whatever; it is not compulsory; it is a mere polite request, and it is an indication by this Congress that we stand in favor of retrenchment; that we wish to carry out and intend to carry out, as far as possible, the work of the Washington conference, which was a step in the right direction. I am in favor of this bill; I intend to vote for it, and I think this amendment constitutes a proper amendment to the bill. It is a supplement to it and the bill is not complete without it. The bill is likely to be misunderstood elsewhere if we do not have this amendment. Why should gentlemen object to this amendment in the interest of peace? [Applause.]

The CHAIRMAN. The Chair regrets he can not agree with his colleague from Illinois, and sustains the point of order.

Mr. McKEOWN. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Oklahoma offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. McKEOWN: Page 48, line 18, after the word "Navy" strike out "together with the sum of \$6,944,000."

Mr. FRENCH. Mr. Chairman, essentially that is for the building program and for the purpose of carrying on the work on the two alrship carriers and the work on the submarines, one of them authorized last year and begun, the other two to be laid down, provided this bill shall go through.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Oklahoma.

The amendment was rejected.

The Clerk read as follows:

No part of any appropriation made for the Navy shall be expended for any of the purposes herein provided for on account of the Navy Department in the District of Columbia, including personal services of civilians and of enlisted men of the Navy, except as herein expressly authorized: *Provided*, That there may be detailed to the Bureau of Navigation not to exceed at any one time 24 enlisted men of the Navy: *Provided further*, That enlisted men detailed to the Naval Dispensary and the Radio Communication Service shall not be regarded as detailed to the Navy Department in the District of Columbia.

Mr. RATHBONE. Mr. Chairman, I move to strike out the last word. I desire to have my position clearly understood and not misunderstood by this House. No one goes further than I do in respect for the executive head of this Nation. I would not wilfully do anything to embarrass him under any circumstances. I have read carefully his expression as referred to by the gentleman from Ohio and I see absolutely nothing in the amendment that has just been offered here which could in any way embarrass him. There is no compulsion about it; there is no thought or suggestion of restraint about it. It is in line with what we have done in the Borah amendment, in the Byrnes amendment, and on other occasions. The President of the United States has signified a willingness, if I interpret his language aright, to call another conference for the limitation of armaments, but he hesitates, perhaps, for two reasons. If you will study his language closely, first of all he does not want this country to become entangled with the League of Nations. That can all be avoided. Any conference called by him can stand absolutely upon its own footing and it does not need to be in any way involved with the League of Nations.

It can be an independent move of this country just as the Washington Conference on the Limitation of Armament was.

Mr. BLACK of New York. Will the gentleman yield?

Mr. RATHBONE. I yield to the gentleman from New York.

Mr. BLACK of New York. Does not the gentleman think he would be more in order if he offered a resolution calling upon the President to ask the Secretary of State why he stopped short in the disarmament conference and why he stopped when he cut down our fleet and did not cut down the others?

Mr. RATHBONE. I will say to the gentleman that I have heard the Washington conference and its results belittled upon this floor, and I make bold to say it was one of the greatest achievements known to man. For thousands of years humanity had dreamed of being able to limit armament and to stop the mad race of competitive armaments, which was piling up the burden of taxation upon the shoulders of the overtaxed people of the world.

Mr. BLACK of New York. Will the gentleman yield?

Mr. RATHBONE. I decline to yield until I have concluded my remarks, and then I will yield to the gentleman or to anyone else.

For the first time in the history of the human race men were able to gather about the council table and to stop this feverish competition in armaments, to reduce taxation, to insure the peace of the world, and what has the Washington conference accomplished? It has achieved many acts of justice. Japan has returned Shantung, the question of Siberia has been settled. We have obtained recognition, after over 20 years of vain insistence, of our doctrine of the open door in China. We have brought about the scrapping of the Anglo-Japanese alliance. We have brought the reign of peace to this hemisphere and to the Orient. The Washington conference was a step in the right direction. It ought to be followed up, at the proper time, in the discretion of the President, by another step in the same direction, and that is all that this amendment offers. Let me reiterate—

Mr. BLACK of New York. Will the gentleman yield?

Mr. STEVENSON. Will the gentleman yield to me?

Mr. RATHBONE. Just as soon as I have concluded I will gladly yield, if I may have a little more time.

In the first place, the President of the United States could not be embarrassed, because this leaves entirely in his hands, according to his best judgment, when to call this conference or whether to call it or not. How could he be embarrassed under those circumstances?

I yield now to the gentleman from New York, who, I think, was on his feet first.

Mr. BLACK of New York. I was just wondering if the gentleman realizes that, although the Washington conference is supposed to have stopped this mad race of armament, to-

day, at this very minute, we are appropriating money to build a larger Navy, and Japan is doing the same thing, and Great Britain is doing the same thing. Would this have happened if they had completely reduced armament at the time of the Washington conference?

Mr. RATHBONE. The Washington conference has been eminently successful in doing what it set out to do. It was limited in its object, which was the reduction of armament in capital ships.

Mr. BLACK of New York. Will the gentleman yield?

Mr. RATHBONE. Not for the moment, until I have completed my statement.

No one can say but what it has wholly accomplished that purpose. It has saved millions of dollars to the taxpayers and has insured peace.

Mr. BLACK of New York. Will the gentleman yield now? Has the gentleman read the minutes of the disarmament conference?

Mr. RATHBONE. I have read part of the minutes and I have read much about it.

Mr. BLACK of New York. Does the gentleman realize that our Secretary of State offered a plan to that conference whereby they would reduce all the way down the line, and that when he had reduced our strength he stopped short. His plan was for a general disarmament and was not a reduction of capital tonnage alone.

Mr. RATHBONE. I will answer the gentleman by saying that the gentleman is in error about that.

Mr. STEVENSON. I would like to ask the gentleman how many authorities and how many requests it will be necessary to propound to the President in order to get him to call such a conference? We passed this same thing last year, and it is in effect now, as the gentleman stated. If the President thinks it is judicious, does not the gentleman think the President has the authority from this same Congress in this same language to call such a conference, and how many times does the gentleman think we will have to repeat it in order to get the President to call it? A similar amendment was passed last May.

Mr. RATHBONE. I will answer the gentleman. In my judgment the President does not need any suggestion whatever from us, but it is well that we, the House of Representatives, should continue on record, in spite of the jingo talk we have heard, in spite of the things that have been said upon the floor of this House, as in favor of any and every reasonable step that can be taken to insure the peace of the world. Let us clarify the situation. Let us make known our attitude to all the world, so that there can be no mistake about where the House of Representatives stands; that while we stand for an adequate defense, while we stand for this bill as upholding the strength of the American Navy, yet we stand for something more than that, and that is the peace of the world and the cooperation and friendship of nations.

Mr. WATKINS. Will the gentleman yield for a question?

Mr. RATHBONE. I yield to the gentleman from Oregon.

Mr. WATKINS. If what the gentleman from New York has just said is true, and I do not want to question the gentleman's veracity, then there is more reason for the calling of a conference than if what he said was not true.

Mr. BLACK of New York. That is true.

Mr. RATHBONE. I do not think I get the point of the gentleman.

Mr. WATKINS. If we had a conference and they are not going by it, there is more need for the gentleman's resolution at this time and we ought to keep on until they do call one.

Mr. FRENCH. Mr. Chairman, that there may be no misapprehension as to the attitude of the great President of the United States and the policy of the administration touching the disarmament conference, I am going to ask that the Clerk read at the desk the words of the President to this Congress within the month on the subject of a disarmament conference.

The CHAIRMAN. Without objection the Clerk will read, in the time of the gentleman from Idaho.

There was no objection.

The Clerk read as follows:

DISARMAMENT CONFERENCE

Many times I have expressed my desire to see the work of the Washington Conference on Limitation of Armament appropriately supplemented by further agreements for a further reduction and for the purpose of diminishing the menace and waste of the competition in preparing instruments of international war. It has been and is my expectation that we might hopefully approach other great powers for further conference on this subject as soon as the carrying out of the present reparation plan as the established and settled

policy of Europe has created a favorable opportunity. But on account of proposals which have already been made by other governments for a European conference, it will be necessary to wait to see what the outcome of their actions may be. I should not wish to propose or have representatives attend a conference which would contemplate commitments opposed to the freedom of action we desire to maintain unimpaired with respect to our purely domestic policies.

Mr. BYRNES of South Carolina. Mr. Chairman, I move to strike out the last three words. Mr. Chairman, as the author of the amendment to the last naval appropriation bill which passed Congress in May, I simply want to say that I have not changed my views as to the wisdom or necessity of a further conference. I have not offered the amendment at this time solely because I believe this Congress has gone on record stating its views. I said two days ago in general debate and repeat that I am in great doubt as to what the President meant by the language which has just been read at the desk.

Shortly after the Congress passed the last naval appropriation bill with the request that he invite the naval powers of the world to a further conference for the limitation of armament, the press carried the statement that just as soon as the Dawes reparation question was settled and the program agreed to by the European governments, an invitation would probably be extended for the purpose of further limiting naval armament.

Though the Dawes reparation program has been adopted by the various Governments, the President now says he does not deem it wise to invite the nations to a further conference until some action has been taken upon the proposal made to hold a conference in Europe because he does not want to have representatives attend a conference which would contemplate commitments opposed to the freedom of action we desire to maintain as to domestic policies.

Exactly what he means I do not know. I must say that the maintenance of a navy is a domestic question, and in the interest of world peace we sacrificed our freedom of action and limited battleships at the Washington conference. I am not encouraged by that statement. I fear that the President may not send representatives to Geneva. I hope sincerely that he will, because I know that this naval bill carries \$290,000,000, and, as I said two days ago, within the next 30 days the Congress will be called upon to appropriate an additional \$25,000,000 to complete the two aircraft carriers and construct the airplanes to go on those carriers. In addition the Navy Department has asked the Budget Bureau for \$55,000,000 to begin the program of construction authorized in the so-called modernization act. If the Budget Bureau approves it, if the President adopts it and sends these estimates to Congress, it will add \$80,000,000 to the naval bill for this year, making \$370,000,000. And from this year on it is certain that in the absence of an agreement further limiting armaments the naval budget of the United States is going to amount to \$350,000,000 or \$375,000,000, annually.

I know that it is for the best interests of the taxpayers of the United States that the President should send a representative of this Government to Geneva to attend the disarmament conference that is to be held there, even if it is held under the auspices of the League of Nations. We have been sending representatives to one or two other conferences suggested by that organization, and certainly we should send representatives to this conference which holds more hope for the peace of the world and for the relief of the taxpayers of America than any other proposal now pending before the people of the world. [Applause.]

Mr. RATHBONE. Will the gentleman yield for a question?

Mr. BYRNES of South Carolina. Yes.

Mr. RATHBONE. Is not it a fact that it has appeared in the foreign press and the press of this country since the delivery of the President's message on December 3, 1924, that the prospects of such a conference referred to in his message are much less than they were; that the change in the British Government, the reversal of policy, apparently, of some leading nations over there, have wrought a change since this expression by the President which may make it inadvisable, in his best judgment, to make this move? Is not that true?

Mr. BYRNES of South Carolina. I know from the debates in the House of Commons that the government which was recently defeated was enthusiastically in favor of such a conference, but that is true of the government now in control. But I think the gentleman is exactly correct and that representatives of other governments who realize that the success of such a conference is dependent upon our willingness to participate will be impressed as I have been impressed by the statement of the President. I am satisfied that in his heart he is as earnestly in favor of furthering the limitation of

armament as I am. But I do not want him to be frightened away from carrying into execution what he really desires because this disarmament conference may happen to be called under the auspices of the League of Nations.

The CHAIRMAN. The time of the gentleman from South Carolina has expired.

Mr. RATHBONE. Mr. Chairman, I ask unanimous consent that the gentleman from South Carolina be granted one more minute.

The CHAIRMAN. Is there objection?

Mr. BEGG. Mr. Chairman, I object.

The CHAIRMAN. The Clerk will read.

The Clerk concluded the reading of the bill.

Mr. FRENCH. Mr. Chairman, I move that the committee do now rise and report the bill with the several amendments back to the House with the recommendation that the amendments be agreed to and the bill as amended do pass.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. CHINDBLOM, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill (H. R. 10724) making appropriations for the Navy Department and the naval service for the fiscal year ending June 30, 1926, and for other purposes, and had directed him to report the same back to the House with sundry amendments with the recommendation that the amendments be agreed to and that the bill as amended do pass.

Mr. FRENCH. Mr. Speaker, I move the previous question on the bill and all amendments to final passage.

The previous question was ordered.

The SPEAKER. Is a separate vote demanded upon any amendment?

Mr. FRENCH. I demand a separate vote upon the Sears amendment, which occurred on page 39, following line 5.

The SPEAKER. Is a separate vote demanded on any other amendment? If not, the Chair will put the other amendments en gross. The question is on agreeing to the other amendments.

The other amendments were agreed to.

The SPEAKER. The Clerk will report the amendment on which a separate vote is demanded.

The Clerk read as follows:

Page 39, after line 5, insert a new paragraph, as follows:

"Submarine base, Key West, \$100,000."

The SPEAKER. The question is on agreeing to the amendment.

The question was taken; and on a division (demanded by Mr. SEARS of Florida) there were—ayes 48, noes 49.

Mr. SEARS of Florida. Mr. Speaker, I challenge the vote upon the ground that there is no quorum present, and I make the point of order that there is no quorum present.

The SPEAKER. The gentleman from Florida makes the point of order that there is no quorum present. It is clear that there is not. The Doorkeeper will close the doors, the Sergeant at Arms will bring in absent Members, and the Clerk will call the roll. The question is on agreeing to the Sears amendment.

The question was taken; and there were—ayes 110, noes 122, answered "present" 1, not voting 198, as follows:

[Roll No. 13]

So the amendment was rejected.

The Clerk announced the following pairs:

On the vote:

Mr. Timberlake (for) with Mr. Sinnot (against).
 Mr. O'Sullivan (for) with Mr. Fenn (against).
 Mr. Kindred (for) with Mr. Gifford (against).
 Mr. Drane (for) with Mr. McLeod (against).
 Mr. Smithwick (for) with Mr. Sweet (against).
 Mr. Carew (for) with Mr. Bixler (against).
 Mr. O'Connell of New York (for) with Mr. Wertz (against).
 Mr. Quayle (for) with Mr. Swoope (against).
 Mr. Sullivan (for) with Mr. Snell (against).
 Mr. Weller (for) with Mr. Davis of Minnesota (against).
 Mr. Bloom (for) with Mr. Beers (against).

General pairs:

Mr. Vare with Mr. Montague.
 Mr. Snyder with Mr. Vinson of Georgia.
 Mr. Morin with Mr. Byrnes of Tennessee.
 Mr. Porter with Mr. Ayres.
 Mr. Reed of New York with Mr. Linthicum.
 Mr. Watson with Mr. Peery.
 Mr. Williams of Illinois with Mr. Ward of North Carolina.
 Mr. Seger with Mr. Carter.
 Mr. Garber with Mr. Hastings.

Mr. Johnson of South Dakota with Mr. Buckley.
 Mr. Cooper of Ohio with Mr. Eagan.
 Mr. Fairchild with Mr. Garrett of Tennessee.
 Mr. Lineberger with Mr. Clancy.
 Mr. Madden with Mr. Dominick.
 Mr. Tilson with Mr. Morrow.
 Mr. Phillips with Mr. Prall.
 Mr. Tinkham with Mr. Wright.
 Mr. Winslow with Mr. Bulwinkle.
 Mr. Simmons with Mr. Crosser.
 Mr. Treadway with Mr. Boylan.
 Mr. Dempsey with Mr. Fulbright.
 Mr. Luce with Mr. Howard of Nebraska.
 Mr. Merritt with Mr. Jost.
 Mr. Fredericks with Mr. Cummings.
 Mr. Michaelson with Mr. Browning.
 Mr. Foster with Mr. Milligan.
 Mr. Mills with Mr. Steagall.
 Mr. Kless with Mr. Tydings.
 Mr. Dallinger with Mr. Mead.
 Mr. Crowther with Mr. Wilson of Mississippi.
 Mr. Kendall with Mr. Oliver of New York.
 Mr. Anthony with Mr. Rogers of New Hampshire.
 Mr. Aldrich with Mr. Shallenberger.
 Mr. Nelson of Maine with Mr. Davy.
 Mr. Perkins with Mr. Johnson of Kentucky.
 Mr. Vestal with Mr. Lindsay.
 Mr. Murphy with Mr. Getan.
 Mr. Rogers of Massachusetts with Mr. Gallivan.
 Mr. Sears of Nebraska with Mr. Canfield.
 Mr. Hawley with Mr. Sherwood.
 Mr. Graham with Mr. Logan.
 Mr. Anderson with Mr. Sperring.
 Mr. Brand of Ohio with Mr. Lyon.
 Mr. James with Mr. Thomas of Kentucky.
 Mr. Green with Mr. O'Connor of New York.
 Mr. Browne of Wisconsin with Mr. Taylor of Colorado.
 Mr. Campbell with Mr. Mooney.
 Mr. Kearns with Mr. Pou.
 Mr. LaGuardia with Mr. Salmon.
 Mr. Dyer with Mr. Morris.
 Mr. McKenzie with Mr. O'Brien.
 Mr. Magee of Pennsylvania with Mr. Parks of Arkansas.
 Mr. Funk with Mr. Sabath.
 Mr. Freeman with Mr. Richards.
 Mr. Perlman with Mr. Corning.
 Mr. Tincher with Mr. Driver.
 Mr. Moore of Illinois with Mr. Lea of California.
 Mr. Sanders of New York with Mr. Doughton.
 Mr. Wood with Mr. Lilly.
 Mr. Parker with Mr. Dickstein.
 Mr. Wyant with Mr. Kunz.
 Mr. Sproul of Kansas with Mr. Lee of Georgia.
 Mr. Woodruff with Mr. Hooker.
 Mr. Fairfield with Mr. Celler.
 Mr. Larson of Minnesota with Mr. Browne of New Jersey.
 Mr. Haugen with Mr. Doyle.
 Mr. Fitzgerald with Mr. Glatfelter.
 Mr. Kelly with Mr. Evans of Montana.
 Mr. Holaday with Mr. Brand of Georgia.
 Mr. Underhill with Mr. Garrett of Texas.
 Mrs. Nolan with Mr. Griffin.
 Mr. Welsh with Mr. Harrison.
 Mr. White of Maine with Mr. Larsen of Georgia.
 Mr. Smith with Mr. Johnson of West Virginia.
 Mr. Yates with Mr. Howard of Oklahoma.
 Mr. Zihlman with Mr. Summers of Texas.
 Mr. Ward of New York with Mr. Tague.
 Mr. Reed of West Virginia with Mr. McNulty.
 Mr. Hall with Mr. Wefald.
 Mr. Keller with Mr. Wolf.
 Mr. Miller of Illinois with Mr. Berger.
 Mr. Paige with Mr. Kent.

The result of the vote was announced as above recorded.

The SPEAKER. A quorum is present; the Doorkeeper will open the doors. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read the third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

The question was taken, and the Speaker announced the ayes seemed to have it.

Mr. BLANTON. Mr. Speaker, I ask for a division.

The House divided; and there were—ayes 150, noes 17.

So the bill was passed.

On motion of Mr. FRENCH, a motion to reconsider the vote by which the bill was passed was laid on the table.

BRIEF HISTORICAL DEVELOPMENT OF THE PRESENT RAILROAD SITUATION

Mr. HAWES. Mr. Speaker, I ask unanimous consent to extend my remarks in the Record on the subject of the historical development of railroad legislation, my own production.

The SPEAKER. Is there objection? [After a pause.] The Chair hears none.

Mr. HAWES. Mr. Speaker, there are now 10,900 bills before this House and 3,700 in the Senate. It is both a physical and mental impossibility to give each thorough consideration.

The Interstate and Foreign Commerce Committee, of which I am a member, has before it many bills which relate to the control, regulation, and direction of railroads.

For my individual information I have attempted to arrive at some understanding of the past history of railroads and legislation affecting them and to bring this subject down to date in condensed form, not for the benefit of experts or with the thought that it will influence those persons who have given study to the subject but rather that the average Member or the private citizen, in considering changes in our present law, may have before him a brief historical statement of the development of this subject.

I doubt if the public is fully aware of the enormity of the task presented by the simplest bill relating to the operation, management, or control of railroads.

No part of this subject can be considered except in its relation to the whole. It is necessary to understand the magnitude of the subject and how it is all related one part with another.

We can not confiscate without payment. We must not merely destroy. Therefore the first essential in the consideration of any change in existing law is a knowledge of all the facts relating to the problem.

In the affairs of life we are guided by experience, and experience is largely a matter of history. It is the knowledge of what has gone before or of things that have occurred to the individual or the Nation which must be considered in any contemplated change.

A doctor studies the past history of his patient; a lawyer assembles his facts before he looks for the law; a man purchasing a business first reviews its past conduct and possibilities. Therefore in proposing changes in railroad law, a knowledge of what has gone before is necessary.

Transportation of all kinds will ultimately become a related subject because the connection between water, rail, and highway is daily forming closer contact, and soon we may have the addition of practical air transportation.

FIRST RAILROAD

What is now the Baltimore & Ohio Railroad obtained its charter in 1827, and the ground was broken on July 4, 1828, by Charles Carroll, the then only surviving signer of the American Declaration of Independence. It is recorded that on opening the ceremony this venerable patriot said:

I consider this among the most important acts of my life, second only to that of signing the Declaration of Independence, even if second to that.

Professor Hadley, writing in 1885, stated:

One man's life formed the connecting link between the political revolution of the last century and the industrial revolution of the present.

That was but 96 years ago.

In 1830 the Baltimore road had only 13 miles of track in operation; in 1831, the Mohawk 17 miles. In 1852 the famous "Old Ironsides" was placed in operation, having no brakes, brought to a stop by reversing the engine, weighing 7 tons, and costing finally \$3,500.

Baldwin, founder of the vast engine works that now bears his name, started in 1832. He had been a watchmaker by trade. The cars that followed his first engine were the old Concord stages with their wheels adapted to rails.

Five years later, or about 1835, the infant railroads were stretching themselves in all directions. Albany and Utica were connected by rail. Two hundred miles of the present Pennsylvania system had been laid in Pennsylvania, the Columbia section having been built by the State, and Philadelphia was connected with the Ohio River at Pittsburgh. The Reading road opened later. Three lines were sent out from Boston. Providence, Lowell, and other manufacturing centers were connected up.

The State was reluctant to aid, but private capital went into the expansion.

From 23 miles of road in 1830 there was an increase to 2,818 miles in 1840. By 1850 there were 9,021 miles of railroad in the United States. The great industrial centers of the East were connected with each other and with the sea. Small progress had been made in the South.

TWENTY-FIVE YEARS LATER

Twenty-five years from the date of the first railroad brings us into a 10-year period of railroad building in the United States, perhaps the most important years of our growth.

From 1850 to 1860 the road mileage increased from 9,000 to 30,000 miles. In 1855 the Baltimore road had 139 engines, 2,567 freight cars, and 96 passenger cars.

Westward and southward the lines pushed on. By rail and canal, with a few interruptions of changing cars, the East was connected with the West, first from New York to Philadelphia,

then to Parkersburg, then to Cincinnati, thence to St. Louis. Two rivers were ferried and passengers changed cars five times. But the East and the West had begun to annihilate distance.

All this was not accomplished without struggle. Private capital was available, but the early days were marked by heated contests between the pioneer railroad builders—visionary they were called at times—and the State.

In Pennsylvania State aid was obtained only after the most contentious deliberations. Early appeals for land grants and stock subscriptions were not met with a ready response. The cost of construction of the roads was six times the early estimates, each mile ranging in the neighborhood of \$44,000. Predictions of returns on investment were scoffed at. In this State a board of commissioners finally saw the possibilities of the steam road and, after insisting against what looked to be great odds, in 1844 officially recognized the steam locomotive.

In New York public sentiment was against State aid in road building. "Visionary" pioneers, however, began to survey on a limited capital, estimates were made on investments and returns, and again, after a bitter struggle, New York gave the credit of the State not to exceed \$3,000,000 for the construction of roads. In 1839 a legislature of New York asked for the surrender of the charter of the largest railroad and its property as well. The bill lost by only one vote.

In 1850, however, it was seen that railroads were both necessary and practical. Canal building stopped and attention was turned to public assistance for the roads.

Favorable factors were the increase of money and the boom that resulted from the discovery of gold in California. Settlers started west and populated new States. Great cities were springing up, and in the South cotton cultivation and production grew enormously.

In 1850 the first land grant was made to the Illinois Central system, and thereafter many followed. Both State and Nation contributed to the new development in money and in lands. The Pennsylvania State owned and controlled roads passed into private ownership or leasehold and all roads were now privately owned and controlled.

Extending into undeveloped territory and gambling upon the success of future development and expansion, private capital could not proceed alone and was given State aid in land grants and money, many States contributing liberally for their development that they might be placed in better competition with those sister States which were far ahead in transportation development.

It must be stated in passing that the manner of granting this money and the methods of its use are not matters of pride in the history of railroad building.

Money was wasted. State debts were repudiated. The attempt to keep track of finances in what we now know as an accurate accounting system was futile, or deliberately muddled. Banks as well as the State suffered from a very loose condition, and the outcome was that State aid stopped.

Sharfman, in the American Railroad Problem, states that—the community manifested so marked an eagerness to secure railroad transportation that the States' attitude toward carriers was one of liberality and encouragement.

Cunningham, in American Railroads, says:

Speculative building, with many cases of financial maladministration, unfair discrimination in rates and service, and ruinous competition caused a reversal of public opinion. Open antagonism took the place of friendly cooperation. There was intense resentment against abuse of power exercised by railroad executives and bitter criticism of rates which were regarded as excessively high. . . . The spirit of antagonism . . . crystallized early in the seventies in the drastic legislation known as the granger laws.

These granger laws, most of them unconstitutional, as the courts later ruled, were the means, however, by which the conditions of 1850 to 1870 were brought to a close, and were the foundation upon which later regulation was constructed.

During the period of State aid Congress was inactive, yet later gave more than 33,000,000 acres of land to induce railroad construction on the first line from the Mississippi to the Pacific.

CIVIL WAR AND ANOTHER 10 YEARS

The panic of 1857 was hardly over when the Civil War came, and railroad construction suffered a severe jolt from these two causes.

Had it not been for several consolidations during the period between 1850 and 1860 these two disasters to railroad building might have caused a greater setback. But Vanderbilt and others had united lines into great systems and the capital in-

vestment was able to withstand the shock of depression. An example of such consolidation may be noted in the fact that until Vanderbilt undertook the work of gaining control of the roads between Albany and Buffalo 10 different companies were operating between these two points.

In 1860 the railroads had made remarkable progress. It was a great step from 1840 to 1860 to find the old box cars of four wheels and 34 barrels of flour, switched by horses and pulled by a muleshoe engine, replaced by sensible looking carriers. The Concord stage of 1830 on wooden rails and the four-wheel passenger coaches of three compartments each, in which the average-sized man could not stand up straight, had passed into memory.

The period of State aid antedated congressional aid. Even in the fifties Congress was slow to act on land grants. There was a constitutional question involved, lenders said, in the power of Congress to give away its lands to private enterprise.

But in 1862 the hesitancy began to disappear when appeals were made for land grants to construct a line from the Mississippi to the Pacific. There had been keen rivalry as to what route should be taken to the Pacific, but at the time of the secession Congress was in a position to act. In fact, Congress had to act for military purposes, and the East was to be connected with the Pacific via the northern route.

An Illinois grant was the model for subsequent grants. The railroads, in addition to a strip 200 feet wide for a right of way, received 6 square miles of land for each mile of track constructed. Later grants increased the acreage given, and there were certain exceptions to the model grant in subsequent grants.

Under the act of 1862 as amended the grant was 10 square miles to every mile of track laid, but owing to the character of the country through which the road was to run, undeveloped and unpopulated, the grant in fact was not much more attractive than previously made grants of 6 square miles.

The road to the Pacific was undertaken by the Union Pacific, the Kansas Pacific, and the Central Pacific Cos.

Congress granted 33,000,000 acres of land to induce construction of this road.

In all, during the 10-year period of 1861 to 1871, 23 companies were the recipients of grants, including those mentioned and also the Texas & Pacific and Southern Pacific lines.

More than 159,000,000 acres of public lands were offered in this way up to 1871, and all of it accepted, except where the roads were unable to carry out their construction. About 120,000,000 acres actually passed to the roads.

In addition to these land grants the Government loaned money in the form of bonds. This land and bond assistance constitutes a lengthy chapter in America's development.

PERIOD OF STOCK JOBBER

In 1880 there were, despite the handicaps of reconstruction and the panic of 1873, 93,267 miles of railroads in the United States. Thirty-three thousand miles had been added in the five-year period from 1867 to 1873 and only 10,000 in the years 1874, 1875, 1876, 1877, and 1878.

But from 1880 to 1890 came by far the most astounding growth of railroads in any country of the world and a growth that will probably mark the greatest achievement in transportation development in the history of the world.

In the United States in these 10 years we added 70,000 miles of railroad to the 93,267 miles of road we had in 1880, and our total at the close of 1890 was 163,597 miles.

Figures compiled by the Joint Commission on Agricultural Inquiry of the Sixty-eighth Congress (p. 319, vol. 3) show that in 1890, the culmination of our greatest decade of railroad building, there was invested in the railroads in road and equipment, in railway capital outstanding and not held by railway companies, \$7,577,000,000.

Here we begin to see the extent of our growing system. This amount in 1890 was as much as the present capital and surplus of all the National and State banks and trust companies of the entire United States, with a billion or more to spare.

What was the result? A scramble for power on the part of the roads and railroad baiting on the part of others. A new problem had grown up with the last few years of the "industry of transportation." All the great lines stretching across the continent several times and from Canada to the Gulf, employing thousands of men, providing for thousands of families, giving labor to hundreds of allied industries, manufactories, and trades, owned by private capital and battling for expansion as well as returns, contended in a dangerous competition for business.

During these years legislative clerks and pages were boastful of their passes; legislatures were bought, directly or indirectly; an army of high-salaried agents invaded many States and the National Capital.

Stock jobbers arose and figures were juggled and garbled. Rebates and discriminations to shippers and jobbers were inevitable in the scramble for supremacy in transportation. Speculative expansion attracted innocent capital looking for dividends. Stock traveled up and down the scale of market manipulations. Railroad barons grew up and others were ruined. Consolidations were effected and mergers announced. Pools ran riot and margins increased. All that the iniquities of the system could invent were recorded in one exposure after another. Reputations were ruined and careers ended.

The orgy of wasteful expenditures in a mad effort to thwart public control was destined to bring about the very thing it sought to forestall. State regulation was inevitable. It came.

STATE REACTION

All of this took place over a long period of years. It began back in the seventies, when legislatures in the Western States were beginning to discuss State rate-making powers. As Vanderblue and Burgess bring out quite clearly in *Railroads—Rates, Service, and Management*, the farmers were blaming the railroads for depressions, as were others. In Illinois, Iowa, Minnesota, Missouri, and other States, hard hit by the depression, "regulatory commissions were created largely as a result of this popular protest by the farming classes."

Many years previously in Massachusetts a commission had been created, and in New York also there was a board that lasted for a short period of time. But the Massachusetts body had no authority over the railroads. They were an investigating commission, reported on their findings, and trusted largely to acquiescence on the part of the railroads to what they thought would be public approval to put their recommendations into effect.

In the Western States, however, the commissions were given authority to act. It was a delicate operation to begin, and a more serious problem to finish. Facts were difficult to obtain, and figures were largely elastic. Courts were called upon to interpret and enjoin, and likewise to mandamus and order. The attempt at State rate making and its early success brought about the day of the pass and the legislative lobbyist, for in the last analysis the legislature was probably more plastic than the commission, and in the hands of the legislator finally rested the authority to enlarge or curtail the power of the commission.

The more radical laws in some instances were not obeyed at all by the carriers, and in others only to a degree; and then, when receiverships began to follow depression and road conditions began to get worse rather than better, despite new mileage and new areas reached, it was found that it was not so much a matter of high rates in general as it was what were called discriminatory rates in particular.

These discriminatory rates were taken up by the States with varied results. In some instances both farmers and manufacturers were pleased, and in others one of the two were satisfied, much to the distress of the other, while in other instances neither was entirely served by the new attempt at regulation.

The subject of "intra" and "inter" State rates then came to the forefront of the situation and a new era of investigation and report was ushered in.

NATIONAL CONTROL

It was evident, after careful analysis, that if regulation were to be effective at all, owing to the various classes of shippers and the more varied character of the commodity to be hauled, to say nothing of the extent of the haul, it became apparent that national regulation would have to be given serious consideration.

President Grant, in 1872, had made mention in a message to Congress of the advisability of considering methods of making uniform or fair the cost of transportation of commodities from the Central States to the sea.

But it was not until 1886 that any serious attempt was made in Congress to bring national control. The Senate received a report in which all the complaints against the railroads were exhaustively treated, and a bill was introduced looking to the question of national rate regulation. In 1887 Congress created the national commission for the purpose of regulating commerce, and this act, to a large extent, was based upon the salient provisions of the various State laws, or at least those phases of the State laws which had proved, in the opinion of Congress, effective.

The original national act looking to rate regulation was, in the light of what has transpired since that time, a mere legis-

lative makeshift, of but a few paragraphs rather loosely worded and indicative of a distrust by Congress of its own rate-making power.

The present interstate commerce act is a delicate, technical, document some 200 pages in length, including the various acts and parts of acts relating thereto.

It was not until 1890 that the Supreme Court ruled favorably on the attempt of Congress to control, and the original interstate commerce act simply created an investigating body on the theory that its reports would enforce compliance with public demand by the railroads.

The State commissions had early taken up matters in addition to rates and alleged discriminations. Among them were:

(1) Safety of travel, including inspection of equipment, grade separation, automatic control, and so forth; (2) service, including car and freight service, terminals, and the like; (3) liability of the companies to shippers; (4) finances, including periodical valuations and estimated and reasonable returns; (5) construction, including the application of carriers for permission to extend their lines in some instances, and to give up nonproductive lines in others.

From the time that Congress took up the railroad-control subject until the present day all of these matters have been included in rail legislation, and to them have been added the relation between the carrier and employee.

INTERSTATE COMMERCE COMMISSION AND LABOR BOARD

The Interstate Commerce Commission is a board of 11 men, appointed by the President and confirmed by the Senate of the United States, and as constituted since its inception has enjoyed the services of technical experts and economists, men previously well trained or experienced in the operation of State commissions dealing with roads.

At the present time this board has been extended into a working organization that requires the space of an entire 11-story building in Washington. It has bureaus selected for each of the activities of the board or to carry out its various powers; certain of its operations are grouped in "divisions," and hundreds of employees carry out its functions. An extensive library of thousands of volumes has grown up under its direction and is used daily for reference by its many departments, as well as by the public and by experts.

The divisions of the board are created to handle, first, management and safety; second, rates; third, service in relation to rates; fourth, management; fifth, service as between the roads and with respect to terminals, and so forth.

Allotted to these divisions are the "bureaus," among them being safety, locomotive inspection, valuation, traffic, inquiry, finance, statistics, accounts, service, law, administration, and compensation departments.

There are still other bureaus and there are chiefs, directors, examiners, and technical experts. The arms of the commission extend into the general offices of more than 1,500 railroads and the volume of statistical data collected daily is astounding, all relating to the powers, functions, and activities of the commission.

Since the passage of the original act the interstate commerce law has been amended by Congress in nearly all its phases, each amendment looking to the extension of its powers and duties.

This great body, at first a merely inquisitorial board, now has the power to establish and enforce rates. The penalty of fine and imprisonment was established for failure to carry out the schedule of the commission, and an imprisonment feature of the penalty clause, later removed by the Elkins amendment to the commerce act, was restored by the Hepburn Act under Mr. Roosevelt.

Under the amendments of 1906 the commission's authority was also extended to express companies, sleeping-car companies, pipe-line companies, and all other companies coming under the head of transportation companies, and in this year the commission was empowered to fix maximum rates and dictate the manner in which the roads shall account to the Government for receipts and expenditures.

The acts of 1910 gave the commission authority over cable, telephone, and telegraph companies, and again enlarged its powers of rate making by making it possible for the commission to suspend proposed rate changes of the carriers until after an investigation.

In 1912 the act was amended to give the commission jurisdiction over the traffic incident to the Panama Canal, and for this purpose included all water-rail lines. In 1913 the valuation amendment was made authorizing the commission to survey and estimate the value of the railroad properties of the Nation, and since that date no great change was made except in the passage of the act of 1920 called the transportation act.

By this act the jurisdiction of the Interstate Commerce Commission with respect to State rate-making bodies was finally established. In other words, the unworkable situation of previous years in which both State and Nation were attempting to control rates over the same carriers was ended, and from 1920 the rate-making power has been definitely lodged with the Government of the United States in the commission. The State board which existed in practically every State in the Union all had wide power and still have it. They can compel the attendance of witnesses and the production of records, and do all that is necessary to inquire into both rates, management, and service. But at the present time, while there exist instances of a conflict of authority in the varied phases of the law, there is rather generally a spirit of cooperation between the States and the Nation, and a conceded right to the national commission to make and enforce rates.

WAR, THE RAILROADS, AND AFTER WAR

It is necessary to revert a few years in order to arrive at a clear understanding of the present situation.

In 1916, under Mr. Wilson, with the exigency of war and its necessities at hand, it was apparent that the transportation facilities of the Nation would, as a matter of national defense, have to be thrown together under one management and control, and Congress accordingly, in that year, gave the President the right to take over the carriers. Mr. Wilson later appointed a Director General of Railroads and put into operation Federal management of roads.

Whatever may be said of Government ownership or operation of roads by advocates of that policy, it will have to be admitted that the public, as represented by Congress, paid no attention to the merits of the Government ownership theory by this act. It was a war emergency act.

But when it began to operate we were, in fact, experimenting accidentally in Government ownership.

There are two extreme views in the matter of railroad operation: One, the theory of Government ownership; the other, private ownership without even rate or service control.

Thus, in America, between 1870 and 1917, we passed, in fact, however accidentally, from one extreme to the other.

It is true that separate contracts were made with each road taken over, but when competition was eliminated and all roads placed upon an equal basis, Government ownership, to a large extent, was in operation.

There were handicaps, it is true, to the Federal management. Labor was in bad shape numerically and otherwise, and equipment of the roads was run down, and all materials and labor that might have been used in the physical upbuilding of the carriers were needed for the emergencies of war.

So practically the United States operated the roads on the strictly military basis of "As you were," and put into effect such rules and regulations as would systematize transportation and control of it, without going into the physical ability of the roads to bear the burden.

We now come to an interesting chapter in railroading. Previous to 1916 road after road had gone into the hands of receivers. Railroad credit was at a low ebb. Since 1893, when 74 roads, with 20,340 miles of tracks and a bonded and stock indebtedness of \$1,780,000,000, went into the hands of receivers, 356 roads had followed, carrying with them into the courts nearly a hundred thousand miles of rails and billions in stocks and bonds.

Naturally, when the Government took over the railroads, they were in a "run-down" condition. Equipment was in need of repair and replacement; tracks were in the same condition; and, more serious than all else, credit was gone.

Then came the new conditions of war. Labor required more pay, living conditions had changed, and freight and passenger rates had to be "boosted" to meet the demands both of natural extra costs of operation and the new cost of expediting the transportation of armies and munitions.

So the United States, confronted with its problem, was hardly able to do more than to meet each condition as it arose. Wages increased, as did freight and passenger rates.

But there was little time left for reconstruction of the roads or the repairing of credit.

And when this condition dawned upon the Federal Government the war ended and the roads had to be returned to their owners.

Demands were made for an extension of Federal control, but Mr. Wilson was not in favor of it. It was generally conceded that the American public had not approved Government management as a step to Government ownership. The roads had been taken over in the emergency of war, and that emergency having passed they were in justice to be restored.

Mr. Wilson named the date for their restoration to private ownership. The roads could not be returned as one would return a chattel. Property could not be confiscated. Transportation could not be set adrift on its own resources. The problems of reconstruction would strike the railroads hardest. The wage problem had to be dealt with and railroad credit re-established.

To do this in proper manner was the motivating principle back of what turned out to be the transportation act of 1920, the last great amendment to the interstate commerce act.

Be it said to the credit of Congress, as a whole the transportation act was a credit to its capacity, earnestness, and zeal, whatever shortcomings may be found in the act itself. It demonstrated at least a constructive effort to deal with a difficult problem in a limited time.

The two great features of the transportation act will probably be set down as (1) a pledge of Government temporary assistance to the roads to preclude the possibility of a panic and to restore credit to the carriers; (2) the setting up of machinery under which the Interstate Commerce Commission might not only fix maximum rates but might fix minimum rates as well, and for this reason might take control over the causes operating to certain ends with respect to returns on investment. To carry out the theory that the Government should inquire into matters relating to returns of the roads on investments, the Labor Board was created in the hope or on the theory that labor disputes might find settlement through its operation and thus insure continuity of service and proper wage scales.

It was provided, in connection with the first purpose of the transportation act, as well as the second, that the Interstate Commerce Commission in establishing rates should try to fix rates which would, so far as possible, yield a fair rate of return upon the aggregate value of railroad property devoted to public use in each of any rate districts established by the commission.

Essentially the things mentioned were the real objects of the transportation act under which the roads are operating to-day.

It was provided that for two years the roads should receive $5\frac{1}{2}$ per cent return on the aggregate value of property actually used in transportation in such districts. One-half of 1 per cent might be added for improvements. So that 6 per cent was recognized as a fair return. At the expiration of the two-year period of Federal aid to the roads the commission established slightly less than 6 per cent as a return in an attempt to follow this provision in the act.

In handing back the roads it was also provided that the Federal Government would continue its financial aid for a certain period and that the roads in this accounting should reimburse the Government for improvements made during the term of Federal control.

The "recapture" clause of section 15a of the transportation act is not generally understood. It provides that if any road under the rate schedules earns more than the fair return then such excess shall be placed in a reserve fund. One-half of this reserve fund may be drawn upon by the road for improvements or dividends, all subject to the approval of the commission, and the other half of excess earnings shall go to a general contingent fund to be expended by the United States through the commission on needed railway improvements or rehabilitation as the commission may from time to time elect.

In 1924 the Supreme Court upheld this clause of the transportation act.

The Labor Board, as constituted by the transportation act, consists of a commission of nine men—three from the carriers, three from the employees, and three from the public. The President appoints all nine men, those from the carriers from six nominations made by the carriers, those from the employees from six nominees of the employees. No nominations are made by the public.

There is provision also for labor boards of adjustment, which may inquire into matters involving grievances or working conditions but which have no jurisdiction in the matter of wages.

The act provides, however, that before any matter shall go before the boards it shall first be the subject of conferences between the parties interested—the carrier or carriers and the employees. If conference fails, then wage disputes go to the Labor Board; and other disputes go to the Labor Board also if the adjustment boards do not exist, for it is provided that the creation of the adjustment boards is voluntary, and either the roads or the employees may refuse to create their portion of such adjustment boards.

The Labor Board provision authorizes the examination of all facts and conditions entering into the dispute and provides for full publicity of all its hearings, discussions, or findings, but no authority is delegated to enforce its decisions.

The hearings before this board in numerous instances and the results of these deliberations, together with the conditions of both sides in particular cases, are matters of public record.

HIGHWAYS

In the last few years a new agency of transportation has entered into the consideration of thoughtful men, an agency that bids fair later to have a distinct bearing on the future of the American railway.

We now have a National and State investment in public highways of \$5,000,000,000, and this year Congress has appropriated \$80,000,000, which must be matched by the States, making a total new investment of \$160,000,000 in the next two years, establishing a policy which will probably be continued.

Already the competition of the motor car has been felt in the interurban lines and in railroad lines of a short-haul character. The motor bus has already resulted at least in a few abandonments of electric-line transportation. Near my own city, through Illinois and Missouri, there are motor coaches extending out into long lines of profitable freight and passenger business. That is a coming problem.

The Department of Agriculture estimated three years ago that 134,000,000 tons of farm produce were hauled over the highways of the Nation in 1921. The shipping of livestock by truck is becoming popular and economical in farming communities, and the transportation of other commodities by truck is increasing daily. At first the truck was a valuable feeder to the railroad, but with the extension of the National and State road programs and the enormous increase in the motor truck and motor car output the competition becomes a factor in the railroad problem.

The motor problem is a study in itself. According to the Joint Agricultural Inquiry Committee of the Sixty-seventh Congress, the registrations of motor vehicles in the Nation in 1911 were 501,000, of which 14,000 were trucks.

Ten years later the registrations were 10,300,000 motor vehicles, of which 1,390,000 were trucks, and to-day there are 15,500,000 registrations, of which 1,831,000 are trucks, with an annual investment in automobiles of \$7,546,000,000.

Every truck in its relation to every mile of paved road becomes a potential factor in the transportation problem, a factor in the future of the American railroad.

WATERWAYS

From 1824 to 1923 the United States spent a total of \$1,150,000,000 on waterways, harbors, rivers, canals, boats, and river service. From 1913 to 1921 the Government spent \$400,000,000 of this sum. There are 6,014 miles of navigable waterways and rivers receiving Government appropriations. Of the total amount spent on waterways, harbors, and canals, about \$400,000,000 has been spent to date by the Government on rivers only.

This does not take into consideration the Shipping Board and its war emergency expenditures of \$2,500,000,000. This refers only to canals, waterways, rivers, and river service which are distinctly competitive subjects in the discussion of the railroad problem.

There is a bill now before Congress to appropriate, for a six-year building program for inland waterways, \$53,000,000.

When these expenditures for waterways are added to the expenditures by the Government and States for highways the public competitive investment becomes enormous.

INVESTMENT AND SERVICE

To-day in the United States there are 258,314 miles of railroads operated. There are 38,692 miles of secondary track and 116,186 miles of terminal and siding tracks, a total of 413,192 miles of trackage, or more than enough to lay rails across the Atlantic 100 times or to span the earth's surface at the Equator in first-class mileage 10 times.

There are 68,990 locomotives, 2,380,482 freight cars, and 57,166 passenger cars. Every man, woman, and child of our 110,000,000 population could be transported at one time if all railroad vehicles were used.

In 1923 the railroads carried 1,387,942,018 tons of freight a distance of 416,211,000,000 miles.

In the same year 1,009,000,000 passengers rode a total distance of 38,297,000,000 miles.

The railroads have a capital of about \$21,000,000,000, or at the rate of about \$89,500 per mile.

The total operating expenses of 1923 were \$4,895,000,000.

The operating revenue, \$6,289,000,000.

There are 1,855,000 employees working on these roads and about 2,000,000 in allied industries, and the number of individual roads reporting to the commission is more than 2,000.

There are 890,000 stockholders in these roads in addition to bondholders and other creditors.

Allowing three to a family, there are 12,000,000 persons depending upon the railroads for money that actually goes directly into their pockets.

These roads burned 131,491,000 tons of soft coal in 1923 and 2,614,000 tons of hard coal, and consumed 2,334,365,000 gallons of oil.

They laid 84,500,000 railroad ties and 3,000,000 tons of steel in replacements and betterments.

Every locomotive costs between \$35,000 and \$75,000, every passenger car \$15,000 to \$30,000, every diner approximately \$50,000, and every freight car from \$1,500 to \$3,500.

The roads loaded nearly 50,000,000 freight cars during the year 1923, and installed 4,160 locomotives, 223,724 freight cars, and 2,534 passenger cars.

NATIONAL VALUATION

In 1913 Congress amended the interstate commerce act by a provision directing the Interstate Commerce Commission to proceed at once to make a valuation of the railroads of the United States, and authorized the commission to divide the Nation into districts to carry out this work.

The commission divided the country into five sections: Eastern, central, western, southern, and Pacific; and three boards were created, with one member on each board from each of the five districts; the first being a board of engineers, the second being a board of land attorneys, and the third a board of accountants.

For the purpose of expediting the valuation, field offices were established and field and office staffs were created. That was 11 years ago.

In 1922 an investigation was begun by Congress as to the cause of the apparent delay in completing this valuation, and it was discovered, for the first time, that the extent of this work was enormous.

To-day a better knowledge of the extent of this work may be obtained. At the peak of this valuation process there were 1,800 men employed by the commission for this work alone.

It must be remembered that there are over 2,000 railroad companies owning physical properties in the United States. These do not all report to the commission individually, but in the valuation process the properties of each of these 2,000 and more roads are to be valued.

This does not mean that the commission may enter the offices of the railroads, examine their financial statements, take the total amount of capital invested, and return this as the valuation of the road.

The commission first notified the roads that such a valuation was to be made, and the roads themselves were required to assist the commission in this work. Special charts, diagrams, and data had to be prepared with respect to every foot of track, every tie and every rail, every locomotive, passenger car, baggage coach, and other equipment—every item relating to this equipment and these physical properties in a financial way was tabulated, and an agent of the commission examined every item in these voluminous financial statements.

The commission was required to travel over much of the 258,000 miles of road in order to determine depreciation, actual cost, cost of replacement, and all the technical matters that enter into a valuation process.

In the 11 years ending in 1924 the army at work under the commission cost the Government nearly \$26,000,000, and the carriers assert that in assisting the Government to arrive at their various valuations the carriers spent three times this amount, or approximately \$75,000,000.

During this period of investigation litigation was unavoidable, and time and again the courts were resorted to in an effort to determine whether the policy of the commission was fair and equitable.

In fixing a fair return as contemplated by the interstate commerce act the actual valuation of the roads will be one of the important factors, but there is wide divergence of opinion even among experts as to the real valuation of a physical property, considering original investment, overhead expense, maintenance, and depreciation.

It is estimated the work of valuing the railroads will be completed by July, 1927.

A bill has been introduced in Congress asking for an appropriation of \$4,135,000 to complete primary valuation reports, and the statement is made by Interstate Commerce Commission experts this will complete the work of valuation so far as the primary valuation is concerned.

The statistical data, charts, maps, and drawings necessary to complete this work will fill to their capacity the space of more than 50 rooms, and if reduced to volumes would constitute several thousand.

The book cost of road and equipment by all classes of carriers reported in 1919 was as follows:

Eastern group	\$9,038,194,615
Southern group	2,183,923,124
Western group	8,818,454,872

Total of groups..... 20,040,572,611

The commission's estimate was—

Eastern group	\$8,800,000,000
Southern group	2,000,000,000
Western group	8,100,000,000

Total..... 18,900,000,000

RATES AND FAIR RETURN

I quote from the testimony of John J. Esch before the Interstate and Foreign Commerce Committee on May 21, 1924:

Section 15a (3) provides that after March 1, 1922, the commission shall "from time to time determine and make public what percentage of such aggregate property constitutes a fair return thereon, and such percentage shall be uniform for all rate-group territories which may be designated by the commission."

* * * The provisions of section 15a have been framed in recognition of constitutional guaranties of fair return upon property devoted to public use. They also declare the policy of Congress "in its control of interstate commerce system * * * to make the system adequate to the needs of the country by securing for it a reasonable compensatory return for all the work it does."

* * * Section 15a, reasonably construed, contemplates the determination of a return which the carriers, collectively or in rate groups, may attain over a period of time under rates adjusted from time to time with that object in view. The phrase "from time to time" does not mean that we should adjust and readjust rates to meet business fluctuations. Whether carriers may be able to earn an aggregate net railway operating income equal to a fair return must depend to a large extent upon business conditions. In the Wisconsin case the court said: "The new measure imposed an affirmative duty on the Interstate Commerce Commission to fix rates and to take other important steps to maintain an adequate railway service for the people of the United States."

* * * In numerous cases cited courts and regulating authorities of States have recognized that public utilities and railroads may be permitted individually to earn, under reasonable rates, at least 6 per cent upon fair value.

* * * In our view railway corporations should, like other corporations, pay their Federal income taxes out of the income rather than collect it in effect from the public in the form of transportation charges adjusted to enable it to retain a designated fair return over and above the tax. We may observe that a fair return of 5.75 per cent, representing an aggregate annual net railway operating income arrived at after deducting, among other things, the Federal income tax on a return of 6 per cent, would be approximately the equivalent of a fair return of 6 per cent, out of which the Federal income tax was payable.

CONSOLIDATION OF RAILROADS

From the very earliest days there have been continuous consolidations of railroads, the number of individual roads gradually decreasing.

President Coolidge, in his last message to Congress on this subject, said:

In my message last year I emphasized the necessity for further legislation with a view to expediting the consolidation of our railways into larger systems. The principle of Government control of rates and profits, now thoroughly embedded in our governmental attitude toward natural monopolies such as the railways, at once eliminates the need of competition by small units as a method of rate adjustment. Competition must be preserved as a stimulus to service, but this will exist and can be increased under enlarged systems. Consequently the consolidation of the railways into larger units for the purpose of securing the substantial values to the public which will come from larger operation has been the logical conclusion of Congress in its previous enactments and is also supported by the best opinion in the country. Such consolidation will assure not only a greater element of competition as to service, but it will afford economy in operation, greater stability in railway earnings, and more economical financing. It opens large possibilities of better equalization of rates between different classes of traffic so as to relieve undue burdens upon agricultural products and raw materials generally, which are now not possible without ruin to small units, owing to the lack of diversity of traffic. It would also tend to equalize earnings in such fashion as to reduce the importance of section 15a, at which criticism, often misapplied, has been directed. A smaller number of units would offer less difficulties in labor adjustments and would contribute much to the solution of terminal difficulties.

There is now before the Committee on Interstate and Foreign Commerce a bill providing for consolidation of the railroads into several great systems.

COST OF PUBLIC OWNERSHIP

The Government can not, without paying for it, take over nor confiscate this enormous property, valued at approximately \$20,000,000,000, nor could it take over without withdrawing from the States and Nation \$350,000,000 annually in taxes.

In 1911 the class I railroads paid taxes amounting to \$98,626,000. In 1920 State taxes had risen to \$232,000,000 and Federal taxes mounted to \$50,000,000, a total of \$282,000,000, or an increase of 175.7 per cent over the year 1911.

In 1923 the roads paid \$332,000,000 in taxation to the State and Federal Governments, and for 1924 will pay over \$350,000,000.

SUMMARY

Summarizing the 96 years of development in the railroads we find:

1. A joint attempt at building between private capital and State and National aid.
2. The abandonment of State and National aid and the passing early in our history of roads into the hands of private capital.
3. The attempt and the failure of States to regulate rates; this having been demonstrated to be essentially a national function.
4. The roads are now largely directed by men of extended experience who have grown up in the railroad business, nearly all advancing by merit from minor positions.
5. Railroad stock, formerly owned by a few, is now held by hundreds of thousands of citizens, in many cases representing a lifetime saving.
6. The Government's effort to secure a proper valuation of railroads and promise of completion in 1927.
7. The right of the Interstate Commerce Commission to make rates has been established by the courts; limited, however, to rates insuring a fair return upon investment.
8. Practically everything connected with the railroads is now regulated: Rates, service, safety appliances, extensions, issuance of stock, issuance of bonds, consolidations, abandonments, locomotive and car inspection, accounting systems, reports, investigation of management, excess profits, connections with ports, rail and water commerce, valuations, liability of carriers.
9. The matter of further consolidation is now under consideration.
10. Investment in highways of \$5,000,000,000 and yearly investment of State and Nation of \$80,000,000.
11. National investment in inland waterways, canals, and harbors of \$1,150,000,000, and we contemplate an additional expenditure of \$53,000,000.

If I have in this statement shown the magnitude of the subject, the efforts of State control, the extent of the present national control, and have emphasized the tremendous development and the number of citizens dependent upon the roads for financial stability, I may have aroused an interest which will cause a more thorough study, extending to thousands of volumes.

Before making changes Congress, with the light of experience, should know what has gone before, ascertain the extent and limitation of its powers, so that it may approach this subject with thorough understanding.

[NOTE.]—For those who desire a more complete study of railroad problems I refer to the sources of my own information, namely, Government Regulation of Railway Rates, by Hugo Meyer; Our Railroads To-morrow, by Edward Hungerford; Principles of Railroad Transportation, by Johnson and Van Metre; American Railroads, by Cunningham; Government Ownership of Railroads, by Dunn; The Business of Railway Transportation, by Lewis Haney; Railroads—Rates, Service, Management, by Vanderblue and Burgess; the excellent works of Professor Hadley; decisions of the Labor Board, 1921 and 1922; hearings of Senate committee on S. 2327; hearings before House committee, May, 1924; current report of the Interstate Commerce Commission; the transportation act of 1920, as amended and revised and compiled; and three volumes of the congressional hearings on the return of the railroads to private management.

EXTENDING APPROPRIATION, COLUMBIA BASIN INVESTIGATION

Mr. SUMMERS of Washington. Mr. Speaker, I ask unanimous consent to take from the Speaker's table Senate Joint Resolution 157 and put it upon its passage.

The SPEAKER. The gentleman from Washington asks unanimous consent to take from the Speaker's table and pass the Senate joint resolution which the Clerk will report.

The Clerk read as follows:

Senate Joint Resolution 157, extending appropriation in connection with Columbia Basin investigation

Resolved, etc., That the unexpended balance of the appropriation contained in the act of March 4, 1923 (42 Stat. L. p. 1540), making appropriations for investigation of the feasibility of irrigation by gravity or pumping, water sources, water storage, and related problems in connection with Columbia Basin project, is hereby reappropriated and made available immediately and to continue available until the investigation is completed.

Mr. WINGO. Mr. Speaker, reserving the right to object—

The SPEAKER. The Chair was told that it would be a bill limiting it to February 15, but the bill as read says "until the investigation is completed."

Mr. SUMMERS of Washington. Until the report is completed, and the Secretary believes it will be completed by the 1st of February, or perhaps the 15th.

Mr. GARNER of Texas. Is this an emergency matter?

Mr. SUMMERS of Washington. I would be very glad to state this appropriation was made a year and a half ago, requiring a report on the 31st of this month. I have a letter from the Secretary of the Interior which says the report is not completed, and will not be for some weeks yet. There are several scientific men preparing the report, and this is to continue the little balance of that appropriation so they can go ahead and complete the report, which will be ready within a few weeks; otherwise the appropriation will be no longer available.

Mr. GARNER of Texas. When Mr. GARRETT of Tennessee left he advised me that there would not be anything coming up after Calendar Wednesday except the naval appropriation bill. That is my understanding also from the gentleman from Ohio [Mr. LONGWORTH].

Mr. LONGWORTH. I did not hear the gentleman.

Mr. GARNER of Texas. When Mr. GARRETT of Tennessee left he advised me that nothing would come up this week except the naval appropriation bill, and that is also my understanding from the gentleman from Ohio. I would like the matter to go over until the gentlemen interested in the matter can have an opportunity to look into it.

Mr. LONGWORTH. I will say to the gentleman from Texas I was not aware of the general purpose, but being a question of unanimous consent—

Mr. GARNER of Texas. If the Speaker does not want to take the responsibility of declining to give unanimous consent himself for the present, I will do it myself, and ask that it go over until to-morrow.

Mr. SUMMERS of Washington. Will not the gentleman permit me to read a very short statement from the Secretary of the Interior?

Mr. GARNER of Texas. Put it in the Record and we will have it to-morrow.

Mr. SUMMERS of Washington. But we will have no session.

Mr. GARNER of Texas. We are bound to have a session to-morrow.

Mr. LONGWORTH. I have told a number of gentlemen who made inquiry that there will be no business to-morrow after the appropriation bill was through.

The statement of the Secretary is as follows:

THE SECRETARY OF THE INTERIOR,
Washington, December 18, 1924.

Hon. JOHN W. SUMMERS,
House of Representatives.

MY DEAR MR. SUMMERS: Under the act of February 21, 1923, I was authorized to investigate and report on what is known as the Columbia Basin reclamation project, and an appropriation of \$100,000 was made for this purpose under the act of March 4, 1923 (42 Stat. 1540), available until December 31, 1924.

The engineers and economists in charge of the preparation of data for the final report advise me that it will be impossible for them to complete their work so as to enable me to submit my report by the date the appropriation expires. It was my purpose to submit a final report on this matter on or before December 31, 1924, but now find that such a report can not be submitted before February 1, 1925, and it may possibly be the 15th of that month. I believe, therefore, that it would be advisable to extend the time during which the funds appropriated will be available for this purpose so as to cover any expenses

incurred after December 31, 1924. The exact amount of the unexpended balance can not be stated, on account of unreported expenditures.

This matter is called to your attention in order that proper action may be taken by the Congress.

Sincerely yours,

HUBERT WORK.

Mr. GARNER of Texas. I would rather have this go over to to-morrow. If it can be done by unanimous consent, it can be done to-morrow.

The SPEAKER. The Chair will state that the bill is not in the form he understood it was in. He understood it ought to be limited to February 15.

AIR MAIL SERVICE

Mr. WINTER. Mr. Speaker, I ask unanimous consent to extend my remarks in the Record.

The SPEAKER. The gentleman from Wyoming asks unanimous consent to extend his remarks in the Record. Is there objection?

There was no objection.

Mr. WINTER. Mr. Speaker, I am impelled to say a word for record in support of the bill authorizing the Postmaster General to extend the Air Mail Service. My State, which is my district, lies on the air mail route from New York to San Francisco. There are air mail plane stations at Cheyenne, Laramie, Rawlins, Rock Springs, and Evanston, all in Wyoming. There are revolving, sweeping signal lights interspersed across the 365 miles of valley, plain, and mountains, from the eastern to the western boundary of the State. The highest is on Sherman Hill, at an altitude of 8,600 feet, the Continental Divide.

It has been my fortune to have witnessed last fall air mail planes arriving at and leaving the Wyoming stations. It is an inspiration and brings a thrill to see these rigid-winged machines sweeping through the air lanes over these tremendous stretches of one of the Commonwealths of this great Nation and to realize that it is a part of a system operating from ocean to ocean. It is a striking demonstration of the marvelous ingenuity, the resourcefulness, the skill, and the bravery of the American people and its citizen employees.

This service has not been without its sacrifices of human life. Twice air mail pilots have made the supreme sacrifice in the crashing of their planes against the high head of Elk Mountain. In my State, when darkness or snowstorms have confused their course and obscured their objective. It was with gratification and a feeling of security for the lives of our courageous pilots that on many nights across the breadth of my State, from auto or from train, on the Union Pacific route, I saw the great shafts of light sweeping across the heavens, the signals beckoning them safely from station to station in the dark hours of the night. Like great eagles, symbolizing the power, genius, and swiftness of the United States, the mail planes descended from the darkness and again ascended into the night and swept onward.

They carry across the Nation at amazing speed the messages of business, of society, and of the home. They link in swift contact the East and the West. They dwarf the Nation to a span. They bring our people nearer to each other. They render incalculable service in the commercial world; but, greater than this, they solidify, they unite, as never before, the utmost sections of our broad land. They will weave, as this service is extended over the whole country in time, a thousand strands daily into the common fabric of the Union.

ADJOURNMENT

Mr. LONGWORTH. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 4 o'clock and 55 minutes p. m.) the House adjourned until to-morrow, Saturday, December 20, 1924, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

747. A communication from the President of the United States, transmitting a draft of legislation making available not to exceed \$275,000 of the existing appropriations for river and harbor works for the purpose of making surveys of the St. Lawrence River and the preparation of plans and estimates by the United States section of the Government Board of Engineers on the St. Lawrence River (H. Doc. No. 498); to the Committee on Appropriations and ordered to be printed.

748. A letter from the chairman of the Interstate Commerce Commission, transmitting a report for the month of November, 1924, showing the condition of railroad equipment; to the Committee on Interstate and Foreign Commerce.

749. A letter from the Secretary of War, transmitting, with a letter from the Chief of Engineers, reports on preliminary examination and survey of Mulberry Fork of the Warrior River above Sanders Shoals, Ala.; to the Committee on Rivers and Harbors.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of Rule XIII,

Mr. MADDEN: Committee on Appropriations. H. R. 10982. A bill making appropriations for the Treasury and Post Office Departments for the fiscal year ending June 30, 1926, and for other purposes; without amendment (Rept. No. 1056). Referred to the Committee of the Whole House on the state of the Union.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of Rule XIII,

Mr. BUTLER: Committee on Naval Affairs. H. R. 9112. A bill for the relief of Commander Charles James Anderson, United States Naval Reserve Force; without amendment (Rept. No. 1057). Referred to the Committee of the Whole House.

Mr. BUTLER: Committee on Naval Affairs. H. R. 9228. A bill for the relief of Charles Ritzel; without amendment (Rept. No. 1058). Referred to the Committee of the Whole House.

Mr. BERGER: Committee on the Public Lands. H. R. 1579. A bill authorizing the disposition of certain lands in Minnesota; with amendments (Rept. No. 1059). Referred to the Committee of the Whole House.

Mr. STEPHENS: Committee on Naval Affairs. H. R. 1446. A bill for the relief of Charles W. Gibson, alias Charles J. McGibb; without amendment (Rept. No. 1060). Referred to the Committee of the Whole House.

Mr. STEPHENS: Committee on Naval Affairs. H. R. 10670. A bill for the relief of Frederick S. Easter; with an amendment (Rept. No. 1061). Referred to the Committee of the Whole House.

*CHANGE OF REFERENCE

Under clause 2 of Rule XXII, committees were discharged from the consideration of the following bills, which were referred as follows:

A bill (H. R. 9946) granting a pension to Harry E. Pangburn; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

A bill (H. R. 10854) granting an increase of pension to Charles N. Cannon; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

A bill (H. R. 10795) granting an increase of pension to Gideon C. Lewis; Committee on Pensions discharged, and referred to the Committee on Invalid Pensions.

A bill (H. R. 10896) granting an increase of pension to Samantha A. Carnes; Committee on Pensions discharged, and referred to the Committee on Invalid Pensions.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. MADDEN: A bill (H. R. 10982) making appropriations for the Treasury and Post Office Departments for the fiscal year ending June 30, 1926, and for other purposes; committed to the Committee of the Whole House on the state of the Union.

By Mr. WILLIAMSON: A bill (H. R. 10983) providing for the leasing of restricted Indian allotments for a period not exceeding 10 years; to the Committee on Indian Affairs.

By Mr. CRISP: A bill (H. R. 10984) declaring Flint River above Albany, Ga., nonnavigable; to the Committee on Interstate and Foreign Commerce.

By Mr. NEWTON of Minnesota: A bill (H. R. 10985) limiting the provisions of the act of August 20, 1916, relating to the retirement of captains in the Navy; to the Committee on Naval Affairs.

By Mr. CURRY: A bill (H. R. 10986) to authorize cooperative agreements between the heads of the executive depart-

ments and the Governor of the Territory of Alaska; to the Committee on the Territories.

By Mr. BRITTEN: A bill (H. R. 10987) to advance the Naval Establishment with a view to meeting the 5-5-3 ratio promoted by the Washington arms conference, and to authorize an increase in the limits of cost of certain naval vessels, and to provide for the construction of additional vessels; to the Committee on Naval Affairs.

By Mr. GASQUE: A bill (H. R. 10988) to provide for dividing the State of South Carolina into three judicial districts, for the appointment of a district judge, district attorney, and marshal for the eastern district of South Carolina, for the holding of the terms of court in said districts, and for other purposes; to the Committee on the Judiciary.

By Mr. SUMMERS of Washington: Joint resolution (H. J. Res. 312) extending appropriation in connection with Columbia Basin investigations; to the Committee on Appropriations.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BEGG: A bill (H. R. 10989) granting an increase of pension to Anna Snyder; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10990) granting an increase of pension to Phoebe E. Betts; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10991) granting an increase of pension to Elvesta E. Carper; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10992) granting an increase of pension to Katie Krieger; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10993) granting an increase of pension to Maria E. Witter; to the Committee on Invalid Pensions.

By Mr. BURTNESS: A bill (H. R. 10994) granting a pension to John M. Johnson; to the Committee on Invalid Pensions.

By Mr. CRAMTON: A bill (H. R. 10995) granting a pension to Jennie E. Buckley; to the Committee on Pensions.

Also, a bill (H. R. 10996) granting a pension to Tamar Ervin; to the Committee on Pensions.

By Mr. CROWTHER: A bill (H. R. 10997) granting a pension to Mary A. Kennedy; to the Committee on Invalid Pensions.

By Mr. FAUST: A bill (H. R. 10998) granting an increase of pension to Henry De Bell; to the Committee on Invalid Pensions.

By Mr. FISH: A bill (H. R. 10999) granting an increase of pension to Mary E. Carpenter; to the Committee on Invalid Pensions.

Also, a bill (H. R. 11000) granting an increase of pension to Eliza A. Frost; to the Committee on Invalid Pensions.

Also, a bill (H. R. 11001) for the relief of Arthur E. Colgate, administrator of Clinton C. Colgate, deceased; to the Committee on Claims.

Also, a bill (H. R. 11002) for the relief of Peter Myer; to the Committee on Military Affairs.

By Mr. GARDNER of Indiana: A bill (H. R. 11003) granting an increase of pension to George Sparks; to the Committee on Pensions.

By Mr. GIBSON: A bill (H. R. 11004) granting an increase of pension to Mary H. Hight; to the Committee on Invalid Pensions.

By Mr. GREENWOOD: A bill (H. R. 11005) granting a pension to Sarah Ladson; to the Committee on Invalid Pensions.

By Mr. GRIEST: A bill (H. R. 11006) granting an increase of pension to Susan Bryson; to the Committee on Invalid Pensions.

By Mr. HAWLEY: A bill (H. R. 11007) granting a pension to Hattie A. Cruson; to the Committee on Pensions.

By Mr. KOPP: A bill (H. R. 11008) granting a pension to Eliza A. Corbett; to the Committee on Invalid Pensions.

By Mr. LOWREY: A bill (H. R. 11009) for the relief of James M. Conner; to the Committee on War Claims.

By Mr. LOZIER: A bill (H. R. 11010) granting an increase of pension to Margaret McCullough; to the Committee on Invalid Pensions.

By Mr. MANLOVE: A bill (H. R. 11011) for the relief of Thomas A. Heard; to the Committee on Military Affairs.

Also, a bill (H. R. 11012) granting an increase of pension to Louisa L. Littler; to the Committee on Invalid Pensions.

By Mr. MAPES: A bill (H. R. 11013) granting a pension to Albert S. Riddle; to the Committee on Pensions.

By Mr. MOORE of Ohio: A bill (H. R. 11014) granting an increase of pension to Frank L. Snoots; to the Committee on Pensions.

By Mr. PURNELL: A bill (H. R. 11015) granting an increase of pension to Silas Rogers; to the Committee on Pensions.

By Mr. ROBSION of Kentucky: A bill (H. R. 11016) granting a pension to Polly Couch; to the Committee on Invalid Pensions.

Also, a bill (H. R. 11017) granting a pension to Catron Jones; to the Committee on Pensions.

By Mr. RUBEY: A bill (H. R. 11018) granting a pension to John T. Wilson; to the Committee on Invalid Pensions.

By Mr. SNELL: A bill (H. R. 11019) granting an increase of pension to Mary Griffin; to the Committee on Invalid Pensions.

Also, a bill (H. R. 11020) granting a pension to Margaret Richards; to the Committee on Invalid Pensions.

By Mr. SPEAKS: A bill (H. R. 11021) granting an increase of pension to Mary J. Graham; to the Committee on Invalid Pensions.

By Mr. THOMAS of Kentucky: A bill (H. R. 11022) granting an increase of pension to Henry Y. Staton; to the Committee on Pensions.

By Mr. VINCENT of Michigan: A bill (H. R. 11023) granting a pension to Arthur Raymond; to the Committee on Pensions.

By Mr. WILLIAMS of Illinois: A bill (H. R. 11024) granting a pension to Elizabeth Jamison; to the Committee on Invalid Pensions.

By Mr. WILSON of Indiana: A bill (H. R. 11025) granting an increase of pension to Elizabeth Davis; to the Committee on Invalid Pensions.

Also, a bill (H. R. 11026) granting an increase of pension to Matilda Gomes; to the Committee on Invalid Pensions.

By Mr. WINSLOW: A bill (H. R. 11027) granting an increase of pension to Abby E. Trussell; to the Committee on Invalid Pensions.

By Mr. CURRY: Resolution (H. Res. 386) to pay Mary V. O'Toole and Conrad P. Kahn, clerks to the late Hon. Julius Kahn, one month's salary; to the Committee on Accounts.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

3266. By Mr. ANDREW: Petition of Army and Navy Union, Charlestown, Mass., urging passage of bills increasing pensions of Civil and Spanish War veterans; to the Committee on Pensions.

3267. By Mr. GUYER: Petition of sundry citizens of Franklin County, Kans., protesting the passage of Senate bill 3218, known as the compulsory Sunday observance bill; to the Committee on the District of Columbia.

3268. Also, petition of sundry citizens of Ottawa, Kans., objecting to the passage of Senate bill 3218, known as the compulsory Sunday observance bill; to the Committee on the District of Columbia.

3269. By Mr. RAMSEYER: Petition of citizens of Mahaska, Monroe, and Wapello Counties, State of Iowa, opposing the passage of Senate bill 3218 or any other religious legislation which may be pending; to the Committee on the District of Columbia.

3270. By Mr. VARE: Memorial of Philadelphia Board of Trade, urging passage of the McFadden bill; to the Committee on Banking and Currency.

3271. By Mr. VINCENT of Michigan: Petition of residents of Gratiot County, Mich., protesting against the passage of the compulsory Sunday observance bill; to the Committee on the District of Columbia.

SENATE

SATURDAY, December 20, 1924

The Chaplain, Rev. J. J. Muir, D. D., offered the following prayer:

Our Father, we draw near to Thee this morning, and while we bless the hand that has been guiding our way we wish to return to Thee thanks especially at this season of the year. To some there may be a sense of loneliness attached to it that makes them think of others with them formerly, but we pray that Thou, "strong Son of God, immortal love," may be near in the presence of these lonely experiences, multiplying to each the joy of Christmas time in heart and in the experiences through which they may be passing.

Grant to each in the separation temporarily for the homecoming that Thy grace may be made sufficient and that all the while we may find ourselves companioned by Him who hath said, "I will never leave thee nor forsake thee." We ask in Jesus' name. Amen.

The reading clerk proceeded to read the Journal of the proceedings of the legislative day of Tuesday, December 16, 1924, when, on request of Mr. JONES of Washington and by unanimous consent, the further reading was dispensed with and the Journal was approved.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Farrell, one of its clerks, announced that the House had passed a bill (H. R. 10724) making appropriations for the Navy Department and the naval service for the fiscal year ending June 30, 1926, and for other purposes, in which it requested the concurrence of the Senate.

The message also announced that the House had agreed to the concurrent resolution (S. Con. Res. 23) providing for the appointment of a joint committee to make necessary arrangements for the inauguration of the President elect of the United States on the 4th of March next, and that Mr. GRIEST, Mr. HADLEY, and Mr. ROUSE were appointed members of the joint committee on the part of the House to arrange for the inauguration.

ENROLLED BILLS SIGNED

The message further announced that the Speaker of the House had affixed his signature to the following enrolled bills, and they were thereupon signed by the President pro tempore:

H. R. 8657. An act to amend section 98 of the Judicial Code, providing for the holding of the United States District Court at Shelby, N. C.; and

H. R. 6941. An act granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent children of soldiers and sailors of said war.

REPORT OF THE WAR FINANCE CORPORATION (H. DOC. NO. 486)

The PRESIDENT pro tempore. The Chair lays before the Senate the Seventh Annual Report of the War Finance Corporation, which will be referred to the Committee on Finance.

Mr. FLETCHER. It seems to me the report ought to be printed as well as referred to the Committee on Finance. I make the request that it be printed as a Senate document.

The PRESIDENT pro tempore. The Senator from Florida asks that the Seventh Annual Report of the War Finance Corporation be printed. Is there objection? The Chair hears none, and it is so ordered.

COMMITTEE ON INAUGURAL ARRANGEMENTS

The PRESIDENT pro tempore. The Chair announces as members of the joint committee on the part of the Senate to take in charge the inaugural ceremonies the Senator from Kansas [Mr. CURTIS], the Senator from Maine [Mr. HALE], and the Senator from North Carolina [Mr. OVERMAN].

THE ALASKA RAILROAD (S. DOC. NO. 175)

Mr. WILLIS. Mr. President, in accordance with the statute the President of the United States submitted to the Congress the report of the general manager of the Alaska Railroad, together with the report of the superintendent of transportation, which were referred to the Committee on Territorial and Insular Possessions. There are also included some rather voluminous tables of statistics which it seems to me need not be printed, but I ask unanimous consent that the report of the general manager and the report of the superintendent of transportation be printed as a Senate document. I think they contain useful information.

The PRESIDENT pro tempore. Is there objection to the request of the Senator from Ohio?

Mr. NORRIS. I have not read the report, of course, but the Senator who offers it omits from the printing the statistics. I judge from the papers sent to the desk that they can not be very voluminous. Although I do not know what they show or what they are, it seems to me that we ought not to omit printing the statistics.

Mr. WILLIS. I have not the slightest objection. I looked over the statistics and thought they were not perhaps important, but if the Senator desires to have them printed I will include the statistics in my request; and also the illustrations.

Mr. NORRIS. With that understanding I have no objection to the printing.

The PRESIDENT pro tempore. Without objection the order to print, with the illustrations, is made as requested.

PETITIONS AND MEMORIALS

Mr. BORAH presented memorials numerously signed by sundry citizens of Boise and Moscow, all in the State of Idaho, remonstrating against the passage of legislation providing for compulsory Sunday observance in the District of Columbia, which were referred to the Committee on the District of Columbia.

Mr. FERRIS presented memorials of sundry citizens of Harrison, Lake, Temple, Morley, Stanwood, Altona, Onaway, Alden, Wheeler, Alma, Ithaca, Elm Hall, Glennie, Mikado, Barton City, Osceola, Shepherd, Riverdale, Crystal, Sumner, Cedar Lake, Stanton, McBride, Edmore, Frankfort, and Ferndale, all in the State of Michigan, remonstrating against the passage of legislation providing for compulsory Sunday observance in the District of Columbia, which were referred to the Committee on the District of Columbia.

Mr. CAPPER presented a memorial of sundry citizens of Ellis County, Kans., remonstrating against the passage of legislation providing for compulsory Sunday observance in the District of Columbia, which was referred to the Committee on the District of Columbia.

He also presented a telegram in the nature of a petition signed by H. L. Kokernot, president; E. B. Spiller, secretary, Texas and Southwest Cattle Raisers' Association, and S. H. Cowan, American National Livestock Association, at Fort Worth, Tex., praying for the prompt passage of the so-called Smith-Hoch resolution, being Senate Joint Resolution 107, declaring agriculture to be the basic industry of the country, and for other purposes, which was referred to the Committee on Interstate Commerce.

Mr. SHEPPARD presented a telegram in the nature of a petition from the McAllen Study Club, of McAllen, Tex., praying for the entrance of the United States into the World Court, which was referred to the Committee on Foreign Relations.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. CUMMINS:

A bill (S. 3733) to enlarge the powers of the Washington Hospital for Foundlings and to enable it to accept the devise and bequest contained in the will of Randolph T. Warwick; to the Committee on the Judiciary.

By Mr. BUTLER:

A bill (S. 3734) to remit the duty on an addition to a carillon of bells imported for the St. Stephens Church, Cohasset, Mass.; to the Committee on Finance.

By Mr. KEYES:

A bill (S. 3735) for the relief of Antoine Laporte; to the Committee on Military Affairs.

By Mr. McNARY:

A bill (S. 3736) authorizing an appropriation to be expended under the provisions of section 7 of the act of March 1, 1911, entitled "An act to enable any State to cooperate with any other State or States, or with the United States, for the protection of the watersheds of navigable streams, and to appoint a commission for the acquisition of lands for the purpose of conserving the navigability of navigable rivers," as amended; to the Committee on Agriculture and Forestry.

By Mr. JONES of Washington:

A bill (S. 3737) granting an increase of pension to Sydney Skidmore (with accompanying papers); to the Committee on Pensions.

By Mr. SWANSON:

A bill (S. 3738) to authorize preliminary examination and survey for the dredging and deepening of Pocaty Creek, a branch of North Landing River, Va.; to the Committee on Commerce.

A bill (S. 3739) granting an increase of pension to Clare D. Fielding; to the Committee on Pensions.

A bill (S. 3740) authorizing and directing the Secretary of the Treasury to pay to W. Z. Swift, of Louisa County, Va., the insurance due on account of the policy held by Harold Rogis; to the Committee on Claims.

By Mr. RALSTON:

A bill (S. 3741) granting a pension to Maggie D. Snack;

A bill (S. 3742) granting an increase of pension to Mira B. Morse;

A bill (S. 3743) granting an increase of pension to Mary St. Clair; and

A bill (S. 3744) granting an increase of pension to Mary A. Wilson (with accompanying papers); to the Committee on Pensions.

By Mr. CURTIS:

A bill (S. 3745) granting an increase of pension to Mary T. Glancy (with accompanying papers);

A bill (S. 3746) granting an increase of pension to Mary A. Brown (with accompanying papers);

A bill (S. 3747) granting an increase of pension to Eliza A. Reed (with accompanying papers);

A bill (S. 3748) granting an increase of pension to Mary E. Hart (with accompanying papers);

A bill (S. 3749) granting an increase of pension to Catherine Walker (with accompanying papers);

A bill (S. 3750) granting an increase of pension to William F. Rogers (with accompanying papers);

A bill (S. 3751) granting an increase of pension to Mary Ann Lucas (with accompanying papers);

A bill (S. 3752) granting an increase of pension to Mary J. Rowland (with accompanying papers); and

A bill (S. 3753) granting an increase of pension to Kate Trooster (with accompanying papers); to the Committee on Pensions.

By Mr. BORAH:

A bill (S. 3754) granting a pension to Mordecai M. Gladish (with accompanying papers); to the Committee on Pensions.

By Mr. FERNALD:

A bill (S. 3755) granting an increase of pension to Sarah J. Smith (with accompanying papers); to the Committee on Pensions.

By Mr. SHORTTRIDGE:

A bill (S. 3756) for the relief of Maj. Arthur A. Padmore; to the Committee on Claims.

By Mr. DILL:

A bill (S. 3757) granting a pension to Mary Holst;

A bill (S. 3758) granting a pension to Willis Britton; and

A bill (S. 3759) granting an increase of pension to William F. Schmadeka; to the Committee on Pensions.

By Mr. WADSWORTH:

A bill (S. 3760) to amend in certain particulars the national defense act of June 3, 1916, as amended, and for other purposes; to the Committee on Military Affairs.

AMENDMENT TO AGRICULTURAL APPROPRIATION BILL

Mr. WATSON submitted an amendment proposing to appropriate \$20,000 for the establishment and maintenance of a live-stock market news service at Indianapolis, Ind., including personal services and other incidental expenses, intended to be proposed by him to House bill 10404, the Agricultural Department appropriation bill; which was referred to the Committee on Appropriations and ordered to be printed.

CHANGE OF REFERENCE

On motion of Mr. WARREN, the Committee on Appropriations was discharged from the further consideration of the bill (S. 3668) authorizing the construction of additional hospital facilities for the port of New Orleans, La., and it was referred to the Committee on Public Buildings and Grounds.

ADMISSION OF CERTAIN IMMIGRANTS

Mr. CURTIS. At the request of the Senator from New York [Mr. COPELAND], I move that Senate Joint Resolution 100, introduced by him yesterday, relative to the immigration of certain aliens, be referred to the Committee on Immigration. The motion was agreed to.

HOUSE BILL REFERRED

The bill (H. R. 10724) making appropriations for the Navy Department and the naval service for the fiscal year ending June 30, 1926, and for other purposes, was read twice by its title and referred to the Committee on Appropriations.

FEDERAL AID IN RURAL POST ROAD CONSTRUCTION

The PRESIDENT pro tempore. Morning business is closed.

Mr. STERLING. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of the bill (H. R. 4971) to amend the act entitled "An act to provide that the United States shall aid the States in the construction of rural post roads, and for other purposes," approved July 11, 1916, as amended and supplemented, and for other purposes.

The PRESIDENT pro tempore. Is there objection to the consideration of the bill?

Mr. GERRY. Mr. President, this is a bill involving large expenditures. I should like further time to study it. I have not had time to study it and therefore object to its immediate consideration.

The PRESIDENT pro tempore. Objection is made.

Mr. STERLING. Then I move that the Senate proceed to the consideration of the bill.

Mr. HARRISON. Mr. President, will the Senator withhold that motion for a moment? I understand that morning busi-

ness is over and a motion to proceed to the consideration of the bill might set aside the special order with reference to the Muscle Shoals measure.

Mr. STERLING. I understand not under the unanimous-consent agreement, but that we have until 2 o'clock to consider bills on the calendar.

The PRESIDENT pro tempore. The Senator from South Dakota will bear in mind a former ruling of the Chair to the effect that only routine morning business can interfere with proceeding with the unfinished business, unless by unanimous consent.

Mr. STERLING. That being the ruling of the Chair I submit, of course.

Mr. NORRIS. Then I understand the unfinished business is now before the Senate?

The PRESIDENT pro tempore. The Muscle Shoals bill is now before the Senate.

MUSCLE SHOALS

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 518) to authorize and direct the Secretary of War, for national defense in time of war and for the production of fertilizers and other useful products in time of peace, to sell to Henry Ford, or a corporation to be incorporated by him, nitrate plant No. 1, at Sheffield, Ala.; nitrate plant No. 2, at Muscle Shoals, Ala.; Waco Quarry, near Russellville, Ala.; steam power plant to be located and constructed at or near Lock and Dam No. 17 on the Black Warrior River, Ala., with right of way and transmission line to nitrate plant No. 2, Muscle Shoals, Ala.; and to lease to Henry Ford, or a corporation to be incorporated by him, Dam No. 2 and Dam No. 3 (as designated in H. Doc. 1262, 64th Cong., 1st sess.), including power stations when constructed as provided herein, and for other purposes.

Mr. NORRIS. Mr. President, I told the Senate on yesterday that to-day I would give a brief outline of the Ontario situation in water power and electric development. I think it bears directly upon the Muscle Shoals proposition. It has been referred to several times by Senators. While personally I did not intend to bring it up unless that question was brought up in the Senate, yet since the question of so-called public ownership and operation of public utilities has been mentioned and since a very direct illustration, whether good or bad, can be given in reference to the operation of such utilities by public authority, I thought we ought to have just a brief outline of what the law is in Ontario and the method by which they are operating and have been operating since about 1905. It has been in operation about 20 years, starting with a very small business and expanding until now it is the largest system in the world of the development of electric light under one absolute control without interlocking directors or anything of the sort. I think it will be interesting to let the Senate understand the method of operation of those public utilities that is pursued there.

Under the law of the Province of Ontario there has been provided a hydroelectric commission similar to the corporation set up in the Senate committee bill. In fact, I think the Senate committee bill would have more literally followed the Canadian system had conditions here made it possible to do so at once. Senators will see, I think, as I proceed that under the conditions prevailing here we could not set up that kind of an institution without having the cooperation of municipalities. The Canadian law, in effect, provides for a voluntary partnership of municipalities. It has been extended at various times, and the law has been changed to extend it as experience has shown it to be necessary.

A partnership of municipalities has been formed for the purpose of generating electric energy to supply the people and the business interests in those various municipalities. No municipality was compelled to go into that partnership, but it was a purely voluntary association. The law provided that a hydroelectric commission should be established and that it should be the duty of that commission to provide for the generation of electricity, to build transmission lines, and to supply the electricity thus generated and transmitted to such municipalities as might enter into the agreement and go into the partnership.

The system started out, I think, with 10 municipalities, but it now has several hundred, the theory being that electric energy should be supplied to the consumers at absolute cost. There was no governmental subsidy; there was no provision for the expenditure of so-called public funds. The commission, in order to get money with which to develop power, issued bonds, and all the capital investment in the entire operation has been secured by the sale of such bonds. The commission generate the electricity, transmit it to the municipality, and the municipality takes it. The municipality does its own distributing,

fixes its own price, issues its own bonds for the building of a distributing system within its jurisdiction. The municipality pays to the commission its share of the actual cost of the system. During all the operation of the system there has never been one cent paid from taxation, with one exception; that I shall notice later on in regard to rural or farmer lines. The capital investment has been secured entirely by the issuance of bonds; first, by what we might call the wholesale commission, the hydroelectric commission; and, second, by the issuance of bonds of the various municipalities which have participated in the system.

Let me refer to the electric-light bills rendered by a municipality. The municipality issues 13 bills, 12 in the regular way, the same as does any other similar institution; but it does not know at the beginning of the year just exactly what the cost is going to be; both the cost of operation and the maintenance of the general distributing system for the year have to be estimated, and likewise each individual municipality has to estimate what it is going to cost to distribute the electricity which it buys of the commission. It estimates the cost that it is going to incur; it estimates the amount of electricity that it is going to use. Then it is able to tell approximately about what it must charge per kilowatt-hour to its customers. Since, however, that is but an estimate, it may find at the end of the year that the estimate has been too high and that it has some money left; or that the estimate has been too low and there is a deficit. So it issues the thirteenth bill. If its estimate has been too low and the rates charged have been so low that they have not sustained the estimate, then a thirteenth bill is rendered, calling for the payment of an additional amount by the customer. If, on the other hand, the estimate has been higher than necessary and there is a surplus left over and above the expenses, then the thirteenth bill is not an additional charge, but is a refund or rebate of that customer's proportionate share of the surplus based on the amount of electricity that he has used during the year.

In the same way the general wholesale commission issues its bills to the municipality. If it is shown that the estimate has been too low the various municipalities in the thirteenth bill are called on to pay their proportionate share, but if the estimate has been too high and there is a surplus the thirteenth bill is a refund to the municipalities of their proportionate share of the surplus. The business is wound up every year in that way. If a municipality has fixed its rates too low it will have to increase them a little the next year in order to recoup what it has lost the preceding year.

Experience has shown that these estimates have been very accurate, never, of course, coming out to a cent, but in a very large majority of the cases the thirteenth bill brings a check instead of a notice that an additional amount must be paid. As I proceed, I shall cite one year at least showing in how many cases there have been additional charges and in how many there have been surpluses.

Now, by way of illustration, let me refer to the bill of a customer, for instance, in the city of Toronto. The customer gets a bill at the end of a month, as customers do here, for the electricity that he has consumed in his home, let us say, for a certain month. What items does that bill contain? What elements go to make up that bill? First is the expense of operation in the municipality of Toronto—the cost of maintenance, salaries, and so forth; then the cost of the electricity which the municipality has bought from the wholesale establishments with which they have gone into partnership, an amount for a depreciation fund, an amount for interest on the bonds which the municipality has issued, and another item is the proportionate share of the customer toward a sinking fund that will accumulate enough money to pay off the bonds in 30 years.

Mr. HARRISON. Mr. President, may I ask the Senator a question before he proceeds? I merely wish to ask a question for information, because I am not advised on the particular point.

The PRESIDING OFFICER (Mr. Willis in the chair). Does the Senator from Nebraska yield to the Senator from Mississippi?

Mr. NORRIS. Let me first finish describing the bill which is rendered the customer. I have given the terms that are contained in the customer's bill in the case of a resident of Toronto, all going to make up the expense that Toronto must pay. I have not as yet said anything about its share of the expenses of the wholesale establishment. So there is included in the bill also the proportionate share of the customer of the interest that the wholesale establishment, the General Hydroelectric Co., must pay on its bonds, his share of the expense of maintaining that wholesale establishment, including salaries, cost of the development of power, and so forth; also an item

representing his share of a sinking fund which in 30 years will accumulate sufficient to pay off the bonds of the wholesale system. In every bill that is issued are included the various items which I have mentioned, going in the aggregate to make up what the customer must pay. Now I yield to the Senator from Mississippi.

Mr. HARRISON. I wanted to ask the Senator whether the system which he has been describing applies to all the Provinces of Canada or merely to one Province of Canada?

Mr. NORRIS. It applies merely to one Province.

Mr. HARRISON. And in that one Province does it apply merely to the disposition of the power from the Niagara Falls, or does it apply to all the power that is developed in that Province?

Mr. NORRIS. I can not answer that directly. I can answer it, however, by saying that it is not limited to power developed at Niagara, but it does not apply to all the power developed in the Province; in other words, the Canadian law does not undertake to interfere with any private corporation which is developing power. There are private parties developing power, but the commission, let me say in passing, has sometimes found it necessary, on account of the great demand and the growth of the system, to buy power themselves from private corporations. As a matter of fact, usually the private corporations go out of business when they come in competition with the public system by selling their plants to the General Hydro-Electric Co., the wholesale establishment to which I have referred. The action is entirely voluntary, but the hydroelectric commission can develop power anywhere in that Province on any stream. They have between a dozen and twenty different projects now in operation, and there are a great many more which they will have to develop, because they are not able now to supply the demand that is coming to them for power.

Mr. HARRISON. If the Senator will permit this observation, I recall in a study of the disposition of the power at Niagara Falls some years ago under the treaty between this Government and Great Britain we were to take 20,000 cubic feet, I think, on the American side and Canada was to have 36,000 cubic feet per second. There was no market for the power that was developed on the Canadian side, and under the treaty we were able, therefore, to obtain, I think, 250,000 horsepower from Canada to supply the industries on this side. That was some 10 years ago, as I recall, and I imagine that since that time industries have grown on the Canadian side and that the power which we used to purchase from Canada is now being sold to industries in Canada.

Mr. NORRIS. I can not answer that question; I do not know whether that power is all utilized there or not, but I do know that the report of the commission shows that after the first few years of operation, when it had been demonstrated that they were going to make a great success of the system, various principalities came into the system and went into the partnership, and there has been such a demand for power that one of the difficulties the commission has had to contend with has been to get power to supply the demand.

Mr. President, this system in Ontario has operated under some handicaps. Before it was inaugurated the same system was in operation that we have, and very powerful interests, of course, have been combating them and are combating them yet, and everything is being done to discourage them. However, it is now conceded, I think, even by those who bitterly opposed it at the beginning and opposed it for some time afterwards, that the public system has developed into a great success.

I have on my desk the report of the commission for the year ending October 31, 1923. It seems they end their fiscal year in October, and, so far as I know, the report for 1924 has not yet come out.

Perhaps I ought to give just a little review of some of the financial operations.

Capital expenditures in this entire system prior to June 1, 1921, were \$517,911.77. All that money, capital expenditures, comes from the sale of bonds.

Capital expenditures since June 1, 1921, and up to October 31, 1923, \$1,607,113.35.

Making a total of \$2,125,024.12.

The total investment of the commission has been \$178,960,696.56. That is just for the wholesale part of it. The total investment of the various municipalities that constitute the system has been \$62,892,504.90, making a total investment of \$241,853,201.46; and during the year for which this report was made there was collected by the municipalities a total revenue of \$17,219,044.66.

That is made up of the following items:

Cost of power—that is, what they would pay to the wholesale establishment—\$8,699,026.67.

Operation, maintenance, and administration, \$3,901,739.92.

Debt service charges and interest, \$2,607,741.71.

Depreciation account, \$916,782.75.

Making a total of \$16,125,291.10, and leaving a surplus for the year of \$1,093,753.36.

This is all itemized in the report by the various systems; but probably I would not be justified in taking the time of the Senate to go into that much detail.

This amount paid by the municipalities does not mean that it constitutes the income of the wholesale establishment, because they can sell to private industries and corporations; and this report shows that the commission for this year has collected from all sources \$15,742,831.91, which was appropriated to meet the expenses of administration and operation and to set aside adequate sums in respect to sinking fund, renewals, and contingencies, leaving a net balance of \$345,588.41 collected in excess of requirements.

Now, just note what they do with that. When they got through they found that they had, in round numbers, \$346,000 left. After they had paid the expense of operation, after they had set aside the necessary requirements for a depreciation fund, after they had paid the interest on the bonds, and after they had set aside sufficient money to accumulate a fund that would in 30 years pay off the bonds, they had left over \$345,000; and what did they do with it?

Mr. SMOOT. What was their capital?

Mr. NORRIS. They have not any capital.

Mr. SMOOT. I mean, capital investment.

Mr. NORRIS. I will give that when I get through. I have not it right now.

This surplus was at once returned to the municipalities. In other words, the commission had made an estimate of what it was going to cost to run this gigantic thing for the year, and when they got through they found that their estimate was a little over \$345,000 too large, and they had that much left. They turned it right back to the people who had paid it to them. They, in turn, would put that into their incomes in the municipalities, and if they found they had a surplus they returned it to their customers with the thirteenth bill that I have been talking about.

Mr. WALSH of Montana. Mr. President—

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Montana?

Mr. NORRIS. I yield.

Mr. WALSH of Montana. Will the Senator tell us how much of the capital investment was represented by bonds?

Mr. NORRIS. Practically all. I do not know of any way they have of getting any money for capital account except by the sale of bonds. I think, before I get through, I will come to that and give the amount.

Mr. WALSH of Montana. Are those bonds of the Province?

Mr. NORRIS. No; they are the bonds of the hydroelectric commission. They are not the bonds of the Province; and I want to say that while I have not it in this report I have read a report made about those bonds. They are the highest-class bonds in the world.

Mr. WALSH of Montana. I suppose that means, then, that the only security back of the bonds is the income of this hydroelectric commission?

Mr. NORRIS. Yes, sir.

Mr. WALSH of Montana. The Province itself is not pledged for the payment of the bonds?

Mr. NORRIS. I do not know as to that. I could not say. It may be that the Province is pledged for that. I do not know what the law provides in that case. All I know is that the Province never has had to pay any of it, and I will show later on that in a great many of these cases, while they expected to get out of debt in 30 years, some of them are out of debt now, and have enough money to pay all their bonds, and that the income of the wholesale establishment has grown so rapidly that the estimated amount they are setting aside is going to be more than sufficient to pay off all of their indebtedness.

I might as well take up that matter now. Sometimes, as an objection to the system, people say, "Why, here, this thing did not pay out this year. It went behind." I have explained how that is fixed if it does run behind. Of course, it is perfectly apparent to every fair-minded man that at the beginning of the year they can not tell to a cent just how they are going to come out. There may be accidents; there may be a falling off in consumption; there may be other things that will decrease their income. On the other hand, it may go the other way.

Of 224 municipalities there were a total of 21 which failed theoretically to provide depreciation in addition to all operating and maintenance expenses, but their relative importance is clearly disclosed by an examination of the reports. These 21 municipalities indicate a total theoretical loss of \$84,400.49. During the same year the remaining 203 municipalities piled up a surplus of \$1,178,153.85, leaving a net surplus for all the municipalities of \$1,093,753.36. These 21 municipalities in the next year would have to raise sufficient money to pay what they were behind on this year. The other municipalities, instead of increasing their rates, would lower their rates, because many of them found they had surpluses that were too great, and the idea was to furnish this electric energy at cost or to come as near making it at cost as possible.

Here is a list of 30 of these municipalities. Remember that all the bonds issued, not only for the wholesale establishments but for the municipal establishments, run for 30 years; and it is the theory of the system that they must set aside from their income enough money not only to pay the interest but to accumulate a fund that in 30 years will wipe it all off the books. They will be completely out of debt and thereafter will not have to pay any interest and will have no debt to pay, but will have their property clear and have nothing to pay but absolute cost and maintenance and upkeep; and the depreciation fund, and so forth, can be omitted.

There are, or were last October, 30 municipalities that had enough quick assets on hand, practically cash, to pay off the entire bonded indebtedness of each one of those municipalities and wipe it out. These municipalities, when they were setting aside this fund, of course would invest it in various kinds of bonds so that it would draw interest; and those bonds, those investments, together with the cash on hand, are more than the entire indebtedness. Compare that with a private plant. Compare that with any private corporation of this kind. Instead of paying off their debts and canceling their bonds they continue to issue more and never pay off any of them. The consumer pays the bill. He has these same items in his bill all the time; but, like Tennyson's brook, it goes on forever. At the end of 30 years he is no nearer the goal of being out of debt than he was at the beginning; and that necessarily implies, theoretically at least, that something is added to the bill that every customer must pay, because he is not only paying the expense of operation but he is paying off the debt by his bill.

I do not intend to read all of these. They are all in the report, and Senators can have access to them if they want to; but I will call attention to a few of them which I have picked at random.

One of these towns is named Collingwood. It has total property in its distributing system, and other things connected with it, for which it originally issued bonds in order to either build the property or buy it, valued at \$182,415.46, and it has left of that indebtedness to pay only \$22,874.65. It has on hand total quick assets amounting to \$50,799.39, so that after paying off their bonds and being clear of debt they have an amount left equal to \$27,924.74.

In addition to that, at the time of the making of this report there were 24 municipalities which were so near out of debt, were so near in the class of this town to which I have just referred, that they all expected to get out of debt during the year 1924. I suppose the report for 1924 will soon be out, and perhaps it is out now, though I have not been able to get it.

Mr. WALSH of Montana. How many years' operation does that represent?

Mr. NORRIS. It represents various periods. The question was first agitated in 1902 or 1903. It was five or six years before the system was gotten into operation. It was somewhere about 1910 when the first municipalities went into it, and they have been coming in ever since. Senators must understand that although the wholesale concerns act in an advisory capacity and require some rules and regulations, the municipalities are managers of their own cities, charge what they please, and to a great extent expend what they please.

They are differently situated. A great many of these towns and municipalities are small. Some of them have less than a thousand inhabitants, and then there are places like Toronto and Windsor and Niagara—larger places. It can be readily understood that if a small municipality went out to raise money for the building of an electric-light distributing system their bonds might not command the same price in the market as would those of larger cities. So there will be variations as to the cost, variations as to what must be added in the various bills and the prices for the current will vary in accordance with that. Every municipality must bear its own

expense for a distributing system, for its operation and its maintenance, and pay its share of the operation, maintenance, and cost of the wholesale system, proportioned on the amount of energy it uses.

I know it would interest my colleague [Mr. HOWELL], who is a student of things of this kind, to know that this depreciation reserve now stands at 22.1 per cent of the total cost of the plant. In other words, this fund they have been setting aside for years is now over 22 per cent, and it has not been in full operation for the last five or six years but a comparatively small number of years, while the depreciation reserve and surplus, taking those two together, combined, have already reached approximately 43.4 per cent of the total plant cost. So I do not see how anybody can say they are not operating on an absolutely safe business basis. In fact, some of the municipalities which started out on the theory that they were going to pay off their debts in 30 years have paid them off in less than 20 years; and when a thing like that happens, everybody can see what will happen to the rate. One of the greatest items of cost is the cost of the plant itself, to pay off the bonds that were issued by which they got the money to buy or to build the plant, and they will have nothing left to pay when that is paid off but the cost of maintenance and the expense of management and handling; so that the great benefit that has been coming, as I shall show, in the reduction of rates has not yet reached its peak. The greatest reduction is yet in store, and the current will be so cheap that the very prospect of its cheapness almost dazzles the human imagination.

Mr. President, the question naturally arises, having established this system, what has been the result to the man who has to pay the electric-light bill for his home? I have here a list of all the municipalities within this system, showing what has happened in each municipality in the way of rates. It would take several hours if I should read them all. I have given in toto the fund that has been set aside, and I think the danger of loss there has been obliterated, and I can give it in each individual case by looking it up in this report.

I want to call attention to some of these cities and some villages, because this system helps not only the cities, but it goes into the small towns, and before I conclude I shall show something about what it does for the rural population, the farmers of the country. They were not in it originally. It covered just the municipalities; but as the wonderful facts were developed about cheap electricity the balance of the population began to clamor for electricity and for the benefit of these cheap rates, and although none of them paid anything in the way of taxation for it, as a matter of fact, they wanted the system extended, and it is really in its infancy yet.

Let us take the town of Acton. There were electric lights there before this system was adopted, supplied by private companies. In the homes, the domestic part of the business, the consumer paid 10 cents a kilowatt hour. Just bear that in mind. They went into this, and in 1914 the rate was cut down to 6.9 cents. They kept on cutting it down. The war came on, and the rate was still going down during the war. They were in the war longer than we were—went in at the beginning and were in clear through—and the same tendency to increase prices and to profiteer went on there the same as everywhere else.

Legitimately things went up, but the electric rates of this concern went down all the time, until in 1923 they were down to 2.8 cents a kilowatt hour for the homes of that city. It is a small place, and when they had to pay 19 cents per kilowatt hour they had only 82 consumers; but when electricity became cheaper everybody commenced to put it in, and the number kept on increasing as the rates went down, until in 1923 they had 383 consumers. That refers to the homes, not stores. I will give those later. When they started in the average consumption in the homes in that town monthly was 15 kilowatt hours. In 1923, because the current was so cheap, the average consumption in the homes in that town was 44 kilowatt hours. The average bill monthly was \$1.26.

Let us see what the merchant had to pay. Before this commission started business the merchants had to pay 10 cents a kilowatt hour. That was cut down to 7½ cents immediately, and they kept on cutting it down until in 1923 they had it reduced to 3.1 cents a kilowatt hour. The average bill of the merchant, the storekeeper, and the business man was \$2.79 a month. In every one of these villages there are three groups of power—the domestic, which means the home; the commercial, which means the store; and the manufacturing concern, which buys the power by the horsepower. They were selling power to manufacturers in 1923 for \$27.74 a horsepower per year. That was the average. They had 18 customers in that list. Under private control, at 10 cents a kilowatt hour, they had only three customers in the manufacturing business. That

shows you what this means in the way of helping manufacturing establishments, not big ones, but a lot of little ones. As I said once before on the floor of the Senate, the cheapening of electric energy and its distribution through the country means the decentralizing of manufacturing concerns from large places to a great number of smaller ones in the vicinity of the raw product, because they can carry the current at a lower cost than they have to pay in the way of freight on the raw product to the congested centers.

I would like to go through the list because it is exceedingly interesting, but there are three or four hundred of them and I must pass on. I have picked out some of the worst, because I want the Senate to get those which have been most successful. They have all been successful. So far as I know there has not been a failure, but I want to give those where the rates have not been lowered much.

Here is the town of Ayr. They went into this in 1915. They have not been in so very long yet. They were paying 12.5 cents per kilowatt hour when they went in. This is domestic consumption. They cut it down to 5.5 the first thing. They were one of the cities that ran behind in the year 1915. They made the rate too low for the number of customers they had and had to raise the rate the next year. They made that mistake. Somebody who is opposed to Government ownership will say, "Look at this town. It went down so low that it had to go right back," but still is a matter of 4 cents per kilowatt lower than what they paid before they went in, so they made it 8.8 cents, but the very next year they cut it down to 7.9 and the next year put it back to 8, still 4 cents lower, and then kept on lowering it until in 1923 they had it down to 4.9 cents per kilowatt hour. The merchant had to pay 5.1 cents per kilowatt hour in 1923, and before the town went into the system he paid 12.5 cents per kilowatt hour.

Here is another town by the name of Brampton, which went in in 1912. They were paying 9 cents per kilowatt hour for electric energy when they went in. They cut the rate down to 4.9 cents under the public-owned system and kept on reducing it. That was in 1914 when the war commenced. They cut it right down in the face of the war, and the next year during the war they cut it again to 4.3, and the next year, still during the war, they cut it down to 4 cents and then to 3 cents, then to 2.9 cents, then to 2.7 cents, and the next year to 2.3 cents, the next year to 2.2 cents, and the next year to 1.9 cents, and in 1923 to 1.8 cents. The average consumption of the ordinary home was increased from 18 kilowatts per month average in the homes of that town to 73 kilowatts per month. The business men had the same experience. They had to pay 9 cents a kilowatt hour previously. They cut it to 4 cents, then 3.5, and so on down until they got down in 1923 to 2.1 cents. They had 12 manufacturing establishments when they went into this thing and in 1923 they had 52, and they had reduced the power consumption to \$17.88 per horsepower per year. Everybody knows that is a wonderfully cheap power.

In Brantford they paid 8 cents when they went in and they are now paying 1.5 cents, reducing it all the time during the war. The merchants in the town paid 8 cents and are now paying 1.3 cents. The manufacturer is paying \$21.35 per horsepower per year.

Brockville went in in 1916 when they were paying 9 cents. They fixed the rate the same under their publicly-owned system and then increased it the next year one-half cent and increased it one-tenth of a cent the next year. Then they dropped, and again increased it in 1921 and in 1922. In 1923 they were paying 6.8 cents. That is not much of a showing. I want to show them all. We can look up Brockville and find out why. There are some reasons in every case, sometimes mismanagement, I have no doubt, although I have not had time since the bill has been pending here, with the other duties I have had, to trace it out. It will be like a private business. If it is not properly managed, it will fail.

There is Cannington. They went in in 1915 paying 12.5 cents. They are now paying 5.9 cents. The merchant paid 12.5 cents and is now paying 8.4 cents. The manufacturer is now paying \$15.73 per horsepower per year, and they have just doubled the number of their manufacturing concerns in the town in that length of time.

Here is the town of Clinton. In the beginning there they paid 10 cents and are now paying 3.3 cents. The merchant paid 10 cents and is now paying 5 cents.

Collingwood went in in 1913. They were paying 11 cents and now pay 2.4 cents. The merchant paid 11 cents and is now paying 3 cents.

Here is another one that is not so good. I have not been able to examine even all of these, because there are several

hundred of them, but wherever I find one that did not work right I am bringing it to the attention of the Senate, and if I have omitted any such it is because of lack of time.

Here is Dashwood. They do not give the rate in this report before they went in, but say that it was a flat rate and I do not know what the flat rate was. They started in 1918. They probably built their plant during the high peak of war prices and they started their customers at 11.5 cents. They have been reducing it ever since and have cut it down to 9.2 cents in 1923. They make the merchant pay 12 cents there now for lighting the stores.

In Drayton they started in with 12.9 cents. I do not know what they paid before except that it was a flat rate. The rate is not given. They reduced it all the time until 1923, and then increased it, and in that year paid 11.1 cents. If we made inquiry about that town, we would find it was a very small place. They only have 119 domestic customers. They only have 42 merchants. It is a comparatively small place.

Elmira went in in 1914, paying 11.4 cents, and now pays 2.3 cents. Its merchants paid 11.4 cents, and they now pay 3.5 cents for electricity. They charge \$25.58 per horsepower for manufacturing concerns, and while it is not as cheap as some others, their manufacturing concerns have increased since they went into it from 8 to 22.

Here is Galt, which went in in 1912. They have been in practically 12 years, and this is the report ending October 31, 1923, so it gives the operations for about 11 years. The people in their homes in Galt were paying 11 cents per kilowatt hour. They cut it right to 5.3 cents, and then to 3.3 cents. In 1916, right during the war, they cut it to 2.8 cents, then to 2.4 cents, 2.2 cents, 2.1 cents, and then to 2 cents. In 1922 they had it down to 1.8 cents. There is a reduction from 11 cents down to less than 2 cents per kilowatt hour. The merchant pays 2 cents per kilowatt hour and had previously paid 11 cents.

In Georgetown from 1913, when the town went in, the people in their homes were then paying 10 cents per kilowatt hour and now pay 2.8 cents per kilowatt hour.

In Guelph they were paying 8 cents under private control in 1912. They have reduced in all the years, a steady reduction all the time, until they have it down to 1.9 cents per kilowatt hour, and they have increased the average consumption in the home from 17 kilowatts per month to 62 kilowatts per month.

Here is Hamilton, one of the large cities of Canada. They used to pay 8 cents per kilowatt hour. They went in in 1913 and cut it right down to 3.9 cents and then had to raise it. They found it was too low. They put it up to 4 cents a kilowatt. Then down it went, and on down, without a single increase through all the war, but a decrease every year, though small, until in 1923 they had reduced it to 1.7 cents per kilowatt hour. That is so cheap for electricity that one would hardly turn off the light in the daytime. Their merchants pay a still less rates for stores, and so forth. The commercial rate is 1.5 cents per kilowatt, and the manufacturers pay \$14.93 per horsepower per year, one of the cheapest cases of horsepower we can find anywhere.

Mr. SHIPSTEAD. Mr. President—

The PRESIDING OFFICER (Mr. WILLIS in the chair). Does the Senator from Nebraska yield to the Senator from Minnesota?

Mr. NORRIS. I yield.

Mr. SHIPSTEAD. It may interest the Senator to learn that since 1920 the rates in Hamilton were further reduced, and that in 1920 the rate was 2.3 cents for domestic consumption and 1.3 cents for commercial consumption.

Mr. NORRIS. I am glad to have the Senator's interruption.

Kitchener in 1911 or 1912, when under the private system and when the government-operated plant had not gotten control, paid 11 cents per kilowatt hour. They cut that to 4.9 cents and kept on with a reduction every year during the war until in 1923 they had it down to 1.6 cents per kilowatt hour. Their merchants there paid 1.7 cents per kilowatt hour and their manufacturers paid \$22.09 per horsepower per year on the average.

London is one of the representative cities there. Before they went in in 1912 they paid 9 cents per kilowatt hour. They cut that to 4.5 cents, and the next year had to raise it, but not much. They raised it to 4.8 cents and the next year cut it to 3.3 cents, then to 2.9 cents, 2.6 cents, 2.5 cents, 2.4 cents, 2.2 cents, and 1.9 cents in 1921. In 1922 they reduced it to 1.8 cents and in 1923 to 1.6 cents per kilowatt hour. The merchants' commercial rate was just the same. Their power rate was \$24.17 average per horsepower per year.

I wish to cite some instances which do not make such a good showing, and shall refer to some of the smaller places. Here is one which I now find where the people had a cheap rate to

begin with—Niagara Falls, in Canada. According to the report which I hold in my hand, they were paying only 3½ cents per kilowatt hour when they went into this system. That is a very cheap rate, as everybody must concede; but they cut it down every single year. They started in with a rate of 2.6 cents, and they brought it down in 1923 to 1.3 cents a kilowatt hour. The merchants only pay 1.2 cents per kilowatt hour, and the manufacturers there, on an average, pay \$18.04 per year per horsepower.

I have omitted citing a great many of these cases because I do not wish to weary the Senate by taking up too much time. I think, however, I should refer to the town of Petrolia. In 1917 the people there went into this system. Previously they had been paying 14 cents per kilowatt hour, but on entering the system the rate was cut to 6.1 cents; it was more than cut in the middle the first year, but it was reduced a little too much. I presume, however, if one would examine the records he would find that in that year this was one of the towns that had underestimated the cost of furnishing electricity and that the thirteenth bill was a duebill instead of being a refund. The town had made their estimate too low as to what they thought their expenses were going to be, and they ran behind that year; so the next year they increased the rate, but not very much. The people had been paying 14 cents under private operation, but the rate was cut to 6.1 cents the first year. That was too low a rate, and they had to increase it to 6.3 cents; but that was an increase of only two-tenths of a cent. Then thereafter they commenced reducing the rate every year, and there never was another increase. In 1923 they had reduced the rate to 3¼ cents per kilowatt hour.

Mr. BROOKHART. Mr. President—

Mr. NORRIS. I yield to the Senator from Iowa.

Mr. BROOKHART. It has been repeatedly stated that the bill of the Senator from Nebraska is a power proposition and if enacted into law will be of no benefit to the farmer. I will ask the Senator if he has pointed out any benefits which have gone to the farmers in Canada under the system he is now explaining?

Mr. NORRIS. No; I have not; but I intend to do so before I conclude my statement.

Mr. BROOKHART. I did not want the Senator to omit that.

Mr. NORRIS. In another town, Stratford, the people used to pay 12 cents a kilowatt hour, but after that town became a member of the general system they began to reduce the rate. The rate which was paid in 1912 and in 1913, the first two years, is not given, and so I can not state to the Senate what it then was; but in 1914 the rate was reduced to 5.5 cents; it was more than cut in the middle. Then it went on down, down every year, and even while the World War was going on and prices were mounting high the rate got lower and lower, until in 1923 it was reduced to 1.4 cents per kilowatt hour.

Mr. President, in this connection as to the town of Stratford I wish to call the attention of the Senate to the fact that in 1914 the average consumption in the homes of that town was 18 kilowatt hours per month, but when the price of electricity commenced to go down the amount consumed in the homes began increasing, as will be found to be the universal rule. In 1923 the average consumption in the homes of Stratford was 126 kilowatt hours per month. You can not use that much unless you have practically all of the electrical appliances that are known, and that is what has been going on in that town. As to one place—I do not know whether it is a case cited in this report or in an article which I have read—it is stated that in the Province of Ontario the number of homes using electricity for cooking purposes is increasing at the rate of 1,000 per month. That means the consumption of a great deal of electricity.

That could not be done if one had to pay the fabulous prices which are charged under private ownership and which we have to pay in Washington, unless he had a greater income than have I. Notwithstanding the use of that immense amount of electricity, the average bill for the homes in Stratford was \$1.85 per month.

They made the merchant pay a little higher rate than was paid by the homes. He had to pay 12 cents under private operation, but they commenced with a price of 4.7 and kept on cutting the rate down until in 1923 the charge to the merchant was 2.1 cents per kilowatt hour, and the charge to the manufacturers was on an average \$18.06 per horsepower per year, and manufactures had increased in that town from 76 in number when they first went into the system to 163 when this report was made.

Mr. RANDELL. Mr. President, will the Senator from Nebraska yield to me?

Mr. NORRIS. I yield to the Senator from Louisiana.

Mr. RANDELL. I am extremely interested in what the Senator from Nebraska is saying. He has made quite a remarkable showing, I think, touching the decrease in the cost of electricity in the Province of Ontario since the production of electricity became a public utility as compared with the prices charged by private utilities. I think he has demonstrated beyond any peradventure that it costs considerably less now to the actual consumer than it previously did. I am anxious to know, especially in the light of the Senator's very recent remark that it is costing us a great deal more in this country, including the Senator among other consumers, whether he has any actual figures to show the cost to the consumer in towns of the United States comparable to the Canadian towns which he has just cited, which are securing electricity under the private system.

Mr. NORRIS. Oh, yes.

Mr. RANDELL. The Senator will bring that out later, will he?

Mr. NORRIS. Yes; I will bring some of the facts out. I have been talking with the Senator from Minnesota [Mr. SHIPSTEAD], who also has some information on that subject which he is going to bring out, and my colleague [Mr. HOWELL], who I am sorry is not present at the moment, had on his desk a book to which any Senator can turn in a moment and get the rate in any city in the United States as to which he wishes to learn the figures. For instance, he can ascertain the facts as to the city of Buffalo, which is right across the line from Canada. I do not have the rates prevailing in that city, but they can readily be put in the Record, because they are contained in the statistical book which my colleague has been using. There are some places in this country where the rates are comparatively low, but as a rule they are way above the Canadian rates. I think it will be found that Buffalo pays somewhere in the neighborhood of two or three times as much as is paid on the Canadian side. However, I have some other illustrations of Canadian cities which I should like to give as I go on. I would be glad to finish this branch of the discussion.

Mr. RANDELL. I do not want to interrupt the Senator unduly, but I wonder if he has any figures showing the rates in towns in the United States where the plants are municipally owned?

Mr. NORRIS. Yes; I think they have been pretty fully given. The Senator has been ill and has not been able to be here all the time. They have been given to quite an extent, and probably some more of them will be given. The Senator from Minnesota [Mr. SHIPSTEAD] has made a study of the situation in Seattle, where there is a municipally owned plant.

Mr. RANDELL. Does the Senator find the rates very much cheaper in an instance of that kind than where the plant is privately owned?

Mr. NORRIS. Oh, yes; and I will say to the Senator a great many such illustrations are already in the Record.

Let me refer now to the city of Toronto. That municipality went into this public system in 1912. Toronto, as Senators know, is one of the large cities of the Province and, I think, the largest city in Ontario. The rate charged prior to its entrance into the system was 8 cents, but after Toronto joined the system the rate was cut to 4.4 cents.

The next year it was raised to 4.5 cents, but the year following that it was cut to 3.9 cents; then to 3.1 cents; then to 2.7 cents; then to 2.5 cents; the next year it was also 2.5 cents; the next year it was 2.2 cents; the next year 2.2 cents; and then in 1922 and 1923 the rate was down to 2.1 cents a kilowatt hour. The average bill for electricity in the homes of Toronto per month was \$1.48.

The merchant of Toronto, however, had to pay a higher rate; he was required to pay 4 cents, although before Toronto went into the system he was paying 12 cents per kilowatt hour. Senators will find in going through the report that every city fixes that matter as it wants to. In our cities I think it is the usual rule to charge for commercial business a lower rate than the rate for domestic purposes, but in Canada it very often occurs that the rates are just the same, and sometimes the commercial rate is a little higher and sometimes a little less, but it does not vary as much, I think, as it does in our country.

Now let me take the city of Windsor, which is just across the line from the city of Detroit. Windsor is 250 miles from the place where the electricity is generated. The publicly owned system carries the electricity 250 miles to the city of Windsor. In that city the consumers were paying 12 cents a kilowatt hour before this system was inaugurated, but after Windsor became a part of the system, in 1915, the rate was cut to 4.9 cents. The next year the rate was the same, but

the year following they cut it to 4½ cents; the next year to 4.2 cents; the next year to 3.9 cents; the next year to 3.2 cents; the next year to 3 cents; the next year to 2.6 cents; and in 1923 it was 2.6 cents. The average home used to consume in one month 18 kilowatt hours, but the consumption has grown until in 1922 the average home consumed 94 kilowatt hours. The merchant of Windsor has to pay a little less for commercial lighting; he only pays 2.3 cents, whereas before the system went into operation he had to pay 8 cents.

I will refer now to the town of Woodstock. The consumers there used to pay 8 cents before the city went into the public system, but after they joined that system the first thing done was to cut the rate to 6½ cents, and they have kept on reducing it, even through the war, until now they are paying 1.6 cents per kilowatt hour. The merchants there pay 1.9 cents for commercial lighting, and the manufacturer is charged \$20.31 on an average per horsepower per year for manufacturing purposes.

I should like to say to Senators that I have not tried to give figures as to all of the towns listed merely because of the lack of time. I have nothing to conceal, and I should be glad to have any Senator take the tabulated list which I have and examine it. Perhaps there may be some rates that are higher than any I have given, although I pointed out, I think, that under the system the highest I have been able to find in the hurried examination I have made was 11 cents. I wanted to give the worst as well as the best examples. I will be glad to give the figures as to any town which is supplied by this system in the Province of Ontario or to turn the book over to any Senator who wishes to look at it so that he may call the attention of the Senate to any figures which he may find in it.

I have had my attention called to one town. I have not seen the article, but this morning somebody called my attention to the fact that some one in San Francisco had written an article condemning this system, and to show that his argument was justified he called attention to one town in Canada where they had had the system, and told the result of it. I do not know what this is going to show. I have not had time to look it up. I had it called to my attention by a little notation just as I was coming to the Senate, but I remember the town. It was Markham, and it will be somewhere in this list, because it is one of these systems. I have never looked at it, but I will just turn to it and look at it, and whatever good or bad it may be I will give the result to the Senate as shown by this chart.

Here it is—Markham. The first thing that strikes my eye is the fact that Markham did not go into this system until 1920. The first thing it would have to do would be to get a distributing system, so it was at some disadvantage on account of the high prices. It cost more than it would have cost if it had gone in early, in 1910 or 1912, or even in 1914, before the prices went so high. It had to issue bonds, I presume, to get the money to put in its distributing system or, if it bought one that was already there, to buy that one. So the records do not go back many years, but we will see what they show.

Markham—Before they went in they were paying, I presume, a privately organized corporation 10 cents. This book says "10 plus 25." I do not know just what those figures mean, but it is 10 cents plus something, so it was not less than 10 cents. We will say they paid 10 cents; and they went in, and they had to increase that rate. I suppose that is what this article is based on—that after they went in they increased the rate to a point higher than the private concern charged. They increased it to 11.8 cents a kilowatt hour. That was 1.8 cents per kilowatt hour increase that they had to pay, but that was in 1921. In 1922 they cut that rate to 8.2 cents a kilowatt hour, a reduction from what they had to pay under private ownership, and in 1923 they cut it to 7.9 cents a kilowatt hour.

Let us see what the merchant had to pay. He had to pay 10 cents before, and they raised that to 14.1 cents when they went into it; and then they cut it down the next year to 11.2 cents, and in 1923 they cut it still further to 8.1 cents. So there is a case of an increase of rates, and probably that is the only one. If there were any others, I should imagine somebody would have dug them up; and they based a long argument on that. Here is a town that went in and increased their rates after they went in, but what were they doing when they paid 10 cents to the private company? That was to go on through all eternity. The private company might have had bonds and probably did, as many as they could issue and float. The town had to pay interest on those bonds, and they had to keep on paying interest forever if they kept on under that system.

What are they doing under this system? They have their own bonds. During these three years when they increased the

rate they were paying interest on their bonds, and they were paying money into a fund to cancel their own bonds to pay their own debt at the end of 30 years. I do not know how the operation came out. I can look it up in another part of the record and see just what their investment is and how much of it they paid, and so forth. They are getting out of debt, and even though they paid a higher rate in the end they are cheapening it, and they already have it down lower than they had to pay to the private party. But even if it failed in this little town, Mr. President—even if you could find out of three or four hundred instances one that made a failure—you can find the same thing all over the world. I do not claim that every venture of this kind is going to be a success.

Mr. CURTIS. Mr. President—

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Kansas?

Mr. NORRIS. I yield to the Senator.

Mr. CURTIS. I did not hear the beginning of the Senator's remarks, though I expect to read his speech in the RECORD. Did he give in his speech the date of beginning of the operations of these various plants?

Mr. NORRIS. Yes; I did.

Now, I want to say something about the supplying of electricity to the rural population. As I said before, when this system started it was a partnership between municipalities. Everybody knows that one of the great expenses in connection with electric development is the cost of distribution; and so, if we undertake to supply the farmers of any community, it makes a great difference whether there are 2 farmers to the mile or whether there are 20, because the cost of the transmission line is just the same in each case.

It was not long after this system had been in operation before the farmers of that Province commenced to wake up to the importance of having electricity in their homes for lighting, for heating, and for running various kinds of farm machinery. This commission immediately commenced to investigate the subject, because the only object of their existence was not to make profit but to see how cheaply they could make electricity and how many people they could get it to, and so they commenced to study the farm proposition.

They are still studying it. They are still developing. They are still advancing. The Province amended the act for the establishment of this commission in order to help the rural population, and made a provision which I think I have here, but I have not had time to read it. In substance, however, it was that in the case of a rural population, on account of the increased cost, the Province would pay one-half of the cost of the transmission lines in the country. That was to help out the farmers. That is the only place, as I said at the beginning of my remarks, where the taxpayers were ever called on to pay a dollar. It was to subsidize, if you want to put it that way, the rural lines in order to make it possible to get the electricity to the homes of the farmers, and they have done a great deal of business in that way.

They are constructing lines in the country, not only overhead but they are constructing underground lines. It is more expensive to put them underground; but if it is in the right kind of soil and the right kind of a country, when they once put it in it will last practically forever, and poles will not, as you know. So they are experimenting, and this report of 1923 shows that during the year they constructed 216 miles of overhead primary line and 21 miles of underground primary line, and arrangements have been completed to construct a large number of additional rural lines during the coming year.

Then follows a table showing, in the different systems—and under this plan they have divided up the country into systems—how many lines are being extended and how many lines are being built. These are purely the farmers' lines. They have also been extending the lines to little hamlets, little villages, unincorporated little villages of four or five houses. Wherever they could get an opportunity to put in a line where the cost would not be prohibitive, where they could get enough farmers to take it, they put in a line; so they are going on.

If I wanted to take up the time, I could take up some of the farms that are not in this report, but of which I have reports, out in the country. Ontario is a fruit country and a dairy country, and the farmers are putting in milking machines out in the country. I remember reading a description of a farm that was 6 miles out in the country where the man had 25 or 30 milch cows. He milked them by electricity. His wife cooked all the meals, 365 days in the year, by electricity. They had electric fans and they had an electric hot-water heater in that place.

There are a great many other questions involved in farm extension. For instance, the farmer not only wants light and power in his home, but he wants light and power in his barn; he wants grinding machines; he wants to pump water; he wants to use electricity in a hundred different ways in various farming operations. So that it is very important, and it is growing in Canada by leaps and bounds; and there is not any doubt but that except in the very sparsely settled parts of the country the time is coming when every farm home is going to have all the advantages of electricity that they have in the city.

Here is a map of the Province of Ontario. The red lines indicate either existing transmission lines or contemplated transmission lines of this system. It is going to become a veritable network. At various places in the Province there are water-power possibilities. This commission eventually will develop all of them. They can not develop them fast enough now to keep pace with the demand that is coming to them for power and for light.

Mr. RANSDELL. Mr. President, will the Senator permit me to interject there a thought that I think will be a little bit helpful to his argument?

Mr. NORRIS. Certainly.

Mr. RANSDELL. I should like to say to the Senator that in my own portion of Louisiana the farmers are getting so much awakened to the great advantages of electricity that, though they have no hydroelectric power there nor any other kind of electric power, they are putting in small electric plants run by gasoline as the motive power. These plants cost between \$700 and \$1,000, and they are utilizing them very, very successfully all over the farming section of my part of Louisiana. I believe the farmer is getting absolutely awake to the great benefits that come from using electricity on the farm.

Mr. NORRIS. I thank the Senator for his interruption. There is not any doubt on earth but that while we still live there will be such an avalanche of demand from the farmers of the country that the natural resources of America shall be preserved for all the people and not given away to private interests, that no man in this House or in the other or even in the White House can withstand the terrible force of public sentiment that is going to be behind it. We can not get away from it. It is just as natural as the rising and the setting of the sun; and every time we turn over a great natural resource to some private industry—particularly a trust, as has been shown here, that controls practically all of the electric devices of America—we are only bringing on to perhaps our successors the condemnation of an outraged but righteous people.

The next thing they all say is, "Do these fellows pay taxes?" No. What do they do? They light the streets; they pump the water of all these municipalities up in Canada at actual cost, and the saving between the actual cost figures and the money that the towns pay for the electricity that is used publicly is more than all the taxes that the private concerns would pay. But that is not all.

That is not all. Every individual who pays would have the amount he pays increased if this public utility had to pay taxes. He would pay a little more for his electric light; but as compared with a private concern, the amount which the individual merchant pays in the city of Toronto, let us say, compared with the amount he would have to pay if he paid taxes, is something like 1 to 10. I shall refer now to the hearings before the committee. Mr. Judson King, who went up into Canada and traveled over that country, appeared before the committee, and I shall read from his testimony. Speaking of taxes in this Province in Canada, he said:

Mr. TAXPAYER. In 1921, 212 municipalities, big and little, partners in hydro, paid a total of \$1,080,358 for street lighting and \$694,531 for water pumping and other city power.

That is what they paid to this publicly owned proposition, to this Government ownership operation, if you want to put it that way. I continue the reading:

Since former standard prices to companies, or high coal rates for their individual plants, made this service cost from two to five times as much, it is evident that the taxpayers of Ontario made a gain of at least \$3,000,000 for that year, and still more in 1922.

In 1920, Buffalo taxpayers—

That is, in the city of Buffalo, N. Y., just this side of the river—

paid \$584,779 for street lights; Toronto, about the same size, paid \$335,370 and had three times as many lights.

Nearly half the cost, with three times the service. Further on in his testimony Mr. King called attention to another thing. Referring to "Lighting the International Bridge," he said:

As I started out to see the great Chippewa Canal and went around the famous Falls I passed the International Railway Bridge over the Niagara River. The cost of lighting this bridge is another interesting study in efficiency. The west or Canadian side is lighted by the hydro people—

That is, this public-service corporation—

the east or American half by a New York company. The same number of lights, the same bridge, the same river, the same method of production.

All alike, the power coming from the stream under the bridge, all from the same source, one plant privately operated and one publicly owned and operated. Listen to what he says about it:

Average monthly cost for 1921 on the Canadian side, \$8.43.

Now, for these people who go into hysterics whenever we say anything about the Government owning a municipal utility of any kind, let us see what the blessed private corporations charged on this bridge for the same light, generated from the same power. The Canadian publicly owned concern charged \$8.43. The American private corporation charged on the American side of that bridge \$43.10 per month on the average.

Mr. King takes the bill of a firm in Canada and says:

I have the bill of Appleton & Co., dry-goods men, in the little city of Galt—

That is one of the cities about which I read the prices—

out near the center of the Province. In the month of July last they used 412 kilowatt hours, and it cost them \$7.82. When I reached California, which Secretary Hoover praises as having the cheapest power anywhere, I set experts to work and found that in a town of similar size, San Jose, Mr. Appleton would have paid \$25.44 for this service. In Alhambra it would have cost \$28; in Washington, D. C., \$27.33; and still more in New York and New England.

The town of Galt—population 13,000—has several small factories which save money. The city fathers save money on the city bills for lighting, etc. In fact, I had it figured up by an expert, and it appears that all of the consumers in Galt have saved in the last seven years some \$3,089,962 by reason of the courage and vision of the hydro people. But it was nettling to a patriotic American when they sympathized with me over what I had to pay in Washington.

The cost of lighting the Labor Temple in Toronto from February to June, 1911, before the city went into this system, for those five months was \$467.91 under private operation. For the period from February to June, 1922, after they had gone into this system, for the same five months in the year, the lighting of the Labor Temple cost \$179.94, less than half of what it cost before.

Mr. King said:

Taxes are lowered because municipal lighting and power costs less under the new system, but private corporations pay taxes; does hydro pay taxes? The commission pays the Province for the use of the waters. The local commissions pay no taxes. How much then do the cities lose? I had that figured out. If in 1921 hydro in Toronto paid taxes like a private utility, it would have added 43.7 cents to the yearly expense of each domestic user, and \$1.53 for each commercial user. But since the average domestic consumer saves \$35.67—

Which is figured out mathematically—

and each commercial user—

Figured out the same way, saves—

\$186.09 every year, as against the price they would have had to pay the old private company for the same service, you can understand why I never heard anything about "taxes" while I was in Ontario.

Mr. King said in another place, speaking of rural lighting and power:

Rate sheets furnished me by Engineer Gaby show, for example, that a "farm unit" at Saltfleet, 53 miles from the source of power, using a large load, has a 4-cent per kilowatt hour rate for house lighting and a 2-cent rate for pumping, sawing, etc. A small load unit at Ridgetown, 211 miles from the source of power, has a rate of 7 cents for lighting and 3 cents for power. This is not yet as cheap as in Ontario cities, but yet is half what American cities have to pay, and is constantly decreasing.

This is from a letter from Mr. Gaby:

Prior to 1910 farmers did not consider seriously the question of electrical power. They had plenty of help. Their wives and children did not demand the higher living conditions that prevail at the present time; the service was practically impossible to get, and the cost prohibitive.

But the conditions changed * * * until the farmers found themselves with a scarcity of farm labor and are now looking about for labor-saving devices. The women have been granted the franchise, and they now demand better living conditions.

Then Mr. King continued:

The courage and vision with which the hydro people covered this new potential market has been roughly stated. But no statistics or cold reports can possibly tell the human side of the story—the human nature element, so to say. To get that you must visit the farm home of Ontario, as I did last summer, and talk with the women as well as the men. Even then you need a good imagination to visualize and get the significance of what is happening. You must listen to a busy farm wife with a house, a husband, a hired man, and three children to care for, who has no hired girl, and a mortgage on the farm. If she is not robust or in good health, interest deepens. Remember that thousands of Ontario farm wives now cook on an electric range. It is a godsend to them. No coal or wood to carry in, no ashes to carry out, no fires to build; yet the current is so cheap that they can afford to do it, and in some places even save money. It is cool in the summer time.

Let Mrs. Hoffman near Waterloo tell you how an electrically lighted farmhouse brightens life and helps to keep the boys and girls at home on the farm. Also the electric pump fills the big tank at the top of the house, and there is no hard long pumping, especially on Monday. That "wash day" has lost its terrors. Start the machine before breakfast and the clothes are on the line before 10 o'clock. "Ironing day" with electric irons also is a snap compared with the old method. Farm women and girls enjoy the bathrooms, I also found. Also there is less work when hydro saves the presence of an extra hired man or two on the farm.

The short of it is that with cheap electric rates the farm women of Ontario are beginning to have a real chance at the "fuller life" lecturers and magazine writers have pictured to them. But I must leave to the professor of social science the further development of this theme. Yet here again the Canadians have bested us.

President Theodore Roosevelt in the letter appointing his famous commission on country life in 1910 said:

It is especially important that whatever will serve to prepare country children for life on the farm, and whatever will brighten home life in the country and make it richer and more attractive for the mothers, wives, and daughters of farmers should be done promptly and thoroughly and gladly. There is no more important person, measured in influence upon the history of the Nation, than the farmer's wife, no more important home than the country home, and it is of national importance to do the best we can for both.

Those are the words of Roosevelt. They are as true now as when he spoke them. The vision he had was longer than is ours. He saw it before we could see it. But the statements he made are yet literally true.

Mr. King further said:

Later his commission reported a bad outlook for American farm wives, that "agencies" were needed to relieve the women of many of their manual burdens on the one hand and interest them in outside activities on the other. "The farm woman should have sufficient free time and strength so that she may serve the community by participating in its vital affairs."

Mr. President, before Judson King went to Canada he came to my house. I asked him to do several things when he went up there, and one of them was to go into some town or city and go into a home of ordinary people, not into a home of the rich, not into a home of the very poor, but to take some one in circumstances that were of the ordinary. He did it. He went into a good many homes, but he went into one in particular in Toronto, the home of a machinist, a man who worked in a machine shop. He went in and met this man's wife. Their name was Cullom. They lived in a house of eight rooms. He explained what he was trying to do. I had asked him to get the absolute original bills if he could that had been paid for electricity and bring them home with him. He brought a large number of them.

I have here a photographic copy of the bill of Mrs. Cullom. It seems for the month preceding she had consumed in the home 334 kilowatt hours of electricity. That is an enormous amount for a home, an enormous amount. No home in the city of Washington of eight rooms consumes one-half of that, nor

anywhere else in the world, unless they are getting awfully cheap electricity and have all the electric appliances that are known to the science. But she had them all. She had an electric fan in her kitchen. She had an electric stove upon which she did all of her cooking. She had in the house an electric hot-water heater that heated all of the water for all purposes. She had an electric washer, an electric ironing machine, an electric toaster, and 50 electric lamps over the house of 50-watt capacity. I have a list of the things, I think, in the hearings. I do not know whether I have mentioned them all or not. In addition to what I have mentioned she had an electric vacuum cleaner. She consumed with all these appliances 334 kilowatt hours of electricity.

Judson King lived in the city of Washington. His wife is a doctor. She used in her professional business a very large amount of electricity. Her office is connected with their apartment in the apartment house where they live. The great bulk of the electricity is used in the treatments she gives to her patients. It just so happened, but a wonderful coincidence, that not for the same month but for another month, the bill of Mrs. King for the apartment and for the office, which was all under one meter, showed that she had used 334 kilowatt hours during the month. It happens that it is exactly the same as Mrs. Cullom had used in her eight-room house up in Canada. Now, it is interesting to know how much it cost Mrs. Cullom and how much it cost Doctor King. Mrs. Cullom paid, according to the bill here, \$3.35. Doctor King, in the city of Washington, our glorious Capital, where we are looking after the poor and downtrodden with such feverish anxiety, paid to the privately owned corporation that supplies us here, and very graciously permits us to live, \$23.18 for the exact number of kilowatt hours for one month. Three dollars and thirty-five cents in Canada and \$23.18 in the city of Washington. I have here a photographic copy of both of the bills and will be glad to have anybody examine them who may wish to do so.

I do not care to get my personal affairs mixed up in this discussion, but it seems to me it is very applicable that I live in a house in Washington that contains eight rooms, just the same number of rooms as are in the machinist's home in Toronto, Canada. I do not have an electric stove and electric heater and all those electric appliances that he has, because I can not afford them, not because I am not getting as much income as the machinist up in Toronto, but because prices are so terribly high here that I can not have them in my home. Those people have an eight-room house and I have an eight-room house. How do our lights compare? I counted mine this morning, and I have 29 lights in my eight-room house and I have a light wherever I think I need one, but it is not always as light as day everywhere. I am economical about it, because it means money. But how many did Mrs. Cullen up in Canada have in her eight-room house? She had 50, and all of her lights, every one of them, is a 50-watt lamp. Not more than half of mine are 50-watt; the balance are 40-watt, except two, which I think are 60-watt.

I call attention to that, Senators, only to show what wonderful opportunities are at hand for the people of this country and, for that matter, of the world, if this wonderful thing, electricity, coming into the daily life of everybody in the country and in the world, can be cheapened so that all the people, poor as well as rich, can have the benefit of it. Canada has demonstrated that it can be done. Why should not the United States do it, Mr. President?

Mr. SHIPSTEAD. Mr. President, the Senator from Nebraska has given us a very illuminating address this morning. He read from the report of the Ontario Public Service Commission a long list of statistics showing what the electric light and power rates were in the Province of Ontario before the municipalities, under the direction and operation of the Ontario Power Commission, started to develop power and distribute it to the consumers in the Province of Ontario. I have here the figures of 15 municipalities showing the rates paid in 1920. I call attention to the fact that the year 1920 marked the peak of the high cost of living and the high cost of production brought on by the war. This list shows what those municipalities paid for light and power before the war when purchasing electricity from private corporations, and what they have paid when purchasing electricity from a municipality after the advent of what is called municipally owned hydroelectric power in Canada. I ask that, without reading the list, it may be printed in the Record.

The PRESIDING OFFICER (Mr. WADSWORTH in the chair). Without objection, it is so ordered.

The matter referred to is as follows:

Municipality	Cost of power, 1920		Average rate per kilowatt hour in 1920		
	To municipality per horse-power	To customer per horse-power	Domestic	Commercial	Old rate
Toronto.....	\$17.00	\$19.50	Cents 2.2	Cents 2.2	Domestic, 8 cents plus 25 cents; commercial, 12 cents plus 25 cents.
Hamilton.....	16.00	12.70	2.3	1.3	Domestic, 8 cents plus 25 cents; commercial, 8 cents.
London.....	19.00	12.00	2.2	1.8	9 cents plus 25 cents.
St. Thomas.....	24.00	18.00	2.6	2.2	11 cents.
Guelph.....	19.00	16.00	2.6	2.2	Domestic, 8 cents plus 25 cents; commercial, 8 cents plus 15 cents.
St. Marys.....	28.00	32.50	3.1	3.0	9 cents plus 15 cents.
Waterloo.....	20.00	20.00	2.3	2.3	12 cents plus 25 cents.
Hespeler.....	21.00	25.50	4.1	3.5	10 cents plus 15 cents.
Windsor.....	36.00	35.00	3.2	3.2	Commercial, 8 cents; domestic 12 cents.
Barnia.....	36.00	35.00	4.3	5.0	Domestic, 6 cents; commercial, 5.4 cents.
Stratford.....	25.00	28.00	2.1	2.4	Domestic, 12 cents plus 25 cents; commercial, 12 cents plus 25 cents.
Woodstock.....	20.00	18.00	2.4	2.1	8 cents plus 25 cents.
Preston.....	19.00	20.00	2.8	2.7	9 cents plus 20 cents.
New Hamburg.....	32.00	31.00	4.1	4.3	10 cents.
Ingersoll.....	21.00	20.00	3.5	2.4	8 cents plus 25 cents.

Mr. SHIPSTEAD. The Senator from Louisiana [Mr. RANSDELL] asked for some comparison of rates in Canada and in the United States and the Senator from Nebraska gave him an instance of two households that can be called rather small users of electricity. I have another comparison, and, while comparisons are said to be odious, this is a comparison of the use of electricity on a comparatively large scale in Canada and the United States. I have here the original bills of two hotels, one in the city of Washington, D. C., and the other in the city of Niagara Falls, Ontario. The hotel in Washington is called the Lafayette Hotel. The hotel in Niagara Falls is also called the Lafayette Hotel. I have the original bills and they are marked "paid." It so happens that the Lafayette Hotel in Niagara Falls used in the month of June, 1922, 8,000 kilowatt hours of electricity and for that electricity paid \$93.42. The bill that I hold in my hand is the bill paid by the Lafayette Hotel Co., of Washington, D. C., to the Potomac Electric Power Co. for May, 1924. This bill shows that during that month the Lafayette Hotel Co., of Washington, D. C., used 12,611 kilowatt hours of electricity, for which it paid \$425.95. If the Lafayette Hotel, of Niagara, Ontario, had used 4,700 kilowatts more during the month of June, 1922, it would have used and had to pay for the same amount of electricity that the Lafayette Hotel, of Washington, D. C., used during one month. The Lafayette Hotel of Niagara would then have paid the sum of \$99.75. Now, here we have the comparison of two hotels with the same name, one in Canada and one in Washington, D. C. For the same amount of electricity used during one month the hotel in Washington, D. C., would pay \$425.95 and the hotel in Canada would pay \$99.75.

I am not going to go into any detail about the development of water power in Ontario, because the senior Senator from Nebraska has gone into it so fully this morning. I will ask, Mr. President, to have the photostat copy of the two original bills to which I have referred printed in the Record.

The PRESIDING OFFICER. Without objection, permission is granted.

The matter referred to is as follows:

LAFAYETTE HOTEL Co., Sixteenth and I Streets.		MOTORS—READINGS	
To POTOMAC ELECTRIC POWER Co., Dr.			
For electric current: From March 28 to April 28, 1924. Maximum demand, 31.2 kilowatts.			
Fixed charge:			
20.0 kilowatts, at \$3 per kilowatt.....			
11.2 kilowatts, at \$2.50 per kilowatt.....			
31.2 Total kilowatts.....			
Energy charge:			
250 kilowatt hours, at 6 cents per kilowatt hour.....			
500 kilowatt hours, at 5 cents per kilowatt hour.....			
1,000 kilowatt hours, at 4 cents per kilowatt hour.....			
10,861 kilowatt hours, at 2.375 cents per kilowatt hour.....			
12,611 Total kilowatt hours energy charge.....			
Fixed charge.....			
Amount.....			

H. WILLIAMS TO THE HYDRO-ELECTRIC SYSTEM, Dr.
120 Welland Avenue, Niagara Falls, Ontario

Installed load, 430.00 watts.

To electric-light service for May, 1922:

Present meter reading, 42,000 (first 20 hours' use of installed capacity at 4 cents per kilowatt hour, 1,200)	\$51.60
Previous meter reading, 34,000 (next 70 hours at 1.5 cents per kilowatt hour, 3,010)	46.15
Consumption in kilowatt hours, 8,000 (remainder at 0.15 cent per kilowatt hour, 4,700)	7.05
Gross bill	103.80
Less discount 10 per cent.	10.38
Net bill	93.42

No discount after June 19, 1922.

Three cents per card charged if paid at other than main office.
Read carefully the notice on the back of this card.

Mr. SHIPSTEAD. Mr. President, I wish to call one thing to the attention of the Senate that I think is interesting at this time; that is, the fact that behind the development in Canada there is a personality something on the same order of the personality which the senior Senator from Nebraska [Mr. NORRIS] presents to the people of the United States. His name is Sir Adam Beck. He is now, and has been from the beginning, the chairman of the provincial commission having charge of the development of electrical power. It is interesting to note what the newspaper of his home town had to say about Sir Adam Beck when first he presented this program to the people of Canada. I will read a quotation from that newspaper which I find in the record of the hearings of the Committee on Agriculture and Forestry upon the so-called Muscle Shoals bill when that measure was before the committee last winter. The quotation is from the newspaper of Sir Adam Beck's home town about 20 years ago. The editor of that newspaper then stated:

Has the Hon. Adam Beck become a monomaniac on the power question? His wild and extravagant assertions have justified the suspicion, were it not that they are timed and calculated for election purposes.

In a flight of imagination during his speech the other evening he declared that every cottage, every house, every home in this city will be lighted by electricity. His power scheme would raise men's wages, give 2-cent fares on the railroads, and banish the tenements from Ontario. The taxpayers would not pay one cent of the cost, which would be borne entirely by the consumers of power.

His newspaper organ lets its fancy soar even higher and pictures the housewife heating her flatirons by electricity—why not her curling tongs, too—instead of sweltering before a hot stove on a summer's day.

In this connection it might be interesting to recall the testimony of Mr. King before the Committee on Agriculture and Forestry. While on his tour of inspection in Canada an engineer told him that the high peak of the load carried happened to be on or about midday on Tuesday of each week, because that was ironing day. So it appears that the prophecy made by Sir Adam Beck something like 20 years ago, and which was jeered at by the editor of the newspaper from which I have quoted, has been fulfilled.

I quote further from the same article:

If all the Arabian Nights' rhetoric of Mr. Beck and his organ is to be believed, Niagara Falls power is a gift of the fairies to the humblest as free as air, so that bye and bye the householder will merely have to touch the button and the Beck schemes will do the rest.

That was the jeer with which he was met when he first proposed his dream to the people of Canada. Subsequent history proves that his dream has come true. I am reminded of what the senior Senator from Nebraska was charged with the other day. He was charged with being a dreamer. Sir Adam Beck had a dream for the people of his Province of Ontario; that dream has come true, and because Sir Adam Beck brought that dream to a realization for his people the King of England knighted him for his services to the people of Ontario. In the light of recent history, however, I am inclined to believe that if Sir Adam Beck had been an American citizen and had tried to do the same thing for the people of the United States, instead of being knighted and honored, he would have been read out of his party and charged with fostering doctrines subversive of the public interest.

I wish also to call the attention of Senators very briefly to another project in the United States. I am calling attention to it because no Senator in the debate upon the floor on the pending question has mentioned the city of Seattle, Wash., nor has told the story of what vision and courage the citizens of Seattle have had and what they have done in the last 20 years

in developing that wonderful system of municipal light, power, and heating which they have developed during that time.

I desire to call attention to the rates in Seattle prior to the advent of a municipally owned light and power system there. I read from the annual report of the superintendent of the city plant of Seattle, which was issued on December 31, 1923. That report states:

When the city plant was projected in 1902 consumers were paying 20 cents per kilowatt hour for current. As soon as the municipal plant was assured a reduction was made to 12 cents. When the city lighting department began taking contracts residence rates were fixed at 8½ cents for the first 20 kilowatt hours, 7½ cents for the second 20 kilowatt hours, 6½ cents for the third 20 kilowatt hours, and 4½ cents for all over 60 kilowatt hours.

This was followed by a reduction in electric power and light rates by the Stone & Webster Co., a competing private corporation, to 10 cents for the first 20 kilowatt hours, 9 cents for the second 20 kilowatt hours, 8 cents for the third 20 kilowatt hours, and 5 cents for all over 60 kilowatt hours.

I wish to direct the attention of the Senate to the rates that are now being paid by the citizens of Seattle: For the first 40 kilowatt hours, 5½ cents; for the next 200 kilowatt hours, 2 cents; and for everything above 240 kilowatt hours, 1 cent per kilowatt hour. Before the Committee on Agriculture and Forestry Superintendent Ross said that they could reduce the price still further if it were not for the fact that the demand would be so tremendous that electricity would be taken away from the industries of Seattle by the people, who would use it for the purpose of heating their homes, and because they have not electricity enough to supply the demand that would ensue they have up to this time refused to reduce the rates further. They are now working on a project to develop 600,000 horsepower.

It is interesting also to bear in mind the testimony which was presented to the Committee on Agriculture and Forestry showing that the capital cost per horsepower of the Stone & Webster Co., the competing company, amounts to \$450 per horsepower, while the capital cost per horsepower of the city-owned plant amounts to \$150 per horsepower.

A great deal has been said in the course of discussion in the Senate on this question—and I wish to say that, in my opinion, the discussion has been absolutely fair and very illuminating—about taxes. There is in this report of the city of Seattle a page and a half given over to the consideration of the problem of taxes in connection with municipally owned and privately owned electric lighting, power, and heating plants. Because it is so illuminating, and I believe so typical, I ask that it may be printed in the RECORD without being read. It is an official report from the city of Seattle.

The PRESIDING OFFICER. Without objection, it is so ordered.

The matter referred to is as follows:

TAXATION OF UTILITIES

Much paid propaganda is being circulated by private power concerns to convince the public that municipally owned utilities should be taxed.

While the companies spread this doctrine they evade their own taxes. What taxes they do pay are based on about one-third or one-quarter of what other concerns are assessed. They have one basis for taxation and one vastly higher for rate-making purposes.

These taxes are not borne by the utility company. They are borne by the consumer in the rate he pays. The only function of the company here is to collect the taxes for the tax collector.

A utility concern stands in a very unique situation, selling light and power to practically everyone who is benefited by general taxation. It therefore collects its taxes, to be redistributed to almost the same people, though in somewhat different proportion. A reduction in light and power rates then becomes largely equivalent to a reduction in taxes. It is the total cost of doing business that counts, and \$100 paid in general taxes affects this total no more or no less than if it were paid in excess cost of light and power.

For instance, in Seattle the gross receipts for light and power taken in by both company and city total about \$7,000,000. The total taxes for municipal purposes are less than this amount. Light and power rates are two to two and one-half times less than those which prevail where the influence of city competition is not felt.

This means that without a city power system Seattle would pay \$7,000,000 to \$10,000,000 more for its light and power every year—a sum greater than its municipal taxes. Further, the city has made and is making a handsome profit, which will give further reductions in rates. This profit to date amounts to \$6,119,206.87.

Seattle enjoys a maximum rate of 5.5 cents per kilowatt hour. Across the Cascade Mountains in the same State of Washington the maximum rate is 16.11 cents per kilowatt hour. A customer in Seattle

may pay \$2 for what a man in eastern Washington would pay \$6. The \$4 excess certainly represents a tax levied by a private concern and over which the public has no control. In its stead the company returns an insignificant amount as general taxes.

The water powers of the United States are natural and perpetual resources, and this fact, together with the lesser costs of management in public plants is becoming better understood. Public ownership of light and power is on the increase, and as the stone rolling down the mountain side ends in the irresistible avalanche so this movement will sweep the country and lift the hand of oppression from the business man and lift the burden of the housewife.

The hand of King Canute can not hold back the waves of the sea.

The exploiters of water power know this well and hope by taxing public utilities to delay the day and grab the natural resources. The American public stands aghast at Teapot Dome oil leases for grounds that can soon be exhausted, but sanctions leases for water power that never can fail and beside which Teapot Dome is child's play. When we compare the little taxes the public receives with these vast gifts the comparison is odious, to say the least.

"The power to tax is the power to destroy." So said the Chief Justice of the United States; and the power to destroy may defeat the power to create.

There is only one course to pursue with a public utility. We have failed to control the taxes of power companies; we will always fail, for monopoly is government; but we are the taxing body. We have our utility; let us give it every chance to raise its head through the insidious company propaganda, backed by hundreds of millions, and let it show the real control of rates and bring them down where they should be. Then if we want to use the surplus for general purposes, or if we wish to tax, we have only to say the word. The question of taxation has therefore no part in the discussion of private versus municipal control.

Mr. SHIPSTEAD. Mr. President, the discussion which has taken place on the floor of the Senate during the last few weeks has been most illuminating. The junior Senator from Nebraska [Mr. HOWELL] the other day went into great detail in describing the production and sale of power by municipally owned plants in various parts of the United States. The senior Senator from Nebraska [Mr. NORRIS] closed the discussion yesterday afternoon by an interesting statement in reference to the electric-light, power, and ice plant at Omaha, and on yesterday morning the senior Senator from California [Mr. JOHNSON] gave us some very valuable information relating to electric lighting and power that is being produced in connection with the reclamation projects throughout the West and sold by the United States Government. Senator SMITH, of South Carolina; Senator McKELLAR, of Tennessee; and many other Senators have contributed valuable information to the discussion.

There are a few facts that stand out prominently upon reading the CONGRESSIONAL RECORD of the debates that have taken place upon the subject. One of these outstanding points is the apparent lack of relief given by the so-called public utilities commissions to the people of the various States from the oppression of the so-called electric light and power trust. For the past 30 years it has been a cardinal principle of the American people that monopolies should be controlled and regulated by the State and National Governments, and we have had 30 years of that theory put into practice; but from reading the Record one is inclined to believe that it has been a failure; that instead of the State governments and the National Government controlling and regulating the monopolies, the monopolies have been controlling and regulating the governments.

So far as the record shows, the only apparent ray of light that gives hope to the American people for relief is the public ownership of electric light, heat, and power plants; and then we come to the question of the disposition of the Government's property—the so-called Muscle Shoals proposition.

During the debate the other day it was charged that the lessee must of necessity be a subsidiary of the General Electric Co. Only time will tell whether the General Electric Co. will finally become the lessee of this property. It is generally conceded that the price under the terms of the so-called Underwood substitute is so infinitesimally small that it is hardly worth taking into consideration when we remember the amount of money that the Government has invested in this property. It is patent to anyone that the lessee can only be some corporation that will use a part of the power for the manufacture of fertilizer, and will either sell the surplus power to the cities and rural communities of the United States or use that power in the manufacturing business which the corporation itself will control.

The junior Senator from Nebraska [Mr. HOWELL] made a significant statement on December 17 when he disclosed to the Senate the very interesting fact that the owners of the Talla-

poosa River plant, if they can connect that plant with the so-called Muscle Shoals plant, can develop an additional 165,000 primary horsepower. The Alabama Power Co. owns the Tallapoosa River project. Therefore it is reasonable to assume that the Muscle Shoals project will be more valuable to the Alabama Power Co., a subsidiary of the General Electric Co., than to any other company engaged in the business of developing and selling electric power, because, on account of the strategic location of these two properties, by connecting them together the primary power, which is so very much more valuable than the secondary power, can be raised to the enormous amount of 165,000 horsepower. I will ask the junior Senator from Nebraska [Mr. HOWELL] if I am stating that correctly?

Mr. HOWELL. As I understand, the Senator is stating it in accord with the facts.

Mr. SHIPSTEAD. I thank the Senator.

I believe the senior Senator from Nebraska [Mr. NORRIS] is correct when he states that this is the question that shall determine whether this governmental property shall be dedicated to the welfare of the American people, or whether it shall be dedicated to a private corporation which shall use it for the purpose of selling power and electricity to American citizens at prices which at all times, so far as practical effect on the American people's pocketbook is concerned, have been exorbitant. For instance, at the hearings before the Agricultural Committee the statement was made that the average rate in the United States was about 8½ cents per kilowatt hour. Wherever a plant owned and operated by the public has been put in operation it has at all times, so far as my knowledge goes—and I have read the records and the hearings very extensively—been followed by a gradual and persistent reduction in rates, to such a remarkable degree that the result is amazing.

The senior Senator from Nebraska [Mr. NORRIS] the other day said that this would make Teapot Dome look like a pinhead. I do not know. There is some circumstantial evidence that leads one to believe that there is at least something to the charge. We have had various eras in the development of this country. We had what was called the pioneer era, when we burned wood. At that time wood was the chief source of power. Then we had the coal era. Coal became the chief source of power. The present price of coal is the best proof of who won in the struggle for coal. Then we had the oil era, because oil was the chief source of power. Now we are entering upon the era of electricity. At all times there has been a struggle for the possession of these sources of power on the part of those who would use those sources of power to sell the necessities of life—heat, light, and power—to the American people for the purpose of exploiting the American people; and, on the other hand, on the part of those who would conserve the timber, the coal, the oil, and water power for the benefit of the people of America; and that struggle is still going on.

The oil fields of the Navy finally landed in the hands of a private corporation. Some one has said that campaign contributions had something to do with it. I do not know. In view of the charge that has been made that the General Electric Co. would in all likelihood be the lessee of this property, I want to call to your attention the fact that the senior Senator from Nebraska [Mr. NORRIS] on yesterday morning read a long list of electric companies and subsidiary companies in the United States, all owned by the General Electric Co., the head of the so-called Electric Power, Light, and Heating Trust. I want to call to your attention the fact that upon the board of directors of the General Electric Co. are several members of the firm of J. Pierpont Morgan & Co. There are Dwight Morrow and Mr. Stettinius, members of the firm of Morgan & Co. On that board of directors is also George F. Baker, jr., of the First National Bank of New York, closely affiliated with the Morgan group. On page 183 of the Roosevelt edition of Moody's Masters of Capital, we find that the largest stockholders in the First National Bank of New York, outside of George F. Baker and son, are the members of the Morgan banking house, or the firm of Morgan & Co. George F. Baker, jr., as I have said, is also a member of the board of directors of the General Electric Co.

Another member of the board of directors of the General Electric Co. is Seward Prosser, president of the Bankers' Trust Co. of New York, upon whose board of directors we find the name of Mr. J. Pierpont Morgan, Mr. Porter, and Mr. Cochran, all members of the firm of J. P. Morgan & Co. I think that is interesting in view of the fact that the General Electric Co. is known in financial parlance as a Morgan concern.

We found that during the last campaign considerable money was contributed to the campaign by members of the board of directors of the General Electric Co. and members of the firm of Morgan & Co. I do not say that this contribution was made with any undue motives, but I think it is interesting at this time to see that some of these men contributed.

E. W. Rice, jr., the chairman of the board of directors of the General Electric Co., contributed \$3,000.

J. R. Lovejoy, vice president and director, \$1,000.

George F. Baker, jr., \$5,000.

C. A. Coffin, a director, \$5,000.

D. W. Morrow, \$5,000.

A. W. Burchard, \$5,000.

Seward Prosser, \$1,000.

B. E. Sunny, \$1,000.

A total of \$26,000.

Then we have S. Z. Mitchell, a director of the Alabama Power Co. and the Electric Bond & Share Co., \$5,000; Charles Hayden, a director of the Utah Securities Corporation, \$10,000; and Harrison Williams, a director of the American Gas & Electric Co., controlled by the Electric Bond & Share Co., \$3,000.

In view of the fact that the Underwood substitute provides that if this property is leased to a private corporation it shall be leased by the President, it seems to me—

Mr. HEFLIN. Mr. President—

The PRESIDENT pro tempore. Does the Senator from Minnesota yield to the Senator from Alabama?

Mr. SHIPSTEAD. I do.

Mr. HEFLIN. I did not hear all of the Senator's statement about contributions. What were these contributions made to?

Mr. SHIPSTEAD. They were made to Mr. Hodges, the treasurer of the Republican National Campaign Committee.

Mr. HEFLIN. The Republican Party?

Mr. SHIPSTEAD. Yes.

The individual contributions are not very large when you consider the wealth of the men making the contributions, and I do not charge that they were made for the purpose of purchasing a special privilege in the leasing of Muscle Shoals. But it may be noted in passing that during the campaign several members of the firm of J. P. Morgan & Co. were very prominent in the collection of funds from other people for carrying on the campaign.

Mr. Stotesbury, of Philadelphia, a member of the firm of J. P. Morgan & Co., held an important position in the collection of funds in Pennsylvania. Guy Emerson, vice president of the Bankers' Trust Co., of New York, upon whose board of directors are Mr. J. P. Morgan, Mr. Cochran, and Mr. Porter, members of the firm of Morgan & Co. Mr. Emerson collected funds in New York. Mr. Dwight Morrow, of the firm of Morgan & Co., also had a prominent part in the campaign. His nephew was in Chicago national headquarters a large part of the time, I am informed, and previous to that had been for two years in the law office of Mr. Hodges, national treasurer of the committee.

In view of these things, it seems to me the friends of the President who are supporting this measure are placing the President in a rather embarrassing situation, and I thought it my duty to call their attention to this fact. We have been told that President Harding's friends placed him in a very embarrassing position, and I am sure that the friends of President Coolidge do not desire to place him in the same embarrassing position.

It has been said upon the floor of the Senate that part of this power should be dedicated to the manufacture of fertilizer. I want to say that if this plant finally comes into the possession of the General Electric Co., it will at least look as though this plant was dedicated in part to the money that was raised and contributed during the campaign to fertilize the barren political fields of the Northwest. We have heard a great deal of talk in this debate about dedicating this property. The senior Senator from Nebraska [Mr. Norris] desires, and his bill provides, that it shall be dedicated to the welfare of the people of the United States. He is seeking to prevent this property being used as a great milking machine, with its wires spread into all the cities and rural communities connecting with the pockets of the American people, to milk their pockets by extortionate prices paid for the use of these necessities of life—light, heat, and power.

Mr. CURTIS. Mr. President, I should like to ask the Senator from Nebraska [Mr. Norris] if there is anything further this afternoon? Otherwise, I desire to have a short executive session before adjournment.

Mr. NORRIS. Mr. President, I had intended to say something to-day about what the senior Senator from Alabama

[Mr. UNDERWOOD] had said in his remarks on the floor of the Senate, but I have learned that the Senator from Alabama is ill and not able to attend the session of the Senate to-day on account of his illness. Of course, I do not intend in his absence to take up the points I intended to discuss to-day, so I will say to the Senator from Kansas that, as far as I am personally concerned, I have nothing further to say to-day.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Chaffee, one of its clerks, announced that the House had passed the following joint resolutions of the Senate, each with an amendment, in which it requested the concurrence of the Senate:

S. J. Res. 157. Joint resolution extending appropriation in connection with Columbia Basin investigation; and

S. J. Res. 159. Joint resolution providing for the control and eradication of the European fowl pest and similar diseases in poultry.

COLUMBIA BASIN PROJECT

Mr. JONES of Washington. I ask the Chair to lay before the Senate the amendment of the House to Senate Joint Resolution 157.

The PRESIDING OFFICER (Mr. WILLIS in the chair) laid before the Senate the amendment of the House to the joint resolution (S. J. Res. 157) extending appropriation in connection with Columbia Basin investigation, which was, on page 1, line 10, to strike out "investigation is completed" and to insert "15th day of February, 1925."

Mr. JONES of Washington. I move that the Senate concur in the amendment of the House.

The motion was agreed to.

ERADICATION OF EUROPEAN FOWL DISEASES

The PRESIDING OFFICER laid before the Senate the amendment of the House of Representatives to the joint resolution (S. J. Res. 159) providing for the control and eradication of the European fowl pest and similar diseases in poultry, which was to strike out all after the resolving clause and to insert:

That not to exceed \$100,000 of the appropriation of \$3,500,000, contained in the second deficiency appropriation act, fiscal year 1924, approved December 5, 1924, for the eradication of the foot-and-mouth disease and other contagious or infectious diseases of animals, is hereby made available to enable the Secretary of Agriculture to provide means to control and eradicate the European fowl pest and similar diseases in poultry: *Provided*, That the sum herein granted shall remain available for the purposes of this act until June 30, 1926: *Provided further*, That no part of this sum shall be used for the payment of indemnities for condemned poultry.

Mr. McNARY. I move that the Senate concur in the House amendment.

The motion was agreed to.

SENATOR FROM NEBRASKA

The PRESIDING OFFICER. The Chair lays before the Senate credentials which have just been received, and which will be read and filed.

The credentials were read and ordered to be filed, as follows:

STATE OF NEBRASKA,

SECRETARY OF STATE.

I, Charles W. Pool, secretary of state of the State of Nebraska, do hereby certify that at a general election holden on the 4th day of November, A. D. 1924, in the State of Nebraska, the following-named person was elected to serve in the United States Senate from the 4th day of March, 1925, to the 4th day of March, 1931, GEORGE W. NORRIS.

In testimony whereof I have hereunto set my hand and affixed the great seal of the State of Nebraska. Done at Lincoln, this 15th day of December, A. D. 1924.

[SEAL.]

CHARLES W. POOL,

Secretary of State.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Farrell, one of its clerks, announced that the Speaker of the House had affixed his signature to the following enrolled joint resolutions, and they were thereupon signed by the President pro tempore:

S. J. Res. 157. Joint resolution extending appropriation in connection with Columbia Basin investigation; and

S. J. Res. 159. Joint resolution providing for the control and eradication of the European fowl pest and similar diseases in poultry.

ADDRESS BY PRESIDENT COOLIDGE

Mr. McNARY. Mr. President, on the 19th day of November of the present year President Coolidge delivered a very thought-

ful and interesting address before the National Conference on Utilization of Forest Products, and I ask unanimous consent that it be printed in the RECORD.

The PRESIDENT pro tempore. Is there objection? The Chair hears none, and the address will be printed in the RECORD accordingly.

The President's address is as follows:

ADDRESS OF PRESIDENT COOLIDGE BEFORE THE NATIONAL CONFERENCE ON UTILIZATION OF FOREST PRODUCTS, AT WASHINGTON, IN THE NATIONAL MUSEUM AUDITORIUM, AT 10 A. M., WEDNESDAY, NOVEMBER 19, 1924

This conference has been called for the purpose of further attempting to deal with the problem of our national timber supply. One of the chief items in that problem is the present appalling waste. Some of this waste may be unavoidable, but to a large extent it is unnecessary. The time is at hand when our country is actually confronted with a timber shortage. That can be remedied in only two ways: By diminishing the present waste and increasing the present supply.

It is significant that this conference was called by the late Secretary of Agriculture, Henry C. Wallace. It was the outcome of a broad forest policy which he was engaged in developing, and to which he contributed so much ability and energy. It was, he hoped, to lead to such care in the manufacture and use of our forest products that we would greatly lessen the severity of the prolonged timber shortage of which we are entering the first stage. If this conference can forward his purposes, there could be no more worthy tribute to his devotion to forest conservation. Others may have equaled him, but American forests have had no better friend than Secretary Wallace.

Busy men and women who drop their personal affairs and lend their counsel to a public conference come with the expectation that they can accomplish some tangible results. The Government is going to ask you to consider definite plans for reducing timber waste. It is going to suggest that out of this conference shall emerge a program of specific action for timber saving rather than a mere expression of ideas. Containing as it does leaders from every branch of forest industry and from many interests closely allied with forest industry, this conference has, I know, the ability and the will to create such a program. It is not my purpose to discuss these specific measures but to give as a background for your consideration some of the facts that force us to adopt a drastic program of forest thrift.

The era of free, wild timber is reaching its end, as the era of free, wild food ended so long ago. We can no longer depend on moving from one primeval forest to another, for already the sound of the ax has penetrated the last of them. We like to think that it took three centuries to harvest these immense forests. It is comfortable to believe that they will last indefinitely still. But in reality we have cut most of our timber not in the past 300 but in the past 75 years, to serve the great expansion of population and industry, and there is no reason to expect a decline in the rate of cutting as long as the forests last.

What has given us this illusion of permanency? First, our stored timber, which could be drawn on with increasing speed and with the appearance of plenty until the last stick of it should be done. Secondly, a transportation system that has permitted our sawmills to follow the retreating forests and to ship their product to distant buyers. Our markets have been full of timber. Only in the higher cost, the long haul, the near exhaustion of certain kinds of wood, and the sharply falling per capita consumption have we dimly sensed the dwindling of our forests.

We do not know the forest situation down to the last acre and board foot, but we know it well enough to make us think and act. Of the old forest the first explorers met we have in area only one-sixth left, and in bulk of timber less than one-third. From over-cutting and fire we have left on our hands something like 80,000,000 acres of denuded forest land, most of it unfit for farming. Then we have about 250,000,000 acres of second-growth forest, much of it poor in quality and amount. Three-fourths of our cut is still from virgin forests, difficult and distant of access, so that their products must pay for long freight hauls to reach the chief markets.

Expressed roughly, we have left about 745,000,000,000 cubic feet of timber. From this the annual drain is 25,000,000,000 cubic feet. This total drain is most significant when we reflect that, toward offsetting it, we have an annual timber growth of only 6,000,000,000 cubic feet; and even in our young forests, where this growth is taking place, cutting has already outstripped growth. We must face the situation that at this rate we are not far from timber exhaustion.

To bridge this fatal gap between cut and growth we have never taken sufficient action. In fact, our wealth of old-growth timber has made us prone to ignore the gap and to leave our less fortunate descendants to struggle with it. But we can not escape the penalties of our national neglect. They are already beginning to be felt. Since 1870 lumber prices have risen much more rapidly than the prices of other commodities. Per capita annual consumption of sawed lumber, which in 1906 had reached 523 board feet, has dropped

to 285, and in some of the Eastern States to 160 board feet. We are paying a yearly freight bill of \$250,000,000 which could better be used for growing timber than for transporting it.

There is no easy road out of this unprofitable situation. The end of free timber is in sight. World competition for the world supply will leave no large dependable source of imports open to us. The use of substitutes hardly keeps pace with new uses for wood; there is no likelihood that we can become a woodless Nation even if we wanted to. When the free timber is gone we must grow our wood from the soil like any other crop.

Strange as it may seem, the American people, bred for many generations to forest life, drawing no small measure of their wealth from the forest, have not yet acquired the sense of timber as a crop. These immense stretches of cut-over land, mostly too rough or too sterile for tilling, have not awakened us to their vast potential worth as growers of wood. Fully one-fourth of our land area ought to be kept in forest—not poor, dwindling thickets of scrub, but forests of trees fit for bridges and houses and ships. Handled by the best timber-cropping methods, our present forest lands could be made to grow even more timber each year than we now use. But much of our cut-over land, lying idle or half productive, is now an immeasurable loss. It pays little or no taxes, it keeps few hands busy, it turns few wheels, it builds no roads. Idle forest land has scrapped schools, factories, railroads, and towns; it has dotted the land with abandoned farms; it has created a migratory population. Our forest problem is a land problem of the first magnitude.

It is likewise an industrial problem of great importance. These great industries that depend on the forest for their raw material—industries that, taken together, rank about third in value of output among our chief industrial groups—must be preserved. They employ a very large number of wage earners; they represent an immense investment of capital; around them are built whole cities; they feed the railroads with a vast flow of traffic. In the long run, they depend for their existence on making our forest soils grow timber and on using that timber without waste.

This brief sketch of the forest problem would be incomplete if it did not mention the hopeful progress already made toward a better forest policy. Of our total forest area of 470,000,000 acres, about one-fifth is in public ownership. Most of these public forests are safeguarded from fire and dedicated to timber growing. Of private forest lands—in extent much the most important part of our forests—a little more than half have more or less adequate protection against fire. On the rest fire is free to ravage the young growth and subject the forest to a steady deterioration; but the Clarke-McNary law, passed by the last session of Congress, will, I hope, speedily change the outlook for these neglected forests. It authorizes Congress, in cooperation with the States, to establish systems of protection against fire, and it authorizes, among other things cooperation in tree planting and a study to develop stable and equitable forest taxation. Very considerable progress has been made under previous legislation in joint fire protection.

Under the Weeks law the Federal Government has purchased 2,000,000 acres of forest land in the Eastern States, as the nucleus of a national forest system for the East. Congress has wisely provided for forest experiment stations in 6 of our 10 or 12 principal forest regions, stations that are destined to become centers of knowledge and guidance toward better forest practice. Much valuable work has been done by various Government agencies in combating forest insects and diseases, and in research in many phases of better utilization of timber.

Among private agencies also there has been promising activity. Associations of timber owners in many regions have established fire protection. Here and there private owners have embarked on timber growing as a profitable investment, and the industries dependent on our forests are taking a keener interest in working out a forest policy. Forestry associations, State forestry departments, and forest schools are lending invaluable aid to the forestry movement.

These are hopeful signs. Yet we have started too late and are moving too slowly to bridge the gap between cut and growth. We must adjust ourselves to an era of reduced per capita consumption. We must husband our supplies. Granted that we shall get into effect a big-scale program of timber growing, it would be poor business to go to the expense of growing timber if we should persist in losing a large part of the crop by unsatisfactory ways of manufacturing and using it. Between cutting the timber in the woods and finally putting the product to use, nearly two-thirds of the total volume is lost. A third of this loss, it is estimated, can under present economic conditions and with tried and tested methods be saved—a yearly saving nearly as great as all the timber our forests grow each year. Saving timber, it is obvious, will not only reduce the amount we must grow, but if started now on an effective scale it will relieve the timber shortage and make less drastic the social and economic readjustments this shortage will force upon us. A tree saved is a tree grown.

In the coming struggle for timber, economic survival among the forest industries will depend on economic fitness. Economic fitness will be measured by good management and good technical processes. These qualities come from research and from training, and the forest industries, to reach a high level of skill, must make a full use of both these tools of modern industrial progress. Hitherto the diversity, the geographical isolation, and the small average size of our wood-using industries, coupled with abundance of raw material, has kept them from advancing as rapidly in improved methods as some of our more highly concentrated industries. But timber shortage will force competition in better methods. Much is already known of better methods, and the time is already here when this knowledge can be profitably employed. Many companies have in fact made notable progress in waste reduction and are furnishing examples of what can be done by careful management and expert planning. It seems possible that the individual industries, by banding together, can overcome their handicaps of isolation and collectively employ more experts to work out better processes.

It is to consider joint efforts toward better forest utilization that this conference has been summoned. It is a movement in which the State and National Governments, the industries, the universities, the consumers, and the technical experts should join. The various Government agencies equipped to help will, I know, be eager to do what they can to forward this undertaking. So vast an enterprise as the forest-using industries must not be allowed to decline for lack of raw material. We have abundant soil to produce it. We have the energy and the intelligence to learn to use our forests without waste. This conference ought to lay the foundation of a far-reaching and effective effort for forest thrift.

We hold the resources of our country as a trust. They ought to be used for the benefit of the present generation, but they ought neither to be wasted nor destroyed. The generations to come also have a vested interest in them. They ought to be administered for the benefit of the public. No monopoly should be permitted which would result in profiteering, nor on the other hand should they be indiscriminately bestowed upon those who will unwisely permit them to be dissipated. These great natural resources must be administered for the general welfare of all the people, both for the present and for the future. There must be both use and restoration. The chief purpose of this conference is to discover policies which will, in the hands of private individuals and of public officers, tend to the further advancement of this already well-defined and securely adopted principle.

ENROLLED JOINT RESOLUTIONS PRESENTED

Mr. WATSON, from the Committee on Enrolled Bills, reported that on to-day that committee presented to the President of the United States the following enrolled joint resolutions:

S. J. Res. 157. Joint resolution extending appropriation in connection with Columbia Basin investigation; and

S. J. Res. 159. Joint resolution providing for the control and eradication of the European fowl pest and similar diseases in poultry.

EXECUTIVE SESSION

Mr. CURTIS. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After 10 minutes spent in executive session the doors were reopened and (at 2 o'clock and 55 minutes p. m.) the Senate adjourned, the adjournment being, under the concurrent resolution of the two Houses, until Monday, December 29, 1924, at 12 o'clock meridian.

NOMINATIONS

Executive nominations received by the Senate December 20, 1924

POSTMASTERS

CALIFORNIA

James Underwood to be postmaster at Trinidad, Calif. Office became presidential October 1, 1923.

Robert C. Ross to be postmaster at Cotati, Calif. Office became presidential April 1, 1924.

Benjamin E. Randolph to be postmaster at Westmoreland, Calif., in place of W. E. Edwards, resigned.

Fred W. Urch to be postmaster at Troma, Calif., in place of B. E. Witt, resigned.

Floyd M. Filson to be postmaster at Tennant, Calif., in place of E. M. Gholson, resigned.

Anna E. Collier to be postmaster at Seal Beach, Calif., in place of B. B. Brown, declined.

William A. Murphy to be postmaster at Montague, Calif., in place of R. G. Isaacs, resigned.

John A. Thompson to be postmaster at Cloverdale, Calif., in place of L. B. Wiedersheim, resigned.

John J. West to be postmaster at Willows, Calif., in place of I. J. Proulx. Incumbent's commission expired June 4, 1924.

Fred M. Eachus to be postmaster at Newman, Calif., in place of R. L. Dixon. Incumbent's commission expired June 4, 1924.

William M. Irwin to be postmaster at Fullerton, Calif., in place of Merton Blackford. Incumbent's commission expired June 4, 1924.

Isaac J. Willard to be postmaster at Fort Jones, Calif., in place of F. J. Mathews. Incumbent's commission expired June 4, 1924.

Allen G. Thurman to be postmaster at Colfax, Calif., in place of A. T. Scanlon. Incumbent's commission expired March 3, 1924.

FLORIDA

Milton E. Clark to be postmaster at Pensacola, Fla., in place of W. J. Forbes. Incumbent's commission expired February 20, 1924.

GEORGIA

Forrest C. Berry to be postmaster at Young Harris, Ga. Office became presidential October 1, 1923.

Edgar S. Hicks to be postmaster at Yatesville, Ga. Office became presidential October 1, 1923.

Henry W. Harvey to be postmaster at Rockingham, Ga. Office became presidential October 1, 1923.

Portia C. McAllister to be postmaster at Pitts, Ga. Office became presidential October 1, 1923.

Virgil A. Snider to be postmaster at Mitchell, Ga. Office became presidential January 1, 1924.

Gordon B. Hulme to be postmaster at Kingston, Ga. Office became presidential October 1, 1923.

Robert J. Walsh to be postmaster at Garfield, Ga. Office became presidential October 1, 1923.

Jessie H. Beddingfield to be postmaster at Unadilla, Ga., in place of R. E. Hudson, removed.

Hugh T. Cline to be postmaster at Milledgeville, Ga., in place of Olin Robinson, removed.

ILLINOIS

William W. Harmon to be postmaster at Xenia, Ill., in place of E. C. Burkett, resigned.

Lem Neville to be postmaster at Catlin, Ill., in place of R. F. Jones, resigned.

Paul B. Cousley to be postmaster at Alton, Ill., in place of William Fries, deceased.

Robert R. McCreight to be postmaster at Marissa, Ill., in place of Louis Wolter. Incumbent's commission expired June 5, 1924.

Leonard C. McMullen to be postmaster at Hume, Ill., in place of J. J. Carr. Incumbent's commission expired May 28, 1924.

Edwin A. Mead to be postmaster at Hebron, Ill., in place of Henry Earle. Incumbent's commission expired August 29, 1923.

Simon Lark to be postmaster at Fithian, Ill., in place of O. E. Bantz. Incumbent's commission expired March 9, 1924.

IOWA

Dorothy E. Parden to be postmaster at George, Iowa, in place of Dorothy Parden. Incumbent's commission expired June 5, 1924.

KANSAS

Glen D. Rose to be postmaster at Eureka, Kans., in place of G. G. Wood, resigned.

Clara G. McNulty to be postmaster at Stockton, Kans., in place of J. Q. Adams. Incumbent's commission expired June 4, 1924.

George H. Leisenring to be postmaster at Ellis, Kans., in place of Alexander Nierberger. Incumbent's commission expired June 4, 1924.

Henry A. Cory to be postmaster at Alta Vista, Kans., in place of G. W. Edwards. Incumbent's commission expired June 4, 1924.

KENTUCKY

Sadie Bowe to be postmaster at Wheelwright, Ky. Office became presidential October 1, 1923.

Troy W. Frazier to be postmaster at Elsiecoal, Ky. Office became presidential January 1, 1924.

James Webb to be postmaster at Allen, Ky. Office became presidential January 1, 1923.

Felix G. Fields to be postmaster at Whitesburg, Ky., in place of C. H. Back, removed.

MAINE

George G. Winters to be postmaster at Strong, Me., in place of R. M. Bates. Incumbent's commission expired June 5, 1924.

Virgil A. Linnell to be postmaster at Rumford, Me., in place of G. B. McMennamin. Incumbent's commission expired June 5, 1924.

Ernest A. Fogg to be postmaster at Livermore Falls, Me., in place of J. L. Foster. Incumbent's commission expired June 5, 1924.

Arthur O. White to be postmaster at Lisbon Falls, Me., in place of G. H. McIntosh. Incumbent's commission expired June 5, 1924.

Charles E. Sherman to be postmaster at Boothbay Harbor, Me., in place of H. S. Perkins. Incumbent's commission expired June 5, 1924.

MICHIGAN

Frank A. Cole to be postmaster at Grass Lake, Mich., in place of E. J. Marrinane. Incumbent's commission expired June 4, 1924.

MONTANA

Ernest M. Hutchinson to be postmaster at Whitefish, Mont., in place of A. B. Horstmann. Incumbent's commission expired May 10, 1924.

NEW YORK

John Sparks to be postmaster at Eldred, N. Y. Office became presidential January 1, 1923.

Lee G. Ayers to be postmaster at Richford, N. Y., in place of H. R. Swift, deceased.

Anna M. Ball to be postmaster at Berkshire, N. Y., in place of C. A. Partridge, deceased.

Robert E. Brown to be postmaster at Almond, N. Y., in place of H. G. Stillman. Incumbent's commission expired March 3, 1924.

OHIO

Walter J. Fury to be postmaster at Addyston, Ohio. Office became presidential April 1, 1924.

OREGON

Leila A. Phelps to be postmaster at Hermiston, Oreg., in place of C. H. Skinner. Incumbent's commission expired May 6, 1924.

PENNSYLVANIA

Adah E. Pettis to be postmaster at Saegerstown, Pa., in place of P. L. Peters, deceased.

Ralph B. McCord to be postmaster at North East, Pa., in place of A. S. Knepp. Incumbent's commission expired June 5, 1924.

George L. Goodhart to be postmaster at Dayton, Pa., in place of W. L. Marshall. Incumbent's commission expired June 5, 1924.

Frank G. Grein to be postmaster at Homestead, Pa., in place of W. A. Kessler. Incumbent's commission expired August 5, 1923.

Walter C. Alcorn to be postmaster at Avonmore, Pa., in place of F. B. Smeltzer. Incumbent's commission expired June 5, 1924.

SOUTH DAKOTA

Norman Lockwood to be postmaster at Doland, S. Dak., in place of C. H. Stevenson, deceased.

Levi J. Thomas to be postmaster at Ipswich, S. Dak., in place of H. A. Briggs. Incumbent's commission expired May 28, 1924.

Earl F. Vandenburg to be postmaster at Conde, S. Dak., in place of G. A. Miller. Incumbent's commission expired June 4, 1924.

TENNESSEE

Emma R. Kilgore to be postmaster at Cottagegrove, Tenn. Office became presidential April 1, 1924.

John G. Holmes to be postmaster at Trezevant, Tenn., in place of A. H. Jones. Incumbent's commission expired April 28, 1924.

Henry M. May to be postmaster at McEwen, Tenn., in place of D. O. Thompson. Incumbent's commission expired June 4, 1924.

Roe Austin to be postmaster at Dover, Tenn., in place of J. M. Scarborough. Incumbent's commission expired January 23, 1924.

Matthew C. Bratten to be postmaster at Liberty, Tenn., in place of W. P. Whaley, resigned.

Stephen Hixson to be postmaster at Dunlap, Tenn., in place of A. W. Layne, resigned.

Sampson DeRossett to be postmaster at Crossville, Tenn., in place of R. A. Potter. Incumbent's commission expired April 28, 1924.

WISCONSIN

Oscar E. Hoyt to be postmaster at Iron Ridge, Wis. Office became presidential October 1, 1922.

Leo Joerg to be postmaster at South Milwaukee, Wis., in place of H. A. Ohm. Incumbent's commission expired August 29, 1923.

Eugene D. Recob to be postmaster at Richland Center, Wis., in place of F. J. Haas. Incumbent's commission expired August 29, 1923.

Walter H. Smith to be postmaster at Mondovi, Wis., in place of W. H. Smith. Incumbent's commission expired March 22, 1924.

Charles H. Roser to be postmaster at Ghidde, Wis., in place of C. H. Roser. Incumbent's commission expired March 22, 1924.

Henry E. Steinbring to be postmaster at Fall Creek, Wis., in place of H. E. Steinbring. Incumbent's commission expired June 5, 1924.

Edward J. Gardner to be postmaster at West De Pere, Wis., in place of H. B. Loper, removed.

Mary S. Blair to be postmaster at Almond, Wis., in place of F. E. Poll, resigned.

CONFIRMATIONS

Executive nominations confirmed by the Senate December 20, 1924

PROMOTIONS IN THE DIPLOMATIC SERVICE

To be secretaries

J. Holbrook Chapman.	Robert O'D. Hinckley.
John N. Hamlin.	Paul Mayo.

CONSULAR SERVICE

To be consuls

Harry J. Anslinger.	Charles I. Graham.
Willard L. Beaulac.	Bernard F. Hale.
Herbert S. Bursley.	Charles H. Heisler.
Richard P. Butrick.	Leo J. Keena.
Edward Caffery.	H. Tobey Mooers.
Charles L. De Vault.	Christian M. Ravndal.
Howard Donovan.	Francis H. Styles.
Samuel J. Fletcher.	Fletcher Warren.
Raymond H. Geist.	

To be vice consuls

Paul H. Alling.	Benjamin M. Hulley.
George Alexander Armstrong	John R. Ives.
William H. Beach.	C. Warwick Perkins, jr.
Ellis A. Bonnet.	Joseph P. Ragland.
Prescott Childs.	Edwin Schoenrich.
Joseph T. Gilman.	W. Maynard Stapleton.
Arthur J. Gravelle.	Harry E. Stevens.
Winthrop S. Greene.	Howard C. Taylor.
George J. Haering.	Cyril L. F. Thiel.
Harry C. Hawkins.	

FOREIGN SERVICE

To be foreign service officers, Class I

Maxwell Blake.	William H. Robertson.
Jefferson Caffery.	Thomas Sammons.
Sheldon L. Crosby.	H. F. Arthur Schoenfeld.
Charles C. Eberhardt.	Robert P. Skinner.
John G. Foster.	Frederick A. Sterling.
Alphonse Gaullin.	Nathaniel B. Stewart.
Franklin Mott Gunther.	George T. Summerlin.
Albert Halstead.	Horace Lee Washington.
Carlton Bailey Hurst.	Post Wheeler.
Julius G. Lay.	Sheldon Whitehouse.
Henry H. Morgan.	Hugh R. Wilson.
Gabriel Bie Ravndal.	Evan E. Young.
Warren D. Robbins.	Alexander M. Thackara.

To be foreign service officers, Class II

Homer M. Byington.	Leo J. Kenna.
William Coffin.	Tracy Lay.
Edwin S. Cunningham.	Marion Letcher.
Charles B. Curtis.	Alexander R. Magruder.
Claude I. Dawson.	DeWitt C. Poole.
William Dawson.	Ralph J. Totten.
William H. Gale.	Roger Culver Tredwell.
Clarence E. Gauss.	Craig W. Wadsworth.
Edwin N. Gunsaulus.	Alexander W. Weddell.
Nelson T. Johnson.	

To be foreign service officers, Class III

Norman Armour.
Ray Atherton.
James G. Bailey.
Thomas D. Bowman.
John K. Caldwell.
Clarence Carrigan.
George E. Chamberlin.
Carl F. Deichman.
Frederic R. Dolbeare.
Louis G. Dreyfus, jr.
Allen W. Dulles.
Frederick T. F. Dumont.
Robert Frazer, jr.
Arthur C. Frost.
Wesley Frost.
John A. Gamon.
Arthur Garrels.
Arminius T. Haebler.
Matthew E. Hanna.
Ernest L. Harris.
Lewis W. Haskell.
Charles M. Hathaway, jr.
P. Stewart Heintzleman.
Philip Holland.
W. Stanley Hollis.
Augustus B. Ingram.
Theodore Jaecckel.
Douglas Jenkins.
Hallett Johnson.
John E. Kehl.

To be foreign service officers, Class IV

William W. Andrews.
F. Lammont Bell.
Philander L. Cable.
Hamilton C. Claiborne.
Felix Cole.
E. Haldeman Dennison.
Hernando De Soto.
Leon Dominian.
George K. Donald.
James Clement Durn.
Cornelius Van H. Engert.
Cornelius Ferris.
Fred D. Fisher.
Otis A. Glazebrook.
Herbert S. Gould.
George A. Gordon.
Elbridge Gerry Greene.
Oliver B. Harriman.
Clarence B. Hewes.
Calvin M. Hitch.
Myron A. Hofer.
Ross E. Holaday.
Samuel W. Honaker.
Williamson S. Howell, jr.
J. Klahr Huddle.
John F. Jewell.

To be foreign service officers, Class V

Copley Amory, jr.
Frank D. Arnold.
Henry H. Balch.
Joseph W. Ballantine.
Thomas H. Bevan.
Pierre de L. Boal.
George A. Bucklin.
Ralph C. Busser.
Charles R. Cameron.
Harry Campbell.
Frederick C. Chabot.
Harold D. Clum.
John K. Davis.
Leslie A. Davis.
Hazel H. Dick.
Alfred W. Donegan.
Eugene H. Dooman.
W. Roderick Dorsey.
Edward A. Dow.
Coert Du Bois.
John W. Dye.
Carol H. Foster.
Claude E. Guyant.
George C. Hanson.
Joseph E. Haven.

Alexander C. Kirk.
Ezra M. Lawton.
Samuel T. Lee.
Will L. Lowrie.
Ferdinand L. Mayer.
George S. Messersmith.
Ransford S. Miller.
Stokeley W. Morgan.
Edwin L. Neville.
Edward J. Norton.
John Ball Osborne.
Ely E. Palmer.
Willys R. Peck.
Mahlon Fay Perkins.
G. Howland Shaw.

 Avery G. Smith, Saint Albans.
 Charles H. Stetson, Enosburg Falls.

HOUSE OF REPRESENTATIVES

SATURDAY, December 20, 1924

The House met at 12 o'clock noon, and was called to order by the Speaker.

The Chaplain, Rev. James Shera Montgomery, D. D., offered the following prayer:

Another new day is ours, blessed Heavenly Father. We praise Thee for all Thou hast brought us of strength, of health, of peace, and warmth of heart. Duties, opportunities, and privileges are before us like an open book. For all these we look up and thank Thee, our Father Eternal. "Glory to God in the highest, on earth peace, good will toward men." Help us not only to give the angels' song new breath, but may our lives increase in love, beauty, and wisdom under its inspiration. Throughout our country let the Christmas spirit bless, until the happiness and good will of all are the concerns of each. Give blessings of great gladness to our families here and those that are separated. Amid flatteries and abuses, may no day pass in which we fail to thank the infinite God of this earth for our dear homeland. Let the best that is within us rise up in answer in Thy great providence, and may we be dedicated anew to the institutions that make for the glory of our Republic. Through Jesus Christ our Lord. Amen.

The Journal of the proceedings of yesterday was read and approved.

EUROPEAN FOWL PEST

Mr. MADDEN. Mr. Speaker, I am going to ask unanimous consent for the consideration of a resolution which passed the Senate yesterday, but before I ask that consent I would like to have unanimous consent to proceed for a minute or two in order to explain it.

The SPEAKER. The gentleman from Illinois asks unanimous consent to proceed for a minute or two in order to explain the resolution to which he refers. Is there objection?

There was no objection.

Mr. MADDEN. Recently a very serious disease has developed among the poultry of the country. The poultry industry of the United States amounts to about \$1,000,000,000 a year. Much of the poultry shipped from several States recently

has been returned by the parties to whom the shipments were made, and that has resulted in trains carrying the diseased poultry back into the sections from which it came, thereby spreading the disease among poultry which is not diseased.

This is a strictly economic question. The disease which now affects poultry does not affect human beings. There is no danger to human beings from the disease. As soon as the disease attacks poultry they quit laying, and it is said that if the meat of a diseased chicken is eaten after it is cooked it will not affect the person who eats it. But the poultry industry of the United States is very much alarmed and the Secretary of Agriculture is anxious that a quarantine should be placed upon the shipment of poultry from the States in which the disease exists. He wants authority and money to enable him to require the disinfection of the trains which carry the poultry from one section of the country to another section.

Mr. BLANTON. Will the gentleman yield?

Mr. MADDEN. In just a minute. Doctor Mohler says the disease can be checked; that the danger can be overcome; and that the loss, which is terrible now, can be prevented if the Secretary of Agriculture is given a small amount of money to enable him to require the disinfection of the trains and to prevent the shipment of diseased poultry from one State to another, and that very shortly conditions in the poultry business will be normal if that be done. I will now yield to the gentleman from Texas.

Mr. BLANTON. There is on hand now in cold storage more turkeys—

Mr. MADDEN. This does not affect dead poultry at all; it has relation to live poultry.

Mr. BLANTON. I am going to show the gentleman wherein it does affect dead poultry, if he will permit. There is in cold storage now a greater number of pounds of frozen turkeys, chickens, and fowls of all kinds than there has been before in quite a number of years. This meat in cold storage is already inspected, and if those who own this inspected meat in cold storage can, during the coming holidays, keep out an influx of other poultry on the market they can dispose of their frozen meats now in storage at enormous prices, and this will result in doubling, trebling, and quadrupling the price of all the frozen poultry that are now in storage. This \$100,000 is to be spent in the name of agriculture. I wonder if the gentleman is familiar with all of the facts surrounding the recent expenditure of money in the State of Texas, especially in south Texas, with reference to the foot-and-mouth disease? I wish he had some of the reports on that which I have in my office where cattle was slaughtered indiscriminately.

Mr. MADDEN. I have only a minute or two.

Mr. BLANTON. I am sorry, but, Mr. Speaker, I think we ought to have a quorum on this Christmas holiday to take up agricultural matters, and I make a point of no quorum.

Mr. LONGWORTH. I trust the gentleman will not make that point.

Mr. BLANTON. And I hope the gentleman from Illinois will not bring up this \$100,000 item to-day.

The SPEAKER. Of course, this will require unanimous consent.

Mr. BLANTON. I will not make the point of order; but I am going to object to present consideration of this resolution when the time comes, for I believe that most of this \$100,000 will be wasted.

Mr. MADDEN. I am sorry. Of course, I do not know the facts surrounding the expenditure of the money to which the gentleman calls attention, but I do know from those who ought to know, from the Agricultural Department experts, that the disease does not affect poultry in cold storage, and I would be very reluctant to believe that anybody, no matter how influential, could induce the Secretary of Agriculture to join in a movement to put up the price of poultry that is in cold storage, when, as a matter of fact, every element in the case is so clear that there ought not to be any doubt as to what our action should be.

Mr. MILLER of Washington. Will the gentleman yield for a short question?

Mr. MADDEN. Yes, indeed.

Mr. MILLER of Washington. What proportion of the poultry industry in the country is affected by this disease?

Mr. MADDEN. I do not know the proportion, but several States are involved—California, Illinois, New York, New Jersey, and many other States which I am not able to recall at this time.

Mr. MILLER of Washington. It has spread throughout the country?

Mr. MADDEN. It is general. The disease is throughout the country generally and ought to be eradicated. Of course, I

do not want to assume the responsibility for not furnishing the facilities to the Department of Agriculture to eradicate it. If there is any man who wants to object to the consideration of the resolution, of course, he will assume that responsibility.

Mr. BLANTON. Mr. Speaker, representing a farming district and a poultry district, and to save the farmers this \$100,000, I object to the present consideration of this resolution.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Craven, one of its clerks, announced that the Senate had passed bills of the following title, in which the concurrence of the House of Representatives was requested:

S. 3611. An act authorizing the construction of a bridge across the Missouri River near St. Charles, Mo.; and

S. 3610. An act authorizing the construction of a bridge across the Missouri River near Arrow Rock, Mo.

The message also announced that the Senate had passed the following resolution:

Senate Resolution 285

Resolved, That the Senate has heard with profound sorrow the announcement of the death of Hon. JULIUS KAHN, late a Representative from the State of California.

Resolved, That the Secretary communicate these resolutions to the House of Representatives and transmit a copy thereof to the family of the deceased.

Resolved, That as a further mark of respect to the memory of the deceased the Senate do now adjourn.

SENATE BILLS REFERRED

Under clause 2 of Rule XXIV, Senate bills of the following titles were taken from the Speaker's table and referred to their appropriate committees, as indicated below:

S. 3545. An act to revive and reenact the act entitled "An act granting the consent of Congress to the Huntington & Ohio Bridge Co. to construct, maintain, and operate a highway and street-railway bridge across the Ohio River between the city of Huntington, W. Va., and a point opposite in the State of Ohio," approved August 18, 1921; to the Committee on Interstate and Foreign Commerce.

S. 3611. An act authorizing the construction of a bridge across the Missouri River near St. Charles, Mo.; to the Committee on Interstate and Foreign Commerce.

S. 3610. An act authorizing the construction of a bridge across the Missouri River near Arrow Rock, Mo.; to the Committee on Interstate and Foreign Commerce.

BILLS PRESENTED TO THE PRESIDENT FOR HIS APPROVAL

Mr. ROSENBLUM, from the Committee on Enrolled Bills, reported that this day they had presented to the President for his approval the following bills:

H. R. 10650. An act to authorize the settlement of the indebtedness of the Republic of Lithuania to the United States of America; and

H. R. 10651. An act to authorize the settlement of the indebtedness of the Republic of Poland to the United States of America, and for other purposes.

ORDER OF BUSINESS

Mr. MOORE of Virginia. Mr. Speaker, I ask unanimous consent to occupy three minutes for the purpose of asking a question of the gentleman from Ohio [Mr. LONGWORTH] relative to the order of business following the recess.

The SPEAKER. The gentleman from Virginia asks unanimous consent to address the House for three minutes. Is there objection?

There was no objection.

Mr. MOORE of Virginia. I understand, Mr. Speaker, that the recess terminates on the 29th. I would like to ask the gentleman to give us some idea what business will be transacted that day and on the days following in that week.

Mr. LONGWORTH. I will be very glad to answer the gentleman. The intention is to occupy the Monday on which the session convenes with the consideration of business of the District of Columbia. I am assured no bills will be brought in which are of a controversial nature. It is the intention of the gentleman from Illinois [Mr. MADDEN] to begin the discussion of the Post Office and Treasury bill on Tuesday. Wednesday, according to present arrangements, will be Calendar Wednesday, the Post Office Committee having the day. Then it is expected that the House will recess over Thursday, making New Year's Day a holiday, and finish up the Post Office and Treasury Departments bill on Friday and Saturday.

The SPEAKER. The Chair would call the attention of the gentleman to the fact that on Monday District business is not

in order except by unanimous consent. That is the fifth Monday.

Mr. LONGWORTH. I had forgotten that, Mr. Speaker. In that case the appropriation bill will be taken up on Monday.

Mr. WINGO. Will the gentleman yield further?

Mr. LONGWORTH. Yes.

Mr. WINGO. Can the gentleman go further and state what will probably be done during the following week?

Mr. LONGWORTH. I think that will depend very largely on the condition of appropriation bills. The gentleman from Illinois [Mr. MADDEN] perhaps could tell the House whether there will be another bill ready immediately after the Treasury bill.

Mr. MADDEN. Yes; the Army bill is ready now to be reported, and immediately after the Army bill there will be the independent offices bill, and following that immediately will be the bill covering the Departments of Labor, Commerce, State, and Justice, and that will leave nothing then but the District and the legislative bills.

Mr. WINGO. Has the administration abandoned any hope of enacting the McFadden bill at this session?

Mr. LONGWORTH. On account of the condition of appropriation bills it may be found that the way will be so clear for the passage of those bills very promptly that probably, in my judgment—and it is my hope—the week after the New Year's week we may be able to take up the McFadden bill.

Mr. WINGO. I think it will take about two days at the outside to pass that bill.

Mr. GARNER of Texas. Will the gentleman yield for another question?

Mr. LONGWORTH. Yes.

Mr. GARNER of Texas. According to the statement of the gentleman from Illinois [Mr. MADDEN], if we take up one appropriation bill after another continuously, we will not get through with them before the 20th of January or perhaps the 1st of February. What are you going to do with the rivers and harbors bill?

Mr. LONGWORTH. I will say to the gentleman that my statement does not mean it is the intention to pass only appropriation bills.

Mr. GARNER of Texas. The gentleman does hope, then, before the 15th of January to consider the rivers and harbors bill?

Mr. LONGWORTH. I would not say before the 15th, but somewhere around the 15th I would hope it might be considered.

EUROPEAN FOWL PEST

Mr. BLANTON. Mr. Speaker, at the instance of the chairman of the Committee on Appropriations, whose judgment, I think, is nearly always good and whose judgment I follow many times, I withdraw my objection.

The SPEAKER. Is there objection to the request of the gentleman from Illinois [Mr. MADDEN] for the present consideration of the joint resolution, which the Clerk will report?

Mr. MADDEN. Mr. Speaker, I ask unanimous consent that the Senate Joint Resolution 159 be taken from the Speaker's table and that it be amended in accordance with the amendment which I send to the desk.

The SPEAKER. Is it an amendment or a substitute?

Mr. MADDEN. It is an amendment in the nature of a substitute, striking out all after the resolving clause.

The SPEAKER. The gentleman from Illinois asks unanimous consent for the present consideration of the Senate joint resolution, with a substitute, which the Clerk will report.

The Clerk read as follows:

Senate joint resolution (S. J. Res. 159) providing for the control and eradication of the European fowl pest and similar diseases in poultry

Substitute offered by Mr. MADDEN: Strike out all after the resolving clause in the Senate resolution and insert the following:

"That not to exceed \$100,000 of the appropriation of \$2,500,000 contained in the second deficiency appropriation act, fiscal year 1924, approved December 5, 1924, for the eradication of the foot-and-mouth disease and other contagious or infectious diseases of animals is hereby made available to enable the Secretary of Agriculture to provide means to control and eradicate the European fowl pest and similar diseases in poultry: *Provided*, That the sum herein granted shall remain available for the purposes of this act until June 30, 1926: *Provided further*, That no part of this sum shall be used for the payment of indemnities for condemned poultry."

The SPEAKER. Is there objection to the present consideration of the joint resolution?

There was no objection.

The SPEAKER. The question is on the amendment offered by the gentleman from Illinois.

The amendment was agreed to.

The SPEAKER. The question is on the engrossment and third reading of the joint resolution.

The joint resolution was ordered to be engrossed and read a third time, was read the third time, and passed.

On motion of Mr. MADDEN, a motion to reconsider the vote by which the joint resolution was passed was laid on the table.

SCHOOLS OF THE DISTRICT OF COLUMBIA

Mr. ZIHLMAN. Mr. Speaker, I ask unanimous consent to extend my remarks in the Record by inserting a speech by Prof. Frank W. Ballou, superintendent of schools of the District of Columbia, on the school needs of the District of Columbia, delivered before the Washington Chamber of Commerce on December 16, 1924.

The SPEAKER. The gentleman from Maryland asks unanimous consent to extend his remarks in the Record in the manner indicated. Is there objection?

There was no objection.

Mr. ZIHLMAN. I feel that this address will be of interest and value to the Members of the House and will assist them in familiarizing themselves with actual conditions in the schools of this city.

THE CONDITIONS AND NEEDS OF THE SCHOOLS OF THE DISTRICT OF COLUMBIA

Education is the most important enterprise in which democratic governments engage. From 25 to 50 per cent of the total expenditures for municipal purposes in cities of the United States is spent for public education. The community is more directly interested in public education than in any other single activity, because the system of public education concerns itself with every boy and girl in the community between the ages of approximately 6 and 18. No other public enterprise is of so vital concern to the present and future welfare of any community as its public-school system except possibly public health.

On behalf of those directly connected with the school system I desire to express our grateful appreciation of the privilege accorded the superintendent of schools by the Washington Chamber of Commerce of presenting to this body of business and professional men this statement on the conditions and needs of the public schools. It is largely through the interest and activity of such organizations as this that improvement in the educational conditions of the city must be brought about.

SOME FIGURES ON THE SCHOOL SYSTEM

The public-school system is undertaking to provide appropriate, adequate, and efficient education for 72,573 pupils, of whom 59,838 are in the elementary schools, 12,177 in the high schools, and 558 in the normal schools. These pupils attend school in 140 elementary school buildings, 15 high and junior high school buildings, and 2 normal-school buildings. The engineer commissioner reports that these 156 buildings cost \$14,481,780.57 when constructed. He has estimated that to replace them with the type of fireproof construction now used would cost \$41,738,306.00. The cost of the sites for these buildings was \$3,956,069.88.

It requires 22,000 tons of coal annually to heat them and 419 laborers, coal passers, firemen, janitors, and engineers to take care of them. Two thousand seven hundred and seven teachers and school officers are required to provide and supervise the education of these pupils. The total school budget for the fiscal year 1925 is \$8,885,215.

Running the school system is not only a great educational undertaking, but it is also a great financial and business enterprise. A proper conception of the size and varied activities of the school system is essential to a proper understanding of its conditions and needs.

WHAT HAS BEEN ACCOMPLISHED

Consideration of some of the accomplishments during the past few years will constitute a proper introduction to the more detailed analysis of our present conditions and needs.

RECLASSIFICATION LEGISLATION

After several years of consideration, investigation, and formulation the so-called reclassification legislation became permanent law on March 4, 1923. This legislation carries salary schedules for the 419 laborers, janitors, engineers, 50 clerks, 29 medical inspectors and dentists, and 10 nurses employed in the public schools. These employees have all been placed on salary schedules which provide for annual increases in compensation for efficient service in lieu of the flat salary heretofore received by most of them. The schedule for the janitorial staff represents an increase of 45.6 per cent over the basic salaries and 12.6 per cent over the total compensation received last year.

TEACHERS' SALARY BILL

After years of unsuccessful efforts to increase appropriately the compensation of the educational employees of the Board of Education,

success finally was realized when the teachers' salary bill passed the Sixty-eighth Congress and was approved by the President June 4, 1924.

It provides a new salary schedule for teachers, school officials, school librarians, attendance officers, employees in the community-center department, and in the department of school attendance and work permits. It provides salary schedules for certain new positions which are necessitated by the growth, extension, and reorganization of the school system, such as principals of junior high schools, administrative or free principals for elementary schools, assistant principals in the high schools, general secretaries and community secretaries in community-center departments, a director for school attendance, and census inspectors for taking the school census, a chief examiner for the board of examiners, and an additional assistant superintendent for the colored schools, who shall be chief examiner for the board of examiners for the colored schools, and the position of first assistant superintendent of schools, one for the white schools and one for the colored schools, who shall be the deputies of the superintendent of schools in their respective divisions of the school system.

It carries important legislative provisions relating to the organization and administration of the schools, such as the enlarged and reorganized boards of examiners, authorizing the appointment of temporary teachers, creating the position of annual substitute teachers, and authorizing the Board of Education to conduct a community-center department, a department of school attendance and work permits, night schools, vacation schools, Americanization schools, thereby legalizing these activities in the schools and removing the appropriations from being subject to a point of order in the House of Representatives.

The salary schedules and the legislative provisions of this act place it among the most important legislation relating to the schools of Washington that has ever passed Congress. It will take its place along with the organic act itself passed in 1906.

The community should congratulate itself that teachers and school officers are now to receive a scale of pay which will entitle the community to a higher quality of service than could be secured and maintained under the former salary schedule.

As the spokesman for these teachers and officers I express our thanks to the Washington Chamber of Commerce and to other similar organizations for their efforts in securing the passage of this measure, and I pledge to the community our unstinted effort and our renewed devotion to the attainment of that high standard of excellence which is required and expected by the citizens of the Nation's Capital.

It is the duty and responsibility of the superintendent to secure and retain efficient teachers. They are the greatest asset of any school system. Efficient teachers must have knowledge of what they are to teach; but they must make vital to the child what they teach, they must stand before their pupils as ideals of manhood and womanhood, and they must inspire and encourage. Believing in this high calling of the teacher, it was necessary to secure a salary schedule which would pay for such services. The superintendent will hold himself responsible for procuring for our schools the services of the best teachers and officers that the salaries will secure.

SCHOOL BUILDINGS OPENED

Now that the salaries of all employees of the Board of Education have been adjusted, the most serious educational problem confronting Washington as a community is that of providing adequate schoolhouse accommodations for our school population. The regular annual increase in school enrollment and the accumulated shortage of schoolhouse accommodations, which has long existed in Washington, have contributed to creating the present congestion in our schools. Any understanding of the present situation must be based on a consideration of the normal rate of increase in enrollment and of our inheritance of pre-war and war conditions with respect to schoolhouse construction.

ENROLLMENT IN ELEMENTARY SCHOOLS

The average annual increase in number of pupils in elementary schools in Washington from 1913 to 1920 was 788 pupils; from 1920 to 1924 was 802 pupils; for the whole period—that is, from 1914 through 1924—it is 793 pupils.

Any adequate building program must make provision for an increased enrollment in the elementary schools of Washington of approximately 800 pupils per year. This means that 20 additional classrooms should have been opened annually during this period of 10 years, and should be opened each year as long as this annual increase in enrollment continues. Because until recently 20 additional schoolrooms have not been opened each year, congestion in our schools has increased and pupils have suffered physical hardships, and that education which is the birthright of every child of school age in America has been denied them.

ENROLLMENT IN HIGH SCHOOLS

The average annual increase in enrollment in the high schools from 1913 to 1920 was 245 pupils; from 1920 to 1924 it was 927 pupils; and for the whole period it was 492 pupils per year.

It is to be especially noted that there has been a striking acceleration in the rate of annual increase in number of pupils in our high

schools during the past four years. In 1921-22 alone, the total increase of high-school pupils was 1,357, or a number of pupils more than enough to fill any one of our high schools except Central or the new Eastern.

It is conservatively estimated that adequate preparation for increased enrollment in our high schools will require increased accommodations each year for at least 750 high-school pupils. It is to be noted also that as our high-school accommodations are improved and our educational program is extended, the number of high-school pupils is inevitably bound to increase.

ELEMENTARY SCHOOLS

Annually since the war appropriations have been made for the construction of elementary-school buildings. As a result certain elementary-school buildings or additions to buildings have been opened for school purposes.

In 1920-21 four additional rooms were opened at the Deanwood School.

In 1921-22, 44 rooms were opened and occupied as follows: Eight rooms each at Petworth, Takoma, West, Burroughs, and Burrville; and 4 rooms at the H. D. Cooke.

In 1922-23, 60 rooms were opened and occupied as follows: Twelve rooms at the Wheatley, 8 rooms each at Eaton, Kingsman, Buchanan, Mott, and new Bell, and 4 rooms each at Monroe and Deanwood.

In 1923-24, 22 rooms were opened and occupied as follows: Eight rooms each at Lovejoy and Garrison, 4 rooms at the Smothers, and 2 rooms at the Chain Bridge Road.

In 1924-25, 14 rooms have been opened to date as follows: Eight rooms at Bancroft and 6 rooms at the Thomson School. During the present school year 8 additional rooms will be completed through the construction of the Raymond School and 8 additional rooms at the Janney School, both of which are now under construction. This will make a total of 30 additional rooms to become available and occupied for elementary-school purposes during the school year 1924-25.

By the end of the school year 1924-25, 160 elementary-school classrooms will have been built and occupied since July 1, 1920. Of these 160 classrooms, only 5 were for replacement of rooms not longer fit for use. This makes a total net of 155 classrooms, or an average of 31 additional classrooms per year, opened and occupied between July 1, 1920, and July 1, 1925. As will be shown later, this amount of schoolhouse construction has not only taken care of the increased enrollment but it has somewhat reduced congestion.

JUNIOR HIGH SCHOOLS

The junior high school is an accepted institution in school organization in the United States. It has passed the experimental stage. As to its educational advantages there is no longer serious debate among educators.

The increase in the number of junior high schools has been nothing short of phenomenal. Educational authorities assert that the first junior high school was established in 1909. According to the United States Bureau of Education, 13 years later, i. e., in 1922, 456 different cities reported having 733 junior high schools.

The first two junior high schools in Washington were established in 1919. Since then five additional junior high schools have been established and one more will be opened February 1, 1925. Appropriations are carried in the Budget now before Congress for two additional junior high schools. The junior high school not only provides better education for our pupils but it offers the best opportunity to bring relief from congestion in both elementary and high schools, at a minimum cost.

The junior high school accommodates pupils of grades 7 and 8 of the elementary schools and pupils of grade 9 of the first year of the high school. The organization, therefore, of a junior high school affects the pupil enrollment in both elementary and high schools. By building one junior high school and taking the seventh and eighth grade pupils out of the several elementary schools in the immediate vicinity, congestion in those elementary schools is correspondingly reduced.

The junior high school is not important merely as a means of relieving congestion or as a temporary makeshift, but as an institution in which better education is provided boys and girls in grades 7, 8, and 9 than is now provided them. The value of any plan of organization must be determined in terms of the educational advantages to the individual child.

In the traditional eight-room elementary school in Washington, there is one seventh-grade class and one eighth-grade class. This organization permits of no adaptation of the educational program or the methods of instruction to the individual needs of those seventh and eighth grade pupils. All of the seventh-grade pupils are taught in one class, and taught as a class.

By bringing such classes together into the junior high school, pupils may be classified in accordance with their abilities, educational interests, and probable future educational careers. In the junior high school separate classes are organized for those pupils who are inevitably going to college and the study of foreign language is begun

in the eighth grade rather than in the first year high school. Separate classes are also organized for those pupils who will probably leave school at the end of the eighth or ninth grade, and intensive prevocational and vocational work is provided for them. Likewise, those pupils planning to enter business courses begin their preparation for that course in the eighth grade rather than in the ninth grade.

The system of junior high schools is being extended in Washington because of its educational advantages. It is likewise economical in the matter of building construction, since one building may bring relief to a large number of elementary schools as well as high schools. A junior high-school building must have outdoor play space, gymnasium facilities, general science rooms, drawing rooms, and a variety of shop equipment. If the institution is to serve its educational purpose. The educational work of the junior high school will be limited and restricted unless the facilities provided in a junior high-school building are adequate for the educational program of the institution.

HIGH SCHOOLS

From 1916, when the Central and Dunbar High Schools were opened, until 1923, when the new Eastern High School was opened, the only additional accommodations for high-school pupils that were provided in the District of Columbia were provided by the establishment of the Columbia and Shaw Junior High Schools. Although the increase in enrollment of high-school pupils averaged approximately 700 pupils per year during that period there were no high-school accommodations opened to meet that increased enrollment.

In March, 1923, the new Eastern High School was opened. It was originally designed to accommodate 1,500 pupils, but through considerable alteration of plans the capacity of the school is expected to reach approximately 1,800 pupils.

Further relief for high-school congestion will be provided when the additions to the Armstrong Technical High School and the Western High School are completed.

The addition to Armstrong will provide additional accommodations for approximately 800 pupils, and the construction of the building will probably be completed by February, 1925. The building should be completely equipped and occupied some time before the end of the present school year.

The addition to Western High School will provide additional accommodations for approximately 550 high-school pupils, including additional gymnasium facilities not now enjoyed by the pupils of that school, and will be completed in February, 1925.

A site has been purchased adjoining the Langley Junior High School, at a cost of \$215,000, on which to locate a new home for the McKinley Technical High School. Last year's appropriations carried an item of \$5,000 for the construction of the plans of that building. The Board of Education submitted an estimate for beginning the construction of that building. It is greatly to be regretted that this item was not transmitted to Congress by the Bureau of the Budget. When completed, in accordance with the plans as drafted, the new McKinley Building will accommodate approximately 2,600 pupils. It will serve as a technical high school for the District of Columbia and as a regional high school for the section of the city where located.

Relief can not be provided for the congestion now existing in the Shaw Junior High School and Dunbar High School until the McKinley Technical High School is located in its new building. When McKinley vacates its present building, that building will be occupied by the Shaw Junior High School for colored pupils, thereby giving that school an opportunity to double its capacity. The building now occupied by the Shaw Junior High School will be the home of a new business high school for colored pupils. The removal of the business department from the Dunbar High School will bring much needed relief to the Dunbar, which was built to accommodate twelve hundred pupils and whose enrollment is now 1,688 pupils. Neither of these very urgent changes can be made until McKinley is provided with a new home.

A five-year building program should include an item for the construction of a new building to accommodate the present Business High School.

Since the construction of buildings for McKinley and Business will require comparatively large appropriations and each will extend over two or more years, it is desirable that appropriations should be begun at once for McKinley in order that corresponding appropriations for Business High School may follow. The appropriations for these two new high-school buildings should not run simultaneously, but should follow each other.

PRESENT STATUS OF CONGESTION

Annually, on November 1, the superintendent makes a systematic study of schoolhouse accommodations and congestion in the school system. This study has been made each year since 1920.

ELEMENTARY SCHOOLS

The following tabulation shows the congestion existing in the elementary schools of Washington on November 1 of each year:

Accumulated shortage as of November 1 each year

Classrooms needed	1920	1921	1922	1923	1924
1. To eliminate portables.....	73	71	61	61	54
2. To eliminate rented quarters.....	41	23	28	28	24
3. To eliminate undesirable rooms.....	21	39	34	28	30
4. To reduce oversize classes.....	57	67	57	51	40
5. To eliminate part-time classes:					
Grades I and II.....	150	152	137	130	123
Above Grade II.....	15	19	19	18	6
Total.....	360	371	336	336	277
6. To abandon buildings recommended for immediate abandonment in 1908, still in use:					
John F. Cook, 8 rooms; Threlkeld, 4 rooms.....	12	12	12	12	12
7. To abandon buildings recommended for early abandonment in 1908, still in use:					
Abbot, 9 rooms; Adams, 8 rooms; Berrel, 9 rooms; Bradley, 8 rooms; Force, 12 rooms; Jefferson, 20 rooms; Lincoln, 12 rooms; Webster, 12 rooms.....	90	90	90	90	90
8. To abandon other buildings now unfit for use:					
Bell, 8 rooms; Chain Bridge, 1 room; Hamilton, 4 rooms; Smothers, 4 rooms; Tenley, 8 rooms.....	25	25	25	21	-----
Arthur, 8 rooms; Brightwood, 8 rooms; Garnet, 12 rooms; Langdon, 10 rooms; Patterson, 8 rooms.....					66
Grand total.....	487	498	463	459	445

¹ New building occupied Nov. 26, 1923.

² New building occupied Oct. 13, 1923.

PORTABLES

In 1920 the school system was using 78 one-room portable schoolhouses, 73 of which were in the elementary schools and 5 in the high schools. Since that time 2 portables have been destroyed, as they had become so dilapidated that it was impossible to move them. In 1924 there are 37 portable schoolhouses in use in the elementary schools, 6 in the junior high schools, and 13 at the Armstrong Technical School.

RENTED QUARTERS

In 1920, the Board of Education, through an appropriation of \$16,500, was renting 41 rooms for school purposes. That number has gradually been reduced until in 1924 accommodations for 24 elementary-school classes are rented at a cost of \$16,494.

UNDESIRABLE ROOMS

Because of congestion, the school officials have been forced to use basement rooms, hall rooms, and other space in our elementary-school buildings not intended for classroom purposes. Twenty-one such rooms were in use in 1920, 39 in 1921, 34 in 1922, 38 in 1923, and 30 are being used in 1924.

OVERSIZE CLASSES

The standard size of classes in an elementary school, under the rules of the Board of Education, is 40 pupils. Owing to congestion, many classes in the schools of Washington have been organized in excess of that number. If all pupils in excess of 40 were to be brought together and divided into classes of 40, it would have taken 56 classrooms to accommodate them in 1920. In 1924 it will take 40 additional classrooms to accommodate the pupils now crowded into classrooms in excess of 40 pupils.

PART TIME

Part time is an administrative device for making one classroom accommodate two classes. One class receives instruction from 9 to 12.30 daily; another class, under another teacher, occupies the same room from 1 to 4.30 p. m. This arrangement results in reducing the amount of education received by such children from five hours to three and one-half hours per day, or a reduction of 30 per cent in the amount of education received. In 1920 there were 336 first, second, and third grade classes in the public schools of Washington who were on part time, or more than 13,000 pupils.

There were 342 part-time classes in 1921, 312 part-time classes in 1922, 336 part-time classes in 1923, and 258 part-time classes in 1924. It will take 129 additional classrooms in the elementary schools to eliminate the part-time now existing in our elementary schools.

ABANDONMENT OF BUILDINGS

The Schoolhouse Commission provided for in the organic act of 1904, which presented its report in 1908, recommended the immediate abandonment of 10 school buildings and the early abandonment of 8 other school buildings. Of these buildings recommended for immediate abandonment in 1908, the J. F. Cook building of eight rooms, and the Threlkeld School building of four rooms, are still in use.

Of the other buildings, which are the Abbot, Adams, Berret, Bradley, Force, Jefferson, Lincoln, and Webster, not a single building has yet been abandoned. The addition to the Thomson School has made it possible to transfer six of the classes from the Webster School. That building is still occupied, however, by four primary classes, and the day and evening Americanization schools.

Since 1908, additional buildings have become unfit for further use. Of those buildings, the Smothers, a four-room building, has been replaced, the one-room Chain Bridge Road building has likewise been replaced.

An appropriation has likewise been made and a contract let for the construction of a new health school to replace the building on Bladensburg Road now occupied by that school.

Furthermore, the first 8-room unit of a 16-room building necessary to replace the Tenley School is now under construction, and the first unit of a 16-room building to replace the Bell School has already been completed and occupied. The old Bell building, however, can not be vacated, until an additional eight rooms shall have been constructed.

In addition to these buildings, with respect to which steps have been taken or complete arrangements made to vacate, other buildings should be abandoned. There are 140 elementary school buildings in the District, some of them constructed as long ago as 1868.

At least one elementary-school building will have to be abandoned each year if the obsolete buildings in the District of Columbia are to be eliminated from use. Such buildings as the Arthur, Brightwood, Garnet, Langdon, and Patterson should be abandoned in accordance with a systematic program of replacement.

It will be observed from the facts already presented that the number of elementary-school buildings opened since 1920 has been sufficient to take care of the increased enrollment and, to some extent, reduce part-time oversized classes and rented quarters, and to discontinue the use of certain portables which were transferred to junior and senior high schools.

It is conservatively estimated, on the basis of annual increase in enrollment and on a distribution over a five-year period of all accumulated shortages in schoolhouse accommodations, that 90 classrooms, together with other necessary educational facilities, must be provided each year for five years if at the end of that time the pupils in elementary schools of Washington are to be adequately housed. Anything short of this minimum program of schoolhouse construction means a continuance of undesirable accommodations and the further postponement of the day when the elementary school children of Washington will be adequately housed.

HIGH SCHOOLS

The following tabulation shows the congestion existing in the high schools of Washington on November 1 of each year since 1920:

Evidences of congestion, November 1, 1924

School	Capacity in 1924	Enrollment Nov. 1—					Excess in 1924
		1920	1921	1922	1923	1924	
Business.....	900	1,206	1,261	1,330	1,256	1,203	303
Central.....	2,300	2,837	3,072	3,182	3,276	3,154	854
Eastern.....	1,500	691	884	1,052	1,397	1,545	45
McKinley.....	1,100	1,208	1,464	1,502	1,406	1,373	273
Western.....	600	700	884	1,041	991	1,058	408
Columbia Junior 1.....	300	140	251	364	366	391	91
Hise Junior 1.....	150	—	—	—	—	148	-2

Macfarland Junior 1.....	225	—	—	—	—	197	-28
Armstrong.....	300	638	880	1,094	1,076	1,054	754
Dunbar.....	1,200	1,402	1,540	1,597	1,742	1,688	488
Randall Junior 1.....	100	—	—	—	—	75	-25
Shaw Junior 1.....	250	40	65	115	124	238	-12
Total.....	9,300	8,984	10,331	11,267	11,636	12,271-245	3,216-245
Net excess.....		1,364	2,081	3,017	2,866	2,071	2,971

¹Ninth grade only in junior high schools

This tabulation shows that the seven junior high schools, which are not yet completely organized, should be able to accommodate approximately 245 additional pupils in the ninth year when the enrollment is complete.

This tabulation also shows that each one of the seven senior high schools is overcrowded. On November 1, 1924, there was in the high and junior high schools a net excess of 2,971 pupils over and above the capacity of those schools.

In 1920 the enrollment in our high schools and junior high schools was 8,984, which was 1,204 pupils in excess of capacity.

In 1921 the high and junior high school enrollment was 10,331, making a net excess enrollment of 2,981 pupils.

In 1922 the total enrollment in high and junior high schools was 11,267 pupils, making a net excess enrollment of 3,017 pupils.

In 1923 the total enrollment in the high and junior high schools was 11,637 pupils, making a net excess enrollment of 2,886 pupils.

In 1924 the total enrollment in the high and junior high schools was 12,271 pupils, making a net excess enrollment of 2,971.

Armstrong Technical High School: The capacity of the Armstrong Building is 300 pupils, and the enrollment on November 1, 1924, was 1,054 pupils. To accommodate these pupils 13 portables have been provided.

To relieve this congestion an addition to the Armstrong School is nearing completion, which will provide accommodations for 800 additional pupils.

Business High School: The capacity of the Business High School is 900 pupils, and its enrollment on November 1, 1924, was 1,203 pupils. It has been operating on a part-time schedule for a number of years, and will be obliged to continue part time until additional schoolhouse accommodations are provided.

Central High School: The capacity of the Central High School is 2,300, and its enrollment on November 1, 1924, was 3,154 pupils. A double-shift program has been introduced for all pupils of the first three semesters.

Dunbar High School: The capacity of the Dunbar High School is 1,200 pupils, but its enrollment on November 1, 1924, was 1,688 pupils. It is planned to reduce this enrollment by the transfer of the pupils in the business department to another building and establishing a business high school for colored pupils. Further relief will be necessary and must be provided through the establishment of additional junior high schools.

Eastern High School: The capacity of the Eastern High School has been listed at 1,500 pupils, though it is probable that the school will accommodate 1,800 pupils. Additional locker facilities and accommodations for individual pupils will be required. The enrollment in Eastern on November 1, 1924, was 1,545 pupils.

McKinley Technical High School: The capacity of the McKinley Technical High School is 1,100 pupils. The enrollment on November 1, 1924, was 1,373 pupils. An effort was made at one time to place certain classes in the McKinley on part time. Since many boys attending "Tech" work afternoons as a means of self-support, this part-time arrangement forced many boys to leave school and resulted in the abandonment of the part-time plan at "Tech."

Western High School: The capacity of the Western High School is 650 pupils and the enrollment on November 1, 1924, was 1,058 pupils. An addition to the Western High School is being constructed which will provide accommodations for approximately 550 additional pupils. When completed, this addition will be fully occupied by the present enrollment of the school.

After the completion of the additions to Armstrong and the Western High School and the establishment of the Powell Junior High School, some of the aforementioned congestion will have been relieved. As has already been stated, the annual increase in enrollment in high schools requires accommodations for approximately 1,000 high-school pupils each year for a period of five years. Anything short of this minimum program of schoolhouse construction for high-school pupils means the continuance of the congested conditions in our high schools.

WHAT CONGESTION MEANS

The congestion in the schools and the conditions resulting therefrom affect not only the education of the boys and girls but affect the activities of many homes from which pupils go.

(A) IN A HOME

Let us consider a home in Petworth in which there are four children. The youngest child attends a first-grade class which is on part time. On Monday, Tuesday, and Wednesday that pupil attends school from 9 until 12.30 in the morning, and on Thursday and Friday he attends school from 1 to 4.30 in the afternoon. On the days when he attends the school in the morning he can scarcely get home for lunch before 1 o'clock, while on Thursday and Friday he must have lunch at an earlier hour in order that he may be in school by 1 o'clock.

From that same home in Petworth a girl in the sixth grade attends a class in a portable on Allison Street, six blocks from the main building. She must go to the main building once a week for sewing.

An older boy in this same home attends the eighth grade at the Macfarland Junior High School. He has his lunch at the school, and so the home is not affected by the hour of the lunch at the school. Such a boy receives physical training instruction in the corridors of the Macfarland Junior High School on rainy days, because no gymnasium facilities have been provided. In fair weather he receives his physical training instructions entirely outdoors, on ground not prepared for physical training work.

An older daughter in this same family attends the first half of the second year in the Central High School. Because Central High School is on part time, she arrives at the school to begin her first classroom work at 18 minutes past 12, and continues class work until 4.15. This pupil gets lunch either at school or at home. If, as is preferable, this pupil gets lunch at home, she must have lunch before 12 o'clock in order to reach school in time.

If the home is to provide the lunches at home for the elementary and high school children, lunches for the three children will come at different hours of the day, and never uniformly at the same hour during the five days of the week.

The four children do not start to school from home at the same time any day in the week, but go at two or three different hours, and return at different times throughout the afternoon.

Obviously this school situation is not at all as it should be. The organization of the school should be such as to articulate completely with the organization of the home. The inconvenience to which the homes of Washington are put as a result of congestion in the schools ought to be corrected at the earliest possible moment. Those conditions can be corrected only through better school facilities, which will make possible the organization of the schools themselves in accordance with recognized principles of efficient organization and in proper relation to the functions of the home.

(B) IN THE SCHOOLS

The inconvenience to the homes as a result of congestion in the schools is as nothing compared with the limitations on the proper education of the boys and girls in the schools. Pupils on part time are permitted to attend school only 70 per cent of the school day, and are therefore deprived of the educational advantages which children have who are able to attend school a full five-hour day.

Children who are in classes with over 40 pupils can not receive the individual attention from the teachers which every pupil has a right to receive, and which it is the responsibility and duty of the citizens of the community to see to that he does receive.

The educational disadvantages of part-time and overcrowded classes can not be made up and represent a complete loss in the education of the child.

Putting children into portables and other undesirable rooms continuously jeopardizes their health and deprives them of suitable school-house accommodations, to which every American child is entitled.

The public expects the schools to teach the children proper respect for public property. This can only be done in case the property is worth respecting.

The public expects the schools to teach personal cleanliness and personal hygiene. This can not be done in unsuitable, insanitary school-rooms.

The public expects the schools to teach honesty, and yet by furnishing one locker in our high schools for two and sometimes three pupils at one time there is created a situation which contributes to thievery and presents a constant temptation to every pupil, whether morally weak or strong.

These few observations only hint at the educational disadvantages which literally thousands of pupils are experiencing because of the lack of proper schoolhouses. Failure on the part of the present generation to provide adequate education for the future generation of citizens now in our schools is visiting on the next generation a handicap of untold burden which no one can estimate or now perceive.

RELIEF MEANS INCREASED APPROPRIATIONS

Since 1920 there has been a decided increase in the amount of money appropriated by Congress for schoolhouse construction. The annual appropriations during those years are as follows:

1920	\$85,000
1921	1,939,000
1922	980,000
1923	2,036,000
1924	1,300,000
1925	1,242,500
Total	7,382,500

During no corresponding period of the history of public education in the District of Columbia has so much money been provided for schoolhouse construction. On behalf of my associates, I desire to give public expression of our appreciation for the increased educational advantages provided through these increased appropriations.

From the facts already presented relating to the educational accommodations provided by these funds it is perfectly obvious that still further increases in appropriations for buildings must be made if the congested conditions are to be eliminated and justice done to our boys and girls.

I am undertaking to set before this body some detailed facts concerning your educational system and its needs, because I believe that when the real conditions are known the remedy will be readily applied. My knowledge of the fairness and right-mindedness of the people of Washington convinces me that the community will not allow its children to suffer educational injustices, nor will be long in correcting conditions which are unsatisfactory.

COMPARATIVE SCHOOL COSTS

In order that you as representative citizens of this city may have not only the facts relating to congestion in your schools but the facts relating to educational costs in the District of Columbia I now invite your attention to comparative data relating to the matter of school costs.

PER CAPITA COSTS IN CITY SCHOOLS

Statistical Circular No 1, issued by the Bureau of Education of the Department of the Interior on January 1, 1923, contains an analysis of the current expenses per student in average daily attendance in 170 city school systems. This information is for the school year 1921-22, and cities are arranged in groups according to the population of the cities.

CITIES WITH OVER 100,000 POPULATION

The tables show that among the 31 cities with a population of 100,000 or over included in this tabulation, Washington stands 22 from the top in the amount of money expended per pupil in her public schools. There are 21 cities that expend more per pupil than Washington for public education and 9 cities only pay less. The per capita cost of current expenses in Washington is \$77.69. At the head of the list of cities with 100,000 population or more stands Yonkers, N. Y., with an expenditure of \$121.60 per pupil. Other of the larger cities are: Springfield, Mass., \$118.90; Buffalo, \$116.60; Newark, N. J., \$110.89; Oakland, Calif., \$104.15; Boston, \$103.89; Detroit, \$102.95; San Francisco, \$94.59; Chicago, \$89.40; St. Louis, \$87.85; Minneapolis, \$84.52.

On the basis of the per capita cost of instruction in the cities comparable in size with Washington it is apparent that not enough money is now being expended for public education in Washington if Congress expects the Nation's Capital to take her rightful place educationally among the cities of her population class.

The complete information for the 31 cities of 100,000 population or over is contained in the following table:

Total current expenses per pupil	
Cities:	
Yonkers, N. Y.	\$121.60
Springfield, Mass.	118.90
Buffalo, N. Y.	116.60
Newark, N. J.	110.89
Oakland, Calif.	104.15
Boston, Mass.	103.89
Grand Rapids, Mich.	103.76
Detroit, Mich.	102.95
Albany, N. Y.	98.85
Spokane, Wash.	96.50
San Francisco, Calif.	94.59
Milwaukee, Wis.	92.69
Paterson, N. J.	89.51
Chicago, Ill.	89.40
St. Louis, Mo.	87.85
Dayton, Ohio	86.75
Camden, N. J.	85.62
Minneapolis, Minn.	84.52
New Bedford, Mass.	82.53
Fall River, Mass.	80.32
Providence, R. I.	79.95
Washington, D. C.	77.69
Philadelphia, Pa.	75.51
New Haven, Conn.	71.56
Scranton, Pa.	71.31
Louisville, Ky.	69.69
Reading, Pa.	67.51
San Antonio, Tex.	55.83
Atlanta, Ga.	51.74
Birmingham, Ala.	45.54
Nashville, Tenn.	34.63

CITIES OF 30,000 TO 100,000 POPULATION

There are many cities in the country with a population of from 30,000 to 100,000 people that are paying more for public education than is paid in the Nation's Capital. If Washington be compared with the 40 cities reported in this document, issued by the United States Bureau of Education, that comparison will show that 26 of these cities are now paying more per pupil for public education than Washington is paying and 14 only are paying less. In this group of 40 cities 9 cities are paying more than \$100 per pupil for public education, as compared with \$77.69 expended in Washington.

The following is a list of such cities with the per capita expenditure for current expenses in each city:

Total current expenses per pupil	
Cities:	
Muncie, Ind.	\$129.67
San Diego, Calif.	113.05
Hamtramck, Mich.	112.54
Duluth, Minn.	108.88
Niagara Falls, N. Y.	106.18
Stockton, Calif.	103.56
Topeka, Kans.	102.04
Terre Haute, Ind.	100.85
Fort Wayne, Ind.	100.39
Rockford, Ill.	99.97
San Jose, Calif.	95.11
Oshkosh, Wis.	94.24
Utica, N. Y.	94.09
Meriden, Conn.	92.44
Chester, Pa.	91.51
Wheeling, W. Va.	91.25
Auburn, N. Y.	90.88
Joliet, Ill.	90.87
Waterbury, Conn.	90.76
Lorain, Ohio.	89.32
Tacoma, Wash.	87.67
Passaic, N. J.	84.81

Cities—Continued.

Moline, Ill.	\$80.23
Green Bay, Wis.	79.48
Pittsfield, Mass.	79.44
Manchester, N. H.	79.04
Washington, D. C.	77.69
West Hoboken, N. J.	76.74
Newburgh, N. Y.	73.37
Quincy, Mass.	72.69
Taunton, Mass.	71.95
Perth Amboy, N. J.	67.12
York, Pa.	63.02
Hazleton, Pa.	62.47
Covington, Ky.	58.24
Danville, Ill.	51.06
Austin, Tex.	49.75
Wilmington, N. C.	49.29
Tampa, Fla.	42.31
Columbus, Ga.	35.78
Montgomery, Ala.	31.82

CITIES OF 10,000 TO 30,000 POPULATION

Fifty cities with a population of from 10,000 to 30,000 people are reported in this leaflet. If Washington be compared with these cities, it will be found that 21 cities are paying more than Washington is paying and 29 of these smaller cities are paying less.

The complete information for the 40 cities of from 10,000 to 30,000 population is contained in the following table:

Total current expenses per pupil.

Cities.	
Bloomfield, N. J.	\$109.06
Missoula, Mont.	105.55
Eureka, Calif.	100.84
Santa Cruz, Calif.	97.60

Rome, Ga.	31.13
Gadsden, Ala.	30.70

CITIES OF FROM 5,000 TO 10,000 POPULATION

Of the 50 cities with a population of from 5,000 to 10,000 people there are 9 cities expending more than \$100 per pupil for public education, as compared with the expenditure in Washington of \$77.69 per pupil. If Washington be compared with this group of cities, it will be found that 23 cities are paying more than Washington and 27 cities are paying less.

Total current expenses per pupil

Cities:	
Williamson, W. Va.	\$117.60
Globe, Ariz.	111.53
South Amboy, N. J.	109.86
Marshfield, Wis.	109.77

Branford, Conn.	62.03
Vinita, Okla.	61.84
Vineyard, N. J.	61.31
Maysville, Ky.	59.16
Charlton, Iowa.	59.11
Logan, Ohio.	56.13
Milton, Pa.	55.40
Presque Isle, Me.	55.24
Suffolk, Va.	44.55
Frankfort, Ky.	43.94
Washington, N. C.	43.46
Ada, Okla.	38.86
Bicknell, Ind.	33.38
Albany, Ala.	31.13
Gainesville, Ga.	24.17

From the above facts it is clear that comparatively less money is now appropriated for public education in Washington than in most of the cities of corresponding size and that many of the smaller cities of the country are likewise paying more for public education than is being paid in Washington.

The inevitable conclusion from these facts is that more money may be justifiably spent for public education in Washington if the Nation's Capital is to provide education for its children comparable with that of other cities.

THE IMMEDIATE NEEDS OF THE SCHOOLS

Having described some of the conditions in the public schools, I now ask you to turn your attention to some of the steps which should be taken immediately looking toward the improvement of those conditions.

THE FIVE-YEAR BUILDING PROGRAM

Obviously, from the foregoing description of the needs of the schools, the most important subject for immediate consideration is the program for increased schoolhouse accommodations. The Board of Education has practically completed the preparation of a bill to be introduced into Congress at an early date proposing legislative authorization for a five-year school-building program. The purpose of this bill is clearly stated in its title, as follows:

"It is the purpose of this act, which shall hereafter be known as the 'five-year school building program act,' to provide a sufficient number of school buildings to make it possible to abandon all portables; to eliminate the use of rented buildings; to abandon the use of undesirable rooms; to reduce elementary school classes to a standard of not more than 40 pupils per class; to provide a five-hour day of instruction for elementary school pupils, thereby eliminating part-time classes; to abandon all school buildings recommended for immediate or early abandonment in 1908; to abandon other school buildings which have become unfit for further use since 1908; to provide a full day of instruction for high-school pupils, thereby eliminating the 'double-shift' program in the high schools; to provide for the annual increase in enrollment of pupils during said five-year period; and, in general, to provide in the District of Columbia a program of school-house construction which shall exemplify the best in schoolhouse planning, schoolhouse construction, and educational accommodations."

Several organizations have already adopted resolutions in support of this five-year building program.

APPROPRIATIONS BILL FOR 1926

The most immediate and urgent need and one to which attention should be immediately given is that of supporting the budget which is now before Congress covering school appropriations for the year 1926. The original budget of about \$12,500,000 has been reduced to \$9,185,271.

If the experience of the past is to be repeated this year, the probability is that some items for the schools will be still further reduced by the Appropriations Committee.

There is not an item in the school estimates now before Congress that is not urgently needed. There is not a single dollar included in the amount of money suggested for the various educational purposes that is not necessary for the conduct of an efficient system of education in Washington.

The Board of Education has done its part in organizing a budget covering the immediate needs of the schools. It has valiantly supported that budget before the Commissioners of the District of Columbia

and the Bureau of the Budget. Up to this time it has not been possible for the citizens to take any part in the support of the school budget. Now that the budget has become public, the citizens of the District should exercise every legitimate effort in convincing Congress that the estimates as submitted by the Bureau of the Budget represent a minimum amount that should be appropriated for the schools in the next appropriations act.

REORGANIZATION LEGISLATION

A committee made up of representatives of the House and Senate Committees on the District of Columbia made a careful inquiry and study of the conditions in the schools in 1921 and prepared a report on the subject. That committee invited several leading educators to advise with the committee as to necessary improvements in our schools. It was the uniform judgment of those appearing before the committee that, among other things, the authority and functions of the Board of Education should be extended, to the end that the Board of Education shall have the authority to do those things which the public traditionally looks to the Board of Education to do. A bill has been prepared by the Board of Education which proposed amendments to the organic act of 1906, looking toward placing such authority and responsibility on the Board of Education.

UNITED ACTION A NECESSITY

Perhaps the greatest need in the District of Columbia at this time is a more thoroughgoing understanding of the school needs than has heretofore existed and united action on the methods of satisfying those needs. With a united effort on the part of the people of Washington, much needed relief can undoubtedly be secured. Division of the people as to the urgency of the needs or as to the methods of satisfying those needs will inevitably postpone educational progress. Division of opinion among those interested in school problems should be thrashed out before matters are presented to Congress and not after legislation is introduced.

In my judgment, there is more favorable sentiment in Congress at this moment toward school improvement in Washington than there has been on any other occasion during the past five years. We have already taken a tremendous step forward in securing the enactment of the salary law. The conditions in the schools are well known to the great majority of the Members of Congress. In my judgment, it only remains for the people of the District of Columbia to unite on these various matters as they united on the teachers' salary bill. A most propitious opportunity only awaits our seizing it. If we fail to capitalize the present favorable situation, it will be a serious failure. The importance of improving public education in the District of Columbia is transcendent.

MEANING OF PUBLIC EDUCATION

"Education conserves, preserves, and produces. . . . Education does well to reproduce, and by reproducing to conserve the past; it does well to protect the past in the present; it does best of all in adding to the present accumulation of knowledge and power, thus making a future better than the past." H. H. HORN.

The entire personnel of the Nation changes in approximately 70 years. During this period of 70 years three generations of children should be educated. The educational system should furnish them not only with the accumulated knowledge necessary to their efficient citizenship but also should provide them with the abilities and skills necessary to perform their part of the work of the world. Moreover, the educational system must also inculcate in the future citizens patriotic ideals and the necessary virtues of courage, honesty, honor, sincerity, pride in work well done, unselfish service, self-control, duty, obedience, reverence for God, and respect for all mankind.

The education of an individual is a slow and continuous growth. It extends over a considerable period of years within the school system and continues throughout the large portion of one's life. Any interruption to that education in any given year due to lack of school facilities, whether buildings, books, or inadequately trained teachers, represents time irretrievably lost. In this respect the problem of providing adequate education differs from any problem of municipal government. If the streets are neglected one year an increased appropriation the following year will make up the deficit. No such possibility exists with respect to the education of children.

School systems of the larger cities, like individuals, establish reputations for themselves by what they do or do not do. The fine reputation of many cities is largely made by their school systems. Other cities have unfavorable reputations, due in large measure to the conditions in their public schools.

The superintendent of one of the larger cities of the country, in his annual report recently published, called attention to the fact that 175 of the leading educators of the country had classified the larger cities of the country in accordance with their educational reputations. School systems were classified by these 175 educators (a) for efficiency of organization, (b) instruction of cripples, (c) military training, (d) playgrounds, and (e) visual instruction, and many other topics.

It is an interesting commentary on the public-school system of Washington that it is known among the educators of the country only be-

cause of the high-school cadets. Washington is not mentioned in the enumeration of a large number of cities with respect to its organization, its supervision, its teachers and teaching, and the other activities which constitute an efficient school system.

The members of the chamber of commerce are fully aware of the value of advertising. You know that the reputation of this city is a tremendous asset to the business and professional interests in Washington. The school system should be the greatest asset of the community. The commercial and professional interests of Washington can not afford to let it become a liability against the fair name of the Nation's Capital.

At one time in our educational history to encourage boys to attend school, it was customary to emphasize the value of education by pointing out the advantages which an educated person possessed over an uneducated person. Education was conceived in the terms of an individual and its financial and social profit to him.

To-day, emphasis is placed on the importance of education to the public welfare. The wealth of a community is taxed for public education. Individuals must pay taxes whether they patronize the public schools or not. Compulsory attendance laws throughout the Nation require children to attend school to the end that they shall receive the minimum amount of education necessary for intelligent citizenship.

The present view is that education is for the purpose of training the individual to take his part as an efficient citizen and to assume his responsibility and to discharge his obligations toward his home, his church, his school, his community, his State, and his Nation.

In its resolutions in 1924, the department of superintendence stated the present purpose of public schools in the following language:

"The public demanded physical and health education, courses in civics and patriotism, in fire and accident prevention, in music and drawing, in industrial and household arts, in science and commercial studies, expanded options in foreign languages and history, classes for the mentally and physically disabled, part-time and continuation courses, open-air schools, night schools, summer terms; in short, a public service was demanded of the schools to meet changing domestic and economic conditions unheard of a generation ago. Local pressure and legislative enactment established the present public-school program and changed public schools from places for the intellectual training of a selected few to public-service stations whereby and wherein all might be equally served irrespective of race, color, creed, economic status, or parental occupation."

Vast sums of money are being expended throughout the Nation for public education. It is the expectation of the public that those funds will be judiciously and economically expended. It is the responsibility and duty of those in charge of public education in the municipalities and States of the Nation to see that the money appropriated for public education results in the greatest educational advantage to the pupils in our public schools.

The establishment of higher salary schedules for teachers and other employees of the Board of Education will inevitably result in increased expenditures in Washington. Likewise appropriations for schoolhouse construction must be increased. The superintendent of schools and those associated with him in the administration of public education in Washington accept full responsibility and accountability to the public for an efficient and economical administration of the public-school system.

Money expended for public education is an investment rather than an expenditure. It is an investment in the lives of the boys and girls now in the schools. Efficiently trained citizens are the greatest asset of a democracy. The more money spent for the efficient education of our boys and girls and the Americanization of the foreigners, the less money will be necessary to combat the enemies of the Republic from within who are constantly attempting to dynamite the pillars of our national structure.

The more efficient our citizens support our institutions, support themselves, and support those dependent on them, the less money will have to be expended for poorhouses, jails, and penitentiaries. Jails, penitentiaries, and poorhouses are corrective, remedial, and punitive institutions, and are a burden which society as a whole must bear. The public-school system stands as the preventive agency against want, ignorance, and criminality. An ounce of prevention is worth a ton of cure.

An education is the birthright of every child in this democracy. To deprive the child of that birthright is to impair his efficiency as a citizen in the next generation, and to threaten the very existence of democracy itself. We must never forget that one generation is only a single generation removed from illiteracy. Close all educational institutions for one generation and the next generation must be illiterate.

Economy in the appropriations for public education must not be allowed to reach the point of decreasing the efficiency of the present educational program. The public schools are to-day the most potent, most powerful, and most promising single agency making for the unification, stability, and progress of our American institutions. The

destiny of democratic institutions rests upon public education. The citizens of the future Republic are now passing through the schoolrooms of America, where the traditions of our free institutions are conserved, preserved, and transmitted. What the future of America and of American education shall be rests with the American people. The system of public education in the Nation's Capital should lead the way.

COLUMBIA BASIN IRRIGATION PROJECT

Mr. SUMMERS of Washington. Mr. Speaker, I ask unanimous consent to address the House for one minute.

The SPEAKER. The gentleman from Washington asks unanimous consent to address the House for one minute. Is there objection?

There was no objection.

Mr. SUMMERS of Washington. Mr. Speaker, on yesterday I called up Senate Joint Resolution 157, extending the appropriation in connection with the Columbia Basin investigation. Objection was made, and the suggestion was further made that it be amended. I now wish to call up that resolution and offer the amendment agreed upon, making the funds available until the 15th of February, 1925, for completing the report on which the Department of the Interior has been working for 18 months. The report is not completed and can not be made available for a few weeks. I ask unanimous consent to take from the Speaker's table Senate Joint Resolution 157, which is identical with House Resolution 312 introduced by me three days ago.

The SPEAKER. The Clerk will report the resolution.

The Clerk read the title as follows:

Joint Resolution 157, extending appropriations in connection with the Columbia Basin investigation.

The SPEAKER. Is there objection to the consideration of the resolution?

Mr. GARNER of Texas. Reserving the right to object, I understand the gentleman makes the request to take from the Speaker's table the Senate joint resolution and pass it with a certain amendment. May we have the amendment read in connection with the resolution before we give consent?

The SPEAKER. The Clerk will read the resolution with the amendment.

The Clerk read as follows:

Joint resolution (S. J. Res. 157) extending appropriation in connection with Columbia Basin investigation

Resolved, etc., That the unexpended balance of the appropriation contained in the act of March 4, 1923 (42 Stat. L. p. 1546), making appropriations for investigation of the feasibility of irrigation by gravity or pumping, water sources, water storage, and related problems in connection with Columbia Basin project, is hereby re-appropriated and made available immediately and to continue available until the 15th day of February, 1925.

Mr. GARNER of Texas. If I understand the purport of this resolution, it is merely to extend the time in which the commission can function under an act of Congress passed March 4, 1923?

Mr. SUMMERS of Washington. That is correct.

Mr. GARNER of Texas. It extends the activities of the commission until February 15, 1925, extends the time in which they can do the work and extends the time for payment.

Mr. SUMMERS of Washington. That is correct.

The SPEAKER. The question is on agreeing to the amendment.

The amendment was agreed to.

The Senate joint resolution was ordered to be read a third time, was read the third time, and passed.

On motion of Mr. SUMMERS of Washington, a motion to reconsider the vote whereby the joint resolution was passed was laid on the table.

ORDER OF BUSINESS

Mr. LONGWORTH. Mr. Speaker, it will be necessary for the House to remain in formal session in order to receive the resolution just sent to the Senate, but I think there is no necessity for gentlemen remaining here who desire to go away. I shall in a few moments ask unanimous consent for a recess until the receipt of the resolution. Before doing that, however, if I may have the indulgence of the House, I want to say that I have a feeling of real pride as a Member of this House in the very unusual amount of public business that has been transacted so far during the session. In addition to a great deal of important and valuable legislation we have passed three of the great appropriation bills—the Interior Department appropriation bill, the Agricultural appropriation bill, and the naval appropriation bill. That is a record that, so far as I know—certainly in the more than 20 years that I have been a Member of the House—is absolutely unprecedented. It

is an illustration of the very good feeling that has been manifested on both sides of the aisle since this session first began. It is an illustration also of the confidence the membership of this House has in the great Appropriations Committee and in its chairman, a financial genius—I do not think that is too strong a word—the gentleman from Illinois [Mr. MADDEN]. [Applause.] It also shows its confidence in his associates on the various subcommittees on both sides of this aisle who have piloted these bills through the House. I think it is a very happy situation, Mr. Speaker, that this confidence exists in the great committees of the House, and it shows that a large majority of the membership here are much more interested in the dispatch of public business than in seeking opportunities for self-aggrandisement.

Under these circumstances, Mr. Speaker, I think the Members of this House have well earned their holiday, and, before asking unanimous consent to recess, permit me to extend to every one of them my best wishes for a merry Christmas and a most happy and prosperous New Year. [Applause.]

Mr. SEARS of Florida. Mr. Speaker, I ask unanimous consent to address the House for three minutes.

The SPEAKER. Is there objection?

There was no objection.

Mr. SEARS of Florida. Mr. Speaker, I think we may just as well kill time by listening to me as to the able gentleman from Ohio [Mr. LONGWORTH] or by recessing, while we are waiting for the Senate. I also feel grateful over the way in which we have transacted business here, but I rise for the purpose of calling the attention of Members of the House to the remarks I made yesterday, in which I undertook to convince them of the importance and necessity for the improvement of the submarine base at Key West, Fla. In view of the very close vote on the proposition, I believe, and sincerely trust, that the Senators from Florida, knowing as I do their ability and influence, will have that amendment incorporated in the bill and that it will come back to the House, by which time my colleagues will have read the references to which I referred them yesterday, and which I did not have time to read, and that a majority of them at that time will be with me. I shall never forget those who so ably assisted me and who believe that this is a meritorious proposition. I have no words of condemnation for those who disagreed with me, because each man has a duty to perform and he should vote as he sees his duty.

During the time that I am on my feet, Mr. Speaker, I desire to call the attention of the majority leader to the river and harbor bill. I do this because when we return next January we who believe in river and harbor improvements, and who have always fought for those improvements, would like to know where we are and just what we may expect. When I left here last June after we closed I left with the tacit understanding that the river and harbor bill would be taken up at the beginning of this session. I so stated in my campaign, and in order that I may place myself right let me say that I was surprised when it was not considered.

I am not criticizing my good friend from Ohio [Mr. LONGWORTH] nor any of my colleagues, but unless the river and harbor bill is considered by at least the 15th of January, even should this House pass it, it is doubtful that it would have time to get through the other body. Therefore I hope, in order that we may know how to govern our actions in the future, that when we return we may be informed just when the bill will be brought up. I hope the majority leader will then be able to give us that information.

I also hope that some relief along the congested postal conditions may be enacted during this session, and that the Committee on Appropriations, when it brings in its bill, will carefully look into those conditions. Just this morning I received a letter from my district asking me to help out a Republican postmaster because she was receiving only \$600 for clerical help and she had to employ three clerks out of the \$600, and the additional amount she had to pay them practically consumed her entire salary, and she was giving her time for nothing. That condition should not exist. We are taking care of your people, and not my people, and I am appealing for them, and not for myself. In justice to the department, I should say that when I called up the department this morning they said they thought they could give relief in a case like that and they would take it up with the postmaster at that place; but there are many post offices in my district in that condition.
